HISTORY

OF

SAINT LOUIS CITY

AND

COUNTY,

FROM THE EARLIEST PERIODS TO THE PRESENT DAY:

INCLUDING

BIOGRAPHICAL SKETCHES OF REPRESENTATIVE MEN.

BY

J. THOMAS SCHARF,

AUTHOR OF "CHRONICLES OF BALTIMORE;" "HISTORY OF MARYLAND;" "HISTORY OF BALTIMORE CITY AND COUNTY;" MEMBER OF THE MARYLAND HISTORICAL SOCIETY AND ACADEMY OF SCIENCES; MEMBER OF THE HISTORICAL SOCIETY OF PENNSYLVANIA; HONORARY MEMBER OF THE GEORGIA HISTORICAL SOCIETY; CORRESPONDING MEMBER OF THE HISTORICAL SOCIETIES OF NEW YORK, WISCONSIN, MINNESOTA, SOUTH CAROLINA, AND VIRGINIA; OF THE HISTORICAL AND PHILOSOPHICAL SOCIETY OF OHIO; OF THE NEW ENGLAND HISTORIC-GENEALOGICAL SOCIETY, ETC., ETC.

IN TWO VOLUMES, ILLUSTRATED.

VOL. I.

PHILADELPHIA:
LOUIS H. EVERTS & CO.
1883.

J. B. LIPPINCOTT & CO.,
PHILADELPHIA.

PREFACE.

It has been some time since the author and his publishers—whose enterprise and liberality have always kept pace with him in every new undertaking—agreed that St. Louis offered an inviting subject for an exhaustive local history. They knew that no such work had been produced; the general complaint on the spot proved that, and seemed to prove also that it would be welcomed if written.

When, however, the author, after completing his History of Baltimore City and County and the preparations for the History of Western Maryland, came to St. Louis to make inquiries and survey the field, he was disposed to shrink from the undertaking and withdraw from the engagement partly made. There was so much more to be done than he had anticipated that the magnitude of the task frightened him. Not only was the field unoccupied, it had never even been explored. The surface had not been broken. Virgin soil was sure to be rich and to yield great fruits to the cultivator, but it is hard work to plow the prairie for the first crop,—

> "Hæc loca non tauri spirantes naribus ignem
> Invertêre,"—

and it was not necessarily a labor that would be rewarding.

The author does not wish to be understood to say that much has not been written about the history of St. Louis. It were very unlikely that a theme so rich, so various, and appealing so strongly to the imagination and the sympathies would be left untouched by the writers of a community as ardent, as proud of their home institutions, and as sanguine of the future as the inhabitants of St. Louis. Nor have they neglected it. Much has been done, and well done; but the history itself was not written, nor were the sources of it explored and its materials searched out. Although discouraged at first by the magnitude of the task, the author fully realized that the field was a promising and fruitful one, and his generous and thoroughgoing publishers held out to him every possible inducement, in the way of collaboration of manner with matter, of expenditure upon the form and make-up of the work to keep its appearance fully abreast with its contents, which the most exacting and fastidious writer could demand.

Under such circumstances the author finally consented to undertake the task, and he admits that by the time this determination was reached he had discovered that while the subject of the history of St. Louis had never been fully or adequately studied, so far as could be ascertained from outward and published manifestations, the materials of which it could be made were not only in existence, but were rich and comprehensive almost without parallel. Those materials, collected, arranged, and digested for the first time in these volumes, are of the purest ore the gold of history is produced from, and they exist, not simply in "outcrops" and "placers," but in true "lodes" and "mother-veins," abundant, and without a "fault" or a break in their absolute continuity.

These materials the author found were, to a large extent, in the possession of Frederic L. Billon, whose unwearying, indefatigable research had unearthed them, and his first step was of course to get access to Mr. Billon's treasures, and profit by all that he had discovered. Without

these invaluable stores, which fully justified the author's expenditures in securing them, and his patient toil in arranging and apportioning them, it would have been impossible to present the history of St. Louis in the satisfactory shape which it now assumes. But it is proper to forewarn the reader that the author has by no means contented himself with gleaning over the fields where Mr. Billon has been accustomed to search, nor with supplementing his investigations by others conducted inside the same limits.

He conceives, and his not limited nor unsatisfactory experience confirms the belief, that the history of municipalities cannot be adequately written in a corner, nor can it with faithfulness to the due proportions and coloring of the subject be confined strictly to local occurrences. A city, like a planet, has more motions and impulses than one. Such a sphere revolves on its own axis, to be sure, and this diurnal revolution must be fully considered, because the most frequent and the most important. But it has also its orbital and its cyclical motions; it is part of the solar system and of the great celestial sphere, and its true path can never be accurately traced unless all the various forces creating these complex motions are exactly determined and the resultant established between them. So with cities. They have their own centres and diameters, their own men and governments, and revolve in obedience to these with exactness and precision; but none the less do they occupy significant places in the State and in the Federal systems, of which they are components, and oftentimes the most influential members. The history of a city is thus much more than a local chronicle, a specific record of events, institutions, and men within a narrow and circumscribed area. The Roman satirist contended that his theme embraced

> "Quicquid agunt homines, votum, timor, ira, voluptas,
> Gaudia, discursus."

Shall the history of a city of four hundred thousand people, the chief place in the greatest valley and on the noblest river the world ever saw, extend over a less wide and prolific range of discussion? The author did not think in the beginning that when he had marshaled in line the local institutions and the local events, had given the annals of the Spanish and American Governors and mayors, and told the current stories of De Soto and Coronado, Marquette and La Salle, Laclede and Chouteau, besides glorifying the local heroes in a perfunctory and provincial way, he would be doing justice to or indeed producing the history of St. Louis, and the reader will admit that no such limits have been set in the present work.

A city's history, if fully told, must be concerned with general history, with national history, and with State history. Try to eliminate Boston from American colonial annals, or Philadelphia from the chronicles of the struggle for American independence, and what a vacuum is produced, what confusion results. Try to abstract St. Louis from the history of the circumstances, events, and resources giving consequence to the Mississippi valley, and what remains? It is like the play of Hamlet with Hamlet left out. A city influences all its surroundings, all the circumstances concurrent with its annals, and is equally influenced by them. To cast out of the consideration, therefore, these formative circumstances and influences is to submit effects without giving causes, and to present as an independent and fortuitous unit what is really an integral factor in the solution of a far-reaching problem.

In narrating the history of a city there is a regular order of succession which it is essential to preserve and to follow, descending from and through events to men and to the institutions framed by them, not neglecting the resources which these events imply, and which these men possess and develop, or comprehend and propose to utilize.

It is upon this liberal and conscientious plan that the present history of St. Louis was undertaken; nor does the author hesitate to declare that he looks upon the performance of his task with a satisfaction which approaches complacency. As a record of events, as an exhibition of men, as a chronicle and exposition of institutions and resources, the writer is confident that his work has no rivals on this particular field; and, with no little observation and

acquaintance with similar works upon the history of other cities, and no ordinary experience in the collecting and collating of materials for such works elsewhere, he is disposed to claim that the present History of St. Louis is the most complete and satisfactory record, in its every department, which has ever been prepared and published in the United States of the growth, development, and expansion of a municipality. He asserts this with a thorough knowledge of what has been done in New England and the East since the revival of public interest in and enthusiasm for local details, and with a consciousness also of the suspicion of arrogance and self-assumption naturally incidental to such pretensions.

But, before giving judgment, the reader must consider two or three important circumstances. *First*, that the *general*, the national, and, so to speak, international history of St. Louis is peculiarly rich, varied, and full of color, and this history has been almost entirely neglected by the local chroniclers; *second*, that the materials for the *local* history of St. Louis, here for the first time assembled, grouped, co-ordinated, and arranged, are more full and perfect than those for the history of any other city in the Union; and, *third*, that to all this is added a full and exhaustive account and description of every prominent institution, public or private, that has existed or now flourishes within the chartered limits of the municipality of St. Louis and the county circumjacent. Absolutely nothing of importance has been neglected and nothing overlooked.

To accomplish so much, and with such a degree of self-satisfaction, has been no holiday task. Of the labors, the expenses, the responsibility involved in such a work the author says nothing. The book is completed, and it will speak for itself far better than any one can speak for it. But it is proper to call attention to some of the particular features of so voluminous a production, in order to indicate the leading matters in which comprehensive and original research has enabled the present writer to supplement, correct, and revise, or entirely set aside the previous and existing accounts of numerous important occurrences in the annals of St. Louis, or connected more or less directly with its history.

I. *As regards general history*, the author claims that now, for the first time, St. Louis no longer makes its appearance as a sporadic, independent case of accidental and individual settlement upon an accidental place on the banks of the Mississippi River,—such a colonization as might have taken place at any point on the right or left bank within two hundred miles of the actual site of St. Louis,—but was in fact and effect "the survival of the fittest," not indeed in "a struggle for existence," for nearly all the competitors still live, but in a tournament for the best and most eligible situation for a capital city. To establish and emphasize this point history, geology, archæology, and physical geography have all been ransacked, and a great many facts of the class "not usually known" have been brought to bear to sustain the proposition.

The author claims that the question of the discovery of the Mississippi and the relative pretensions of the several discoverers are discussed by him in the only way through which a satisfactory conclusion can be reached on the subject. The great amount of controversy and argument about facts made it important to look into the facts themselves with careful scrutiny, and the author is not without hope that, as one result of his examination and comparison of such original records as are extant, with the additional light thrown upon the subject by the recent researches of Parkman, Shea, and Margry,—all of which, with all of the accessory evidence, have been patiently studied,—this *cause célèbre* will, by common consent, be docketed as "settled." The true history of the Mississippi valley, and the toils of the pioneers and explorers who opened the way to it along ocean tracks and by woodland paths, have been clouded and obscured by national pride and prejudice, and by sectarian disputes and dissensions. In these volumes the author has struggled to do justice to all, and to assign his exact part in the great and chivalrous work impartially to each, Spaniard, Frenchman, Englishman, and Dutch, Huguenot and Catholic, Protestant and Romanist, Canadian and Louisianian, Puritan and Cavalier, Jesuit and Recollêt, backwoodsman and voyageur, trapper and hunter. All had their share in the noble achievement,

and it is the judicial office of the historian not to advocate any class of pretensions, but to decide upon the respective claims and merits of all alike.

The circumstances in the general history of Upper and Lower Louisiana which preceded and led to the planting of St. Louis, the influence of the growth and spread of the English colonies on the Atlantic coast towards the West upon this event, have all been distinctly traced and stated, and a flood of new light has been thrown upon the dates, the history, and the manners and customs of the French settlements of the Illinois, from which St. Louis was originally peopled. The "relations" of the missionaries, the narratives of travelers, the official reports of government officers, the most obscure records of local and personal history have been diligently searched in order to make clear everything that was doubtful in this important section of this hitherto unwritten history of the country.

In respect to the planting of St. Louis, the topography of the place, the names, connections, business, daily life, manners and customs, laws and government of the early settlers, the author believes that his work is simply complete. Every possible line of inquiry has been followed up to the end; every record, and all tradition and reminiscence have been exhausted to perfect this chronicle of the cradle-days of St. Louis. The early history of the town under the French, Spanish, and American territorial dominations does not abound with incidents, but is still replete with interest in every part, and important new light has been thrown upon many of the accepted legends in regard to these events, light derived from the manuscript records and unpublished minutes of the archives, the land commissioners' inquiries, and the registered proceedings of courts, trustees' meetings, and all the dusty documents of private and public concern which the author has had access to. Often the private correspondence of individuals, furnished him for biographical purposes, has enabled the author to correct a date, verify a disputed tradition, or supply an important gap in general history, and it will be seen that the papers of Col. O'Fallon, for instance, have been of essential value in enabling the author to enrich the history of the war of 1812 with Great Britain, and the Gratiot papers have put it in the power of Professor Waterhouse and Mr. Billon practically to rewrite the history of the massacre by Indians threatened in 1780.

An entirely new chapter in the annals of St. Louis, and one of deep and abiding interest, will be found in the attempt to trace the various causes, and especially the Spanish and French intrigues in the West, which led to the Louisiana purchase, and the adoption of Missouri and St. Louis into the American Union. The pursuit of this subject required close study and much research in wide-spread fields, and this part of the history of St. Louis, never before presented in any shape, is believed to be the most complete investigation of it ever made in any connection.

In respect to the history of St. Louis from the time it ceased to be a Spanish and became an American town, the annals presented in these volumes will be satisfactory to the most exigent reader, whether business man, politician, or antiquarian. The territorial government, the municipality, the part taken by St. Louis in the various Indian wars, the war of 1812, the Mexican war, and especially the civil war, are all minutely traced, copiously illustrated, and exhaustively pursued from beginning to end. The intricate subject of land titles and claims, and the history of every piece of land within the limits of St. Louis, are given complete. Nothing which could possibly be of interest to the present or of value in the future has been omitted in the discussion of these wide-spreading branches of the general theme. The material was abundant, and, while it has been sedulously winnowed and carefully verified in every instance, it has been copiously used.

II. *As regards biography,* the author is convinced that no work of a similar character has ever been written which is so replenished with the lives of prominent persons in every walk as these volumes. The archives and records of every sort have been exhausted, and every page of the daily press from A.D. 1808 scrutinized in pursuit of biographical material, in addition to which

the author has had access to the private papers and correspondence of many leading families and to the rich collections of Mr. Billon, so that a most copious and precious store of personal history is here garnered, relating to the genealogies, the acts, and the family connections and alliances of every statesman, every member of the professions, and every business man who has been at all active or prominent in the affairs of St. Louis, from the days of St. Ange and Pierre Laclede to the immediate present. In many cases, even where the person was most distinguished and had been most frequently written about, the author has been enabled, from his innumerable sources of information, to supply dates, correct damaging inaccuracies, and supplement the chronicle or narrative with new, valuable, and interesting details and particulars. The history of each of the learned professions and all the leading trades and occupations has thus been enriched with sketches of the lives of the men who illustrated, adorned, promoted, and developed them, and this circumstance by itself cannot fail to give the work an enduring and ever-increasing value in the eyes of the community.

III. *As regards institutions*, finally, these volumes will be found to contain the history, the description, and the statistics entire of everything that can be classed under this line of inquiry. No matter from what point of view the reader may wish to study the institutions of St. Louis and the private and public work done by her citizens, acting individually or in association, here is wherewithal to satisfy his desires, anticipate his questions, and supply all the information he needs. The entire municipal establishment is traced out in every ramification, and presented with the fullest detail in its history and its statistics,—the city government and officers and every department, its finances, health, educational establishment, police and fire departments, public buildings, monuments, parks, and squares, with the correlated institutions and tenements of the State and Federal government on the spot. Commerce and industry, production and supply, finance, transportation, and transportation resources and facilities have all been presented with careful completeness and assiduous attention to every detail.

The statistics of trade and manufactures, and all that relates to or bears upon the physical, industrial, and financial resources and potentialities of St. Louis have been given so fully that they cannot fail to attract the particular attention and command the respect of business men. These things are treated so as not only to exemplify their present condition, but historically, in order to illustrate the rapidity and ratio of their growth and development. The volumes contain all that relates not merely to banks, insurance, railroads, steamboats, telegraphs, trade organizations, manufacturing and commercial establishments, their present state, their growth, and the men who have contributed to their development and prosperity, but everything likewise relating to the physical resources and possessions upon which these means of wealth have been built and are still building.

Those who are more directly interested in studying a city's resources from the point of view of associative effort and social growth and advancement, and who wish to learn of what St. Louis has done and is doing for religion, benevolence, and charity, for science, literature, and art, music and the drama, and who seek to know of her progress in education, in hygiene, in penatory and reformatory work, will find in these volumes complete information and valuable statistics in every branch and co-ordination of the various theme.

A glance at the table of contents will suffice to convince even the casual reader how effectively all this wide and comprehensive area has been worked over, and all these separate planes of human association and endeavor each in its turn brought into view with a photographic accuracy in minutiæ which yet has not prevented a steadfast attention to the preservation of the perspective of the whole. Churches, hospitals, charities, societies, companies, agencies have been separately treated, and their history, constitution, organization given in full. But it is useless to attempt to enumerate or select among institutions when we reflect that there are more than six hundred separate heads under which these are treated of in this book.

A work so comprehensive in its objects and scope, and embracing such an infinitude of details, must necessarily have its limitations and defects, and the author is quite aware of the impossibility of discussing so fully such a great variety of subjects without occasional errors. It would have been easy to escape from them by making the work less copious, by avoiding dangerous or controverted themes, and gliding swiftly over the thin ice, generalizing and summing up instead of displaying all the facts. But this did not comport with the author's sense of responsibility to his task, and he has not omitted anything which might help to make his work complete, because he was not fully assured that each detail was "letter perfect." It is proper to call attention to some sources of trifling error for which the author is not responsible, and which seem to be unavoidable in works of this sort.

The desire to leave nothing untold which could in any way throw light upon the history of events, men, and institutions in St. Louis has made it impossible now and then to escape repetition. Facts which fall within the proper cognizance of the narrative of general events will sometimes reappear in another shape in the records of institutions or in the personal memoirs. But the author is assured of the reader's indulgence for venial errors of this sort, for he knows that the intelligent reader prefers a twice-told tale to one neglected or half told.

In more than one instance the author has been constrained by his deference to local authority upon strictly local subjects, and by yielding to the testimony of experts in matters which experts alone are supposed to know thoroughly, to hold back his own judgment in regard to certain subjects, and permit the local authority and the expert to tell the whole story their own way. The result has sometimes been clash, confusion, and the appearance of contradiction, for there is nothing about which local authorities and experts differ so much among themselves as those particular events and things in regard to which they collectively consider it the height of presumption for "outsiders" to disagree with them. Where the subject happened to be one of moment and importance, the author has cut the Gordian knot and stated things to suit himself; but in indifferent or trivial concerns he has simply stood aside and let both parties give their own versions.

In the case of many biographies and memoirs of individuals, these discrepancies will be particularly observable, in conjunction sometimes with an obvious want of proportion between the length and pretensions of the sketch and the importance of the individual. For none of this can the author be held responsible, for the materials upon which these biographies are founded being furnished by the families, friends, or associates of their subjects, sometimes solicited from them, the author was constrained to accept them as they are, and did not feel at liberty to remould or materially modify them in accordance with his sense of proportion.

It will furthermore sometimes be noticed that there are variations in the spelling of names of places and particularly of persons. This is unpleasant to the eye and ear, but cannot be avoided without a serious danger of more material error, and a want of fidelity to the record. Spelling was not a particular accomplishment apparently of the early inhabitants of St. Louis, and French and Spanish names are difficult to adjust to any uniform standard, especially when the documents in which they appear have passed through many hands. There is in fact an utter absence of uniformity in the modes of spelling these old names, and often a single name will be found written in two or three different ways on the same page. It is a common thing for an individual to misspell his own name or to write it in more than one way without any particular reason being apparent for the variation. Under such circumstances, the only safe general rule is that which has been pursued, to follow the record.

But it will be recollected when we speak of errors that we are surveying the contents of two volumes of more than nine hundred pages each, containing over two million words, a work more bulky than the ten volumes of Bancroft's History of the United States, the errors of which, by the way, it has required Bancroft twenty years to correct. An occasional slip in such an extensive field may easily secure pardon.

In the preparation of this work more than twenty times its compass of material, expressly procured and arranged for it, in addition to the great collection of books read and examined for collateral information, was digested, condensed, and, in the pertinent newspaper phrase, "boiled down" to the present limits. In no sense of the word is this work founded upon, built up out of, or repeated from any previous one on the same subject, or any of its branches. It is a new book, treating its theme in a new, comprehensive, and original manner, after exhaustive research and thorough examination and comparison of the best authorities and the most authentic documents and authoritative records. The digesting and assimilating process has perhaps not been carried as far as exigent critics might demand, or as the author's taste made him desire, but in this busy and bustling world there is not time enough to polish the front of a large structure as nicely as one would a mantel ornament of Parian marble. The proprieties of style have, however, not been neglected, for carelessness in that respect would have been equally unworthy of a theme so dignified and of the liberality and beauty of form of the publisher's work.

The author would be unjust to himself and to the city whose history he has written if he did not acknowledge in this place, with feelings of profound gratitude, the cordial aid extended to him and his undertaking by the people of St. Louis. They have given him the fullest encouragement throughout, and have helped him materially in elaborating and perfecting the work. Important and valuable assistance and information have been received from the following persons, to whom also particular recognition is due:

To the editors and proprietors of the *Missouri Republican*, who gave the author free access to the files of that paper from 1808 to the present time, with leave to extract all that he wanted, and to Col. John Knapp, for odd volumes of newspapers from 1858 to 1880.

To the proprietors of the *Globe-Democrat* for the use of their files, etc.

To George H. Morgan, Esq., secretary of the Merchants' Exchange, and to the board of directors also of the Exchange, for files of newspapers from 1861 to the present time. Mr. Morgan supplied the author likewise most liberally with much other valuable material in the shape of reports, pamphlets, etc.

To John J. Bailey, Esq., for essential assistance in the preparation of the histories of churches of all denominations; F. H. Burgess, Esq., for biographical sketches and details in regard to the press, the secret societies, and other institutions of St. Louis; Milton H. Wash, Esq., secretary and treasurer of the school board, for reports, official documents, and valuable matter in connection with educational interests; Henry W. Williams, for his complete and able chapter on the intricate and important subject of land claims and land titles.

To Lyndon A. Smith, secretary of Mayor Ewing, for many kindnesses of various sorts, including free access to and use of valuable documents and pamphlets. Mayor Ewing himself, with a kindness and courtesy not to be forgotten, and particularly valuable to and appreciated by a stranger in a strange land, extended his hand to the author, and his cordial official indorsement to the work in its infancy, thus giving the undertaking the right sort of headway at the moment when it was most needed.

To Professor H. H. Morgan, who contributed to the work the chapter on "Art and Artists," and that on "Literature and Literary Men."

To Professor Sylvester Waterhouse, for various contributions to the work which are credited to him, for many kindnesses and courtesies in smoothing the author's way in a strange city, and for valuable suggestions in regard to the general subject which Mr. Waterhouse was fresh from the study of, having recently prepared an abstract of St. Louis history for the census volume on the "Social Statistics of Cities," which Col. George E. Waring, Jr., has charge of as "special agent;" and to Col. George E. Waring, Jr., for special materials and statistics in his department of the census.

To Mr. Frederic L. Billon, who has been long engaged upon a history of St. Louis under

the French and Spanish *régimes*, and whose voluminous collections, begun forty years ago, and embracing many rare and precious documents and unique manuscripts, were placed unreservedly at the author's service. These manuscripts are particularly rich in information in regard to old families, topography, and real estate.

To Dr. E. M. Nelson, editor of the *St. Louis Courier of Medicine*, for the chapter furnished by him upon the "Medical Profession," and for other kindnesses. Good taste and extensive and accurate information have enabled Dr. Nelson to treat his subject with equal fullness and propriety in a way which none can fail to appreciate. To Dr. H. Judd, Upper Alton, Ill., for a sketch of the history of dentistry and the dental profession in St. Louis.

To Frederick F. Espenschied for much valuable information and assistance, and the use of documents not be obtained anywhere else, especially the mayors' messages and municipal reports for many years, with copies of statutes, ordinances, digests, etc., enabling the author to trace down the municipal history by the record. Messrs. Espenschied, Knapp, and Morgan, with rare generosity, permitted the author to carry off all these precious materials to a distant city, where they might be examined more at leisure. To Wm. H. Mayo, Esq., Past Grand Master and Secretary Missouri Lodge, No. 1, A. F. and A. M., for very perfect records of Masonry in St. Louis and access to invaluable manuscript records.

To Oscar W. Collet, Esq., secretary of the Missouri Historical Society, for valuable memoranda and notes gathered for the author from the State archives at Jefferson City, for the use of the collections of the Historical Society, and much assistance in the search for information; Prof. C. M. Woodward, of Washington University, for the account of the St. Louis bridge; Col. Albert G. Brackett, U.S.A., for valuable assistance and information in connection with the history of Jefferson Barracks; Prof. Marshall S. Snow, of Washington University, for the history of that institution; Rev. Walter H. Hill, S.J., for similar matter in connection with St. Louis University; Thomas Lynch, Esq., for information concerning the Volunteer Fire Department Joseph Nimmo, Jr., Chief of the United States Bureau of Statistics, for much valuable statistical matter upon the trade and commerce of St. Louis; N. M. Ludlow, Esq., for an account of the rise and progress of the drama in the West; and Charles W. Knapp, Esq., for information on the business interests of the city.

The author also must acknowledge his many and frequent debts to the authors of the several more recent books about St. Louis and Missouri, their history and circumstances. Where these works have been quoted from specific acknowledgment will be found in the text, but a general confession of debt for hint, guidance, and instruction must still be made to Richard Edwards, W. F. Switzler, L. U. Reavis, Richard J. Compton, John Hogan, R. A. Campbell, Alphonso Wetmore, N. M. Ludlow, W. V. N. Bay, and John F. Darby.

To his publishers the author must gratefully pay the meed, thrice deserved, of most hearty and effective co-operation with him throughout the undertaking. They have most liberally met his every desire in respect of letter-press and engravings of portraits, maps, and other illustrations; they have spared no expense or effort to make the mechanical execution of the volumes equal to its subject and to the author's ambition, and they have helped him in every difficulty, and sought to remove every obstruction from his path while the work was in progress.

To the subscribers to the work, who by consenting to take it unseen on the author's own recommendation and the strength of his and the publisher's reputation, have secured its successful completion and publication, the author renders his most grateful thanks, with the earnest hope, as he bids them adieu, that nothing in the volumes and nothing omitted from them may cause them to regret their confidence and their liberality.

J. THOMAS SCHARF.

HISTORY

OF THE

CITY AND COUNTY OF SAINT LOUIS.

CHAPTER I.

THE OCEAN-PATHS OF DISCOVERY.

THE history of St. Louis presents some peculiarities such as do not seem to appear in connection with that of any other distinctively American city. St. Louis is intensely modern in its character and impulses, yet its foundation rests upon a substructure of very ancient associations, such as lead research and investigation into the affairs of the earliest white settlers of the North American continent. The first white man looked upon the site of St. Louis only nine years before the founding of Philadelphia, and Laclede's trading-post, where this city now stands, was not established until 1764, no more than eleven years previous to the American Revolution. St. Louis was not brought into the Union until 1803; it did not fairly commence to grow until 1818; it was no more than a frontier trading-post and garrison town when it was incorporated as a city in 1822. Yet we must seek its beginning in ethnic influences and race movements and colonies which are antecedent to the planting of St. Augustine and Quebec. The Spaniards who governed St. Louis at the opening of the nineteenth century had already discovered the Mississippi River in the third decade of the fifteenth century, and the French forts and towns in Illinois which eventually contributed their population to augment the growth of St. Louis were all of them planted and thriving before the Peace of Ryswick, and before New England had entirely recovered from the desperate struggle with the Wampanoags.

St. Louis and New Orleans are the only American cities which have owned both the French and Spanish sway before yielding allegiance to the Constitution of the United States. New Orleans continues French to the core. St. Louis is thoroughly Americanized; but in the process of transformation the city has become cosmopolitan in a remarkable degree. In this respect likewise St. Louis is markedly distinct from other American cities. None is less provincial, none so thoroughly metropolitan in the composition of its population, which is yet blended together in one homogeneous whole that makes it an effective unit in every article of action and enterprise. Quebec, like New Orleans, has never been completely naturalized in the Anglo-American family; Boston, like Baltimore, is provincial; New York is still Dutch in warp, and Philadelphia has not outgrown the peculiarities of the formal sect which founded it; Chicago is a camping-place of the nations, with Yankee machinery to give it electrical swiftness of motion; but in St. Louis nationalities are fused and welded together, so that every inhabitant feels the local spirit and patriotic impulse of the Latin, who knew no higher boast than "*Civis Romanus sum.*"

It is part of the object and plan of the present History of St. Louis to trace minutely the currents of race and opinion which have affected and influenced the quality and character of the city's growth, while describing every incident of that growth and development with fidelity and completeness.

Such a history is naturally attractive and picturesque. It is tinctured with romance, it is pervaded with adventure. There is something about it which resembles the sweeping and various contours of the circumjacent prairies, forests, and rivers, and withal there is a smack of local flavor and individuality in it which recalls the *bonhomie* and careless, easy grace of its earliest inhabitants. To catch such vivid traits and reproduce such changing and various tints is a work of art at which the most skillful need not blush to fail, but it is a labor also of love at which the artist will toil with ardor.

The pleasing hypothesis that St. Louis is naturally

the geographical, commercial, and political centre of the North American continent may be entertained or dismissed as one chooses, without injury to the present hopes or future prospects of the great city. But if it were important to the city's interests to maintain and establish the opinion, some curiously apposite arguments in favor of it might be derived from the convergence of the lines of exploration and discovery, of travel and immigration upon St. Louis as a common focal point. This is not peculiar to one epoch, but common to all. It is the tradition of nearly every Indian tribe and nation, and notably of the Natchez, and the Algonkin and the Iroquois who dispersed them and drove them south, that they originally came —in the dim legendary past—from the northwest, upon such a diagonal line of migration as would bring them to the Mississippi at or about the latitude of St. Louis. When Ferdinand de Soto and his followers, bitten with all the Spaniard's insatiate *auri sacra fames*, sought between A.D. 1539 and 1543 to discover another Mexico in the heart of our continent, the path of their arduous wanderings from the southeast brought them ever nearer to this same centre. In 1540, when the Governor of New Galicia, Francisco Vasquez de Coronado, set forth upon his memorable march from Compostella and Culiacan, upon the Gulf of California, to discover and conquer the apocryphally rich "seven cities of Cibola," he did not stay his footsteps in the strange wilderness until he had reached the fortieth parallel at a point half-way between Leavenworth and Omaha. The French who went west from Quebec to Lake Superior, those who descended the Wabash, the Illinois, the Kaskaskia, and the Mississippi, and those who ascended the latter stream from the Belize, all met and settled within forty or fifty miles of the city whose history we are writing, and the oldest settlement, Cahokia, is within sight of its taller spires. So likewise the three chief lines of English settlement from New England across Western New York to the lakes, from Pennsylvania, Maryland, and Virginia westward to the Ohio, and from Virginia and the Carolinas to Tennessee and Kentucky, all converged at St. Louis. It is rather more than a coincidence that Coronado and De Soto, the one starting on the Pacific coast and the other on the Atlantic, would actually have crossed paths if they had projected their outward marches two hundred miles farther, and their meeting point would have been very near the site of St. Louis. It is rather more than a coincidence likewise that the road of the trading-pack and wagon of the New England emigrant, the path of the Virginia ranger and Kentucky hunter, the devious way of the Canadian *coureur des bois* and *voyageur* and route of the trapper, should all of them have led to St. Louis. In the ante-chamber of the representative of the French *ancien régime* or the Spanish hidalgo who might chance to be "commandant" at old St. Louis, but in no other place on this continent, it would have been natural for Daniel Boone, "backwoodsman of Kentucky," to meet and exchange adventures with the Yankee peddler from Connecticut, the Jesuit priest from Minnesota, the Canadian half-breed trapper from the headwaters of the Missouri, and the sugar-planter of Opelousas and Terrebonne.

So races and nationalities confront one another today in St. Louis, and so likewise, in the remotest past of America's connection with historic periods, we find that convergence of races and nationalities towards the central point of the great Mississippi basin, which was to eventuate in the founding of St. Louis and its establishment as the key-city of the mightiest river-system upon the globe.

The causes of the discovery and settlement of the valley of the Mississippi were identical with those which led to the discovery and settlement of America. The lust for gold, made keener by the currency requirements of a period of restless expansion of trade, the desire to plant proud royal banners and the humble cross of Christ upon new lands and to subordinate new realms to European monarchies and Catholic orthodoxy, and the eager jealousy with which the Western nations of Europe, just newly born to commerce and the possibilities of the unlimited expansion of trade over the ocean spaces, beheld the relations of Venice with the wealthy East,—these are the causes which led Prince Henry of Portugal to push south and Christopher Columbus to press westward in quest of that Far Cathay the unexampled riches of which had been exhibited in glowing colors by the fertile pen of Marco Polo. Father Marquette, when he sought the Mississippi, hoped to find that it emptied into the Gulf of California, and thus would afford to France an easy route to China by way of the St. Lawrence and the lakes. La Salle named his fort and village near Montreal "La Chine," in token of the intentness with which he pursued his original object of seeking a navigable route across the continent to India.[1] Both Columbus and the early explorers of the continent by land were deceived in regard to the size of the globe and the proximity of Europe to Asia. Columbus fancied that China lay just across the "ocean stream," not more than fifteen hundred or

[1] Kalm, the Swedish traveler, says the name was satirical, given by La Salle's followers in derision of his incessant talk about China and the repeated delays which kept him from making any further progress in that direction.

two thousand miles from Palos. De Soto, Hudson, Raleigh, and the French explorers all seem to have supposed that the girth of North America on the line of the fortieth parallel was not much greater than on the parallel of the city of Mexico.[1]

This was a fortunate error on the part of Columbus, for his great voyage never would have been undertaken if he had been aware of the breadth of the great Atlantic, and that another continent and a second and mightier ocean still interposed between him and the goal of his hopes and vigils. Columbus had the same religious reverence for the opinions of Ptolemy and the elder geographers that the philosophers and theologians of his day had for Aristotle. He accepted the view put forth by them that the sea covered only one-seventh of the extent of the globe, instead of three-fourths, and he did not think the globe was near so big as it proved to be in the sequel of his discoveries. "*El mundo es poco*," he wrote to Queen Isabella, "*digo que el mundo no es tan grande como dice el vulgo.*" ("I tell you the world is not so great as the vulgar call it.") He felt assured that the distance from the Azores to the known parts of Eastern Asia could not be greater than a third of the earth's circumference, and that much of the intervening space was taken up with islands and the unknown parts of Asia. The geographers upon whom he relied had projected the Caspian Sea very far eastward, advanced the coast-line of China to the meridian of the Hawaiian Islands, and taken away eighty-six degrees of longitude from the actual distance between the Canary Islands and Cathay. If Columbus had not accepted these opinions, he might well have shrunk from an undertaking so vast as that of traversing the immense breadth of unknown space between Spain and Japan.

But the failure of Columbus, while it might have delayed, would not have prevented, the discovery and settlement of America within a short period of time. The thirst for adventure was abroad, the compass and the quadrant gave to the seaman the means of navigating the ocean on certain paths without needing to keep the land in sight. The last half of the fifteenth and the first half of the sixteenth centuries was the peculiar epoch of human energy and enterprise directed to and concentrated upon the field of maritime discovery, just as the next hundred years was peculiarly the period of colonization and settlement in the new lands. A sudden "new sense," in the happy phrase of Humboldt, was developed in that interval for the appreciation of the grand and the boundless. Even if "*Christophorus quidam, vir Ligur*," as the great explorer is termed in Peter Martyr's correspondence, had not attained to our shores, there was "a track of fruitful germs" of discovery and anticipations of America which would not have been neglected under any circumstances. "The dreamy land of physical myths" had showed the receding of shores of unknown continents to the eyes of many successive generations, hungry for new sources of wealth and luxury and filled with yearnings for new and untrodden lands, new paths of adventure and romance. The bosom of the unknown ocean teemed with the most desirable images that come in dreams. It contained the philosopher's paradise of Atlantis, the blissful havens of St. Brandon, the realm of gold and pearls and diamonds, where the fountains bubbled with the sparkling waters of perpetual youth. Here were the Hesperides, the isles of the blessed, where golden apples grew on rippling trees. In these regions the dim light of the traditionary memory just caught gleams of the shrine of St. Thomas the apostle, or saw the marble palaces and great bronze gates of Prester John's city and kingdom in the wilderness.

There was a spirit ripening in these times which would have led men abroad to search for the improbable and the impossible, if nothing more substantial had offered. But there was evidence of land beyond the seas which did not need to be corroborated by the dreams of poets and the speculations of philosophers. Discovery had outrun imagination already. The narrative of Marco Polo far exceeded in splendor the most exaggerated accounts by the ancients of the wealth and wonders of India. The Azores, the Canary Islands, and Madeira were fitting outposts of an American paradise, so bright were their skies, so soft and balmy their airs of perpetual spring. The ardent imagination and keen, instructed intellect of Prince Henry of Portugal[2] never formed such a warm dream of India

[1] The first accurate guess at the true proportions and extent of the North American continental mass is found in Castañeda's "Relations," one of the narratives of Coronado's march. Speaking of the Indian tribes north of the Rio Grande, and whom he thinks to have come from "East India," he says, "According to the route they followed they must have come from the extremity of the Eastern India, and from a very unknown region, which, according to the conformation of the coast, would be situated far in the interior of the land betwixt China and Norway. *There must, in fact, be an immense distance from one sea to the other*, according to the form of the coast as it has been discovered by Capt. Villalobos, who took that direction in seeking for China. The same occurs when we follow the coast of Florida; it always approaches Norway up to the point where '*des boccalaos*' (or codfish) is obtained."—*Smithsonian Report*, 1869: *Paper of Gen. J. H. Simpson on Coronado's March.*

[2] He inherited his brains and his tendency to ocean-paths from his mother, Philippa of Lancaster, sister of Henry IV. of England. He was "a prince devoted to lofty enterprise and

as is presented in the glowing stanzas of Camoens' "Os Lusiados," and wherever discovery was pushed the real exceeded the ideal. For that matter, Mexico and Peru were more magnificent than the Cathay which Columbus sought, and the gold-bearing kingdoms of Theguaio and Quivira which Marquette, Joliet, Hennepin, and La Salle aimed at, the seven cities of Cibola which Coronado strove to attain, could never have proved half so rich in mineral wealth as California and Nevada turn out to be. The Northmen had discovered Greenland, Labrador, and Maine and Massachusetts, as Columbus learned when he made his voyage to Thule. The actual Sargasso Sea in the angle of the Cape Verde, Azores, and Canary Islands may have easily led to the belief in St. Brandon and the island of the Seven Cities, and the bard Meredith ap Griffith, who died in 1477, certainly reported the voyages to a new land of the Welsh prince, Madoc, whether those voyages were ever made or not. It is even claimed by French writers that in 1488, four years before Columbus undertook his voyage from Palos, Cousin, a seaman of Dieppe, was blown westward from the coast of Africa to the shores of a new, unknown continent, in which he saw the mouth of a great river. One of his seamen was a Pinzon, who mutinied, was dismissed from the maritime service of Dieppe, and went to Spain, where he met Columbus, and accompanied him on his first voyage.[1]

Be this as it may, we know that Christopher Columbus reached the Western Continent in 1492, and that John and Sebastian Cabot, sailing under the flag of King Henry VII. of England, first discovered Newfoundland, Labrador, and the main-land in 1497. Parkman is inclined to believe that the French fishermen of Dieppe, Malines, Harfleur, St. Jean de Luz, and other places along the coast of France—Normans, Bretons, and Basques—had a cod-fishery on the banks of Newfoundland anterior to Cabot's voyage, but no accounts of them are known of an earlier date than that given by Jean Parmentier, of Dieppe.[2] Parmentier states that the French fishermen were at the Banks in 1504. It is a curious fact, in reviewing the scene of the discoveries and the ocean adventures which distinguish the latter part of the fifteenth and the first half of the sixteenth centuries, that the French, the most chivalrous people of Europe, and at that period scarcely yet emancipated from the sort of religious enthusiasm which led to the crusades, should have been the first of the European nations to utilize the newly acquired acquaintance with the Western Continent for the comparatively humble purposes of the fisheries, colonization, and legitimate trade. They were not dazzled with the splendor of imperial conquest such as sent hosts of Spanish adventurers abroad in the train of the successors of Columbus, Cortez, Pizarro, Ponce de Leon, Pamfilo Narvaez, De Soto, and others. On the contrary, it was the Norman fishers, the descendants of the followers of Rollo the sea-rover, the hardy Biscayan coastmen of Breton and Basque blood, who first planted the white standard of France and erected the symbol of the cross above their fish-drying sheds on the coasts of Newfoundland, Labrador, Nova Scotia, and the desolate islands in the Gulf of St. Lawrence. France has lost all her other possessions in North America, but the islands of St. Pierre and Miquelon, on the coast of Newfoundland, where probably the French fishermen landed very early in the sixteenth century, are still retained by that country for the fishery uses to which their convenient shores were originally set apart. It was these fishers from the debouches of the Adour, the Garonne, the Loire, the Seine, and the Somme, these hardy navigators who had been taught to despise the perils and discount the mysteries of the ocean by the rude buffets of the waves of the British Channel and the uncertain tides and currents of all the French coast, from the Bassin d'Archarchon and the Pertuis of La Rochelle to the chalk bluffs of Boulogne, who were the predecessors of Jacques Cartier and Samuel de Champlain. The bold promontory of Finisterre points westward with singular emphasis, and the experienced sailors of Dieppe, St. Malo, Morlaix, and Brest would not dread to encounter the difficult navigation of the Gulf of St. Lawrence. Cape Breton was named by these sailors at least as early as any part of our continent has been named by Europeans, and the French were the originators of the American fur trade as well as its most successful prosecutors. Wherever the French landed in America it was to settle and improve, not conquer and despoil, and they

acts of generous spirit," whose motto was "The talent to do good." He established a naval college, founded an observatory at Sagres, improved maps and charts, educated navigators, and prepared the way for the prosecution of the route to India *via* Cape of Good Hope.

[1] Parkman, "Pioneers of France in America," where the subject is discussed with much reading. Estancelin, says Parkman, has been unable to verify the Dieppe legend, but there is nothing improbable in a vessel being blown from the coast of Africa across to the coast of Brazil. The trouble is that one navigator's success leads to the springing up of a thousand counter-claims of discovery, and the knowledge of this propensity will always throw a shadow of suspicion upon any *ex post facto* pretension to priority.

[2] The claim rests upon the fact that Cabot gave the name of Baccalaos, as the Indian word for cod-fish, to the coast of Labrador, stating that it was the native name, and that *baccalaos* is Basque for cod fish.

were the only foreign dwellers upon American soil who won the esteem, the confidence, and the affection of the native tribes, who coalesced with them and did not poison and destroy them by their contact.

If the Cabots undoubtedly discovered the shores of our continent and main-land to the advantage of England, it is certain that the French began their settlements upon our coasts much earlier than the English, and it is probable that there were many informal settlements, landings made, and fish-houses planted by seamen and individuals, without government support or sanction, long anterior to the embarkation of Cartier. The language of Postel, as quoted by Lescarbot,[1] would seem to be conclusive upon this point: "*Terra hæc ob lucrosissimam piscationis utilitatem summa litterarum memoria a Gallis adiri solita, et ante mille sexcentos annos frequentari solita est.*" This would not imply voyages of discovery or search, but the frequent passages of vessels in an established traffic. We know, from the contemporary chronicles, that in 1517 fifty vessels, under the French, Spanish, and Portuguese flags, were at one and the same time engaged in the fisheries upon the cod-banks of Newfoundland, and it is recorded that on Aug. 3, 1527, more than a hundred years before Lord Baltimore attempted to plant his colony of Avalon in Newfoundland, there were in the Bay of St. John eleven sail of Norman vessels, one Breton, and two Portuguese. A business of this magnitude is not built up in a day. Cartier, when he first came out in 1534, found that the bays and capes of Newfoundland had already been named by the French voyagers who preceded him. Nearly all these names are still retained, to bear witness in favor of the French claims to priority in navigating along that part of the continent, and they prove, moreover, that the French did not simply touch at, but circumnavigated, the island. If some one familiar with the family histories of the French fishermen of Normandy, Brittany, and Gascony were carefully to spell out the names upon the map of Newfoundland, he would perhaps establish many dates which are now uncertain. The bays of Pistolet, Griquet, Lemaire, La Poile, and Ingrenechoix, and such names as Broyle, Renowes, Croc, Tolinquet, La Hune, Barachais, Fogo, Trepassey, Cannaigre, etc., must reflect the names, in some measure, of the fishermen who discovered them. In the voyages compiled by Ramusio, we find that these hardy sailors, in exploring these perilous and sequestered seas, discovered a group of islands to the north of Newfoundland, which they fancied were the abodes of fiends, and which they called *les îles des demons*, "*pour autant que les Demons y font terrible tintamarre*," frightful with the inarticulate clâmor of strange human voices, shrieks, yells, and cries such as might burst forth in the orgies of the imps of Satan or from the damned in the extremity of torture. The ignorant fishermen, unblenching in presence of natural dangers, shrunk appalled from these supernatural regions, nor did they venture into the mountains of Labrador, which were fabled to be the habitation of dragons and griffins, and to harbor all the strange creations of faery myth in the depths of their antres vast and cavcrns horrible. But, for the rest, wherever a ship could go they pushed their little barks. Denis, of Harfleur, explored the Gulf of St. Lawrence as early as 1506, and two years later Aubert, a navigator of Dieppe, completed his work. Baron de Lery, in 1518, made an unsuccessful attempt to settle on the bleak and perilous Sable Island, and the cattle which he landed, the descendants of which are still to be found there in great numbers, proved that he intended his settlement to be a permanent one and the nucleus of a colony.

The claim of England to all the territory of North America north of Cape Hatteras rested upon the voyages of discovery made by John Cabot and his son Sebastian in 1497 and 1498. This claim covered, and eventually was enforced against, the territories of New France and New Netherland, though the energies of England in that direction did not begin to be put forth until the reigns of Queen Elizabeth and her successor, when English ships swarmed every sea in pursuit of the wealth-bearing galleons of Spain. Cabot had a commission under the great seal of England, empowering him and his three sons, their heirs, and their deputies to sail into the eastern, western, or northern sea in search of islands, provinces, or regions hitherto unseen by Christian people; "to affix the banners of England on city, island, or continent, and, as vassals of the English crown, to possess and occupy the territories that might be found."[2] Under this patent John Cabot erected a cross, with the flags of England and the republic of Venice, upon the peninsula of Cape Cod in 1497, and in 1498, the same year that Vasco de Gama reached Hindostan by the way of the Cape of Good Hope, and Columbus touched the shores of South America and found the mouth of the Orinoco, Cabot's son Sebastian sailed into the Arctic seas as far as the icebergs would permit him to go, coasted Newfoundland, and continued his voyage along the American coast as far as the

[1] Parkman, Early French Adventure.

[2] Bancroft, vol. i. chap. i.

latitude of Gibraltar. This voyage is described by the eager chronicler Peter Martyr, who, from his vantage ground in Spain, sent to the Pope and the other sovereigns of Europe a series of regular bulletins, reporting the daily progress of adventure and discovery. The spirit of the age and its fructifying curiosity inspired Peter Martyr in an intense degree. "Each day," he wrote, "brings us new wonders from a new world, from the Western antipodes which a certain Genoese traveler has discovered. Our friend Pomponius Lætus could scarcely restrain his tears of joy when I communicated to him the first accounts of so unexpected an event. What aliment more delicious than such tidings can be set before an ingenious mind? It is like an accession of wealth to a miser. Our minds, soiled with vices, become meliorated by contemplating such glorious events." It was the news of the success of Columbus which impelled the Cabots to make their voyages; and their discoveries in turn, with the hope of shortening the distance to China by following routes lying in high latitudes, attracted many navigators to the northern seas.

In 1501 Manuel, King of Portugal, dispatched Gaspar Cortereal to these waters in search of a northwest passage to India. His two caravels explored seven or eight hundred miles of coast-line, as far north as the fiftieth parallel, when their progress was obstructed by the ice. He gave the name of Labrador to the black shores which still bear it,—a name of sombre omen, for it emphasizes the fact that this navigator kidnapped fifty of the natives, to sell them for slaves on his return.[1] Cortereal discovered the Gulf of St. Lawrence, and so thoroughly identified himself with the country that in old Portuguese maps the coast of the main-land opposite Newfoundland is named *Terra Cortereälis*. He undertook a second voyage, from which he never returned, and, though search was made for him, no vestige of vessels or crew was ever found. The Portuguese did not press their explorations farther in this direction. The treasures and spices of the tropics had much more attraction for them and the Spaniards than they found in furs, codfish, and whale oil. In fact, none but the French fishermen thought it worth their while to loiter about these uninviting, iron-bound coasts.[2]

The bull of Pope Alexander the Sixth, which gave to Spain all the new territory discovered west of a meridian drawn through a point one hundred leagues west of the Azores, and confirmed to Portugal all the new territory found east of it, was ignored by the English and resented by the French. Francis I., the chevalier monarch of that country, retorted with animation, "What, shall the kings of Spain and Portugal divide all America between them, without suffering me to take a share as their brother? I would fain see the article in Adam's will that bequeaths that vast inheritance to them." Francis, more of a knight-errant than a king, and more of an adventurer than a true paladin, was emulous of every sort of glory which his brother-monarchs achieved. He patronized art and literature, just as he made war, to increase his *éclat*, and he equipped the Florentine navigator, Giovanni de Verrazzano, for a voyage of discovery and exploration and to search for the northern passage to India, because he coveted the wealth and the fame that Charles V., his hated rival, was earning in the New World. Repeated efforts have been made to disprove the genuineness of Verrazzano's discoveries, or rather the account of them, as contained in his letter to King Francis, of which Ramusio's collection of voyages contains an abridgment. These efforts have created a doubt, but have not discredited Verrazzano, it would seem, among those who have examined into the facts and are acquainted with all the circumstances.[3] Verrazzano sailed from Dieppe towards the

[1] "It has been conjectured that the name *Terra de Laborador* was given to this coast by the Portuguese slave merchants on account of the admirable qualities of the natives as laborers."—*Picture of Quebec.*

[2] "Les demandes ordinaires qu'on fait sont, 'Y a-t-il des trésors? Y a-t-il de l'or et de l'argent?' Et personne ne demande, 'Ces peuples là sont ils disposés à entendre la doctrine Chretienne?' Et quant aux mines, il y en a vraiment, mais il les faut fouiller avec industrie, labeur, et patience. La plus belle mine que je sache, c'est du bled et du vin, avec la nourriture du bestial; qui a de ceci, il a de l'argent, et des mines, nous n'en vivons point."—*Marc L'Escarbot*, quoted from "The Conquest of Canada, by the author of Hochelaga," a work of much research and a mine of collateral learning.

[3] Judge Henry C. Murphy, of Brooklyn (dead since this text was written), heads the list of the skeptics, and has published a monograph on the subject. But Parkman has a copy of the MS. (the original is in the Magliabecchian library, at Florence) of Verrazzano's letter, from which Ramusio prepared the abridgment which he published, and Mr. George W. Greene has unearthed in Florence another letter giving an independent corroborating account of the voyage—"*Fernando Carli a suo Padre a Firenze.*" Besides this, according to Parkman, there is in the Roman Propaganda a map made in 1529, by Hieronymus de Verrazzano, brother of the navigator, on which Canada and this country are designated as "*Verrazzana, sive Nova Gallia, quale discopri, 5 anni fa Giovanni da Verazzano Fiorentino.*" ("Verrazzana, or New France, which was discovered 5 years since by John da Verrazzano, of Florence.") The navigator was a native of Florence, and one of an ancient family eminent in the annals of that nursery of great men. What became of the navigator after his return to Dieppe, where he wrote his narrative, is not ascertained. He was earnestly desirous to return to the new land he had discovered, found a colony, and convert the natives to Christianity, but the wars and disasters of France at that time prevented the king from giving him further encouragement. Shea, following Barcia, says that

end of 1523, with four ships, but a storm drove them back, and when he finally started on the voyage across the ocean from Madeira, in January, 1524, he had but a single caravel, the "Dolphin." In this vessel he crossed the Atlantic in forty-nine days, first nearing the shore not far from the mouth of Cape Fear River, North Carolina, "a newe land, never before seen of any man, either ancient or modern." The inhabitants crowded to the shore to welcome the strangers and treated them with hospitality and friendship, which they requited by kidnapping a terrified infant to carry back with them, we suppose as a curiosity to present to the king. The vessel followed the line of the coast north and eastward, putting into New York Bay and the Harbor of Newport, both of which can be identified from the navigator's description. Thence they proceeded eastward along the New England coast, finding the nations hostile and mistrustful, though anxious to trade,—evidence enough that they had encountered white men before. When he had sailed as far to the north as Newfoundland, Verrazzano's provisions gave out, and he steered eastward for France. His narrative is the earliest description extant of the shores of the United States.

The next voyager to this coast of whom we have any account was a Spaniard, Stefano Gomez, who, after sailing to Cuba and Florida in 1525, steered northward in quest of the passage to India. He reached Cape Race, in Newfoundland, and is supposed to have entered the Gulf of St. Lawrence, and given its name to Canada.[1]

France did not at once follow up the explorations of Verrazzano, but they were not forgotten. The kingdom was in a wretched condition at the time of the navigator's return. It was at war with Spain and Germany; it was invaded by the army of condottieri under the traitor Constable de Bourbon, and Francis was preparing for the fatal expedition to Italy which was to result in the battle of Pavia, the rout of the French chivalry, and the captivity of the king. As Raynal observed, "Intestine troubles discouraged the people from prosecuting extensive foreign commerce, and checked all aspiration for founding kingdoms in the two Indies. . . . The nation, moreover, was always negotiating, as it were, with its sovereign. The royal authority was really unlimited, though not recognized as such by the laws; the nation, though often too independent in act, yet had no legal guarantees for its liberties. The government, occupied alone with the task of subjugating the people, took no care of the interests of the commonwealth." But in 1530 France had a breathing spell; the Treaty of Cambrai gave it a truce of three years, commonly called the *Paix des Dames*, the treaty having been signed in 1529. The grand admiral of the kingdom, the monarch's companion in arms, Philippe de Brion-Chabot, took advantage of it to remind Francis of the

it is almost certain that he was hanged by the Spaniards at Puerto del Pico as a pirate, in the course of a subsequent voyage, which he probably made in the service of Henry VIII. of England. Ramusio affirms that, on a second voyage, he was killed and eaten by savages. Parkman is inclined to believe, from contemporary allusions, that he was living in Rome in 1537, but Le Clerc, in his "Etablissement de la Foy," says, "He had nearly the same fate as Moses; he merely saw that vast country promising him immense wealth; he proposed to enter it, to make a second voyage and considerable establishments, but death, which surprised him on the way, gave him no time to accomplish his designs." In the Chronological Memoirs of Dieppe, Verrazzano is put down as one of the companions of Aubert in his voyage to Newfoundland in 1512.

[1] "An ancient Castilian tradition existed that the Spaniards visited these coasts before the French, and having perceived no appearance of mines or riches, they exclaimed frequently, '*Aca nada*,' ('Here is nothing.') The natives caught up the sound, and, when other Europeans arrived, repeated it to them. The strangers concluded that these words were a designation, and from that time this magnificent country bore the name of CANADA."—*The Conquest of Canada*, vol. i. p. 39. Hennepin, in his *Nouvelle Description*, declares that the Spaniards, finding nothing to gratify their thirst for gold, called the land they touched at "*El Capo di Nada*" ("Cape Nothing"), of which the present name is a corruption. Charlevoix, however, derives the name from the Iroquois word *Kanata*, "*qui se prononce Canada, et signifie un amas de cabanes*,"—a collection of cabins. If this be so—and it is very probable—Canada and Andastes and Conestoga, the aboriginal name of the Susquehanna Indians, have the same root. Duponceau, in a paper published in the Transactions of the Philosophical Society of Philadelphia, notes the fact that Brandt, the well-known Indian chief, in his translation of the Gospel of St. Mark into the Mohawk tongue, always gives the word Canada as the equivalent for village: so that each tribe of Indians in the vicinity of the St. Lawrence may have had its own particular Canada. Cartier called his first settlement "New France," imitating Verrazzano; the St. Lawrence he calls "the river of Hochelaga," or "the great river of Canada," and the name *Canada* he confines to a district extending from the Isle des Coudres to Quebec. The country below he names *Saguenay*; that above, *Hochelaga*. Lescarbot gives the name of Canada to the borders of the St. Lawrence from Montreal to the Gulf. In the map of Ortelius, 1572, *Canada* lies above the river Saguenay; in this map Labrador is still called *Terra Corterealis*, and Florida extends to the Mississippi River, while New France includes both North and South America. Parkman, from whom these particulars are derived, thinks that the derivation of Canada is undoubtedly Indian, not Spanish. "In the vocabulary of the language of Hochelaga, appended to the journal of Cartier's second voyage, *Canada* is set down as the word for a town or village: '*Ils appellent une ville, Canada.*' It bears the same meaning in the Mohawk tongue. Both languages are dialects of the Iroquois. Lescarbot affirms that Canada is simply an Indian proper name, of which it is vain to seek a meaning. Belleforest also calls it an Indian word, but translates it '*Terre*,' as does also Thevet."—*Parkman, Pioneers of France in the New World.*

immense territorial acquisitions of Spain and Portugal in the New World, and the necessity to imitate these easy and productive conquests. Chabot was one of the king's chief favorites,—a hero who shines in the chevaleresque pages of the Bon Sieur de Brantôme, a noble jouster and tennis-player, but not merely a carpet-knight. He was Governor of Normandy and Brittany, and knew perhaps as much about the hardy mariners and fishermen of France's iron-bound coast as he did of the belles-dames of the court and the mistresses of the king. Chabot inspired the king to begin an establishment in the regions discovered by Verrazzano, and found him a fit expert to carry out the plan.

This agent was Jacques Cartier, a mariner of the old Breton town of St. Malo. Cartier's portrait is preserved; it is the face of a man of acute intelligence, indomitable will, and the most intense earnestness of purpose; keen as a falcon, and brave as only a Breton can be. Cartier was born in 1494; he was forty years old,—just the age to plan and to carry out a great design; and he lived in a town filled with people who were familiar with sea-adventure and ready to undertake any sort of enterprise. Little is known about his personal history. He was born, lived, and died in St. Malo. He married there, and both he and his wife were devout Catholics, attendants upon the services in the cathedral. In this venerable edifice Cartier always confessed and attended mass when he set out upon a voyage, and had a special service of thanksgiving when he returned. Before he died he founded an "obit" service there to promote the repose of his soul. Under the directions of Chabot, Cartier was furnished with two vessels of not over sixty tons each, and crews numbering one hundred and twenty-two men all told. When the preparations for the expedition were making, it is said that the kings of Spain and Portugal both protested against it as an invasion of their territorial rights,[1] but this is by no means probable. Cartier sailed from St. Malo, April 26, 1534,[2] armed with a commission from the French king which gave him very full authority. Twenty days afterwards he reached the coast of Newfoundland; thence, by the Straits of Belle Isle, he crossed to the mainland, entered the Gulf of Chaleurs, erected a cross at Gaspé, and, hot in pursuit of the direct route to China, ascended the St. Lawrence to Anticosti. Everywhere he found capes, islands, and rivers named by his French predecessors. This first voyage of Cartier's was only preliminary. He coasted the sea-margin of Newfoundland and Labrador, gave its name to the Bay des Chaleurs, and had much intercourse with the natives, two of whom he took home with him when he returned to France. He describes the Indians as being well-built ("*uomini d'assai bella vita e grandezza*"), and wearing their hair tied up over their heads, like bundles of hay, quaintly interlaced with feathers.[3] He took possession of the country for the French king when he erected his cross in Gaspé Bay, persuading the Indians that the formality was a religious ceremony,—a fiction which it seems did not impose upon their chief.

Cartier, after reaching the mouth of the St. Lawrence on the 15th of August, set sail for France again, the weather beginning to be stormy. He arrived in St. Malo on September 5th, and his report of the voyage and its results was very well received. The navigator had a friend and active patron in the Vice-Admiral of France, Charles de Moncy, Sieur de Maillerie. Moncy had the ear of Chabot, and is supposed to have introduced Cartier to him. Through Maillerie's influence, Cartier's commission was renewed, and a much larger equipment given him for the next voyage. He had three vessels assigned him, with one hundred and ten men; and several gentlemen of birth volunteered to accompany him, including Claude de Pontbriand and Charles de la Pommeraye. Cartier's vessel, "La Grande Hermine," the largest in the fleet, did not exceed one hundred and ten tons burthen; the other vessels were commanded by Captain Gillaume le Breton and Marc Jalobert. When the expedition was ready to sail, the men all marched in procession, with Cartier at their head, to the cathedral, confessed, heard mass, and invoked the blessing of Heaven on their undertaking, after which, on Whitsunday, May 19, 1535, they went to sea. The voyage was tedious; July had come before Cartier reached Newfoundland, but thence it was an easy stretch to the Gulf and River St. Lawrence. Up the latter Cartier sailed two hundred leagues, to the Isle d'Orléans. The Indians whom he had taken to France on the previous voyage returned with him, and were of great service as guides, pilots, and interpreters. They procured supplies and promoted intercourse between the French and the savages. Cartier through them made the acquaintance and secured the friendship of Dannacona, the chief of Stadaconé, the basin of Quebec; and here it was that, the season being far advanced, the bold navigator determined to winter. Stadaconé,

[1] F. X. Garneau, L'Histoire du Canada.

[2] Parkman, Ramusio, Charlevoix, L'Escarbot.

[3] The first two voyages of Cartier are translated in the third volume of Ramusio; L'Escarbot also publishes them in his History. They are written in the third person, and do not seem to be the navigator's own production.

however, important as it was, was not the chief town of the country. That was called Hochelaga, sixty leagues farther up the river, and Cartier determined to visit the King of Hochelaga, in spite of the opposition of Dannacona and the many great bugbears he contrived to prevent the voyage. The expedition was successfully carried out, and thus Cartier was the earliest white man on the site of Montreal. A thousand Indians thronged the shore, dancing, shouting, and singing songs of welcome, and the visitors were escorted in great state to the Indian village of fifty wooden houses, where the decrepit chief of Hochelaga received and entertained them. Returning to Quebec, Cartier completed a fort or stockade which his crews had built in his absence, and the ships were moored alongside of it. The winter came in with severity, but, as the Indians did not seem to mind it, it was probably not an unusually bitter winter; but the French fared very badly. The scurvy broke out among them in a malignant form in December, and soon there were not enough sound persons left to wait on those who were ill. Twenty-six men—twenty-three and one-half per cent.—died before April. An Indian showed Cartier a species of evergreen, the leaves of which were a specific against scurvy, and the survivors of the crew were brought around and restored to health by copious draughts of a decoction made of the leaves of this fir or spruce.

As soon as navigation permitted, Cartier set sail for France, and once more cast anchor in the harbor of St. Malo, on July 8, 1536. He had made great discoveries, but not of the sort that are attractive to kings. He had found a rigorous climate, a savage people, but no gold, spices, nor precious stones. But, on the other hand, the Indians were full of tales of wonder, such as suited the appetite of adventurers: they spoke of a land of gold and rubies, of a nation of whites, of people who lived without food, and others who went through life upon one leg. Cartier did not discredit these stories; but he thought it would be better for the king and court to learn them from the fountain-head, and consequently, when he was ready to sail home, he had carried off Dannacona and his chiefs and interpreters, kidnapping them in return for the many services they had done him and his crew. The savages were treated very kindly, however, and soon became reconciled to the outrageous captivity. The returned voyagers had not very pleasing tales to tell of "New France," nor were the king and his ministers in a mood or situation to encourage further adventures in that direction. Chabot was in disgrace and the poison which the King had sipped at the well of his pleasures was already taking hold of his system. Cartier, however, still found friends and supporters such as generally rally to the aid of men so earnest and sincere. Jean François de la Roque, Sieur de Roberval in Picardy, determined to employ him further, and aid him in occupying and colonizing the new countries. Roberval, a man of rank and position, and distinguished as a soldier, procured a patent from the king, creating him lieutenant-general and viceroy in Canada, Hochelaga, Saguenay, Newfoundland, Belle Isle, Carpunt, Labrador, the Great Bay, and Baccalaos and Lord of Norembega, and giving him authority to discover and settle in New France and convert the Indians. Cartier was made captain-general of the expedition, and a grant from the royal treasury enabled him to fit out five vessels. The profits of the voyage were to be divided, one-third for expenses, and the same to the king and the adventurers. To make up his crews and secure his quota of colonists, Cartier was empowered to rake the prisons and recruit among the malefactors of every grade.[1] The Spanish king watched the preparations for the expedition with great jealousy. Its destination was uncertain, and reinforcements were dispatched to Cuba, Hispaniola, and the other colonies of Spain, while the King of Portugal was invited to join with Charles in taking possession of Newfoundland.

Cartier sailed for New France on May 23, 1541, and reached Quebec safely on August 23d. He selected a site for settlement three leagues farther up the river than Quebec, and built a fort on the crest of Cape Rouge, calling the station Charlesbourg Royal. Roberval did not come out with his vessels until 1542, and while he was lying in the roads of St. John's, Newfoundland, resting after a tedious voyage across the ocean, Cartier and his ships entered the harbor.

[1] Cartier's commission from the king, dated 17th October, 1540, speaks of the Indians as "*gens sauvages, vivant sans connoissance de Dieu et sans usage de raison,*" and directs that they shall be "instructed in the love and fear of God, and of his holy law and the Christian doctrine." It describes Canada and Hochelaga as "*faisant un bout de l'Asie du côté de l'Occident.*" Cartier is to be sent into this attractive land and among its well-shaped people, to make their acquaintance and dwell among them if necessary, in order to "*faire chose agréable à Dieu, vôtre Créateur et Rédempteur, et que soit à l'augmentation de son saint et sacré nom, et de Nôtre Mère Sainte Eglise Catholique, de laquelle nous sommes dits et nommés premier fils.*" The provosts, bailiffs, seneschals, and other officers of cities are directed to deliver to Cartier or his deputies, all prisoners, no matter what crimes they may be accused of, except treason and coining false money, and the captain-general is empowered to select from these prisoners as many as will suit his purposes for the expedition. The commission shows great confidence in Cartier and his "*sens, suffisance, loyauté, prud'hommie, hardiesse, grande diligence et bonne expérience,*" and gives him a liberal discretion.

Cartier had broken up the colony and abandoned New France. The kidnapping of Dannacona and his chiefs, and their subsequent deaths, had had its natural result, and the natives were suspicious or hostile from Hochelaga all the way down the river. This fact, the hardships of winter, discontent and disappointment, and probably failing health also, had utterly discouraged Cartier and his men. Roberval, amazed and indignant, ordered the party to return to Quebec, but the navigator with his vessels silently weighed anchor in the night and made all sail for France. This desertion broke up all Roberval's arrangements, but he still determined to proceed on his expedition, sailed to Cape Rouge, fortified himself strongly, and wintered there miserably, losing fifty men by the scurvy, and having his whole force disorganized by disease, idleness, and lax discipline. Roberval, after conducting some explorations, finally withdrew his colony and returned to France in 1543, and then for a time all idea of founding settlements in New France was abandoned. After the death of Francis, Roberval, in 1549, sailed again for the St. Lawrence, accompanied by his brother and a band of adventurers; but they were never heard of again.[1] With Roberval, to use Parkman's phrase, "closes the prelude of the French-American drama." The curtain did not rise again until 1604–7, and then on a very different scene.

Meanwhile, a strange series of events, not without their influence upon the destinies of the yet unborn city of St. Louis, were being acted out in Florida by the Spaniards and the French. The Spaniards were a very different class of adventurers from the French. Their long wars with the infidels of Granada had filled them with romantic daring and an exalted religious zeal. These wars had set free great numbers of men-at-arms equally athirst for glory and for gold. But it is no more than justice to the *Conquistadores* to say of them, likewise, that they esteemed great undertakings because they *were* great. The age, as Humboldt has remarked, with its overwrought excitements and passions and violence, had a tendency to promote individuality of character, always a prominent trait in the Spaniard, who was then "the freest man in Europe," free in person and free in institutions likewise.[2] It was an age of cruelty, and the Spaniard was "a man of blood," and used to reprisals and barbarous punishments. But Humboldt defends the Conquistadores from the reproach of brutal and sordid instincts repeatedly cast upon them.[3] Balboa, Cortez, Davila, Ponce de Leon, were full of the spirit of romantic adventure and that heroic daring which essays all the perils of the unknown for the sake of glory singly.

Ponce de Leon and Ferdinando de Soto were types of this class of lofty aspirants. The former discovered Florida, the latter the Mississippi, each sacrificing ease, comfort, wealth, and luxury in the pursuit of harassing adventures. They were pirates and scarovers with the valor of chevaliers and the enthusiasm of crusaders. Juan Ponce de Leon was a veteran whom the laurels of other discoverers would not suffer to rest, even when the infirmities of age pressed heavily upon him. His youth had been schooled in war; in manhood he had accompanied Columbus on his second voyage, and was given command of a province in Hispaniola, from whence he cast wistful glances across to still unconquered Porto Rico. Finally he passed over to that island, occupied it, and, after an interval of quiet, was forced to desolate it with fire and sword in order to subdue the Indians in arms against his strong hand and stern rule. De Leon now heard of a land far to the north abounding in gold, gems, and flowers, possessing, moreover, a river or a fountain which had the extraordinary quality of restoring to youth whosoever should bathe in it. It was the vision of alchemy brought within reach and touch. Ponce de Leon believed the fables told him,—he was not singular in that, for Peter Martyr had faith in this fountain too,—and got up an expedition for the conquest of this new and wonderful country. He sailed from Porto Rico in March, 1512, and on Palm Sunday landed on a soil which the natives called Cautio, but which he named Florida, in commemoration of the day. Juan Ponce took possession of the country in the name of Spain, and explored it in various directions, but without suspecting that it was a part of the main-land. He did not find either gold or the Fountain of Youth, but he encountered a most determined hostility on the part of the savages, and was much vexed and baffled by contrary winds and currents. At last he returned to Spain, and was killed not long afterwards in a raid against the fierce Carib Indians.

[1] This is the story of Le Clerc; but Thevet, who, as Parkman says, ought to know, relates that Roberval was assassinated at night in the heart of Paris.

[2] "The Spaniard was the freest man in Europe: the various powers of the state, still unbroken, maintained on each other that salutary check which prevents all tyranny. The time was yet when the tutor of the heir-apparent of the Spanish crown could inculcate on his pupil the doctrine that a tyrant might be put to death; while, at the same time, the people were taught that religion required their obedience to the ruling powers, with submission and support from which only extreme cases could absolve them."—*J. G. Shea: History of the Discovery of the Mississippi River.*

[3] Cosmos, ii. 648.

The success of Cortez in conquering Mexico directed enterprise and adventure still more eagerly to the mainland. Florida, it was commonly thought, abounded in treasures equally with the country of the Aztecs. Pamphilo de Narvaez undertook in 1528 to conquer and colonize the peninsula, the external contour of which had been determined by the explorations of De Leon, Garay, and Vasquez de Ayllon. He landed on the Gulf coast, near Tampa Bay, and with three hundred men marched into the forest in search of the gold and booty which he had seen the followers of Cortez secure. Narvaez was as imprudent as he was greedy and avaricious, and disregarded the counsels of his experienced pilot, Miruelo, and his second in command, Alvar Nunez Cabeça de Vaca. The result was disaster. The Indians were deeply hostile in consequence of the slave-hunting atrocities of Ayllon and others, and they harassed Narvaez's line of march with incessant assault. His men sickened and perished; the horses gave out and were eaten; famine, storm, climate conspired against them; a wretched remnant reached the coast at last, and, embarking in crazy boats, tried to make their way around the curve of the Gulf to Tampico. Only four escaped the hazards of such a route, and these—Cabeza de Vaca, Dorantes, Castillo, and Estavanico (a negro slave from Barbary)—were made prisoners by the Indians. In passing around the Gulf from St. Mark's to Galveston, Cabeza had crossed the Mississippi River and tarried for an interval on an island in its mouth. He had no idea of the river's greatness, however, and his own woes would anyhow have prevented him from paying attention to geographical discoveries. He and his companions were six years in captivity to the Indians, during which time they acquired the language and studied the habits of the tribe. Then, escaping, Cabeza led his companions through Texas and New Mexico to the Pacific coast at the town of San Miguel. This wondrous journey took eighteen months to perform it, and the way-worn travelers secured immunity and consideration from the savages along the route by acting the part of "medicine men." They were received in Mexico like men raised up from the dead, and the strange countries and cities of which Cabeza had heard during the journey, and gave accounts in his simple narrative, led to two more romantic expeditions,—the march of Coronado in search of Cibola, and of Hernando de Soto in quest of the northern Peru, supposed to lie somewhere in the continent between the river Palmas and the Atlantic Ocean, and which Cabeza declared to be the richest country on the globe.

The march of Coronado to Cibola is one of the most daring and successful feats of exploration and adventure upon record. It is an anticipation of the toils and marches of Lewis and Clark, of Capt. Bonneville and Gen. Fremont in the heart of the unexplored American wilderness. Cabeza had brought home accounts, much exaggerated, of the adobe cities of the Zuni and Pueblo Indians, some of which he had seen in the course of his wanderings through New Mexico; and before Cabeza's return, an Indian slave in 1530 had excited the cupidity and curiosity of Nuño de Guzman, President of New Spain, by relating that, in his travels north of Mexico, he had seen cities as large as the Aztec capital; that there were seven of them, and they had streets which were occupied exclusively by workers in gold and silver. These cities, the Indian further related, were forty days distant, and the route to them lay through the desert.[1] Guzman planned an expedition, and started for Cibola at the head of four hundred Spaniards and twenty thousand Indians, but he was not able to proceed any farther than the province of Culiacan, which, however, he occupied and settled. Shortly afterwards his Taos Indians died, and Guzman was removed. His successor, however, the Viceroy Don Antonio de Mendoça, heard of the seven cities from Cabeza and his companions, all of their accounts being full of what seems to be studied exaggeration of the riches of the cities, their piles of lofty houses, and other strange features. Vasquez de Coronado was Governor of New Galicia at the time. The viceroy communicated to him what he had learned from Cabeza, and Coronado proceeded to Culiacan, accompanied by some Franciscan friars and the negro man Stephen, the companion of Cabeza, who volunteered to act as guide to the seven cities. Coronado sent him with the three Franciscan friars to Cibola, to bring him an account of the place. One of the friars was Marcos de Nica, whom Castañeda calls "theologian and priest." The negro, Stephen, was killed by the Indians of Cibola, but Father Mark came back with such a glowing account of the country —which, in fact, he and his companions had scarcely seen, much less examined—that the viceroy was induced to undertake an immediate expedition for its conquest, giving the command to Coronado, with the

[1] The story of Coronado's march has been told by Castañeda. The subject has been discussed at various times by Gallatin, Buckingham Smith, Shea, and others. The documents relating to it have been collected by Hakluyt and Ternaux-Compans, and the best paper on the history and route of the march is that by Brig.-Gen. J. H. Simpson, colonel of engineers, United States army, published in the Smithsonian Report for 1869. Gen. Simpson wrote the paper in Baltimore, having access to the libraries of the Peabody Institute and the Maryland Historical Society, as well as the papers and MSS. of the late Brantz Mayer.

rank of captain-general. The expedition, three hundred Spaniards and eight hundred Indians, started from Compostella, in New Galicia, on Easter-Monday, 1540, passing north through the desert of Sonora, Cuizona, and New Mexico, along the course of the Gila, and through the Pima Mountains, to the Zuni country. Cibola was found to be a poor communal fort built of adobe, and having no more than six hundred warriors, who bravely resisted, but in vain, the invasion of the Spaniards. They had no gold; their sole wealth consisted of corn, cotton stuff made by them, fowls, tanned leather, and dressed robes and furs. From this region Coronado passed on to the great canyon of the Colorado River, and met Comanche Indians, who told him of the bisons on the plains. Later, when they had crossed the Rio Grande, Coronado and his men encountered multitudinous droves of these animals, and killed great numbers of them. It was the opinion of Coronado and his chronicler, Castañeda, that the Rio Grande made such a wide detour to the eastward that it united its waters with the Mississippi (of which they had heard) before emptying into the Gulf of Mexico. The march of the expedition was extended northeastward across the headwaters of the Canadian River, across the Arkansas River to the neighborhood of what the Spaniards thought was a great city, Quivira, terminating just west of the Missouri River, midway between the Kansas and the Platte Rivers, near what is now Pawnee City, Neb. The return route was down the Colorado River and round the head of the Gulf of California. "Thus ended this great expedition, which," says Gen. Simpson, "for extent in distance traveled, duration in time, extending from the spring of 1540 to the summer of 1542, or more than two years, and the multiplicity of its co-operating branch explorations, equaled, if it did not exceed, any land expedition that has been undertaken in modern times."

Cabeza de Vaca appeared in Spain just about the time that Hernando de Soto was preparing an expedition for the conquest of Florida, leave to undertake which he had obtained from Charles V. De Soto had come to America with nothing but his sword, a penniless adventurer, but with a great reputation as a warrior. "When he led in the van of battle," says one of his biographers, "his charge was so powerful, so broad was the bloody passage which he carved out in the ranks of the enemy, that ten of his men-at-arms could with ease follow him abreast." He had joined Pizarro in the conquest of Peru, acquiring immense riches, which he spent lavishly in maintaining distinguished state at the court of Madrid. He was now Governor of the rich province of San Jago de Cuba, and married to a woman of great beauty, Isabella de Bobadilla, the daughter of De Soto's first commander, when he was serving in the ranks. But repose was not in the nature of such men; ambition and the greed for glory haunted him all his life, and he was now willing to expend all his wealth in the uncertain effort to carve out a contingent marquisate in Florida. The stories told by Cabeza de Vaca gave body to De Soto's unshaped plans, and created an enthusiasm in regard to Florida that brought great numbers of nobles, gentlemen, and soldiers to De Soto's banner.[1] In his train

[1] The "Gentleman of Elvas," who, with Louis Hernandez de Biedma, is recognized as the authentic historian of De Soto's expedition, relates that "Captain de Soto was the son of a squire of Xeres of Badajoz. He went into the Spanish Indies when Peter Arias of Avila was Governor of the West Indies, and there he was without anything else of his own, save his sword and target; and for his good qualities and valor, Peter Arias made him captain of a troop of horsemen, and by his commandment he went with Fernando Pizarro to the conquest of Peru, where (as many persons of credit reported, which were there present), as well at the taking of Atabalipa, Lord of Peru, as at the assault of the city of Cusco, and in all other places where they found resistance, wheresoever he was present, he passed all other captains and principal persons. For which cause, besides his part of the treasure of Atabalipa, he had a good share; whereby in time he gathered a hundred and four score thousand ducats together, with that which fell to his part; which he brought into Spain; whereof the Emperor borrowed a certain part, which he repaid again with sixty thousand reals of plate in the rents of the silks of Granada, and all the rest was delivered to him in the contractation house of Seville. He took servants, to wit, a gentleman usher, pages, a gentleman of the horse, a chamberlain, lackeys, and all other officers that the house of a noble may require. From Seville he went to the court, and in the court there accompanied him John Danusco of Seville and Lewis Moscoso d'Alvarado, Nuño de Touar, and John Rodriguez Lobillo. Except John Danusco, all the rest came with him from Peru; and every one of them brought fourteen or fifteen thousand ducats; all of them went well and costly appareled. And although Soto of his own nature was not liberal, yet because that was the first time that he was to show himself in the court, he spent frankly, and went accompanied with those which I have named, and with his servants, and many others which resorted unto him. He married with Donna Isabella de Bobadilla, daughter of Peter Arias of Avila, Earl of Punno in Rostro. The Emperor made him Governor of the Isle of Cuba, and Adelantado or President of Florida, with a title of marquis of certain part of the lands that he should conquer." This sketch of De Soto is curious, as illustrative of the Spanish character. The parvenu at court could only outshine the old hereditary nobles by lavish display and expenditure, and it was this which contributed as much as anything to foster the greed for gold which led the generation of Conquistadores into so many wild lands and desperate adventures and made them such severe taskmasters of the unfortunate Indians whom they had conquered. It was this delight in display and extravagant expenditure, moreover, which attracted to the new continent so many scions of the impoverished and decayed aristocracy both of France and Spain—a class represented by such men as Frontenac in Canada, De Vaudreuil and Kerlerec in Louisiana, and Ulloa and Casa Calvo in that province, and in St. Louis, its frontier town.

when he landed in the bay which he named Espiritu Santo, Florida, after a safe and pleasant passage from the place of rendezvous (the port of San Lucas de Barrameda), were twenty-two ecclesiastics and some gentlemen of the best blood in Spain,—Don Juan de Guzman, Pedro Calderon, a favorite soldier of Gonsalvo de Cordova, the "Great Captain" and the best judge of martial qualities that his country has ever produced, Vasconcellos de Silva, a Portuguese noble of distinguished family and bright personal fame, Nuno Touar, the Chevalier Bayard of his nation, and Moscoso de Alvarado, second only to De Soto himself. So many people of noble birth mustered for this expedition, says one of its historians (many of them having sold or mortgaged their estates in order to pay the cost of their equipments[1]), "that in St. Lucar many men of good account, which had sold their goods, remained behind for want of shipping, whereas for other known and rich countries they are wont to want men."

It was on Sunday, May 18, 1539, the day *De Pasca de Spiritu Santo* (Whitsunday), that the expedition reached the coast of Florida and the place of their landing, the port of Baya Honda, as Biedma calls Tampa Bay. Here six hundred and twenty men and two hundred and twenty-three horses were landed, as brilliant and gallant a body of soldiers as ever marched into the bosom of the repulsive wilderness. Juan Ortiz, a survivor of the party of Pamphilo de Narvaez, was found among the Indians, who had taken care of him for twelve years, teaching him their language and habits. He protested, however, that he knew nothing of the country, and was sent on to Cuba in the returning ships. De Soto now began his memorable march, which led him from Indian town to town, from tribe to tribe, from morass to river, and from canebrake to mountain forest, in pursuit of that illusory empire which he sought, until he had traversed the greater part of West Florida, Georgia, Alabama, and Mississippi. It is the practice of historians to emphasize the fact that Cabeza de Vaca crossed the Mississippi River without showing any consciousness, so far as his narrative is concerned, of having passed an unusually large stream. But it is probable that Cabeza was less reserved in his communications to De Soto, whom at one time he seems to have intended to accompany, declining in the end because not offered a position in the expedition proportionate to his conception of what he deserved. Anyhow, De Soto, in parting with his squadron when he finally left the coast after the capture of the town of the Apalaches, directed his fleet captain, Francisco Maldonado, to return to Havana, procure provisions, and meet him in six months from that date at the mouth of the great river Espiritu Santo.[2]

[1] Don Antono Osorio "dispossessed himself of sixty thousand reals of rent which he held of the church, and Francis Osorio of a town of vassals, which he had in the country of Campos," says the Portuguese chronicler. "Balthasar de Gallegos sold houses and vineyards, and rent corn, and ninety ranks of olive trees in the Xarafe of Seville." This unfortunate also took his wife with him.

[2] This seems to furnish indubitable evidence in favor of the conclusion that the mouth at least of the Mississippi was known at that time, and probably long before, to the Spanish navigators. It is not known precisely when the northern line of the coast of the Gulf of Mexico was explored; but the southern line had been pretty well determined before 1509, and it is not likely that the rest of the circuit would be long neglected by seamen who almost monthly made the traverse from Hayti and Cuba to Maricaibo. Tampico was a known port in 1520, and it was impossible for seamen to cross the discolored waters which the Mississippi pours into the Gulf many miles beyond its mouth without suspecting the existence of a great stream of fresh water similar to the Orinoco and the Amazon. John Gilmary Shea, in his admirable History of the Discovery of the Mississippi River, notes the fact that in an edition of Ptolemy printed at Venice (or Strasburg) in 1513, "the delta of a river corresponding to the Mississippi is traced upon it more distinctly than in the maps of the next century." The Gulf coast of Florida was thoroughly examined in 1518 by Garay, and in 1521, in a map drawn by an arbitrator to determine the pretensions of rival discoverers, the Mississippi was again indicated as having been discovered or mapped by Garay, and as bearing the name *Rio del Espiritu Santo* (River of the Holy Ghost), assigned to it by De Soto in his significant appointment with Maldonado. Brantz Mayer, in a manuscript note on the margin of this page of Shea's History, notes the fact that the Ptolemy map referred to is in the Peter Force Library, and he further suggests that the mouth of the river may have been interpolated subsequent to the date of the map, "as was the case with Ptolemy's, in which new maps were inserted as they came out from time to time." Mr. Mayer afterwards addressed a note to the *Historical Magazine* in which, without specifying his authorities, he says that "the Veruci Ptolemy of 1513 lays it down, or, at least, marks a river without a name, at the site of its embouchure. Orbus Typis, 1515; Piñeda's map, 1519; other Ptolemies, 1525; Cabeça de Vaca saw it in 1528. De Soto crossed it in 1541," etc. In regard to the various *names* of the Mississippi River, Mr. Mayer says in this memorandum (which bears date Oct. 15, 1857), "I remember to have seen in the course of my reading the following Indian, Spanish, and French names applied to the river Mississippi: and it may be well to record them in your magazine for preservation, and probably to be augmented in number by other students of American history:

"*Indian names.*—Mico, king of rivers; Mescha-Sibi-Mescha, great and Sibi river; Namasi-Sipou, fish river; Okimo-Chitto, great water-path—a Choctaw name; Misseessepe; Meactchassipi, old father of rivers (according to Du Pratz); Malbouchia, according to Iberville.

"*French.*—Rivière de St. Louis; Rivière de Colbert-Mississippi.

"*Spanish.*—Rio Grande; Rio Grande del Espiritu Santo; Rio de la Palisada; Rio de Chuchaqua."

To complete the list of Mr. Mayer, and make it more me

Coronado had reached the valley of the Mississippi on the western side, and crossed at least one of its great tributaries. De Soto, after several attempts to discover a great and rich country north of Florida, turned his course westward and distinctly aimed to reach the great river. He crossed the Altamaha; he mistook the Coosa for the Father of Waters; he fought the Chickasaws and ranged northward to the table-land which looks down upon the eastward elbows of the Tennessee and Cumberland Rivers, and at last his men, weary, worn, and travel-stained, came upon the banks of a mighty current "almost half a league broad; if a man stood still on the other side, it could not be discerned whether he was a man or no. The river was of great depth, and of a strong current; the water was always muddy; there came down the river continually many trees and timber, which the force of the water and stream brought down." This was the Mississippi, the Espiritu Santo of which De Soto had heard so much. The inhabitants were worthy of such a stream. They issued forth to resist the passage of De Soto in a fleet of two hundred and fifty canoes, dressed with flags, all under the command of one cacique, who sat beneath an awning in the stern of his royal barge. Biedma suggests that these Indians were of the race of the Mound-builders, for he says, "The caciques of this country make a custom of raising, near their dwellings, very high hills, on which they sometimes built their huts." Some such cacique must have lived, in pre-historic times, upon the site of St. Louis.

The expedition, begun under such splendid auspices and with such a pompous array, ended in cruel suffering and complete disaster. The guides led the party astray in spite of the scourge and the fangs of De Soto's bloodhounds, and their route lay through canebrake, swamp, and morass, and the pathless wilds where the gaunt cypress-tree, hung with gray Spanish moss, protects the lurking-place of the moccasin-snake and the shaded lagoons frequented by the hideous alligator. The men, dispirited and disappointed, convinced of the poverty of the land and the utter failure of their hopes, would have given up the march and made the best of their way to the coast, but De Soto, stern and sombre, refused to turn back. He listened to counsel and complaint with patience, but followed the directions of his own inflexible will, and all the rest obeyed him, for he was terrible and cruel in his wrath. An Indian captive who refused to serve as guide was burnt at the stake, and every Indian village which offered the least resistance was destroyed with fire and sword. There were some terrible battles, for the Indians fought the invaders with desperate courage, but the superior arms and discipline of the Spaniards always secured them the victory. But they paid dear for it: at Movilla, in Alabama, they lost eighteen killed and one hundred and fifty wounded, besides eighty-two horses slain or crippled and all their baggage consumed in the flames of the town, which the Indians themselves set on fire. In the Chickasaw town eleven of De Soto's people were burned to death, and the rest barely escaped, unclad and without arms, from the desperate onset of the savages, who fought

---

thodical, it may be added that the Spanish name, Rio del Espiritu Santo, is found on Garay's map, in the De Soto chronicles, and in Tristan de Luna, who also applies the name of Rio Grande del Espiritu Santo; the "Gentleman of Elvas," one of the reporters of De Soto's adventures, calls it simply Rio Grande; Garcillasso de Vega, the romancer of De Soto's expedition, denominates it Chucaqua, on the authority of Juan Coles, who accompanied the expedition. A variation of this undoubtedly Indian name is Cucaqua. Allouez, the Jesuit explorer, 1666–67, gives the names Messipi, and Messi-sipi; on Marquette's map it is called Mitchisipi, and also Rivière de la Conception, the latter bestowed by the explorer himself; the Natchez Indians called it Ochechiton, Great Water. In Dablon's narrative, 1670–71, it is spoken of as Mississippi; La Salle, with a purpose, when he reached its banks in 1682, baptized it Rivière de Colbert; the Algonkin name had two forms, Missi, great, Seepee, river (*Missi* is equivalent to *Misi-sil, Michil,* as in Michigan, Michil-imacinac, etc., *Missu,* as in *Misson-ri,* etc. *Seepee* is simply the French *sipi* Anglicized). The other Algonkin name was Namasi-sipou, or Nemose-sipou, the river of fishes. This is the name, according to Heckewelder, under which the Mississippi was known to the Delaware Indians in their ancient traditions concerning their migration from the far West. Hennepin, writing in 1684, spells the name Mechasipi; according to Iberville, the Southern Indians denominated the river Malabouchia, and called its mouth Ri; Penicaut's narrative, in Coxe's collection of Louisiana State papers, has the form Meschacebe; in some places the Indian name for the river was Tapata, in others Tamalisen, and the Spaniards sometimes termed it Rio Escondido ("lost river"), and the French occasionally Rivière des Palisades, or La Palisade. Rivière de St. Louis was its name when the French regarded it as the extension of the Ohio River. In a note on Marquette's voyage, in one of the volumes of the Louisiana Historical Collection, it is said that Sassa-goola was one of the Indian names for the Mississippi; the form given in Lanman's History of Michigan is Michi-sépée, and, as Mr. Mayer has noted, that adopted by Du Pratz was Meat-chase-sipi, *sepe* being a corruption of the Algonkin *sepein,* stream. Still another form was Michasippa. According to Dollier de Casson, the Iroquois Indians, in their haughty way, declared that the Mississippi was the same river and had the same name as the Ohio, because one of the forks of the latter, the Alleghany, rose in a section of country through which they hunted. Practically, Great River was the authentic and the proper name of this great confluence of unlimited waters, and the Indian tradition of the *Namisi-sipi* migration is probably a myth of late invention, contrived to explain the name of the river, its original prefix of *Michi* having lost its meaning through the greater potentiality of the antecedent article *na,* by which *Na-michi* (= the great) became converted insensibly into *Namesi* (= fishes, in the genitive case, plural).

as only brave men can do in defense of their homes.

The point at which De Soto reached the Mississippi River, it is supposed, was the lowest Chickasaw Bluff, about the thirty-fifth parallel of latitude. The Spaniards tarried on the banks until they could build barges sufficiently stout to carry over their horses. Then, in May, 1541, they crossed to the western side of the river. The Indians were numerous in this section, dwelling in palisaded towns, but they had no gold and no knowledge of metals. De Soto made a toilsome march northward on the line of the river to about the neighborhood of where New Madrid stands. The Indians here were all hunters, and poor; the bison were so numerous that they prevented the cultivation of maize. The route of the expedition was now directed westward, and it is supposed the adventurers penetrated as far as the highlands of White River. They went into winter quarters on the Washita River, and when spring came descended along the line of that river, in the hope to reach the sea. The marshes and the bayous of the Red River baffled and disheartened the weary explorers, and when, approaching the Mississippi again on the southern bank of the Red River, De Soto found that the Indians had never even heard of the ocean and the Gulf of Mexico, even his resolute spirit and stern will yielded to depression and despair. He was seized with an attack of malarial fever, and appears to have utterly broken down all at once. His men and horses were dying around him, and he could get no information such as would enable him to select a safe and easy route by which to escape out of this toilsome wilderness. He sent word to the cacique of a tribe near by to come visit him; that he and his people were the children of the Sun and accustomed to receive the courteous attention, the love and obedience, of the hunters and dwellers in the forest. The haughty chief sent back word that it was not his habit to pay visits; that if De Soto was a child of the Sun, let him dry up the river on the banks of which he was encamped; and if the strangers wished to see him, they might come to him: he would cordially welcome them, coming in peace, and not give back a single step if they came in war. The Governor was already in bed, stricken with fever and "in great dumps" on account of his chagrins, disappointments, and losses, and this message and defiance seems to have wounded him to the core because he was helpless to resent it. His illness rapidly increased, and it was evident that a fatal termination could not be avoided. De Soto called his officers about him, designated his successor, took leave of his followers, commended his soul to God, and "the next day, being the 21st of May, 1542, departed out of this life the valorous, virtuous, and valiant captain, Don Fernando de Soto, Governor of Cuba and Adelantado of Florida; whom fortune advanced, as it useth to do with others, that he might have the higher fall. He departed in such a place, and at such a time, as in his sickness he had but little comfort."[1] De Soto's body, after burial, was taken up by order of his successors, wrapped in a mantle made heavy with sand, and, enclosed in a tree-trunk that had been hollowed out for a canoe, was sunk in the bed of the Mississippi River. This was done in order to prevent the Indians from denying the claim of the Spaniards that they did not die, but were simply recalled to the celestial sphere from which they had descended. A commander of such great purposes and such an indomitable will as De Soto deserved to have for a sepulchre the mighty river he had discovered and traversed.

Luis de Moscoso, the successor of De Soto, devoted all his energies to the one object of extricating the command from its dreadful environments and the fatal country in which it had suffered so many ills. Despairing of reaching the Gulf by the Mississippi, he struck westward, hoping, as Cabeza de Vaca had done, to reach Mexico overland. Thus he followed the valley of the Red River for over seven hundred miles, and got as far as the Pecos River, among the Comanche Indians. Then, finding no encouragement to pursue this interminable route farther, the wanderers retraced their steps to the Mississippi, erected rude forges, beat their chains, armor, and all their old iron into nails, and began to build vessels to carry them down the river. They constructed "seven brigantines," deckless barges calked with the wild hemp and flax of the country. Their provisions were maize taken from the Indians and the dried flesh of their horses, killed because only a few of them could be taken in the boats. Thus equipped, the survivors of De Soto's great expedition (three hundred and twenty-two men) embarked on the Mississippi on July 2, 1543, rapidly descending, as their oars had the aid of the current. On the way down the river they were attacked and pursued by the Indians, but were not prevented from proceeding, and reached the Gulf of Mexico on July 20th, having sailed, as they computed, two hundred and fifty leagues in eighteen days. Thence, after many perils and hardships, they suc-

[1] The Portuguese Relation. The "Gentleman of Elvas" was certainly an eye-witness of all the expedition did, and, though his account is florid, and he puts speeches in the mouths of all his characters, in imitation of more famous historians, he writes with a winning sort of ingenuousness which would seem at least to entitle him to confidence.

ceeded in following the coast line around to Tampico, where the Governor and people greatly wondered to behold this troop of haggard savages leap from their brigantines and hurry, first of all, to the church to offer thanksgiving for their great deliverance. They had but little of the appearance of white men, none of the look of cavaliers: they were tanned black, gaunt, shriveled, and wild from the assaults, perils, and privations of the wilderness, half-naked, and clad only in the skins of the wild animals they had taken in the chase.

But they had accomplished a great work, for they were the first who sailed down the Mississippi River to the Gulf, and it was this expedition which put beyond all doubt the claim of Spain to the first discovery of the Mississippi. It will be shown in another chapter that the claim of France to the first settlement and exploration of the great river is fully as distinct and indisputable. In the maps, however, of the sixteenth and seventeenth and eighteenth centuries, the country traversed by Ayllon, Narvaez, and De Soto is given a very divided allegiance. In the Spanish maps Florida extends north and east to Virginia, and west and southwest to Mexico. In the earliest French maps New France extends from the Gulf to Hudson's Bay, and in the later ones Upper and Lower Louisiana reached half-way across Texas on the west and to Georgia on the east, not contenting itself on the northeast with any line but that of the Allegheny Mountains. On the English maps, on the other hand, Louisiana, west of Florida and the Carolinas, is put down as the English colony and province of *Carolana*, which, it was claimed, was granted by a patent of King Charles I. to Sir Robert Heath, then attorney-general. Sir Robert conveyed the patent to the Earl of Arundel, who was the father-in-law of Cecilius Calvert, the second Lord Baltimore and founder of Maryland.[1] Of the three claimants, Spain had all the rights which priority of actual discovery secures through the journey of Cabeza de Vaca and the expedition of De Soto. But England claimed prior rights as regarded the whole continent in consequence of Cabot's voyages, and France also in consequence of the voyage of Verrazzano. Spain looked upon Canada as being the upper part of Florida, and watched with incessant jealousy every attempt of France and England to make plantations upon the shores of North America. In the end this jealousy led to collisions and reprisals, one result of which was an undoubted stimulus given to the settlement of Florida, Texas, and New Mexico by Spain, and of the valley of the Mississippi by France.

Florida had so far successfully resisted every military expedition sent against it; but it continued to attract attention, and to lure both enthusiasm and adventure to essay its perils. In 1544 a Dominican Father attempted the spiritual conquest of the country. Luis Cancer de Barbastro was a favorite of the impetuous Las Casas, the friend of the Indians, and their missionary; the good Bishop of Chiapas heard of Father Cancer's plans with enthusiasm, and successfully commended them to the king's notice and approbation. Cancer returned to Mexico fully accredited for his mission, obtained a vessel, and sailed for Florida with Father Gregory de Batata, John Garia, and Diego de Panalosa for his companions. They were murdered by the Indians almost immediately upon landing. Cancer's companions were slain first. When he heard of it, he wrote a simple account of the massacre, saying, "All this was indeed terrible and very afflicting to us all, but not surprising; such things can but happen in enterprises for the extension of the faith. I expected nothing less. How often have I reflected on the execution of this enterprise and felt that we could not succeed in it without losing much blood! So the apostles did, and at this price alone can faith and religion be introduced." He then landed and calmly walked to meet his fate. He had seen thirty years' service among the Indian missionaries when he was murdered, and had been very successful in making converts. Father Cancer was but one example of the devoted spirit and heroic courage of the Spanish Catholic missionaries. In 1553 a vessel was wrecked on the coast of Florida, in which was a number of Dominican Fathers. The survivors of the shipwreck set out to walk to Tampico, the frontier town of Spanish settlements in Mexico. They were nearly all massacred on the way, and only one priest survived.

These disasters, and other evidences of the fierceness of the Florida Indians, determined Philip II. of Spain to make a further attempt to reduce these Indians to submission, as well as have them converted to the faith. Guido de los Bazares had attempted, but failed, to plant a colony; and Angel de Villifane's squadron, as it sailed from San Juan d'Ulloa with the same end in view, had been shattered by a disastrous hurricane. Philip was urged to promote the Florida enterprise by many advisers. Dr. Pedro de Santander wrote to him, July 15, 1557: "It is lawful that Your Majesty, like a good shepherd appointed by the hand of the Eternal Father, should tend and lead out your sheep, since the Holy Spirit has shown

[1] D. Coxe's "Description of the English Province of Carolana," Louisiana Historical Collections, vol. ii.

spreading pastures whereon are feeding lost sheep which have been snatched away by the dragon, the Demon. These pastures are the New World, wherein is comprised Florida, now in possession of the Demon, and here he makes himself adored and revered. This is the Land of Promise, possessed by idolaters, the Amorite, Amalekite, Moabite, Canaanite." And the writer proposes to occupy the country at various points with a thousand or fifteen hundred colonists, found cities, to be called Philippina and Cæsarea, and establish slave depots and barracoons. In 1559 an expedition was sent out under the command of Don Tristan de Luna, with fifteen hundred men. They landed safely in St. Mark's Bay; but immediately after landing, a storm came up which dashed every one of De Luna's vessels to pieces. Not disheartened, the commandant sent two hundred men, under command of his sargente mayor, into the interior of the country, to explore. They joined the Coosa Indians in a war upon the Natchez, and defeated the latter in a battle fought on the banks of the Ochechiton, the great river discovered by De Soto. After this vessels were sent from Mexico for the survivors of Tristan de Luna's party; and they returned, as glad to get away from Florida as all who preceded them had been.

In 1561 the great India fleet, bearing from Mexico and the Gulf to Spain the bullion and treasure which America annually contributed to the coffers of King Philip, was scattered and wrecked on the Florida coast, and between there and the Bermudas. One vessel disappeared with an uncertain fate, and in it was the only son of Don Pedro Menendez (or Melendez) de Aviles, a stern and haughty Asturian noble, esteemed the first naval commander of his day. Menendez had spent a life of wild adventure upon the sea, had commanded fleets and galleons, and been the prisoner and slave of Barbary corsairs. He had served in the Indies, accumulating great wealth, and had been incarcerated and fined by the Council of the Indies. Philip pardoned him, restored him to his command, and remitted half the fine. Menendez now begged of the king leave to go to the Bermudas in search of his son. The king promised to commission him to make a survey in those parts, for the benefit of future navigators; but Menendez preferred to undertake the conquest of Florida, if His Majesty would permit. "Such grief seizes me when I behold this multitude of wretched Indians," he said, "that I should choose the conquest and settling of Canada above all commands, offices, and dignities which Your Majesty might bestow." While the conditions of his expedition, to which the king assented, were being settled, news came to the court and to Menendez that Florida, Spanish territory, had been invaded by the foreigner and the hated French Huguenots had actually planted a colony of heretics upon the soil of His Most Catholic Majesty.

This was really the case. Admiral Coligny, the sagacious head of the Huguenot cause in France, had seen the expediency of planting colonies of his co-religionists in distant lands, in order not only to disseminate the principles of the Reformation over a wider expanse of soil, but also to secure places of refuge for Protestants in case they came to disaster in Europe. This policy, the original contrivance of Coligny, was followed afterwards by Sir Walter Raleigh in Virginia, by the Dutch on the Hudson and at Amboyna, and by the Swedes, prompted by Gustavus Adolphus and Chancellor Oxenstierna, on the Delaware. The Catholic colonies and missions of Spain and France were active and zealous in the work of proselyting among the Indians, but the Protestant colonies cared much less for the propaganda of doctrine than they did for the defense of their fellows from persecution. Coligny's first attempt at a colony was under Villegagnon, who went to Brazil and planted a settlement of Lutherans and Calvinists in the Bay of Rio de Janeiro. The Portuguese expelled the wretched remnant of this colony in 1558, after they had been settled there for two years and a half. In 1562 a second Huguenot colony sailed for the New World, under the lead of Jean Ribaut, an excellent sailor and stanch Protestant of Dieppe, who had been selected by Gaspar de Coligny himself to command the expedition. They embarked, with a French commission, under the French flag, and their instructions contemplated a military colony. Ribaut had soldiers as well as seamen, nobles, and artisans in the two vessels in which he and his party sailed from Havre, Feb. 18, 1562. They reached the coast of Florida on the last day of April, and on May-day embarked at the mouth of a great river, glorious with flowers, which they named the River of May, but it is now called the St. John's. Proceeding northward, the vessels came to Port Royal, in South Carolina. A fort was built near the site of the present city of Beaufort, a garrison of thirty men left in it under command of Albert de Pierre, and Ribaut, with the rest of his party, returned to France. The little colony was soon expelled by famine. They crossed the ocean in a crazy bark built by their own hands, and were captured by the English after they had begun to cast lots to decide who should be eaten to save the rest. In 1564 a third Huguenot colony came out, under command of Réné de Laudonnière, a Poictevin noble.

He had three vessels filled with men, and he landed, as Ribaut had done, at the mouth of the River of May. Five miles up the river there is a bold headland (now called St. John's Bluff) which overhangs the broad and sleepy waters of the lake-like river. Hard by this hill Laudonnière's engineers marked out the lines of his fort, and when it was built and named Caroline, after the King of France, the standard of France was hoisted above it. In 1565, after many vicissitudes, the colony and fort were relieved and reinforced by Ribaut, who returned to the coast with many vessels.

But almost simultaneously with Ribaut came other and very different visitors. Menendez was at their head. He had bargained with the king to conquer Florida in three years, introduce five hundred colonists there, and as many slaves, build villages, establish the nucleus of a Florida church, and stock the country with domestic animals. But as Menendez was starting out to recruit his company the news came from France of the occupation of Florida by Laudonnière, and that Ribaut was on the eve of sailing to reinforce him. Menendez was recalled in haste. No foreigners, and especially no heretics, could be tolerated on Spanish soil. Not only must Laudonnière and Ribaut be crushed, but Menendez must conquer and colonize the whole country, to prevent such adventurers from repeating the insult. He was instructed and he proposed, after capturing the fort on the St. John's, to build a Spanish fort in Port Royal Harbor, and another strong one in Chesapeake Bay. This, he thought, would enable him to hold the entire country and keep the French from following in the footsteps of Cartier. The new expedition was pressed forward with fiery energy, recruits being sought in all the Spanish ports. When Menendez sailed from Cadiz, on June 29, 1565, he led the advance-guard of thirty-four vessels and two thousand six hundred and forty-six men, there being a further reserve of fifteen hundred men who were to follow him. Menendez wrote to the king a full account of his expedition, Mendoza kept a daily journal of its occurrences, and there are numerous other and contemporary narratives of these affairs.

Menendez, with his advance, pushed forward with intense earnestness and frantic zeal. He found the French flag flying on the shore and the French fleet anchored off the mouth of St. John's River. In answer to a hail from the French the Adelantado shouted back, "I am Pedro Menendez, General of the fleet of the King of Spain, Don Philip II., who have come to this country to hang and behead all Lutherans whom I shall find by land or sea, according to instructions from my king. At daybreak I shall board your ships; Catholics shall be well treated, but heretics shall die." At daybreak the French had slipped their cables and escaped. Menendez sailed south, built a fort at Saint Augustine, garrisoned it, and then marched back with grim and savage determination to the accomplishment of the remainder of his task. As he sallied forth, Ribaut, with the French fleet, was sailing to attack him, but a storm dispersed them. Menendez led his five hundred men through forest, swamp, and river to attack Fort Caroline while its defenders were away. We have no desire to enlarge upon what remains to be told of this pitiful and brutal story. Menendez was only too successful. He captured the fort and put its entire garrison to the sword. One hundred and forty-two were thus slain. The rest of the French, as they came in a few at the time, shipwrecked and half naked, were invited to surrender unconditionally, and, when they did so, they were every one shot in cold blood. It was charged in France, but has been denied by the friends of Menendez, that he hung many of the French in the trees around the fort, placing over them the inscription: "I do this, not as to Frenchmen, but as to Lutherans." "I had their hands tied behind their backs," wrote Menendez himself to his king, "and themselves put to the sword. It appeared to me that, by thus chastising them, God our Lord and Your Majesty were served; whereby in future this evil sect will leave us more free to plant the gospel in these parts."

The atrocious butchery has not found many defenders. John Gilmary Shea, in his "History of American Catholic Missions," observes that "whether in this treatment of the French Huguenots Menendez regarded them as pirates, or as parties to the death of his son, or acted in obedience to the orders of Philip or to his own persecuting spirit, can never be known, but in no point of view can his conduct be justified." The massacre was terribly avenged, leading to probably the most romantic expedition ever undertaken even by so romantic a nation as the French. Charles IX. refused to take any steps to resent the murder of his subjects by Menendez under orders from Philip II. A private French gentleman, a Catholic and a Gascon, Dominique de Gourges, determined to wipe out by his own efforts the stain to French honor which his monarch would not remove. He sold his patrimony, fitted out a secret expedition under the pretense of going to the coast of Benin for slaves, and when he was once at sea unfolded his designs to his followers with such ardor and such eloquence that one and all demanded to be led against the ruthless

Spaniards. Then he proceeded to Florida, formed an alliance with the Indians, who already had learned to hate their cruel masters, and led the combined forces to the assault upon the two forts which guarded the St. John's River. This was in 1568. The forts were taken; the garrisons were slain, and De Gourges hung the few prisoners with the legend above their heads: "Not as to Spaniards, but as to Traitors, Robbers, and Murderers." The forts were demolished, De Gourges took leave of his Indian allies, and he and his men sailed back to France. Their visit was like that of the whirlwind, leaving but desolation to mark where it had alighted. Menendez was not punished. His monarch honored him highly, and when, in 1574, he died quietly in his bed in Santander, he was grand admiral of the Armada of Spain which Philip was collecting for the invasion of England.

The planting of St. Augustine by Menendez was the first durable settlement in Florida, and it was undoubtedly made in consequence of the Huguenot colony on the St. John's. Menendez just failed, in consequence of a storm, in planting settlements inside of Port Royal Sound and Chesapeake Bay. Other colonies, and especially Spanish missions, were planted around the coast of West Florida, in Apalachicola Bay, and among the Creek Indians. In this way the Spaniards of Florida gradually drew nigher to their fellow-countrymen in Mexico.

They do not seem, however, to have improved or increased the general knowledge concerning the mouth of the Mississippi River. It was not explored farther, so far as is certainly known, though it is claimed that in 1630 a Portuguese captain, Vincent Gonzalez by name, sailed up what must have been the Mississippi until he came very near the supposed kingdom of Quivira. It is also said that an Englishman sailed up the river in 1648, and in 1669 a Spanish expedition arrived in New York by way of the Mississippi and the Ohio. In regard to these various early voyages Mr. Shea says, "I confess my skepticism;" and it is certainly not expedient to pin much credit to hearsay evidence of explorations of such an important character, which, when they are made, men are generally eager to report and chronicle in a durable shape.

CHAPTER II.

TRACKS OF EXPLORATION—THE MISSIONARY AND THE FUR-TRADER.

SPAIN discovered, France explored and settled, the valley of the Mississippi. In the expedition of De Soto the men-at-arms and the bloodhounds went in the van of the march, and the Franciscan and Dominican Fathers brought up the rear. In the explorations of the French in Canada the warrior had very little place; the Jesuit and Recollect missionary sat in one end of the frail birch-bark canoe, the *voyageur*, the trapper, or the *coureur des bois* occupied the other end, and both plied the paddle, both shared the burthen of the toilsome portage, both dozed or watched by the same fire at night. And the results were as different as the methods. The Spaniards destroyed or enslaved the Indians, leaving the few survivors to be gathered in missions around some convent or to labor their lives long in hopeless peonage. The French, on the contrary, mixed and fraternized with the Indians, dwelt in their villages, intermarried with them, and adopted many of their habits. The spirit of *camaraderie* which was thus produced was the predominant characteristic of every French-Indian town and settlement from Acadie and Tadoussac to Ste. Genevieve and Natchitoches, from Lake Superior to the Gulf, and from the time of Samuel Champlain to that of Bibaud jeune. The French are not indeed the best colonists in the world, but wherever they have settled they have left the most prominent and ineffaceable impression upon the character of the people. M. F. X. Garneau, in his "History of Canada," quotes Maillefer appropriately on this point. The Gaulish race, above all others, he says, is characterized by "that occult force of cohesion and resistance which maintains their material unity amid the most cruel vicissitudes and makes it rise superior to every attempt to depress it." As M. Garneau himself puts it, "The old Gallic *étourderie* (heedlessness) has outlived the unchangeable theocracies of Egypt and Asia, the political combinations of the Greeks, the civic wisdom and military discipline of the Romans. Endowed with a less flexible genius, this people, more confiding and less calculating, this people of antique blood, but ever young in heart when the appeal of a noble conception or the call of a great heart inspires them,—this people would have disappeared as other races, more sage in seeming than it, had done before; and why? because they comprehended only one mission, one interest, and one idea."

The Gallic *étourderie* has been shown in the strange adventure of De Gourges. It is not absent from the great performances of Champlain and La Salle, the man who planted New France and the man who extended its dominions and gave a new grasp of power and splendor to its conceptions. Champlain took up the work abandoned by Cartier, and which Roberval perished in attempting to carry forward to comple-

tion. There is strong evidence to the fact that the massacre of Coligny's Huguenot colony in Florida had much to do with the renewal of the attempt to settle Canada. This was French territory almost by general consent, and at least *jure primæ occupationis*. The Spaniards would hardly attempt to break up a French colony on French soil because hating their religion. The influence of the Guises and of Catharine de Medici would have been exerted to destroy De Gourges on his return from his heroic expedition against the Spaniards, but it was counteracted by the open sympathy of France and the open applause of Europe. When the effort was made to surrender the Gascon soldier to the vengeance of Philip of Spain, the President de Marigny, Chief Judge of the Superior Court of Normandy, concealed him in his own house, and Queen Elizabeth of England offered him high employment in her marine service. So great did his popularity become that the king, Charles IX., took him into favor, and he was about to accept, with the royal consent, the command of the fleet of Portugal in the war of Don Antonio for the Portuguese crown when death ended his career. The long and sanguinary religious wars of France and the arduous struggles of that kingdom ensued to prevent further attempts to establish French colonies in America. In the words of Mr. Bancroft, "the government which could devise the massacre of St. Bartholomew (August 24, 1572) was neither able nor worthy to found new states." The Edict of Nantes, which effected the pacification of his kingdom by guaranteeing safety to the lives and fortunes of his Huguenot subjects, was promulgated by Henry IV., April 15, 1598, and the same year the Marquis de la Roche sailed for America with the intention of planting a colony in Acadie.[1]

The Normans, Bretons, and Basques had maintained and increased the intimacy of their fishing and trading relations with the coasts of New France during all these turbulent times. In 1578 one hundred and fifty French vessels resorted to Newfoundland alone. To the curing of cod-fish and the trying out of whale oil a new industry had been added, that of trafficking with the Indians for furs and peltries, and so widespread were these operations that in 1555, and before that, bison-skins were brought down the Potomac and thence carried by inland streams and portages to the St. Lawrence, to be traded with the French. Pedro Menendez reports in a letter to Philip of Spain that six thousand hides were thus obtained in two years, and Thevet says the bison used to wallow in the sand on the shores of Anticosti Island.[2] This trade was valuable enough to attract attention. The Marquis de la Roche got a patent from the king securing to him the same privileges as those formerly obtained by Roberval. He gathered a gang of thieves and desperadoes from the prisons, embarked them in a small vessel, and sailed for New France. He landed his forty convicts on Sable Island, a desolate sand-ridge, for safe-keeping, while he himself, with a more trusty crew, proceeded to explore the adjacent coasts. Before he could complete his surveys a storm blew his vessel off the coast, and he returned to France. The convicts were sent for next year, and so great had been their sufferings that when the survivors (there were only ten of them) were brought back to France, Henry IV. made special provision for their future. Other but fruitless attempts were made to set up colonies; but finally Samuel de Champlain, in 1603, accepted the command of two vessels sent out to renew the colonial enterprise. Champlain was a well-descended gentleman of Saintonge, a man of skill and experience, who had seen service in the West Indies as a captain in the French navy. In 1604, after a voyage of exploration the previous year, four vessels were sent out under the general direction of Champlain, and it is noteworthy that the adventurers in these vessels included not only the high and the low, convicts and noblemen, but also Catholic and Protestant clergymen, who greatly vexed Champlain by their polemical disputes.[3]

Champlain, De Monts, Poutrincourt, Pontgravé, and their associates, made experimental plantations in Acadie, at Port Royal, Tadoussac, and finally Quebec. In 1609, Champlain, in company with a band of Indians, explored the lake which bears his name, and won a victory over a band of the Iroquois Indians. In 1615, Champlain took out four Recollect Fathers with him to found a mission at Quebec, and afterwards at Montreal. The Jesuits had found their way to Nova Scotia in 1611.[4]

[1] M. Pol de Courcy, of Quebec, has attempted to show that the Marquis de la Roche came out in 1578, but the preponderance of documentary evidence is adverse to the pretension.

[2] Parkman, French Pioneers in the New World.

[3] "*J'ai vu*," said he, "*le ministre et notre curé s'entrebattre à coups de poing, sur le différent de la religion. Je ne sçais pas qui étoit le plus vaillant et qui donnoit le meilleur coup, mais je sçais très bien que le ministre se plaignoit quelquefois au Sieur de Monts d'avoir été battu, et vuidoit en cette façon les points de controversie.*"—*Champlain: Voyages de la Nouvelle France.* The rough sailors, when, after landing, curé and minister had succumbed to the climate, recommended to bury them both in one grave, to see if they would keep up the controversy *post mortem*.

[4] The Recollects were friars minor of the strict observance, Order of St. Francis. They originated in Spain. They took their French name from the Convent des Recollets, given them by Louis de Gonzague, Duc de Nevers. They were protected by Henry IV., Louis XIII., and Louis XIV., and spread all over France.

This is no place, and there is no room in this volume, for even a sketch of the early history of Canada, as equally there is no occasion for it. All that we wish to show are the paths of exploration to and within the Mississippi valley, and the circumstances and influences which led the French in Canada to pursue those paths so persistently and successfully, and to plant so many settlements at different points along their lines. Those settlements have given to the United States some of their chief cities. They culminated in St. Louis, which would not have had its history nor its fortunes apart from them.

Samuel de Champlain was the true founder of the French province of Canada. He established the various early colonies there. He kept them together by his own personal exertions during a course of indefatigable, intelligent labor, sustained during twenty-five years, until the plantations had become rooted and prosperous. Champlain was a devout, consistent Catholic, who began the record of his voyages with the recital of what was throughout his chief article of faith: "Le salut d'une seule âme vaut mieux que la conquête d'une empire, et les rois ne doivent songer à étendre leur domination dans les pays où regne l'idolatrie, que pour les soumettre à Jésus Christ." He introduced the Recollect friars into Canada as missionaries, and at least did not object to the coming of the Jesuits and the extension of their influence through the colonies. But it is almost a matter of record that his first impulses in planting a colony in Canada were those of resistance to Spanish tyranny, and Spanish absorption of the empire of the New World, and that, in making up his first colonial establishment in Quebec, he sought, when he tried to combine Huguenots with Catholics, less to promote toleration and secure the approval of Henry IV., Sully, and Du Thou than to consolidate a power which would be permanent and solidly hostile to Spain. He was the first Catholic writer who dwelt forcibly upon the massacres by Menendez in Florida, and he was an enthusiastic admirer of Dominique De Gourges, whose exploits he often goes out of the way to applaud. He had spent two years and a half in Mexico, Cuba, and the Spanish West Indies, and there perhaps he learned to dislike the subjects and the policy of Philip II. In his "Voyages" he treats the massacre of Jean Ribaut and Laudonnière as "*affront fait à la nation Française*," and, like a loyal Frenchman, he must have deeply resented the Spanish influence at court which led the weak king to pass this affront by without challenge. He was a gentleman himself, chivalrous in sentiment, and full of sympathy for every chivalric performance. He says of the feat of De Gourges, "Ainsi ce genereux chevalier repara l'honneur de la nation Française, que les Espagnols avoient offensée; ce qu' autrement eust été un regret à jamais pour la France, s'il n'eust vengé l'affront receu de la nation Espagnolle. Enterprise généreuse d'un gentilhomme, qui l'executa à ses propres cousts et dépens, seulement pour l'honneur, sans autre espérance; ce qui lui a réussi glorieusement, et ceste gloire est plus a priser que tous les tresors du monde,"—a sentiment couched in the language and worthy the age of Froissart. Be all this as it may, it is certain that Champlain organized his colony upon the principle of making it French in a representative manner, without regard to religious differences; and he did so in spite of his strong predilections for the Catholic faith, and his good-humored contempt of the Reformers, which he did not conceal. When he discovered that he was not strengthening his settlements by this plan, he declined to admit any more Huguenots among his immigrants.

The colonies thus established effected the exploration of the great basin of the St. Lawrence and the lakes, and thence extended their discoveries to the valley of the Mississippi. These explorations were the work distinctively of the trappers and hunters, the fur-traders and the missionaries. The local and imperial governments had very little to do in promoting and encouraging them. Champlain, indeed, explored as widely as he governed wisely and well; he was such a man as is fit to be trusted with the care and nurture of the first feeble germs of empire in the untrodden wild; but he had no successors. The several companies which controlled the affairs of New France were grasping monopolies, none the less sordid because made up of bourgeois and noblesse elements not well compounded together. The imperial delegated government which succeeded them was an attempt to transplant and naturalize an exotic which was not suited to the climate and had no roots. As has been said of it, the *ancien régime* rule in Canada was "all head and no body." Talon's acute and comprehensive plans, and the broad, vigorous executive ability of Frontenac, were able to sustain it far beyond the limits of its own faint and flickering vitality; but when it expired, with Montcalm, upon the Heights of Abraham, our regrets are for the brave and sagacious marquis slain in defense of such a cause, and not for the French domination.

But in the midst of this herbarium of dried roots and decayed branches, there are two vital forces abounding with energy and propagating power: the French missionaries, and the Frenchmen and half-breeds who conducted the fur trade. Those were the

men who built up Canada, and who extended its influence and its frontiers throughout the two great river systems of the North American Continent. When, after the conquest of Canada by Kertk, in 1628–29, the province was restored to the French company in 1633, by the Treaty of St. Germain-en-Laye, it was a poor and mean establishment. In the forcible language of Charlevoix, the island of Cape Bréton, with a scant few fisher huts, the fort at Quebec, "environed by some inferior houses and barracks, two or three cabins in Montreal, as many more possibly in Tadoussac and other spots on the St. Lawrence, and by traders and fishermen," were all that there was of New France; the sole fruits of all the discoveries of a century of explorers, and the outlay, and toil, and sufferings of Cartier and his successors. Champlain, when he came back, brought the Jesuits with him, and they and the Recollects undertook the conversion and the education of the Indians *pari passu* with the extension of the French dominion. Money came into the colony in abundance to sustain their pious and comprehensive designs, and population and prosperity made equally rapid advances.

So much rivalry existed between the Recollect Fathers and the Jesuits in Canada that the literature and history of the period is infected by it; and polemical controversy has actually made it difficult to determine the merits and the rights of priority of the different explorers and discoverers. The local government sympathized with the Franciscan friars, who did not imitate the Jesuits in their severe comments upon the loose morals of the *habitans*, and their indignant efforts for the repression of the lucrative but demoralizing brandy traffic with the Indians. Le Clerc has written the history of "The Establishment of the Faith in Canada" from a stand-point that is so distinctly anti-Jesuit, that he tries to glorify La Salle at the expense of Joliet and Marquette. Hennepin pretended voyages for his own benefit, as La Hontan seems to have done also; and, *per contra*, the insidious influences which obstructed La Salle's efforts while he lived seem to have pursued his memory since he died. La Salle attributed many of those adverse obstacles to Jesuit influences; but he was too noble a man to accuse the order, as others have done, of attempting to poison him. He, Frontenac, and many others in high places, were hostile to the Society of Jesus, opposed their presence in the colony, and put, almost invariably, a dark coloring upon every interpretation of their actions and their designs. The historians of the colony and of the early explorations, Sagard, Le Clerc, Hennepin, etc., are all tinctured with pique or partiality; while the voluminous Jesuit "Relations" seem quietly to assume that nothing was done outside of their order. The sources of these jealousies are not difficult to discover. The Recollects had founded the Canadian missions. They were expelled when the English took possession under Kertk, and they were not restored when France recovered Canada in 1632. At that time Cardinal Richelieu was supreme in France. He offered the spiritual control of New France to his own favorite order, the Capuchins. When they declined it, he confided the province to the Fathers of the Society of Jesus. After Richelieu's death, this policy was maintained by Mazarin, and it was intensified under Louis XIV. The popular feeling of the colony against the rigid regimen of the Jesuits increased when Canada began to have large garrisons of French soldiers, familiar with the loose morals of the camp. The Jesuits did not retaliate when accused of severity, exaggeration of their services, trading, and interference in the government. Still, these complications and squabbles make it desirable for the impartial historian to obtain as much information as he can from outside and independent sources.

This information has been sought and secured. It has been carefully sifted, and compared with the fuller but less impartial chronicles written on Canadian soil, and the result is the conclusion that the Jesuit Fathers were *the* missionaries of Canada, the men who explored its wastes, civilized its savages, and converted them to Christianity. About this there can be no dispute. As "the author of Hochelaga" remarks, "the Jesuits always retained the superior position they held from the first among the Roman Catholic missionaries of Canada. There is a well-known Canadian proverb: '*Pour faire un Recollet il faut une hachette, pour un Prêtre un ciseau, mais pour un Jésuite il faut un pinceau.*'"[1] The distinction is as true as it is subtle. The Swedish traveler Kalm, who came to this country to study botany and natural history at the suggestion of Linnæus, spent much of his time in Canada, and has put upon record the different sorts of impressions made upon him by the three classes of religions. He discriminates in his colorings enough to insure himself a character for impartiality.

"The Recollects," he says, "are a third class of clergymen in Canada. They have a fine dwelling-house here, and a fine church, where they officiate. Near it is a large and fine garden which they cultivate with great application. In Montreal and Trois Rivières they are lodged in almost the same manner as here. They do not endeavor to choose cunning fellows amongst them, but take all they can get. They do not torment their brains with

[1] "Take a hatchet to make a Recollect, a chisel for a parish priest, but an artist's brush is necessary for a Jesuit."

much learning; and I have been assured that after they have put on the monastic habit they do not study to increase their knowledge, but forget even what little they knew before. . . . The priests (*curés*) are the second and most numerous order of the clergy in this country; for most of the churches, both in towns and villages (the Indian converts excepted), are served by priests. . . . In order to fit the children of this country for orders, there are schools at Quebec and St. Joachim, where the youths are taught Latin, and instructed in the knowledge of those things and sciences which have a more immediate connection with the business they are intended for. However, they are not very nice in their choice, and people of a middling capacity are often received among them. They do not seem to have made great progress in Latin; . . . most of them find it very difficult to speak it. . . .

"The Jesuits are commonly very learned, studious, and are very civil and agreeable in company. In their whole deportment there is something pleasing; it is no wonder, therefore, that they captivate the minds of the people. They seldom speak of religious matters; and if it happens, they generally avoid disputes. They are very ready to do any one a service, and when they see that their assistance is wanted, they hardly give one time to speak of it, falling to work immediately to bring about what is required of them. Their conversation is very entertaining and learned, so that one cannot be tired of their company. Among the Jesuits I have conversed with in Canada, I have not found one who was not possessed of these qualities in a very eminent degree. They do not care to become preachers to a congregation in the town or country, but leave those places, together with the involvements arising from them, to the priests. All their business here is to convert the heathen; and with that view their missionaries are scattered over every part of the country. Near every town and village peopled by converted Indians are one or two Jesuits, who take care that they may not return to paganism, but live as Christians ought to do. Then there are Jesuits with the converted Indians in Tadoussac, Lorette, Beçancourt, St. François, Sault St. Louis, and all over Canada. There are likewise Jesuit missionaries with those who are not converted: so that there is commonly a Jesuit in every village belonging to the Indians, whom he endeavors on all occasions to convert. In winter he goes on their great hunts, where he is frequently obliged to suffer all imaginable inconveniences, such as walking in the snow all day, lying in the open air all winter, lying out in both good and bad weather, lying in the Indian huts, which swarm with fleas and other vermin, etc. The Jesuits undergo all these hardships for the sake of converting the Indians, and likewise for political reasons. The Jesuits are of great use to their king; for they are frequently able to persuade the Indians to break their treaty with the English, to make war upon them, to bring their furs to the French, and not to permit the English to come among them. There is much danger attending these exertions, for when the Indians are in liquor they sometimes kill the missionaries who live with them, calling them spies, or excusing themselves by saying the brandy has killed them. These are the chief occupations of the Jesuits in Canada. . . . Everybody sees that they are, as it were, selected from other people on account of their superior genius and abilities. They are here reckoned a most cunning set of people, who generally succeed in their undertakings, and surpass all others in acuteness of understanding. I have therefore several times observed that they have enemies in Canada."

Enemies in Canada! Enemies all over the known world, yet none, even while persecuting them and denying them an abiding-place, have ventured to deny their zeal, their perfect, impersonal, and never-flagging devotion to the cause of missionary work. History is unanimous on this point. The heroism of the Jesuit apostles has made malignancy blush and has disarmed the inveteracy of criticism. They let nothing deter or prevent them in their efforts to save souls. They laughed at hardship and privation, and appeared to welcome martyrdom as a pleasure as much as a duty. They baptized infants with the tomahawk uplifted over their tonsured heads in the wigwams of the Iroquois, and they did not flee before crucifixion and impalement in China and Japan. In the words of Bancroft, "they raised the emblem of man's salvation on the Moluccas, in Japan, in India, in Thibet, in Cochin China, and in China; they penetrated Ethiopia and reached the Abyssinians; they planted missions among the Caffres; in California, on the banks of the Marañon, in the plains of Paraguay, they invited the wildest of barbarians to the civilization of Christianity." They suffered with unexampled patience and unsurpassed heroism the tortures of the damned inflicted by savages who might have passed readily for the proper ministers of hell. They were scalped, they were burned at the stake, they were disemboweled, scored with hot knives, pinched with red-hot pincers, and their finger-nails and toe-nails extracted one by one, with a studied refinement of cruelty which was careful not to overstep the margin of endurance and so shorten the process of agony. In the face of these dreadful inflictions, men like Jean de Brébeuf stood erect, with never a quivering lip or eyelid; Isaac de Jogues, while running the gauntlet and enduring weeks of intermittent renewal of brutal pain, comforted himself with visions of the glory of the Queen of Heaven; Bressani, beaten, mangled, mutilated, dragged naked through brake and bramble, and his companion butchered and devoured before his eyes, could yet chant his offices with a firm voice, and, when rescued and restored, could return to the people who had used him thus ill, to be by them murdered at last. The entire chronicle of these Jesuit missions is one of grievous peril and pain and heroic endurance throughout.[1]

[1] Of the Abnaki missionaries, Sebastian Rale was killed Aug. 23, 1624; of those to the Hurons, Nicholas Viel was killed, July, 1625; Jean de Brébeuf, March 16, 1649; Anne de Noue, frozen to death Feb. 1, 1646; Anthony Daniel, killed July 4, 1648; Charles Garnier, killed Dec. 7, 1649; Isaac Jogues, killed Oct. 18, 1646; René Menard, killed August, 1661; Leonar[d] Garreau, killed September, 1665; Natalie Chabanel, killed Dec. 8, 1649; Gabriel Lallemant, killed March 17, 1649; of those to the Iroquois and the Ottawas, etc., Gabriel de La Ribourde and Zonobe Membré were killed, 1680–86; James Gravier in

But, in fact, martyrdom and torture, the tomahawk and the stake, were the least of the things which these missionaries suffered. They were accomplished men of the world, students, scholars, men of intelligent curiosity and refined tastes. Their life in the dark and embruted wilderness must have been a perpetual martyrdom to every instinct of the natural man and the cultivated spirit. This not only in respect of the penances and mortifications they inflicted upon themselves,—as when the stalwart, indomitable scion of ancient blue blood, the massive, oak-like Brébeuf, added to the fatigues of his assiduous duty by flogging himself twice a day and wearing a spiked iron girdle underneath his bristling hair-cloth shirt,—but in respect also of the deprivation and meagre poverty of their daily lives. These students and scholars had no books to read but their breviaries, no light at night but their pine-wood fires. They had no society but that of the ignorant savages, whom they could amuse only with toys and fables. Their chief food, the "sagamity" from the filthy squaw's keüle, tasted, as one Jesuit Father has recorded, "like the paste in the paper-hanger's and bill-sticker's bucket." Their journeys through the forests were horrible with monotony and back-breaking with fatigue. They slept on rocks or the frozen earth or the wet moss of swamps, with birch-bark blankets to cover them. They had to labor with the oar or paddle and bear the weight of the laden canoe at the portage.[1]

And all this labor, toil, and repression seemed to bring with it so little reward, after all, for the savage after baptism and the mass and much teaching, remains a savage still, unreclaimed and, in all except superficial respects, unconverted.

Not that this seemed so to the Jesuits, however. Their faith, their enthusiasm, their sincere delight in their work, was full and ample compensation to them. Nor was their work all done in the shade and gloom of the desolation we have depicted. They were in the free woods, among the scenes and the population of untrammeled nature. In their bold and distant voyages and explorations they had the company of the free and gay *coureurs des bois* and voyageurs, who made the rocks and forests echo with light and joyous chansons. These voyages were made in birch-bark canoes, wonderful contrivances for the sort of navigation in which they are used.[2] On the route, in addition to the spoils of the chase, the voyageur and the Jesuit had the constant resource of an article of food which contributed very materially to the sustenance of some tribes—the wild oats, or wild rice, *Zizania aquatica* of Linnæus, which some have called the "Tuscarora," and which Kalm styles "water taregrass."[3] In the way of animal food, likewise, the Jesuits were enriched by the fortunate circumstance that they could eat the flesh of the beaver—rich, succulent food, and esteemed a delicacy by the Canadians—on days of fast as well as feast. This proceeded from the fact that the Vatican had pronounced the beaver to be fish, not flesh,[4]—no slight boon to strict conformists like the Jesuits, who had no end of "*jours maigres*" in their calendar.

Such were the devotees of this strange order who did so much for Canada. They studied, prepared vocabularies, and translated the Scriptures into every Indian tongue and dialect. They built colleges and seminaries, and erected a chapel upon every conspicuous spot, while, as Bancroft has said with no less truth than rhetorical force, "the history of their labors is connected with the origin of every celebrated town in the annals of French America: not a cape was turned, nor a river entered, but a Jesuit led the way." Between 1634 and 1647 forty-two of these devoted missionaries threaded and explored the wilderness, sought for souls to turn to God, and examined the country with an acute and intelligent research which makes their annual reports and "Relations" invaluable

1706; Louis Vivier in 1730; J. B. St. Cosme in 1707; Nicholas Foucault in October, 1702; and MM. les pères Souel, Testu, Du Poisson, and Du Guienne slain in Arkansas and Louisiana between 1702 and 1730. These are only the recorded cases in the published "Relations."

[1] There were thirty-five portages, some of them leagues long, through forest and swamp and over rock and fall, between Quebec and the Huron country.

[2] "The canoes that navigate the Canadian lakes are among the most ingenious and useful of the Indian manufactures, and nothing that European ingenuity has devised is so well adapted to the habits and necessities of their mode of life. They are made of the bark of the birch-tree; and of all the various contrivances for transporting burthens by water, these vessels are the most extraordinary."—*Keating's Narrative.* "*Tous ces canots,*" says Charlevoix, "*jusqu' au plus petits, portent la voile et avec un bon vent peuvent faire vingt lieues par jour. Sans voiles il faut avoir de bons canoteurs pour en faire douze dans une eau morte.*" In making these canoes the thin inner bark of the white birch is used; thin hoops for ribs; a gunwale of a narrow lathe, to which the bark is sewed with strips of white cedar root; all made water-proof with wild cherry tree gum.

[3] It is common in all America, from Florida to Canada and farther northwards. Kalm says, "The Indians reckon it among their dainty dishes. It grows in plenty in their lakes, in stagnant waters, and sometimes in rivers which flow slowly. They gather its seeds in October and prepare them in different ways, and chiefly as groats, which taste almost as well as rice."

[4] "Le castor," says Charlevoix, "a été juridiquement déclaré poisson par la Faculté de Médicine de Paris, et en conséquence de cette déclaration la Faculté de Théologie a décidé qu'on pouvoit manger sa chair les jours maigres. Par sa queue est tout-à-fait poisson."

contributions to history and geography. Before 1660 they had explored all the course of the great lakes, from Niagara to the head of Lake Superior, had established missions among nearly all the tribes contiguous to these broad sheets of water, and had penetrated up many of the streams which empty into them. Marquette, Allouez, Dablon, Joutel, Montigny, St. Cosme, Davion, Thaumur de la Source. Charlevoix, Gravier, Marest, Du Ru, and Guignas were of the Society, and it more or less inspired and directed the labors of Champlain, La Salle, Joliet, Hennepin, Tonti, Iberville, Buache, Le Clerc, Le Sueur, Vincennes, D'Artagnette, Nicollet, Perrot, and La Verendoye. Dr. O'Callaghan, the able historian of New York, in his work on the "Jesuit Relations," sums up the leading achievements of the order on the path of discovery and exploration in Canada. He says they "became the first discoverers of the greater part of the interior of this continent. They were the first Europeans who formed a settlement on the coast of Maine, and among the first to reach it from the St. Lawrence. They it was who thoroughly explored the Saguenay, discovered Lake St. John, and led the way overland from Quebec to Hudson's Bay. It is to one of them that we owe the discovery of the rich and inexhaustible salt springs of Onondaga. Within ten years of their second arrival, they had completed the examination of the country from Lake Superior to the Gulf, and founded several villages of Christian neophytes on the borders of the upper lakes. While the intercourse of the Dutch was yet confined to the Indians in the vicinity of Fort Orange, and five years before Elliott, of New England, had addressed a single word to the Indians within six miles of Boston Harbor, the French missionaries planted the cross at Sault Ste. Marie, whence they looked down on the Sioux country and the valley of the Mississippi. The vast unknown West now opened its prairies before them. Fortunately, the early missionaries were men of learning and observation. They felt deeply the importance of their position, and, while acquitting themselves of the duties of their calling, carefully recorded the progress of events around them." These records constituted the "Jesuit Relations," which were yearly printed when they reached Europe, and supplied narratives not surpassed in thrilling interest and simple naive statement by any in the collections of Ramusio, Hakluyt, Purchas, and Navarrete. They are at the same time an inexhaustible fund of accurate American history.

Their explorations of the great Laurentian valley were not complete before they heard of the greater valley of the unmeasured river beyond, and panted with sacred ambition to plant the symbol of the cross among the teeming tribes which roamed over its fertile area. That ambition, pious as the Spaniard's thirst for gold was unholy, was not less quenchless than the mad rage of the Conquistadores. It was the sole grand passion which was permitted to intrude into the cool intellectual republic of the Society of Jesus, but it swayed everything before; it was the *mot d'ordre* of a spiritual knight-errantry such as the Templars and Hospitallers never dreamed of. The breviary and the crucifix, the Jesuit missionary's only weapons and buckler, were carried where the lance and the coat-of-mail of the man-at-arms would never have dared to venture. What the lofty soul of Regulus ventured to do with the eyes of Rome and Carthage upon him, and sure of the wondering applause of coming ages, the humble but fearless Father Isaac Jogues did as a matter of simple daily duty. "*Ibo et non redibo*" ("I go, but I shall never return"), he said as he set out on his last fatal mission of peace to the Mohawks, who had already tortured him nearly to death. Such a spirit could not be baffled on the brink of geographical discovery anywhere. While Champlain was exploring the lake that bears his name, and Lakes Ontario and Nipissing, Père D'Olbeau, in his mission at Tadoussac, was observing the Saguenay valley and the regions to the northward of the St. Lawrence. In 1647, Père de Quen discovered Lake St. Jean; in 1661, Pères Drouillettes and Dablon, with M. de Vallière, pressed forward to Lake Nekouban, but it was not until ten years later that Father Charles Albanel and his companions reached and took ceremonial possession of the desolate borders of Hudson's Bay.

Father Drouillettes ascended the Chaudière and descended the Kennebec in 1646, beginning the mission to the Abenakis. Pères Brébeuf, Daniel, Lallemant, Jogues, and Raimbault extended their explorations and missions to the upper parts of Lake Huron and founded the great central mission town of Sainte-Marie, near the Detroit River, and, in 1639, Jean Nicollet was beyond Green Bay and within three days' travel of what he conceived to be an ocean,—the "great water," which was really the Mississippi. Father Marquette, in 1671, was at Michilimackinac, with his Hurons, the first settler in Michigan. Fathers Chaumont and Brébeuf, in 1640, completed the explorations of Lake Erie; Raimbault and Jogues went to Sault Ste. Marie and the archipelago of Lake Huron; and in 1661, Père Mesnard set out to preach the gospel to the Ottawas on the shores of Lake Superior, of whom the fur-traders had just brought in an account. He was never heard from after he reached

St. Esprit Bay, on the west of Lake Huron, but years afterwards his breviary and cassock were found among the Dacotah Indians, preserved as sacred relics. Father Allouez pressed farther west in 1665; he preached among the Chippeways, built a chapel, and became acquainted with the wandering bands of the Pottawattamies, Sacs and Foxes, the Creeks and the Illinois, the Knisteneaux and the Sioux. The latter told him about the great river on which they lived, and he followed the fugitive families of the Nipissings into the upper regions of Minnesota.

Father Dablon also heard of the great river while at his labors on the western shores of Lake Michigan in 1669, and he and Allouez, in 1672, came very near to the Mississippi in their visits to the Kickapoos and Mascoutins on the river Renard. These Jesuits had planned to go north to the polar seas, to discover in that way a shorter route to Japan.

And now the time had come when the discovery and exploration of the Mississippi by the French could be no longer delayed. Louis [illegible] was king indeed, and his thrifty and sagacious minister of finance and trade, Colbert, was looking after all the royal possessions, with a view to their development for the glory and emoluments of France. This Jean Baptiste Colbert, the woolen-draper's apprentice of Rouen, who became Marquis de Seignelay, was in some respects one of the most remarkable men of his age. He purified the French finances, gave his king a navy and an income, and blessed France with a civil code and a new industrial system. He reformed and reorganized the colonies, Canada in particular, which he took away from the monopoly of traders and put under the king's government. Colbert sent Talon to act as intendant in New France, and make that province a factor in his new and world-embracing commercial policy. He encouraged an extensive immigration into the country by liberal gifts of public lands, and promoted in every way the discoveries and explorations made by the Jesuits. Talon, under Colbert's orders, had actually experimented in the direction of educating, civilizing, and giving citizenship to the Indians; he gave active and intelligent support to the development of every form of industry, particularly to new modes of agriculture, the exploration of mineral resources, and the extension of the colonies' commercial relations. He fostered the whale and seal fisheries, and promoted the exports of timber. In 1688 eleven hundred vessels came to Quebec, bringing merchandise and bearing colonial produce away, and this vast increase of trade was mainly the work of Colbert and his colonial right-hand man, Jean Baptiste Talon, *Intendant de la Justice, Police, et Finances en Canada*, a man of indefatigable industry and zeal.

Talon organized and systematized the work of exploration and discovery which had been carried so far by the Jesuits, giving the Fathers civil agents to accompany them, and suggesting particular routes to specially qualified parties. He sent Perrot to the foot of Lake Michigan, to talk with the Miamis, and call a meeting at Sault Ste. Marie of representatives of all the tribes of the region watered by the headwaters of the Mississippi, the St. Lawrence, and the Red River of the North. He selected and encouraged the intent and ardent La Salle in his initial undertakings. He picked out Capt. Poulet, of Dieppe, as the fit man to verify the route through the Straits of Magellan, and finally it was he who recommended Count de Frontenac to select Joliet for the companion of Father Marquette in the exploration of the as yet unseen great river of the West. Joliet himself, though a fur-trader now, had been educated in the Jesuit college at Quebec for the priesthood. Réné Robert Cavelier la Salle, who hated and feared the Jesuits, had spent his youth in the Jesuit seminary of Rouen, where, whether he intended to be a priest or not, he had performed some of the duties of a teacher of youth.

The voyage of Nicollet to Green Bay has already been alluded to. Nicollet was an interpreter and colonial commissary, who came to Canada in 1618, and learned to speak Algonkin among the savages. In 1639 he went West among the Winnebagoes (Ouinipagou), "a people who call themselves so because *they come from a distant sea*, but whom some French erroneously called Puants." Nicollet established good relations with these bands, accompanied them on their homeward way, explored Green Bay, ascended Fox River to its portage, crossed, and embarked on a river flowing westward. This was the Wisconsin, and Nicollet was told that, should he descend this river three days farther than the place where he stopped, he would have found the "great water." This, which the Indians meant for the Mississippi, Nicollet mistook to mean the Pacific Ocean or a branch of it. Indeed, the Gulf of California, the "Vermilion Sea," as it was called, was thought to extend northeastward in this direction, and the dimensions of the continent had not then been guessed.[1] De Groseilles, in 1658, on Lake Superior, heard of the Mississippi as a beautiful river, large, broad, and deep as the St. Lawrence. It was discovered that Iroquois war-parties, embarking

[1] The facts as given by Shea and Margry are contained in the Jesuit Relations of 1639–43.

on the Allegheny, descended the Ohio and ascended the Mississippi to fight their old enemies the Illinois, or descended to trade with Spaniards in the Gulf of Mexico. Allouez, learning of the river, conjectures that it empties into the Chesapeake or Delaware Bay —"the sea by Virginia"—he says. He hears of the Ilimouek (Illinois Indians) and the Nadouessioueh (Sioux). "They live on the great River called Messipi," he says.

Unfortunately, just at this point in the narrative of these great events, we are brought face to face with a keen and acrid controversy, which is just as bitter and just as personal and vehement as the quarrel, two centuries ago, in New and Old France, between the adherents of the Jesuits and the friends of Robert Cavelier de la Salle. We refer to the question of the real first explorers of the Mississippi River from the waters of the St. Lawrence. Both parties, perfectly honest and sincere in themselves, have resorted to the questionable and disagreeable expedient of denying or disputing the genuineness and authenticity of the documentary evidence produced by their opponents. The difficulties which environ the misunderstanding are still further complicated by the fact that on both sides of the controversy there are forged or spurious documents, relations known to be false, and pretentious claims demonstrated to be without a shadow of claim to credibility. But, as it is not proper to discredit what Father Hennepin said and wrote in his original journal, because he afterwards claimed what was absolutely false and demonstrably absurd, and as it is not just to reject the truths in La Hontan's narrative because he has mixed up falsehood with them, so it is not just nor proper to reject the "Jesuit Relations" because they are assailed by Le Clerc and do not agree with the La Salle documents collected so industriously by M. Pierre Margry; nor, on the other hand, to reject M. Margry's documents because he pretends with them to confute and demolish the Jesuit "Relations." It is the business of the dispassionate and impartial historian to accept and report all evidence on both sides which is of a credible and reputable sort, and to reject none until it has been proven to be unworthy of belief. Then, when the evidence is all in, and has been clearly and fairly stated, the balance of probability can be brought to the test. This course will be pursued here and hereafter throughout these discussions.

The "Jesuit Relations" are plain, simple, unadorned statements of the progress of mission-work and exploration, published as received from year to year between 1611 and 1673. They are continuous from 1632 to 1672. After 1673 the permission to publish them seems to have been revoked. Their honesty has been impeached by Le Clerc and by a correspondent of Antony Arnauld. But Le Clerc's prejudices and misstatements have been clearly proved, and M. Arnauld's friend simply charges the original narratives with having been garbled after they reached Paris for publication.[1] In respect to the events preceding the exploration of the Mississippi the narratives of the "Relations" are full, clear, simple, and coherent, with that intelligent, logical consecutiveness and dependence of one occurrence upon another which it is so difficult to counterfeit in a spurious or fictitious narrative. We will proceed with these narratives as they are given in abstract by Shea in his satisfactory "History of the Discovery of the Mississippi River." The Ottawa mission acquiring importance, Père Dablon was sent to it as Superior in 1668. A station was selected among the Illinois Indians, to which Père Marquette was sent. He took charge, and at once commenced the study of the dialect of the Illinois Indians. His instructor, an Illinois youth, gave him some knowledge of the course of the Mississippi River, and from the youth he also now heard of the Missouri. The enthusiastic young Father had long before planned to make an exploration of the Mississippi, and was simply waiting orders to undertake it. He now writes, "If the Indians who promise to make me a canoe do not break their word, we shall go into this river as soon as we can, with a Frenchman and this young man given me, who knows some of these languages and has a readiness for learning others. We shall visit the nations that inhabit them in order to open the passage to so many of our Fathers, who have long awaited this happiness. This discovery will give us a complete knowledge of the Southern or Western Sea."[2]

Père Allouez, Nov. 3, 1669, left Sault Ste. Marie to visit Green Bay, spent the winter preaching to the Winnebago and other tribes, and in April, 1670, ascended Fox River, crossed Winnebago Lake, and came to another river, flowing out of "a wild-oat lake." He turned up the river, not down, being in search of the Outagamis or Fox Indians. After a season among them he descended the river to the town of the Fire Nations, as the Hurons called them, the Machcouteuch (or Mascoutens). To reach this tribe he had passed on to the headwaters of the Wisconsin, "a beautiful river, running southwest, without any rapids. It leads to the great river named Messisippi, which is only six days' sail from here."

[1] See John G. Shea's edition and translation of Le Clerc.
[2] Relations, 1669–70.

Père Dablon, now superior-general of the Canada missions, intent on reaching the Mississippi, according to the advices and instructions of Colbert and Talon, yet hesitated whether the route by the Illinois or that by the Wisconsin would be preferable. There was another Indian war, in which the terrible Iroquois conquered again. The Ottawas and Hurons fled before them, and Marquette's mission was broken up. He went with the Hurons to Mackinaw, but the idea of exploring the Mississippi still filled his mind. Père Dablon, who wrote the "Relation" of 1670–71, published in connection with it a map of Lake Superior. In his description of it he makes the following reference to the great river:

"To the south flows the great river, which they (the Indians) call the *Mississippi*, and which can have its mouth only in the Florida Sea." He adds,—

"I deem it proper to set down here all we have learned about it. It seems to encircle all our lakes, rising in the north and running to the south, till it empties in a sea, which we take to be the Red Sea (Gulf of California), or that of Florida, as we have no knowledge of any great rivers in those parts flowing into those seas. Some Indians assure us that this river is so beautiful that more than three hundred leagues from its mouth it is larger than that which flows by Quebec, as they make it more than a league wide. They say, moreover, that all this vast extent of country is nothing but prairies, without trees or woods, which obliges the inhabitants of those parts to use turf and sun-dried dung for fuel, till you come about twenty leagues from the sea. There the forests begin to appear again. Some warriors of this country (Maskoutens), who say that they have descended that far, assure us that they saw men like the French, who were splitting trees with long knives, some of whom had their house on the water; thus they explained their meaning, speaking of sawed planks and ships. They say, besides, that all along this great river are various towns of different nations, languages, and customs, who all make war on each other; some are situated on the river side, but most of them inland, continuing thus up to the nation of the Nadouessi, who are scattered over more than a hundred leagues of country."

It is evident that it only remained now to make an exploration of a river about which everything was so distinctly known, not only to the Western missionaries, but to the traders likewise. Among the latter was Joliet, a secular of the Jesuits, who had come as near to the river as Allouez had, and whose services and usefulness were known to Talon. The intendant had resigned his post and was about to sail for France, when he received a letter from Colbert, on June 4, 1672, to the effect that, "as after the increase of the colony there is nothing more important for the colony than the discovery of a passage to the South Sea, His Majesty wishes you to give it your attention." Talon at once recommended Joliet to the Governor, Count Frontenac, as a proper person to undertake the exploration.[1] "He is a man," wrote the Governor to the French minister, "thoroughly versed in this sort of discovery, and who has already been in the vicinity of this great river, of which he promises to discover the embouchure. We shall have certain news of it this summer, and also of the Lake Superior copper-mine, to which we have sent other canoes, although I do not believe that it can be made of much use when discovered, from the distance and the difficulties of transportation on account of intervening falls and rapids."[2]

When Joliet showed his commission, Father-Superior Dablon chose Marquette to accompany him, instead of Allouez, though the latter was more familiar with the waters west of Lake Michigan. But Marquette's enthusiasm, his studies in the Indian tongues, his acquaintance with and esteem among the Illinois Indians, and his obedient and filial devotion to his order, secured him the appointment.[3] Joliet arrived

[1] Frontenac seems to have known Joliet himself. "M. Talon," he writes to Colbert on Nov. 2, 1672, "*a aussi* juge expédient pour le service d'envoyer le sieur Joliet à la descouverte de la mer du Sud, par le pays des Maskoutens et la grande rivière qu'ils appellent Mississipi, qu'on croit se descharger dans la mer de Californie." The word "*aussi*" would seem to indicate that Frontenac likewise was acquainted with Joliet's good qualities.

[2] This letter—the first part of it at least—which is without date in the Margry collection (vol. i. p. 255), is quoted by Mr. Shea from the Memoir of Frontenac, N. Y. Paris coll., as being written in 1672, November. But then why should he have promised news, *this summer*, of an expedition not yet started, if he wrote in November? The letter must have been written in 1673, after Joliet had gone to join Marquette, and before the exploring party had started, or before news of the start had been received by Frontenac.

[3] Marquette was a remarkable man; not less from his piety, his humility, and his devotion to religion than for his abilities as a linguist and a teacher. The Indians loved him as a brother, while they venerated him as a being of supernatural qualities. Jacques Marquette was a native of Laon, France, descendant of the most ancient family of the place, who had borne its highest civic honors for four or five hundred years. Jacques Marquette was born in 1637, his mother, singularly enough, being Rose de la Salle, a pious and devoted Catholic. He entered the Jesuit schools when only seventeen years old, and in 1666 was sent to Canada as a missionary. Immediately on his arrival he began the study of the Montagnais and Algonkin Indian dialects, with the purpose of connecting himself with the Tadoussac mission; but in 1668 he was ordered to join the Ottawa mission, and he forthwith proceeded to Lake Superior, erecting the missionary station of Sault Ste. Marie. Père Dablon joined him here, and they built a church. Marquette had two thousand Indians here under his care, a docile race, whom he tried to teach the lesson of his own life: "learn to labor and to wait." In the autumn of 1669, he was sent to the Ottawa Indians, taking the place of Allouez. It was his leading ambition to have a mission among the Illinois Indians and to discover the Mississippi, and these things he incessantly prayed for. He made acquaintance with wandering

at the mission of St. Ignatius of Michilimackinac, says Marquette, on the day of the Immaculate Conception of the Holy Virgin, and the two travelers were not long in preparing their simple outfit. They had gathered all the information they could get of the Indians and drawn up a map on the basis of it. They provided themselves with two bark canoes, and Indian corn and some dried meat was their whole stock of provisions. They had five men besides themselves, "firmly resolved to do all and suffer all for so glorious an enterprise." "It was," said Marquette, in his simple journal, "on the 17th of May, 1673, that we started for the missions of St. Ignace. Our joy at being chosen for this expedition roused our courage and sweetened the labor of rowing from morning till night. As we were going to seek unknown countries, we took all possible precautions, that, if our enterprise was hazardous, it should not be foolhardy; . . . above all, I put our voyage under the protection of the Blessed Virgin Immaculate, promising her that if she did us the grace to discover the great river, I would give it the name of Conception; and that I would also give that name to the first mission which I should establish among these new nations, as I have actually done among the Illinois."

The travelers soon came to the village of the Menominee or Wild Rice Indians, and from thence to Green Bay. They entered the Fox River, made the difficult passage beyond, crossed Lake Winnebago, and on June 7th reached the town of the Mascoutins and Miamis. Thence to the Wisconsin River, gliding down the tranquil stream through vines and beds of wild rice, until, on June 17th, they reached the bluffs of Prairie du Chien, and, as Marquette says, safely entered the Mississippi "with a joy that I cannot express." Marquette describes the river with a few simple touches which are very effective. Its current "is slow and gentle;" it is in many places "studded with islands;" "on sounding, we have found ten fathoms of water; its breadth is very unequal; it is sometimes three-quarters of a league, and sometimes narrows to three *arpents* (two hundred and twenty yards)." "We gently follow its course, which bears south and south-

Illinois, studied their language and customs, and learned of them about the river on which some of their villages stood. He came to dream of the search for Indian nations towards the south seas "who are still unknown to us, and to teach them of our great God whom they have hitherto not known." He thirsted for danger, toil, and hardship, and martyrdom did not appal him, though it was not in his humility to seek it. He took it as a happy augury that Joliet should have arrived with his commission on the feast of the Immaculate Conception of the Virgin Mary, "whom," he said, "I have always invoked since my coming to the Ottawa country, in order to obtain of God the favor of being able to visit the nations on the Mississippi River." On his return from the great exploration, Marquette was broken down in health by a dysentery. He recovered partially, and engaged at once in other active and fatiguing missionary work, until finally, on his way from old Kaskaskia, on the Illinois River, to his former station at Mackinaw, he expired, on the eastern shore of Lake Michigan, May 18, 1675. Louis Joliet, his companion, seems to have been a Canadian by birth, educated in a Jesuit college at Quebec, and afterwards engaged in the far West fur trade. Parkman says his father was a wagon-maker of Quebec, and that Louis was born there in 1645. He began life with the intention of joining the priesthood, received the tonsure and the minor orders, and took a distinguished part in the philosophical disputations of his class. When he abandoned the clerical vocation, he was sent by Talon to explore the Lake Superior copper mines. He was hardy, brave, intelligent, with a strong mercantile instinct, and had not lost favor with the Jesuits by renouncing the priesthood. After his return from the Mississippi, Joliet married a fur-trader's daughter, made a journey to Hudson's Bay, and received afterwards a grant of the island of Anticosti, where he established himself, engaging in the fisheries and surveying and making maps. The English burnt his place on Anticosti and took his wife prisoner in 1690. He was afterwards royal pilot for the St. Lawrence and hydrographer at Quebec, dying poor about 1700. Marquette's map and his simple narratives are all that he left. He sought no reward; his tender piety and unselfish devotion have embalmed his memory, and the Indians have fancied miracles in connection with his tomb. Two years after his death, says Mr. Shea, in a commemorative address at St. Louis in 1878, his Ottawa Indians, passing that way, took up his body, cleansed the bones, and, putting them in a box of bark, conveyed them to Point St. Ignace, where they were with solemn rite deposited in a little vault in the middle of the church. This edifice was burned down in 1700, and in time all trace of the site and of Marquette's tomb was lost, till last year, when the Rev. Edward Jacker discovered and identified both, but only to find that the tomb had been rifled, evidently by some Indian medicine man, who wished the bones of the great priest as a magical power. The remnants of the box and some fragments of bones were piously gathered, to be placed under a monument in his honor. The family of Marquette still exists in France, proud of one who added such lustre to their name. The descendants of Joliet have filled many places of honor in Canada down to our day both in Church and State, and at this very moment the archbishop of the ancient see of Quebec and the archbishop of St. Boniface in Manitoba claim descent from Louis Joliet. Cortes once pushed his way to the carriage of Charles V., and when the emperor-king haughtily demanded, "Who are you?" the conqueror of Mexico replied as haughtily, "One who gave you more kingdoms than your ancestor left you provinces." Marquette and Joliet, ignored by Louis XIV., might, amid the gay circle of his courtiers, have told him the same. Their peaceful conquest gave into the grasp of France the two great river systems of North America, the St. Lawrence and Mississippi. In the valley of the Mississippi alone, the loveliest, richest, and most wonderful on earth, they gave France what, had she known how to use it, would have made her the mightiest and happiest of nations. No other river on earth traverses, like the Mississippi, every variety of climate; no other valley is so evenly watered, so rich in gold, silver, lead, iron, and coal; none has a more fertile soil, scenery more grand and picturesque, none greater advantage for commerce. Yet France overlooked all this.

east, till the forty-second degree. Here we perceive that the whole face is changed; there is now almost no wood or mountain, the islands are more beautiful and covered with finer trees; we see nothing but deer and moose, bustards and wingless swans, for they shed their plumes in this country." Monstrous fish, fish of strange shape and design, are encountered; wild turkeys perch among the trees, wild cattle (bisons) come to the river-shore to drink. Everything is new and strange in this untraveled wilderness, and no human beings were seen in a traverse of a hundred leagues. At last, on June 25th, footprints of men are seen, a beaten path. The two explorers leave their canoes with the people and follow the path on foot with beating hearts. A village is seen on the bluff; "then indeed we recommended ourselves to God, with all our hearts," yet pursued the path undiscovered till they could hear the Indians talking. The brave adventurers shouted, the Indians rushed out, the peace-pipe was held aloft on both sides. "Illinois," said the savages, and took the voyagers to their village, where a venerable sachem, standing naked in the doorway of his cabin, with uplifted hands, extended to them a welcome which reads like a verse from the Odyssey. "How beautiful is the sun, O Frenchman," said he, making believe, with complimentary finesse, to shade his eyes, "when thou comest to visit us! All our town awaits thee, and thou shalt enter all our cabins in peace."

We will not closely pursue Marquette's narrative, which flows along throughout in this simple and beautiful style, the original being more naive and charming than can be reproduced in any translation.[1] The next day the voyagers proceeded on their way, promising to return in four moons, and escorted to the river-bank by a regiment of spectators. They soon came to the mouth of the Missouri River (the *Pekitanoui*, or muddy river, as Marquette calls it), having passed the Painted Rocks, the description of which was afterwards challenged by Hennepin. These pictured monsters frightened Marquette's followers, and they were still talking about them, "sailing gently down a beautiful, still, clear water, when we heard the noise of a rapid into which we were about to fall. I have seen nothing more frightful; a mass of large trees, entire, with branches, real floating islands, came rushing from the mouth of the river Pekitanoui, so impetuously that we could not, without great danger, expose ourselves to pass across. The agitation was so great that the water was all muddy and could not get clear." Marquette's chief thought, however, was whether he could not, by ascending this river, make the discovery of the Red or California Sea. "I do not despair of one day making the discovery," he says, "if God does me this favor and grants me health, in order to be able to publish the gospel to all the nations of this New World, who have so long been plunged in heathen darkness." Neither of the explorers could dream that just below this point of the Missouri's debouch, with "its dangerous rapid," from which they were so eager to escape, a great city would be built, the population of which would in two hundred years exceed the number of all the Indians whom Marquette sought to convert, where his name would be the theme of even the schoolboy's lips, and the day of his discovery be kept as a festival.

From the site of St. Louis the adventurers still descended, passing the mouth of the Ohio, which they knew as the Ouaboukigou (Ouabache—Wabash), from the lower tributary of that stream. They found here the Chawanons, or Shawnees, Indians, who had thirty-eight contiguous villages, Marquette reports, but were not warlike. The banks of the river now became clothed with cane-brakes, and the missionary found the mosquitoes, which had not troubled him before, beginning to swarm. "We now, as it were, entered their country," he says; and the voyager who enters there, as experience proves, must leave all hope of sleep behind. The Indians procured sleep by passing their nights on a scaffold of poles erected above a smudge fire. Indians encountered in the Chickasaw country assured the travelers that they were not more than ten days' distance from the sea, but they did not attempt to reach it. The Indians were hostile or treacherous. In descending to the mouth of the Arkansas they had secured proof that the Mississippi flowed into the Gulf of Mexico, and not into the Atlantic Ocean or the Gulf of California, and they feared, if they descended farther, they would fall into the hands of the Spaniards, be made prisoners, and lose the fruits of their voyage. So they turned the prows of their canoes up the river, retracing their course until they reached the mouth of the Illinois River,

[1] For example, the sachem's formal speech of welcome: "Quand jéu finy mon discour, le capitaine se leva, et tenant le main sur la teste d'un petit esclave qu'il nous vouloit donner il parla ainsi. 'Je te remercie, Robe Noire, et toy françois (s'addressant à M. Jollyet) de ce que vous prenez tant de peine pour nous venir visiter,—jamais la terre n'a este si belle ny le soleil si éclatant qu'aujourdhui; jamais notre riviere n'a este si calme, n'y si nette de rochers que vos canotz ont enlevées en passant, jamais nostre petun n'a en si bon gout, ni nos bleds n'ont paru si beau que nous les voions maintenant. Voicy mon fils, que je te donne pour te faire connoistre mon cœur, je te prie d'avoir pitié de moy et de toute ma nation, c'est toy qui connoist la Grand Genie qui nois a tous faits, c'est toy qui luy parle et quy escoute sa parole, demande luy qu'il me donne la vie et la santé et vient demeurer avec nous, pour nous le faire connoistre," etc.

and by it and the portage and Chicago River came again to Lake Michigan, passing by the Indian town of Kaskaskia, which Mr. Parkman places with such accuracy about seven miles from the town of Ottawa, Illinois. At the end of September they reached Green Bay, having been gone four months and paddled their canoes over twenty-five hundred miles.

Marquette's journals and map, the sole record of this most interesting and momentous voyage, were not treated as they deserved to be. He prepared his account and transmitted it at once to his superior, Father Dablon, who forwarded it, with a preface, to Frontenac, by whom it was sent to Europe. But it was not published by the French government, and did not see the light until printed imperfectly in 1681 by Thevenot in his "Recueil de Voyages," but with a map different from that of Marquette's, which accompanies his "Relation." This map of Thevenot's may be a reproduction of the one drawn for Count Frontenac from memory by Joliet. A copy of Marquette's "Relation" and map, however, with Dablon's introduction, was preserved in the archives of the Jesuit college in Quebec It was practically unknown, for even Charlevoix did not see it, and it was finally unearthed to be published by B. F. French in the Louisiana Historical Collections, and given, original and translation, with much supplementary matter and learned illustration, by Mr. J. G. Shea in his excellent volume on "The Discovery of the Mississippi River."[1]

Joliet, after taking leave of Père Marquette, proceeded to Quebec, to communicate the results of his discoveries to Count Frontenac. At the foot of the rapids of Lachine, at Montreal, his canoe was upset, two of his men and an Indian boy were drowned, and the explorer barely saved his own life. His journal, his map, and all his papers were lost. "Nothing remains to me now but my life," he wrote to Frontenac, "and the ardent desire to employ it on any service you may direct." But Frontenac himself reported Joliet's return, and the discovery made by him and Marquette, in a letter to Colbert dated Nov. 11, 1674.[2]

"The Sieur Joliet," he writes, "whom Mr. Talon advised me to send to the discovery of the South Sea when I came from France, returned from there three months ago, and has discovered some fine countries, with a navigation so easy by beautiful rivers, that he has found from Lake Ontario and Fort Frontenac one may go by vessel clear to the Gulf of Mexico, having but one portage to make between Lakes Ontario and Erie, about half a league long, and where a post may be set up and another vessel be employed on Lake Erie.

"These are projects to work upon when peace is well established, and the king shall please to push these discoveries.

"He has been within ten days' distance of the Gulf of Mexico, and believes that by the rivers which from the west fall into the great river which he found, and which flows from north to south, and which is as large as the St. Lawrence at Quebec, we may find communications leading into the Vermilion Sea and California.

"I send you by my secretary the chart which he has made of it, and the remarks he has been able to remember concerning it, having lost all his papers and journals in the shipwreck that overturned him within sight of Montreal, where he expected to be drowned after having made a voyage of twelve hundred leagues, and lost all his papers and a little savage whom he brought from those regions, which I greatly regret.

"He had left at Lake Superior, at Sault Ste. Marie, among the Fathers, copies of his journals, which we cannot obtain before next year, through which you will learn with more particularity about the discovery, in which he has acquitted himself very well."

The fragmentary report of Joliet, which accompanied his map as a sort of marginal comment, completes the history of this successful exploration, which, however, was never turned to any useful purpose by the Canadians or the imperial government. Marquette died and was forgotten, except among the Indians.[3]

Marquette was the saint, his passions subdued and his soul as brave as it was tranquil. La Salle was the sinner, proud, haughty, ambitious, scheming high schemes, and sacrificing others as readily as he immolated himself in the pursuit of his great and sometimes nebulous enterprises. But Mr. Shea is transparently unjust in the comparison he makes between the two men. There is no evidence that La Salle was sordid or grasping, and he does not deserve the sneer at "the aristocrat trying to be a merchant; courtier aspiring to rule, eager for a title, but with no idea of founding a state with the whole valley of the Mississippi in his hand."[4] He was an adventurer; but so were Columbus and Balboa, Raleigh and Drake. He was, if Mr. Shea will have it so, "a buccaneer;" but after the order of Cortes and De Soto, not after that of Morgan and Capt. Kyd. Abbé Raynal said, "New France had among its people a Norman named Robert Cavelier de La Salle, a man inspired with the double passion of amassing a large fortune and gaining an illustrious name. This person

[1] The MS. was reprinted by Mr. Lenox under the direction of Mr. Shea, says Parkman.

[2] Marbry, vol. i. p. 257.

[3] Mention has been made of the veneration in which he and his name were held among the tribes. He once preached to two thousand warriors, and his influence with the Illinois Indians was very great. Once, being at war with the Miamis, they came to beg him for ammunition. "I have come among you," he calmly replied, "not to aid you to destroy your enemies' bodies, but to help you to save your own souls. Gunpowder I cannot give you, but my prayers you can have for your conversion to that religion which gives glory to God in the highest, and on earth peace to all men."

[4] Address at the Marquette celebration, St. Louis, 1878.

had acquired under the training of the Jesuits, among whom his youth was passed, activity, enthusiasm, firmness of character, and high-heartedness,—qualities which that celebrated confraternity knew so well how to discern and cultivate in promising natures committed to their care. Their most audacious and enterprising pupil, La Salle, was especially impatient to seize every occasion that chance presented for distinguishing himself, and ready to create such opportunities if none occurred." This is true, as far as it goes; but the trouble with La Salle was, not that he was trained and moulded by the Jesuit discipline, but that his impetuous and imperious nature refused to submit to any discipline, any curb, even of his own experience, sorrow and suffering. His rule of life was that of Marius:

"Si fractus illabatur orbis
Impavidum ferient ruinæ."

"Under the pressure of all his misfortunes," said one of the missionaries, who was companion of his wanderings, "I have never remarked the least change in him; no ill news seemed to disturb his usual equanimity; they seemed rather to spur him on to fresh efforts to retrieve his fortunes, and to make greater discoveries than he had yet effected."[1] Such a man was no charlatan, but a hero.

CAVELIER DE LA SALLE.

Again, Marquette's discovery was the single keystone act of a series of discoveries all leading up to one point. That point—the test case in the great

hold as an outpost against the Iroquois. He set up a seigniory and built a village and stockade, studying the Indian tongue and the conditions of the fur trade. The Indians who visited him told of untraveled lands and unnavigated rivers outside of Canada; he heard of the Ohio, which name the Iroquois claimed to belong to one great river extending all the way to the Gulf of Mexico. He sought a route to China; perhaps he might find it in this way. He went to Quebec, saw Governor and intendant, won them to his plans, sold his seigniory, fitted out a party, including some Sulpicians, and started out for the Ohio. At the head of Lake Ontario the party met Joliet, just returned from a futile attempt to reach Lake Superior; they took Joliet for their guide to the Illinois, and La Salle left them. He had started to go to the Ohio. La Salle, his journals, maps, etc., now fall into mist for two years; there is no record of what he did or saw between 1669 and 1671, except the record which M. Margry has furnished, the unpublished Histoire de M. le la Salle, by a third person, anonymous, who pretends to give the results of ten or twelve conversations with La Salle in Paris. This third person will have it that in these two years La Salle, almost alone, deserted by his people, explored the Ohio from its Alleghany headwaters to the falls or to Cairo and the Mississippi, and descended also the Illinois to the Mississippi, which stream he followed to the thirty-sixth parallel of latitude,—that is to say, from Alton, Illinois, to below the bluffs of Columbus, Kentucky. We have the evidence, however, from his own hand and that of Joliet also, his rival, that La Salle did discover and explore the Ohio.

La Salle, when he returned from the wilderness, had great plans. They needed much money to accomplish them. He went to Quebec, saw the merchants, saw Frontenac, and taught him the secrets of the fur trade, in which the Governor wished to engage a little himself. In 1674 La Salle went to France with strong letters from Frontenac; he was well received at court, secured a patent of nobility and the seigniory of Fort Frontenac, and got large advances of money from his family to promote his adventures in the fur trade. In 1677 he was in France again; new commissions; new loans; exploration of the

[1] René-Robert Cavelier, Sieur de la Salle, was born in Rouen, of an old and rich burgher family, in which at one time was an estate known as La Salle. The date of his birth was Nov. 22, 1643. His father and uncle were rich merchants; his brother was a Sulpician abbé; the family had plenty of money. Robert received a good education; he connected himself with the Jesuits, taught in their schools, but could not yield himself to their crushing discipline. He lost his inheritance by joining the Jesuits, and when he left the order he sailed for Canada, in 1666, to seek his fortune. The Sulpicians of Montreal gave him a grant of land at Lachine to cultivate, and

induction—needed to be established, and Marquette proceeded to verify it with a certain grand single-hearted sincerity which was sublime in itself and in all its surroundings. But La Salle, man of ideas, man of designs, man of complex, far-reaching plans, had conceived a project of empire of which the successive step-by-step discoveries undertaken by him were only necessary parts of the tremendous fabric. To the execution of these schemes he brought keen intelligence, profound earnestness and enthusiasm, and a will that never bent under any pressure. Talon, the intendant, had conceived the idea of crossing Lake Ontario and forcing the Dutch and English out of New York, which would have eventually smothered them in New England. Champlain had sought a northwest passage to China. La Salle combined both plans with the occupation of the Mississippi and the West and the monopoly of the fur trade by France. This would crowd the Spaniards as well as English; it would build up an empire for France in America, and it would enrich the Sieur de la Salle beyond all rivalry of contemporary wealth. Every step he took was for the advancement of this plan,—Forts Frontenac, Niagara, Crevecœur; the exploration of the Ohio, the Illinois, the upper and lower Mississippi, the expedition to the Gulf, the fort in Texas. It was La Salle's plan, and it became the plan finally of the French government, when, having its chain of forts from Niagara to Vincennes, to Kaskaskia, to New Orleans and Mobile, Pensacola and Presidio del Norte, the government of New France planted its cannon also at Fort Du Quesne on the Ohio and Ticonderoga on Lake Champlain at the same time that it struck at Hudson's Bay. It is no reproach to a strong government, much less to a young man with no fortune, not too many friends, and numerous active enemies, if such comprehensive and far-reaching plans fail of accomplishment. La Salle's were crushed by a combination of political, moral, and physical forces. He did not, perhaps, have the attraction of cohesion in himself, and he had to encounter subtle intrigue and trade jealousy and suspicion; to bear the brunt of ecclesiastical and civil feuds which he had no hand in causing; to be the victim of Indian wars he had not roused, and beaten, buffeted, ruined by storm, frost, pestilence, robbery, and murder.

We have no intention to follow La Salle's adventurous steps. At Fort Frontenac he could form his plans at his leisure, for he was feudal lord of all around him. He was on the road to riches, for he had the monopoly of the buffalo fur trade, and this would be immensely profitable as soon as the prairies were reached. He needed money, for he had borrowed five hundred thousand francs. He pushed Hennepin forward to the explorations in Minnesota; he established Tonti at Fort Crevecœur, and then pressed on his preparations to complete the exploration of the Mississippi. Joliet and Marquette had traversed six hundred miles of its course. He would explore it from its far northern source to the Gulf. He mustered his men, resolved to put through his adventure at last, or perish in the attempt. "So many mishaps and evils always happening in his absence made him resolve to trust nobody any more and to lead himself all his people, march with all his equipments, and head each of his enterprises, so as to insure a happy issue."[1]

It was on Dec. 21, 1681, that La Salle and his company, fifty-four in all, Frenchmen, Indian warriors, and squaws and children, set out from Fort Miami. The streams were frozen in places, the portages were made on sledges, yet on Feb. 6, 1682, they had reached the Mississippi, to find the river full of floating ice. In a week,[2] the navigation free, the strag-

Northwest, the Prince de Conti for his patron, permission to build a fort at Niagara. Returning, with his noble friend the loyal Chevalier Tonti for companion, La Salle built the town of Niagara, built and launched the first vessel, the "Griffin," on Lake Erie, sailed to Lakes Huron and Michigan, and built Fort *Crevecœur* (the only groan he ever uttered) on the Illinois, at Peoria. Misfortunes and losses of every sort, many of them of his own contriving, fell upon the adventurer, but he sent Père Hennepin to explore the Upper Mississippi, and he finally explored the lower stream from Alton to the Gulf, thus earning, at least, his title of explorer of the West. In 1683 he went to France again, set out by sea to settle Louisiana and build a fort at the mouth of Mississippi, landed in Texas, and after an Iliad of misfortunes and miseries was basely murdered by some of his own followers. It is a wretched story; but Robert Cavelier de La Salle was not of the men who are born to die in peaceful comfort in their beds. He was badly treated; the elements as well as his fellows conspired against him, and his rule was too severe, his manners too reserved and haughty, for him to be well served. But no man ever had greater confidence shown him by rulers and capitalists, and no man ever won more loyal followers than he in the noble Chevalier de Tonti.

[1] Rélation des Descouvertes de Sieur de la Salle. This is the name by which Parkman quotes it. In Margry's work, vol. i. 435, the title is Relation des decouvertes et des voyages du Sieur de la Salle, etc., 1679–80–81, the sub-title being Rélation Officielle. It is from the records of the French ministry of the marine, and M. Margry is in doubt as to whether it is La Salle's own composition or the memorial of his friends and partners, based on his letters and journals, and written up by *un savant ecclésiastique*. It is probably the latter, as Parkman conceives. But La Salle furnished much of the substance of the document, and Hennepin pilfered from it.

[2] "Twelve days," says the narrative of Nicolas Cavelier, in Margry. Tonti, in his narrative (same volume), says the delay was to enable the Indians to build canoes. Père Membré says they were detained by the ice from February 6th to 13th. Young Cavelier is probably wrong.

gling hunters had come in, an early start was made next morning, 13th, and at evening they had reached the mouth of the Missouri (Ozage, Membré calls it), and camped in the woods below for the night. This camp may have been—and probably was—within the present limits of St. Louis County. Young Cavelier says, "*Le premier jour, on alla cabaner à six lieues au coste droit, proche de l'embouchure d'une rivière qui tombe dans le Mississipi et qui la rende forte trouble et borbeuse.*" (Six leagues from the mouth of the Illinois would bring one to the south shore of the Missouri, and *proche de l'embouchure.*) The place was fully inhabited,—"*abondante en peuples,*" says Tonti. He adds, "There are even some villages of savages who make use of horses for war purposes and to transport the flesh of the bisons killed by them in the chase." Father Membré also speaks of the Indians. These, the earliest inhabitants of St. Louis County, were Osages. La Salle and his party[1] proceeded down the Mississippi to the delta without any further misadventures; they entered the Gulf of Mexico by all three mouths, and, when the parties were reunited on a spot of dry ground just within the river, a column was erected, bearing the arms of France and inscribed: "*Louis le Grand, Roy de France et de Navarre, règne; le neuvième Avril,* 1682." The Frenchmen were mustered under arms, the regulation *Te Deum* and other Latin chants and hymns were sung, a volley of musketry was discharged, the column planted, and La Salle proclaimed the fact (attested likewise by a *procès-verbal* drawn and witnessed on the spot) that he took possession of LOUISIANA in the name of the French king. The boundaries of the parchment empire thus appropriated are marked by Mobile on the west, the Rio Grande on the east, the Ohio and Allegheny Rivers on the northeast; on the northwest the territory extends to the polar circle.

La Salle now retraced his course. He established a fort on the Illinois, at "Starved Rock," near the Indian town of Kaskaskia, to defend his new trading regions from the assaults of the Iroquois; he gathered many tribes about his settlement, for his influence with the savages was almost supreme, and in Indian councils he was more powerful and more persuasive even than Pontiac or Tecumseh; and then, in 1684, he went once more to France to prepare for his last expedition. We will not follow him, but proceed now to examine the various and conflicting evidence in regard to this part of the history of exploration in the Mississippi valley.

We have alluded already to the fact that this matter has been complicated, and the discussion of it seriously embarrassed by the intrusion of spurious and fraudulent claims and the coinage of documents with false names and dates, as well as invented facts. The extent to which this has been done marks at once the general public interest in the subject and the intensity of the controversies of the period. People do not coin and forge for amusement, but for profit, and canards and invented documents will not be put forth when there is nobody to read them. The counterfeit documents on which to rest opinions, claims of discovery, and explorations did not cease with the immediate period of the discovery of the Mississippi In 1855, Judge Law delivered a lecture before a literary institute at Cincinnati, in which, while pronouncing a eulogy upon the Jesuit missionaries of the Northwest, he seriously impeached the fair fame of Père Marquette. He said that the Jesuits extended their missions towards the Mississippi by three routes—the Wabash, the Illinois, and the Wisconsin Rivers, and "that one or more of these three routes had been traversed by the Jesuit Fathers years before Marquette and Joliet launched their frail bark, in 1673, on the waters of the Mississippi, is susceptible of proof; and that the Mississippi had been known, and the tribes inhabiting visited, and the missions established, before Marquette even coasted its borders, is now well understood. As early as the year 1652, twenty years before Marquette and Joliet started on their voyage of discovery to the 'great river Mechassippi,' Father Jean Dequerre, Jesuit, went from the mission on the Superior to the Illinois, and established a flourishing

[1] It is worth while to put on record the names of La Salle's party, the first of the advancing tide of persons of all nationalities who have built up St. Louis. They did not come by railroad nor steamboat, yet there was a characteristic diversity in the composition of the party. The names may be found in Tonti's Relation, as published by Margry: M. de la Salle, commander, for the king, at the said discovery (Rouen, France); the Reverend Father Zenobie (*sic*: Zenobius Membré), Recollect (Membré was a native of Bapaume, Spanish Netherlands); the Sieur Henri de Tonty, captain of brigade (an Italian, son of a governor of Gaeta): the Sieur de Boisrondet (French, and well-born; a youth stanch and loyal to La Salle throughout); Jacques Bourdon, Sieur d'Autray (French; son of Bourdon, the engineer, of Quebec); Jacques La Métorie, notary; Jean Michel, surgeon; Jacques Cochois; Anthoine Bassard; Jean Masse; Pierre You: Colin Crevel: Jean du Lignon; André Hénault; Gabriel Barbier. Pierre Migneret; Nicolas de La Salle; André Babeuf; Pierre Buret; Louis Baron; Jean Pignabel; La Violette; Pierre Prud'homme, armorer. Savages: Captain Clause; Amabanse; Hirguen; Ahos; Senechó; Nanaouairinthe; Youtin; Sanomp; Ouabarcsmantii; Alimalman; Apexos; Chouakost; Akiesko; Maskinampo; Miousma; Onenthio; Pioua; one Huron woman, three Nipissings, five Abenakis, one Okipois, and three children. Of these Indians, some were of the Mohecans, survivors of those expelled from New England and New York; the Abenakis were from Maine, the Nipissings from the Huron country. All were of the Algonkin race and deadly enemies of the Iroquois.

mission, probably the mission of St. Louis, where Peoria is now situated. He visited various Indian nations on the borders of the Mississippi, and was slain in the midst of his apostolic labors in 1661. In 1657, Father Jean Charles Drocoux, Jesuit, went to Illinois, and returned to Quebec the same year. In 1670, Father Hugues Pinet, Jesuit, went to the Illinois and established a mission among the Tamarois or Cahokias, at or near the present site of the village of Cahokia, on the borders of the Mississippi. He remained there until the year 1685, and was at that mission when Marquette and Joliet went down the Mississippi. . . . Thus it will be seen that for twenty years, to wit, from 1653 to 1673, anterior to the discovery of Marquette and Joliet, there was a succession of missions on the Illinois, and one of them, that of Cahokia, established on the very banks of the Mississippi. There are no other memorials of these missions now extant, as known to me, except those preserved in the Seminary of Quebec, from a copy of which the above notices are taken." John G. Shea, unwilling that such discreditable charges should lie against the memory of Marquette, "the angel of the Ottawa missions," investigated the matter carefully, and showed that no such missionaries as Father Duquerre and Father Drocoux ever existed. The sole authority for these and their alleged work was a discredited MS. by one Fr. X. Noiseaux, a vicar in the Quebec Seminary, who gave no authority for his statements, and whose own superiors have said of his work that "errors of every kind, contradictions, false dates, distorted facts, are found in every page."[1]

This is but one, and a modern, instance. Le Clerc, in his large work upon "The Establishment of the Faith," quotes the testimony of Father Anastasius Douay, a companion of La Salle in his last journey, to the point that Marquette's "Relation" was a fiction, and not published until after La Salle's discovery, and that Joliet would have given no sanction to the statements it contained. This, again, is all wrong, like much else in Le Clerc's prejudiced accounts of affairs. Thevenot published his version of Marquette's journal in 1681, at least a year before La Salle's discovery was made, and two years before the news of it could reach France. But the letters of Count Frontenac, given above, are a sufficient corroboration of the work done by Marquette and Joliet, even without Marquette's journal and map. Le Clerc's position that Marquette's "Relation" is a fiction is utterly untenable. If evidence of that sort is tenable under any circumstances, we must admit Marquette's "Relation," or else consent to dispense altogether with the class of evidence to which it belongs.

Tonti, the loyal and generous, brave and devoted follower of La Salle, has been seriously injured by the fact that a spurious narrative was put forward in his name, an absolute forgery. He disclaimed all connection with its authorship. La Hontan, another writer, whose travels have obtained credit because, like Hennepin, he knew how to mix the true with the false, has told of his travels up the "Long River." No such river ever existed, nor was any such voyage ever made. Mathieu Sagean also invented the account of an El Dorado in the Northwest known only to himself; but this adventurer was illiterate, he did not know how to lie, and he only deceived a few persons, like M. de Pontchartrain, who were not to the manner born. The most prominent and conspicuous of these fabulists of the period, who seemed born with a constitutional aversion to the unadulterated truth, was Friar Louis Hennepin, a Flemish Recollect, an adventurer, who lied, libeled, cheated, and forged with utter unscrupulousness, but who, nevertheless, had many of the best qualities of the traveler. In our own day he would have distinguished himself as a newspaper correspondent. His braggart vein did not prevent him from being brave and adventurous, and as an observer he has not often been excelled, while as a *raconteur* he was very bright and entertaining. His travels went through many editions, and their popularity is not surprising. He was a brazen, impudent liar, but he loved a good story and knew how to tell one. As has been stated, he was sent by La Salle to explore the upper Mississippi in 1680. This he did, from the mouth of the Illinois to the Falls of St. Anthony, in a full and satisfactory manner, being taken prisoner and detained several months by the Sioux. When he got away from them he went to France and published an account of his travels and discoveries in a little volume, finely illustrated, which the public eagerly welcomed and read with avidity. In 1697, after La Salle's death, and fourteen years after his first edition, he published a new version of his travels, in which he claimed to have gone *down* the Mississippi, and discovered its mouth, before going up to its source. He had forborne to mention this subject previously, out of consideration for or fear of La Salle. In his first edition, however, Hennepin had given the dates, and now he had not time enough left to put his long voyage in. Consequently, he was compelled to go up and down the Mississippi in his birch canoe more rapidly than he could have done it by steam. The result was that his wretched expedient was instantly detected, and he took no credit by

[1] Collections of Wisconsin Historical Society, vol. iii

the falsehoods he was trying to set up. He was a renegade and a dishonest man at the best. His first edition was dedicated to Louis XIV., the last to William III. of England, showing that he had changed his politics. He does not seem to have had any religion to change. Not content with stealing from the narratives of Marquette, La Salle, Membré, Le Clerc, and Marquette, Hennepin turned out of his way to misrepresent and libel all these, and La Salle in particular. He is the author of the story that La Salle's main object in his last voyage was not to occupy the mouth of the Mississippi, but to seize and plunder the Mexican mine of Santa Barbara.

Under such a condition of the records and documents, it is natural that the facts about the discovery and exploration of the Mississippi are confused and provocative of discussion and controversy. The partisans of La Salle have attempted to discredit or belittle the performance of Marquette and Joliet, and have set up a counter-claim of priority, which there is no proof that La Salle himself asserted. The partisans of Marquette, on the other hand, have attacked at once the credibility of the documents relating to his explorations, the value and extent of those explorations and discoveries, and the character and genius of La Salle himself. There is no necessity for all this. There can be but little doubt of these facts: First, that Marquette and Joliet reached the Mississippi in 1673, and that no white man of whom there is any record preceded them in exploring that part of the great river; second, that Hennepin, acting under the orders of La Salle, explored the upper Mississippi in 1680, no European having preceded him; and third, that La Salle, in 1682, descended the Mississippi from the embouchure of the Illinois to the Gulf of Mexico, and returned by the same route, having had no predecessors in that exploration. No one can safely or successfully dispute these three controlling facts: the evidence for each and all of them is too strong. If they are conceded, all causes of controversy are removed at once, without detracting anything from the honor and character of Marquette, the enterprise and adventurousness of Hennepin, and the glory and persistence of La Salle.

The claims put forth by M. Margry in behalf of La Salle's priority have been industriously urged by him, but they are untenable. Indeed, this laborious investigator has himself discovered and published the evidence which overthrows the pretension. In order that no injustice may be done to M. Margry, it is proper to say that this gentleman, who is a member of the French Historical Society and assistant custodian of the archives of the marine and colonies in Paris, has been most indefatigable in the search for materials for history, and especially American history. He was employed a number of years ago by General Lewis Cass to examine the French archives for information concerning the early history of Detroit, and subsequently by Parkman in securing copies of documents relating to French-Canadian history. He has published several volumes of original papers relating to our history, from his department, assisted by the government of the United States. In 1879 he was elected a member of the Wisconsin Historical Society, and in his letter of acceptance he wrote as follows in relation to some papers of his published in the French "General Journal of Public Instruction" in 1862:

"What I s[illegible] concerning Cavelier de la Salle's priority in discovering the Ohio and Mississippi has been the occasion of great, and even acrimonious [illegible]troversies. I care nothing for attacks from which search a[illegible]uth is excluded, and which are little else than passion. It is enough for me to state that in the American edition of my volumes, which you have, I was not allowed to put any notes of introduction, but that the map inserted in the French edition confirms what I have advanced respecting the discovery of the Ohio, and that I still very firmly believe that La Salle discovered the Mississippi by way of the lakes, by Chicago, and by the Illinois River, as far south as the 36th parallel, and all this before 1673 (the date of Marquette's discovery).

"This opinion of mine I base, first, on the narrative made by La Salle to the Abbé Renaudot.

"This narrative describes an expedition in which La Salle was engaged southwest of Lake Ontario for a distance of four hundred leagues, and down a river that must have been the Ohio. This was in 1669."

"The narrative proceeds: Some time thereafter he made a second expedition on the same river, which he quitted below Lake Erie, made a portage of six or seven leagues to embark on that lake, traversed it towards the north, ascended the river out of which it flows, passed the Lake of Dirty Water (St. Claire?), entered the Freshwater Sea (Mer Douce), doubled the point of land that cuts this sea in two (Lakes Huron and Michigan), and, descending from north to south, leaving on the west the Bay of the Puans (Green Bay), discovered a bay infinitely larger, at the bottom of which, towards the west, he found a very beautiful harbor (Chicago. Is there any earlier mention or description of that site?), and at the bottom of this river, which runs from the east to the west, he followed this river, and having arrived at about the 280th (*sic*) degree of longitude and the 39th of latitude, he came to another river, which, uniting with the first, flowed from the northwest to the southeast. This he followed as far as the 36th degree of latitude, where he found it advisable to stop, contenting himself with the almost certain hope of some day passing by way of this river even to the Gulf of Mexico. Having but a handful of followers, he dared not risk a further expedition, in the course of which he was likely to meet with obstacles too great for his strength. [See my work *Découverte et Établissement des Français dans l'ouest et dans le sud de l'Amerique Septentrionale*, 1614-1754], vol i. p. 378.]

"I base my opinion, secondly, on a letter of La Salle's niece —the Mississippi and the river Colbert both being one. This letter, dated 1756, says the writer possessed maps which in 1675 were possessed by La Salle, and which proved that he had

already made two voyages of discovery. Among the places set down on these maps, the river Colbert, the place where La Salle had landed near the Mississippi, and the spot where he planted a cross and took possession of the country in the name of the king, are mentioned. (Vol. i. p. 379.)

"I base my opinion, thirdly, on a letter of Count Frontenac. In this letter, which was written in 1677 to the French premier, Colbert, Frontenac says that 'the Jesuits, having learned that M. de la Salle thought of asking (from the French crown) a grant of the Illinois Lake (Lake Michigan), had resolved to seek this grant themselves for Messieurs Joliet and Lebert, men wholly in their interest, and the first of whom they have so highly extolled beforehand, although he did not voyage until after the Sieur de la Salle, who himself will testify to you that the relation of the Sieur Joliet is in many things false.' (Vol. i. p. 324.)

"In fine, I found my opinion on the total antagonism between the Jesuits and the merchants, as well as all those who represented interest or only a legitimate ambition. In opposition to the Jesuits Cavelier de la Salle always associated with the Sulpicians, or Recollets, whom Colbert had raised up against the Jesuits, in order to lessen the influence of those who would fain undermine him.

"If La Salle had wished to practice deception, and to claim a merit that was not his, nothing would have prevented his saying that he had gone farther down the river Mississippi or Colbert than he does say he went, whereas he left Joliet and Father Marquette the honor of having penetrated to that river by way of the Wisconsin, and of having descended the Mississippi River three degrees farther than he, and that before the enterprise of 1678."

This letter of M. Margry is the brief of his entire case for La Salle. The letter of La Salle's niece, Madaleine Cavelier, Dame Leforestier, written 21st of January, 1756, says, "As soon, monsieur, as your letter came I sought a safe opportunity to send you the papers of M. de la Salle. There are some charts which I have added to these papers, which should serve to prove that, in 1675, M. de la Salle had already made two voyages in these discoveries, since he had on that matter a map which I send you, by which mention is made of the place where M. la Salle landed (*aborda*) near the river Misipi, another place which he names the river Cobrer (Colbert?), in another he takes possession of this land in the name of the king and has a cross planted, in another place which he names Frontenac, the river St. Lorans at another place. You will see in these pieces the review which they made in the fort, which he built of stone which had been (*aitet*) of wood. You will find there the receipt of M. Duchesneau, for the interest for nine thousand livres, which M. de la Salle paid him to indemnify those who had made this wooden fort." This letter of the Dame Laforestier proves too much for M. Margry. The good lady does not more than indicate the contents of the papers (which are not in existence), but she describes the maps, and proves that one of them, at least, was in illustration of the exploration of 1682. If La Salle had known the Mississippi before 1675, he would not have confused its name with that of Colbert. Colbert was the name which La Salle selected for the river, just as he selected the name of Louisiana for the territory. In any event, the letter proves nothing except that La Salle made two voyages before 1675. The maps may or may not have been relevant to these voyages. There is no evidence for it beyond the unsupported conjecture of this simple-minded dame.

M. Margry relies further upon Frontenac's letter of 1677. The language of Frontenac is singular, but it cannot be read without the context. The Governor (who was mixed up in the fur trade, probably in partnership with La Salle, and suspected the Jesuits of thwarting him in this matter, as they had done in regard to the brandy trade) takes the occasion, in this letter, of preferring a charge against the whole Church in Canada. "Almost all the disorders of New France," he writes, "derive their source from the ambition of the ecclesiastics, who, wishing to join to the spiritual authority an absolute power over temporal things, cause to suffer and to murmur all those who are not entirely submissive to them. It is not simply since a year or two that the ecclesiastics have wished to make themselves an absolute empire in Canada; it appears they formed the design almost as soon as they came in here." In proof of this general indictment Frontenac produces several instances and examples, some of which are very comical. Among these instances, however, is this, "that, having learned that M. de la Salle designed to demand the concession of Lake Erie and the lake of the Illinois (Lake Michigan), of which the first is a consequence of his grant of the commerce of Lake Frontenac, which chiefly comes from Lake Erie, at the entrance of which he necessarily needs to build a fort to prevent the English from seizing it (and by the report of the Reverend Jesuit Fathers themselves they [the English] have recently sent a deserter named Turquet to reconnoitre it),—on learning this, I say, they resolved to make a demand themselves for this concession for the Sieurs Joliet and Lebert, people who entirely belong to them, and the first of whom they have so much vaunted in advance, *although he did not voyage until after the Sieur de la Salle, who himself will testify to you that the relation of the Sieur Joliet is false in many things.*" What voyage? What relation? The Jesuits and La Salle had counter-claims, not to the discovery of the Mississippi,—that was not in question now,—but to Lake Michigan. La Salle wanted to plant a trading-post at the upper Kaskaskia, at Peoria, the great town of the Illinois, where Father Marquette had planned to have a missionary station. Joliet had

been out with St. Lusson in 1769 on an unsuccessful journey towards Lake Superior and Lake Michigan. This was the voyage in which La Salle claimed priority over him. In 1672, when Joliet was sent out to join Marquette and seek the Mississippi, he was expected also to find out something more about the copper-mine on Lake Superior. Joliet made no "Relation" in regard to the discovery of the Mississippi. His only report was a map drawn from memory and a few fragmentary pages concerning it. His report in regard to his journey with St. Lusson and Dolier and Gallinée, on the contrary, must have been full and comprehensive. The reference to Joliet, therefore, is not to his journey with Marquette in 1672 at all, and if it had been so, the words "false in many things" would not imply that the Mississippi had not been navigated by him and Marquette.

But M. Margry depends chiefly upon the reported conversations of M. de la Salle with "a friend of the Abbé de Gallinée" (whom he considers to be the Abbé Renaudot) for the proof that La Salle was the original explorer of the Mississippi River. This interesting article has been carefully examined, in connection with the other documents furnished by M. Margry, and the conclusion is that it does not bear out any such supposition. The Abbé de Gallinée's friend probably misunderstood La Salle. He certainly got the latitude and longitude wrong. He makes the longitude of the headwaters of the Scioto or the Ohio and that of the city of Chicago the same. The paper by itself is unintelligible. Read in connection with other papers in M. Margry's volumes, however, a meaning can be reached which seems to satisfy all the conditions of the problem, without putting a reflection upon the honor or veracity of any of the principal actors in this drama of discovery. If we suppose that "the friend of the Abbé de Gallinée" misunderstood La Salle, we will find further that at no time did La Salle, or any of his friends for him, claim that he discovered the Mississippi prior to 1682. He did claim to have discovered the Ohio in the winter of 1669–70, and to have descended it an uncertain distance. He did claim to have made many other discoveries of importance in the country to the south of the great lakes. This claim is made in several shapes, as coming directly from him and from his immediate friends, in official documents and authentic memorials. Joliet, according to Parkman, conceded the claim, in two maps produced by him in 1673 and 1674. But he did not claim to have discovered the Mississippi, though he knew of Joliet's and Marquette's claim, and was recommending his services and sufferings to the court, in pursuit of a recompense to be based upon them. Talon, the intendant, Frontenac, the Governor, knew of no such claim, no such discovery, though their interests and La Salle's were identical, and though La Salle had gone to the south and west to make discoveries by Talon's own direction. Nor did La Salle's kinsmen make any such claim for him after his death in the memorial to the king reciting his services and explorations.

How then are we to interpret the conversation with the friend of the Abbé de Gallinée? That such a conversation took place there can be no doubt. That La Salle's opinions and his statements concerning his performances were misunderstood is equally clear. The reporter was not well up even in the loose, imperfect geography of the day. He absurdly says that La Salle, during the twelve years of his American journeys, had traversed the regions between the 330th degree and the 265th degree of longitude and the 55th degree and 36th degree of latitude,—a range of from Hudson's Bay to Tennessee and Arkansas, from the Grand Banks of Newfoundland to the upper Missouri River. Perhaps La Salle did go to Hudson's Bay. We know that he sought a short way to India, and that his first journeys were made in the country north of the St. Lawrence. We know that in the end he went to Matagorda Bay, low down on the Gulf of Mexico. But he had not done so at the time of this conversation, and did not pretend to have done so. His pretensions are formulated with the utmost distinctness in a paper published in M. Margry's second volume (p. 377 *et seq.*), in which a friend of La Salle's makes an official report to the Marquis de Seignelay (son and successor of Colbert) on his undertakings, in the shape of a memoir "on the discoveries of the Sieur de la Salle *to the south and the west* of the Great Lakes of New France." This is an elaborate defense of La Salle from all the charges brought against him by his enemies (enemies whom he feared because, as he himself said, "they always succeed in the end in pulling a man down"), and it was made just on the eve of his departure for the exploration of the Mississippi. In regard to this the memoir says, "The Sieur de la Salle has had sufficient proofs that the river Colbert (Mississippi) falls into the Gulf of Mexico, . . . *and we will have positive news about it at the end of the year from the Sieur de la Salle.*" This is the language of one who intends to go and get ocular proof of that which he is already morally certain about. And here is all that La Salle claims at the end of 1681: "*He has been the first to form the design of these discoveries* which he communicated, *more than fifteen years ago* [in 1677 namely], to M. de Courcelles, Governor, and

to M. de Talon, intendant of Canada, who approved it. He subsequently made several voyages to that region (*de ce coste-là*), and one among others in 1669 with Messieurs Dolier and Gallinée, priests of the seminary of St. Sulpice. *It is true that the Sieur Joliet, to forestall him* (*pour le prévenir*), *made a voyage in* 1673 *to the river Colbert;* but this was simply (*uniquement*) to trade in that direction, without having spent any money upon it, and without attempting then nor since to make any establishment there, while on the other hand the Sieur de la Salle, with this design, caused Fort Frontenac to be constructed and built several vessels with decks; he has built several other forts, discovered the country of the Nadowesioux (Sioux) and several others, all at great expense, which he was under no obligation to incur, and the avoidance of which would have made him rich." "If he had preferred profit to glory," the memoir adds, "he had but to remain in his fort, where he enjoyed an income of more than twenty-five thousand livres a year from the commerce he had attracted there."

All this is clear and intelligible. It disposes completely of M. Margry's claims, and it only remains for us to show what were the nature of La Salle's discoveries, how he came to make them, and what their value was to himself and to the Governor and intendant who so eagerly urged him to prosecute them. His career as a discoverer properly began at his trading-post at Lachine, where he received the Indians from every quarter, studied their languages and manner, and made himself familiar with their country. This is on record, and it is also on record that in 1669, after conferences with Talon and Courcelles, he sold Lachine and started out on an exploring expedition in company with Dolier and Gallinée, the Recollect friars. They intended to seek the Ohio, but the Recollect brothers, after meeting Joliet, were persuaded by him to go around Lake Erie and seek Lake Superior, whereupon La Salle said he was too sick to go farther, and the two parties separated.

At that time the Iroquois were so formidable between Detroit and the head of Lake Ontario that this lake and Lake Erie were of no use to the French. The missionaries and traders left Montreal by the northern route, ascended the Ottawa River, made the portage to Lake Nipissing, got into the Georgian Bay, skirted along the north shore of the North Channel, and in 1660 had only heard of two traders who had passed through the Sault Ste. Marie into Lake Superior. The missionaries had immediately followed them,—Menard, Allouez, Dablon, and now Marquette,—and at this time there were missions at Sault Ste. Marie at the east, and at La Pointe in the southwest of Lake Superior, with stations possibly on Green Bay and the Strait of Mackinac, only reached, however, overland from Sault Ste. Marie. The lake routes were not available; the southern shores of Huron, Erie, and Michigan were scarcely known, and the Iroquois and their allies infested the northern routes also.

It is repeatedly mentioned that La Salle entertained Indians of the Iroquois nation at his post at Lachine. But it has not been noted, apparently, that among these Iroquois were some of the Susquehannocks, an Iroquois tribe who were generally at war with their kindred of the Five Nations, though sometimes at peace. These people, who traded with the Swedes, traded also with the French. As we shall show, they hunted up to Lake Erie as well as on the headwaters of the Potomac. La Salle sold out Lachine, Jan. 9, 1669. July 1st of that year he engaged men in his service to go with him "on the voyage for which the said Sieur de la Salle prepares himself to go to the savage and distant nations of both the North and the South Coast,"[1] and started out with Fathers Dolier and Gallinée. The latter, in his "Relation," says that M. de Courcelles begged M. Dolier to join forces with M. de la Salle, "to make together the voyage that M. de la Salle had contemplated (*prémédité*) for a long time towards a great river which he had conceived (in consequence of what he thought to have learned from the savages) to have its course towards the west, at the end of which, after seven or eight months' march, . . said savages related that the land was cut off,—that is to say, according to their fashion of speech, that this river fell into the sea,—and that this river is called in the Iroquois tongue, Ohio. . . . The hope of getting beaver, but above all the hope of finding by this way a passage to the Vermilion Sea, into which M. de la Salle believed the Ohio fell, made him undertake this journey, so as not to leave to another the honor of finding the road to the South Sea, and by it that to China." Father Gallinée goes on to say that La Salle's commission authorized him to search closely in all the woods, rivers, and lakes of Canada in quest of natural advantages (*pour voir s'il n'y auroit rien de bon*), and begged the Governors of the provinces he might come to, such as Virginia, Florida, etc., to permit him to pass, and to give him aid, as they would wish us to do by their people in like case.[2] The expedition started from

[1] Margry, vol. i. 106. *Engagement de Charles Thoulonnier au Service de Cavelier de La Salle.*

[2] Mr. Shea, in his "History of the Discovery of the Mississippi," says, "When Joliet passed down Lake Ontario, in 1674, he

Montreal, in seven or eight canoes, on July 6, 1669, having for guide two canoes of Sonnontoueronon (Seneca) Iroquois, says M. de Gallinée. They had come to Montreal the previous year, and "had dwelt a very long time with M. de la Salle, and had told him so many marvels about the Ohio River, which they claimed to know perfectly well, that they kindled in him more than ever the desire to visit it." These Indians knew all about the Shawanese (*Chiouanons*), and the other Ohio tribes. Gallinée had a Dutchman for his guide. At this time the Senecas were at peace with the French, but they were at war with the Susquehannocks, or, as Gallinée terms them, "*the Antastogué or Antastouais, who are the savages of New Sweden*, and who continually are on the war-path around the country of the Senecas." They had just slain ten men in the very place where the Fathers and their party were awaiting an interview with the Senecas, and the good Gallinée does not seem to have liked the prospect. The object in going to the Senecas was to buy from them an Indian captive of one of the Ohio tribes who might serve to guide them to that country. The Senecas, however, refused them a guide; it was six days' journey of twelve leagues each from their town to the Ohio, whereas, from Lake Erie across to streams running into the Ohio, it was only a short portage of three days. Besides, the Ohio country was very dangerous. The Toaguenha were a bad tribe who would find their camp and scalp them at night. If they escaped these, they were sure to be slain by the Antastoes (Susquehannocks), and that would embroil the Senecas with "Onontio," the Governor of Canada.

They left the Senecas, went to the Niagara River, and thence to a village of the Gantastogué—Sonontoua Outinaouatoua—on or near Lake Erie, where La Salle fell sick, and where the party found two guides, captives of the Shawanese and the Nez-Percé tribes, one of them a Pottawattamie. La Salle selected the Shawanese for his guide. It was at this Indian town that Joliet was found, just in from the West, and here La Salle parted from the Fathers, who started for the shores of Lake Erie, La Salle announcing that he should return to Montreal. Where did La Salle go? In 1677, in his petition to the court of France for leave to establish himself at Fort Frontenac, he said, "In 1667 and the following years he made divers voyages at much expense, in which he first of any discovered much country to the south of the great lakes, among others the great river Ohio. He followed it to a place where it falls from a great height into vast morasses, at the height of 37 degrees, after having been swollen by another very large river that comes from the north; and all these waters apparently empty into the Gulf of Mexico," etc. So, then, he claimed the priority in getting at the true idea of the Western river system; in reaching and exploring the Ohio; in examining the coast-line of Lake Michigan on the south; in discovering the mouth of the Illinois River; and in making acquaintance with the Sioux nation, one tribe of which was settled on the western side of Lake Michigan, south of Green Bay. Joliet admitted his claim to the discovery of the Ohio, and the French court admitted his claim to priority at the Illinois River, for when Joliet asked leave to establish himself there with twenty men in 1677 it was refused.

If we should suppose that La Salle, in 1669, after parting with Dolier and Gallinée, put himself in charge of his Shawanese guide, descended the Allegany, the Beaver, the Tuscarawas, the Muskingum, or the Scioto into the Ohio, and followed it beyond the Wabash, in conjunction with the Shawanese and perhaps the Susquehannock Indians, afterwards mounting the Wabash, making portage to the Kankakee River, thence by the Illinois into Lake Michigan—we can understand exactly how he proceeded, and what the great explorer claimed, and also how he came by his intimate knowledge of the Chicago country. We cannot explain the mystery in any other way than by conceding that between 1667 and 1671 he spent his time in exploring the country and the rivers south of the great lakes; and, as his followers deserted him, he must have had the assistance of the Indians. The immediate value of his discoveries to the Canadian government, outside of the great expanse of new territory which he brought into knowledge, was that he opened up a new southern water-route for the fur trade. The crowning offense he committed in the eyes of his enemies, fur-traders and others, was in attempting to control this route to his own personal advantage by erecting Fort Frontenac and the fort on the Illinois River. With these and a fort on the Straits of Mackinac, as he himself said, he would have entire command of the trade of

stopped at Fort Frontenac, where La Salle was then commander under Frontenac. He was thus one of the first to know of the result of Joliet's voyage, and, perhaps, was one of the few that saw his maps and journals, which were lost before he reached the next French post. At the same time it does not seem to have made much impression on La Salle; his great object then was to build up a fortune," etc., etc. Why should not Mr. Shea give La Salle the benefit of the counter-supposition that when Joliet met La Salle, at the time of which we are now writing, he might have got some germs of the ideas about the great Western river with which the explorer's brain was then teeming? Which is the more likely, in a question of debt, that La Salle borrowed in 1674 what he had been thinking about since 1667, or that Joliet borrowed in 1669 what he accomplished in 1673?

the lakes. With another fort at the mouth of the Mississippi, he would command the entire trade of the Mississippi valley.

In view of all the extended array of facts here presented, therefore, we must conclude that Marquette and Joliet first, among the French, discovered the Mississippi River, and that La Salle first explored the river and the valley of the Mississippi, and made the world acquainted with their extent, their continental relations, and the immense possibilities of their future. Marquette found the path; La Salle surveyed the thoroughfare.

CHAPTER III.

UPPER AND LOWER LOUISIANA.

THE French empire in America was as magnificent in its proportions as it was short-lived. Canada extended northward to the Polar Sea, and the hardy *coureurs des bois* and fur-traders were more than once in conflict with the British whalers and seal-hunters on the shores of Hudson's Bay, while there were numerous naval battles in the fiorded borders of Newfoundland.[1] Westward the only limit to New France was the Pacific Ocean and the Spanish possessions. Louisiana began where Canada left off, at the great lakes, and it claimed to extend to the Alleghany Mountains on the east. The boundary line between it and Florida was the Rio Perdido, while it claimed an indefinite proportion of territory from Western Georgia. On the west the French demanded the Rio Grande, and the Spanish government conceded the Sabine as the dividing line between Louisiana and Mexico. The Bishop of Louisiana claimed what is now Oregon as being part of his see, and the concession made by the French king to Antony Crouzat covered all the expanse of the Mississippi River and all the lands binding upon it and its tributary streams to their several sources.

In fact, this great river and its tributaries were very little known until many years after this grant. But La Salle's voyages had opened the way to further explorations, and to settlements in several places. This explorer's eagle eye had fixed upon the most commanding points between Quebec and Mexico. He chose Lachine as the outpost and bastion of Montreal; he selected Kingston (Fort Frontenac) as the best place to control Lake Ontario; he chose the site of the fort on Niagara River afterwards known as Fort Erie; his eye appreciated the advantages of Detroit and Mackinac; Chicago, Peoria, St. Joseph's, Natchez, New Orleans, and Matagorda Bay were all points of his choosing; and, as was the case with Alexander, the places which he selected for forts and trading-posts have most of them grown to be cities by the natural process of the "survival of the fittest." In the autumn of 1683, La Salle started from Illinois to go to France and prepare for his expedition to the Gulf of Mexico, leaving the faithful Tonti in command of his post, Fort St. Louis, on the Illinois. He reached La Rochelle, France, on December 23d of that year. Tonti was ordered to hold the post in Illinois, and to co-operate with his commander when he should have news of his arrival below. La Salle's last and disastrous expedition sailed from La Rochelle on July 24, 1684, with four vessels and a handsome equipment for a permanent colony in Louisiana. Through accident or treachery, they sailed beyond the mouth of the Mississippi and landed on the coast of Texas, whence La Salle was never able to extricate himself.[2]

[1] It was in these fields that Le Moyne D'Iberville acquired the experience and earned the renown which caused him to be selected to colonize Louisiana. The British had set up and fortified some fur-trading posts on Hudson's Bay and occupied several fine harbors in Newfoundland soon after the beginning of what was known in Europe as "the League of Augsburg." La Salle was only Canadian by adoption, but Pierre Le Moyne D'Iberville was a native of Montreal, a good type of the old Canadian noblesse. He was trained in the French navy; he had distinguished himself in the capture of Pemaquid and other affairs of the border, in the lead of the mixed forces of French and Indians which Canada sent to raid upon the frontiers of New England and New York. From the taking of Pemaquid he sailed at once to Newfoundland, captured and burned St. Johns, and, with a force of one hundred and twenty-five Canadian soldiers and a few Abenakis Indians, made a raid upon all the British settlements, slaying two hundred persons and making seven hundred prisoners. Thence he and his brother Sérigny proceeded to Hudson's Bay with a squadron of war-ships, captured or sunk several English vessels after a desperate engagement, and there laid siege to, bombarded, and took the English Fort Nelson, expelling the British from those inhospitable shores. It was after these gallant exploits that D'Iberville was commissioned to complete La Salle's explorations of the Lower Mississippi. He was one of the eleven sons of Charles Le Moyne, a pioneer gentleman of Montreal, who had distinguished himself in the field under La Barré, and was noted for his influence over the Christianized Iroquois, they choosing him for their leader under the name of *Akouessan*. Charles Le Moyne's sons were François de Bienville, killed by the Iroquois in the attack upon Repentigny, Longueuil, Sérigny, Assigny, Maricourt, Sainte-Hélène, Chateauguay aîné, Chateauguay jeune, Bienville jeune, and D'Iberville. The latter founded Louisiana, the younger Bienville founded New Orleans, and three parishes in Louisiana bear the names of the sons of Le Moyne.

[2] It has been unjustly assumed that it was by design that La Salle overshot his mark. Mr. John Gilmary Shea, whose hos-

The explorer, in fact, never seems to have found out exactly where he was. In common with all his contemporaries he seems to have under-estimated the size of the continent and the breadth and swoop inwards of the Mexican Gulf. He thought that, because it was not a very great voyage by sea from the mouth of the Tampico River (or the *Panuco*, as it was then called) to the mouth of the Mississippi and to Florida,

tility to the great explorer is unfortunate, in that it too often induces him to make light of great plans and magnificent purposes, claims that this expedition is a proof that La Salle was a "buccaneer." In a note to his translation of Le Clerc's "Etablissement de la Foi," vol. ii. p. 202, Mr. Shea says, "It was pretended that La Salle sailed from France to settle in Louisiana. This farce has been kept up until recently, and historians generally have been misled. The truth is at last made clear. The letters of Peñalosa, a renegade Spaniard, Margry, iii. p. 63; La Salle's Projects, ib. pp. 44, 48, 63; his memoir on the expedition he proposed against one of the Mexican provinces, ib., ii. p. 348; the journal of the Sulpitian, Rev. Mr. Desmanville, ib., ii. p. 515, all show that his real object was the conquest of the Santa Barbara and other mines in Mexico. It would seem to have been his object from the first to reach the rich mining country by means of the Mississippi. The perfect madness of attempting to invade Mexico and wrest New Biscay from the Spaniards with a hundred men is apparent; but La Salle told Beaujeu that they were only the forerunners of Peñalosa, who was to follow them next year with considerable forces. (Beaujeu in Margry, ii. p. 428.) This furnishes the only clue to La Salle's obstinate refusal of Beaujeu's last offers, and of his lingering near the coast without making any serious effort to reach the Mississippi." We are compelled to differ with Mr. Shea in regard to this matter. We do it reluctantly, because his authority is deservedly high, and he is one of the most accurate and thorough, as he is the most painstaking, of our historians. But La Salle's fair fame is as much an object of interest and a thing to be defended by the people of the Mississippi valley as Marquette's; and Mr. Shea's attacks upon La Salle, while they have the persistence of personal feeling, are not always borne out by a more liberal interpretation of the authorities cited for them. This is said advisedly, and for the following reasons: The above-quoted paragraph charges more things than one. It charges that La Salle concealed his real object; that his expedition was in effect a piratical one, and that the plan of it was rash and hare-brained. To this it is necessary to reply that, if Margry's volume be any authority, nothing can be more certain than that La Salle's real object was to emancipate his fur trade from the obstructive influences of his enemies by providing a new outlet for it *via* the Gulf of Mexico. He knew that the only way for him to get at the peltries of "Castoria" was to convert that region into an appanage of Louisiana. Secondly, if La Salle did plan an attack upon Mexico, it was not a filibustering expedition at all, but a legitimate military and naval expedition of the French government, sanctioned, encouraged, and equipped by the king and the ministry; and lastly, it was not the plan and act of a fool, but a well-wrought, ably-fortified scheme by one of the most comprehensive and practical minds of that generation. All these three things we propose to establish by the authorities cited by Mr. Shea in proof of the converse propositions.

I. *La Salle's Object.*—In a letter written by him to one of his friends from Michilimackinac, October, 1682, he says, "I have at present great enemies, who are used to accomplish (*qui sont venus à bout*) everything they undertake. I do not pretend to resist them, but only to set myself right, *so that I can complete by sea what I have begun here.*" (Margry, ii. p. 290.) "The utility of this enterprise (the discovery of the Mississippi) is primarily apparent in the convenience of the ports that the mouths of this river form near the Spaniards and near the path of their fleets, where it will be easy to support a strong colony in consequence of the fertility and kindliness of the country and the prairies, all ready for tillage, etc. . . . The mouth of the stream is easy to defend, and, consequently, the entrance to the whole land also. It is within (less than) two leagues [wide], and an army could only with great difficulty march by land because of the great brakes of canes, etc. We can, from there, notably incommode and even entirely ruin New Spain simply by arming the savages, who are easy to keep in order, having already temples and chiefs, and who mortally hate the Spaniards because enslaved by them." (Margry, ii. 292, 293.) All this shows that he looked upon a colony inside the mouth of the Mississippi as the best place not only for his fur-trade, but for attacks on Mexico without danger of reprisals by the Spaniards. He repeats what has been quoted several times, and there can be no doubt that his colony on the Mississippi was, in his mind, the best place in the world from which to operate against New Biscay if he made up his mind to do that. In other words, his avowed object was the real object, and the one which he had most dearly at heart.

2. La Salle, in proposing to operate against Mexico, was proposing a legitimate military expedition against a foreign nation with which his country was at war. La Salle's memoir, the "Projet d'une Nouvelle Enterprise" (Margry, ii. p. 359, not 348, as given by Mr. Shea), states expressly that "the principal fruit which the Sieur de la Salle has proposed from the great perils and labors undergone by him in his discovery was to satisfy the desire of the late Monseigneur Colbert to find a post where the French might establish themselves and wear out (*fatiguer*) the Spaniards in the places whence they draw all their riches. The place that he proposes to fortify, *sixty leagues above the mouth of the river Colbert, in the Gulf of Mexico*, has all the advantages that we made out for, that, as much for its advantageous situation as in consequence of the favorable disposition of the savages dwelling thereabouts. . . . The coast and shore, inundated for more than twenty leagues within its mouth, renders it (the river) inaccessible by land." . . .

3. As to the foolhardiness of the enterprise, La Salle says in this same project (pp. 360, 361) that the Indians were so irritated by the tyranny of the Spaniards, so eager to welcome the French that eighteen thousand of them, forgetting ancient enmities and conquering local differences, had come from two hundred leagues around to meet and welcome him. "By the reunion of these forces," he said, "we can form an army of more than fifteen thousand savages, who, feeling themselves to be supported by the French and the Abenakis of the Sieur de La Salle's suite, will meet with no resistance in the province which it is proposed to attack, where there are not more than four hundred full-blooded Spaniards, scattered through a section one hundred and fifty leagues long and fifty broad, all officers or artisans more fit to manage the mines than to oppose vigorously the enterprise, which would be even favored by the mulattoes, Indians, and negroes, if promised their freedom. Under all these considerations, the Sieur de La Salle offers, with the approval of Monseigneur, to undertake this enterprise, and, *if peace should prevent its execution*, he offers to establish a post very advantageous to commerce, very easy to defend, *and one from which, as soon as a rupture occurs*, the Spaniards can be deprived of a great part of their mines. . . . All these things being surmised, it

it would not necessarily be a great journey by land. La Salle, independent of his pretensions as an original explorer, was a great geographer. The Jesuit maps are marvels of accuracy, as far as they go,—for example, the Jesuit map of Lake Superior, Sault Ste. Marie, Green Bay, and the upper portions of Lakes Michigan and Huron,—but they risk nothing upon conjecture. La Salle, on the other hand, in advance of his chief explorations, worked out the main problem of the water-shed of the American continent. He, in common with all the European colonists of his day, lived on the eastern slope of the North American continent. He and they had heard of the mountains, but had not crossed them. The lakes, the great and little rivers, even the rivers rising back of or between the tall mountain ranges of New England and New York, all flowed eventually into the Atlantic Ocean. La Salle, in common with his contemporaries, heard of streams in the regions south of the great lakes, which flowed towards the west. He, like the rest of his contemporaries, knowing the narrow breadth of the continent in the latitude of Mexico, assumed that it continued to be nearly as narrow far to the northward of the Gulf. Maps made a generation after La Salle gave the Gulf of California treble its real length and importance, gave it an inward trend about on the line of the Colorado River, so that the Pacific coast seemed to be about on the meridian of Pike's Peak and the junction of the Missouri and Yellowstone Rivers. It was assumed that the rivers which ran westward, south of the lake region, flowed west into this wrongly placed and extended "Vermilion Sea." The chronicler of Coronado's march had dispelled this illusion, but his narrative was either not read or not understood. La Salle began his explorations, and their first and most immediate result was to demonstrate that the river system of the interior of the continent, instead of flowing westward into the Gulf of California, flowed southward into the Gulf of Mexico. This was a great discovery. But it still did not quite dispel the illusion of La Salle in regard to the narrowness of the American continent. He died with the idea that the Missouri, the Arkansas, and the Rio Grande were comparatively short streams, and that by going westward the coast line of the Gulf of California and the Pacific Ocean would be discovered about where we now know the Rocky Mountains to be. La Hontan's false narrative somehow gives us the first intimation of the existence of that great chain. It is certain that this pretender did not reach, much less explore it; but some of the French *coureurs des bois* may have easily penetrated into those regions by the Missouri, the Nebraska, or the Saskatchewan Rivers, and La Hontan may have learned from them what he claimed to be a discovery of his own.

When La Salle's death was still a secret, or perhaps before it occurred, but when it was already known that he had failed to reach the mouth of the Mississippi River, the Jesuits in France made overtures to the Marquis de Seignelay for permission to build a

Sieur de La Salle offers, *if the war continues*, to start from France with *two hundred men*; we will join to these *fifty* who are in the country; we will take *fifty filibustiers* as we pass by St. Domingo; he will cause to descend the savages who are at Fort St. Louis, to the number of more than four thousand warriors, and he will join to these a much greater number of others; he will divide this army into three corps to make it easier to subsist them, and also to compel the Spaniards to divide their forces. Two of these corps will be composed each of fifty Frenchmen, fifty Wabanakis, and two thousand savages. We will give orders to them to simultaneously attack the two extremities of the province, and the same day we will enter with the rest of the force the heart of the country, where it is certain that we will be seconded by all the unfortunates who groan in slavery. The English at Boston, although this colony is much more powerful than all those of the Spaniards, have been desolated by six hundred savages. Chile has been ruined by the Araucanians, and the evil that the Iroquois, although without discipline and without leadership, have done to Canada, are examples which suffice to show how much this style of warfare is to the injury of those unused to it, and what may be expected from savages led by experienced Frenchmen who are acquainted with the country." La Salle goes on to estimate also the extent and quality of the aid that might be looked for from the filibusters (volunteer French privateersmen) of San Domingo and other places in the West Indies, and to elaborate his plans in a way which shows how carefully he must have studied them out. The whole paper is a project of successful warfare by France in America without demanding either many troops or much money from the mother-country, and in effect was the scheme upon which France conducted her subsequent wars with England on this continent. How successfully, the history of Braddock's defeat, Fort William Henry, Ticonderoga, and Pontiac's war will prove. The king was so much prepossessed in favor of La Salle's projects that on March 4, 1684, the Marquis de Seignelay wrote to M. de Cussy to call a muster of the San Domingo filibusters and get them in trim for the enterprise proposed by M. de la Salle. (Margry, ii. p. 377.) The evidence adduced is sufficient, we think, to relieve M. de la Salle from the weight of all of Mr. Shea's charges. He was proposing, in time of war, a military operation which was at once original and entirely feasible. It had the sanction of the king, and it would have resulted also in carrying out La Salle's ulterior object of a strong plantation near the mouth of the Mississippi, which was the only point that La Salle contemplated as the base of his operations. It is more than probable, indeed, that he thought of the excursion upon New Biscay and suggested it to the French marine, chiefly as a means to secure the effectual establishment of his Louisiana colony. The references to the Abbé d'Esmanville's journal and Beaujeu's letters, which are dwelt upon by Mr. Shea, merely show that La Salle was compelled to insist with emphasis upon his inchoate New Biscay expedition in his intercourse with his subordinates, in order to prevent M. de Beaujeu from depriving him of his soldiers; and that La Salle espoused Peñalosa's views as likely to create a diversion in favor of his own plans.

vessel at St. Louis of the Illinois—the name of La Salle's fort—and complete the exploration of the river.[1] But the accomplished and loyal Sieur de Tonti had already made another voyage down the great river—the second that was ever undertaken—with the simple object of affording relief and succor to his commander. Fort St. Louis had been taken away from him by Governor Barré and Intendant de Chesneau, both enemies of La Salle and antagonistic to his every interest; but Tonti had succeeded in securing his restoration to the command. Now he heard that La Salle was in distress at some point on the Gulf of Mexico, and he at once proceeded to his relief. His simple letter to the French Minister of Marine on the subject speaks volumes in his favor. It was written in Montreal, after his return, being dated Aug. 24, 1686. He says, "On the news I learned last autumn at Fort St. Louis of the Illinois, that M. de la Salle had descended to the coast of Florida, that he was fighting with the savages and destitute of provisions, I believed that, under such circumstances, it would be of service to the king and agreeable to your grandeur to give him succor. That is why I started for this object on Feb. 16, 1686." He went down the river to the Gulf, restored the king's arms that La Salle had planted and the stream had washed away, made peace with the Quinipissa Indians and gave them a letter for La Salle. This letter the Indians kept for fourteen years and then delivered it to D'Iberville. Tonti could get no news of La Salle, further than that he had put into Mobile Bay on his voyage out. He returned up the river, but not until he had left some of his men in a garrison on the Arkansas River, with instructions to look out for La Salle and his men, and relieve them if possible.[2] Well could this loyal follower declare, as he did in a letter to Cabart de Villermont, written after his return, "I have nothing to reproach myself for on this subject as regards the king's service and my friend's."

La Salle's brother, his attached retainer Joutel, and some others of the explorer's staff succeeded in extricating themselves from Texas. They descended the Arkansas River, found the post established by Tonti, and from it mounted the Mississippi to St. Louis des Illinois. There they concealed La Salle's death, nor was it disclosed by them until after they had arrived in France. When Tonti heard of it finally, he at once proceeded down the river again, with the object of relieving La Salle's settlement in Matagorda Bay, but the place had before that been captured by the Spaniards from Vera Cruz and Tampico. So ended La Salle's attempt to settle the country of Upper and Lower Louisiana. Tonti was of great service in reinforcing M. de Denonville with a body of Canadians and Illinois Indians against the Iroquois. Afterwards, in 1702, he was with D'Iberville, but his career practically ended with his efforts to rescue La Salle.

The attempts of the explorer himself were not useless, however, in promoting the very early settlement of Illinois by the French. The dates of the planting of towns in Illinois are very uncertain, as the records do not begin anything like as early as the time of these settlements, nor is it always certain that a French settlement was coeval with the day of the establishment of a mission. There is, however, one record which goes to show that the settlement of Illinois was begun very early. This is a letter of Governor-General de Denonville to M. de Champigny, intendant, dated Nov. 6, 1688, and written from Quebec. "We have nothing to say on the subject of M. de la Salle," remarks Denonville, "of whom M. Cavelier, his brother, is gone to carry news to Monseigneur; we foresee *that a great number of our libertine coureurs des bois, who are among the Outaouacs and the Illinois*, will be sure to undertake to go join him." Thus, even as early as 1688, there must have been a good many of these bush-rangers among the Miamis and the Illinois. They, as a rule, lived in the Indian villages, taking up with the Indian women, and, as the Illinois bands spent half of each year at Kaskaskia and Cahokia, in the "American Bottom," it is quite likely that some French cabins may have been put up in these Indian towns within a year or two after La Salle made his first exploration down the Mississippi.

La Salle's unworthy brother, Cavelier, proposed to continue his explorations; but the proposal was not very cordially received. Tonti himself, in 1694, offered to Cabart de Villermont to continue La Salle's enterprise and "accomplish" his discoveries, in order to give trouble to Spain, menace the Mexican mines and extend the fur trade, particularly in buffalo robes. Tonti holds, moreover, that, unless the French speedily occupy the Mississippi valley, the English are sure to do so, sending parties from Carolina to seize points on the Ohio River. This, in fact, was just what Daniel Boone did in 1769. Tonti says that he had heard there were English present at a conference with the Miami Indians. The Baron La Hontan, writing from Hamburg in June, 1694, mentioned that he had met two Frenchmen who came

[1] Parkman, Discovery of the Great West, p. 389.

[2] This fort became afterwards the town of Arkansas Post, which was captured from the Confederates during the late civil war by Gen. John A. McClernand, of Illinois.

from Virginia. They claimed to have descended the Mississippi with La Salle, to have been with his party in Texas at the time of his death, and then to have joined the Indians, and through them to have discovered very valuable mines. La Hontan probably was romancing, however; the French resident at Hamburg could discover no traces of the adventurers. Other attempts were made besides those above enumerated to obtain the aid of the French government in completing La Salle's work,—notably by the Sieurs De Louvigny and De Mantet in 1697. In the same year one of the old friends of La Salle, the Sieur de Rémonville, and M. Argoud projected a Louisiana company and prepared some elaborate memoirs on the subject.

It was reserved for Pierre Le Moyne D'Iberville to complete the work of La Salle, perfect the discovery of the Mississippi, and the settlement of Louisiana. There can be no doubt that the French ministry had determined from the first to secure possession of the magnificent country opened up by La Salle; but there were many delays, and it was necessary to proceed carefully, because Spain was stronger than France in the Gulf of Mexico. Iberville was ordered to prepare for his first voyage as early as June, 1698, when he was assigned to the command of the frigate "Badine." He immediately drew up his estimates and made all his preparations, notifying the French ministry that a company was forming in London to establish a colony in the places to which he was going. This company, he was advised, was formed on the strength of information given by Father Hennepin, who, as has already been stated, dedicated the last edition of his work to the English king, William III., and offered to pilot an English fleet to the mouth of the Mississippi.[1] This news about the English made the French government very anxious to have Iberville sail promptly, and repeated orders were sent to him and to the navy-yard at La Rochelle to hasten his departure. He finally sailed from Brest Oct. 24, 1698.

Two years before this the Spaniards in Florida had advanced their posts as far westward as Pensacola, which they strongly fortified. Iberville arrived at Cape François, in St. Domingo, on December 4th, and on Jan. 26, 1699, he was off Pensacola, where the Spaniards would not permit the French to land. Sailing westward, Iberville, reinforced by a fifty-gun ship under Chateaumorant, came to Dauphin Island, west of Mobile Bay, which the French commander called Massacre Island, from having found a large number of bones of men and women there. The fleet finally anchored under the lee of the Chandeleur group, while Iberville, with his smaller vessels, explored Ship Island and Cat Island (the latter so named because it was found to be full of raccoons). The colony was landed on Ship Island, where huts were erected for them. From this point Iberville and Bienville started in two large barges, with fifty men, to discover and explore the Mississippi, the insignificance of the mouth of which deceived the commander when he had finally reached it. However, the barges proceeded up the river, and at last came across the Indians who had preserved for the French Tonti's letter of April 20, 1685. Iberville ascended the Mississippi as far as the mouth of Red River, and then, returning, explored the route to the sea by way of Lake Pontchartrain. He then began the erection of a fort on the main-land at Biloxi, opposite Ship Island. This fort had four bastions and mounted twelve guns.[2] Sauvolle, one of Iberville's brothers, was put in command, with Bienville, another brother, for his lieutenant. Iberville, having completed his fort and settled his colony, now returned to France. Sauvolle undertook some explorations of the interior, putting Bienville in command of the exploring parties. He ascended some of the rivers and bayous, and found unpleasant intimations that the English were destined to give trouble to the new colony. A war-party of Chickasaws, which had penetrated as far as Lake Pontchartrain, was officered by two Englishmen, and in the Mississippi River itself, only a few miles below the site of New Orleans, Bienville came across a British sloop-of-war of sixteen guns, under command of Captain Bar, who told the French that he was examining the banks of the river with the purpose of planting a colony. Captain Bar turned back in consequence of the representations of Bienville. But it was this voyage, and the report in Paris and Versailles that England was preparing to make an establishment of French Huguenot refugees on the Mississippi, that led to the prompt return of Iberville on his second voyage, with reinforcements and more colonists, for

[1] "If they have no other pilot but him," wrote D'Iberville of M. de Pontchartrain, "nothing will come of it. He is a man whom I know for an ignoramus, who was never except on the lower part of the Mississippi, and has no acquaintance with the sea-coast." Proof, this, that Hennepin's forgery and deceit were detected as soon as published.

[2] Stoddard, "Historical Sketches of Louisiana," says this was at old Biloxi, mouth of the Perdido, but Martin and Gayarré say the present Biloxi, and Gayarré indicates the very spot which was fortified. "On the east side, at the mouth of the bay, as it were, there is a slight swelling of the shore, about four acres square, sloping gently to the woods in the background, and on the right and left of which two deep ravines run into the bay."

Louisiana.[1] Iberville proceeded up the Mississippi and built a fort some sixteen miles below the present site of New Orleans. Tonti having joined him, he went up the river farther, and established where the city of Natchez now stands another post, called "Rosalie," in honor of the Countess of Pontchartrain. The fort on this spot, which Iberville intended to be the capital of the province of Louisiana, was not built until sixteen years later. Bienville explored a part of the Red River at this time.

In 1702, war having broken out between France and Spain on the one side and England on the other, Mobile was made the chief French post, with a naval station at Dauphin's Island. Iberville and the officers under his command, in spite of continual attacks of fever and other climatic diseases, were indefatigable in the prosecution of their explorations. The Red, the Yazoo, the Pascagoula, and Washita Rivers were all ascended, and the Arkansas was explored above Little Rock. In 1705 the Missouri, as will be seen farther on, was explored as far as the mouth of the Kansas River. The French colony, however, was removed as far as possible from prosperity. In 1701, Sauvolle died, and in 1706 a fatal blow was received in the death of Le Moyne D'Iberville, who could not be replaced. There was sickness, there were dissensions and famine in the midst of plenty, so that the helpless and incapable colonists were dependent on provisions imported from Vera Cruz, on acorns found in the woods, and on the charity of the Indians, among whom they more than once were forced to canton themselves in order to escape starving to death. The colonists were not fit for the tasks they had undertaken,—half were incapable adventurers, in search of easy good fortunes; half were *fainéants*, who did not intend to work, the sweeping of jails and prisons, the worst and meanest of tramps and idlers. The colonial and home governments both helped to confirm these settlers in their incapacity by encouraging them in the fruitless search after mineral wealth, and in hunting and trapping for furs, instead of giving them land and requiring them to till it. Supplies which should have been produced on the spot, and from the rich and teeming soil, were instead regularly sent over from France, and, being looked for, no effort was made to supplement them by the culture of the soil. The government also broke up or changed sentiments frequently and in an arbitrary manner, so that no one felt inclined to plant and improve where the holdings were of such uncertain tenure. The general result of this bad policy was disastrous in the extreme. Stoddard, in his Historical Sketches, says, "The crown was liberal in both men and money. During the first thirteen years about twenty-five hundred settlers arrived, and few of them ever returned, and the money expended on the colony during the same period amounted to the enormous sum of 689,000 livres. Yet such were the sufferings of the colony that, in 1712, it contained only four hundred whites, twenty negro slaves, and three hundred head of cattle."

The government, weary of such a steady drain from which no income was returned, and strained in all its resources by the expenditures of a gigantic war, determined to adopt another method with Louisiana. To abandon the colony there was simply to hand over a great province, with the possibilities of an empire in its future, to the English. It was accordingly farmed out, under a charter of singular liberality, to Anthony Crouzat, a wealthy merchant who had had extensive dealings already with the crown. Of Crouzat's charter and his success in the government of his enormous province more will be said presently; but it is necessary first to speak further of the progress of exploration and settlement along the course of the Mississippi. In 1698, on the 14th of September, just as D'Iberville was preparing to sail on his first voyage to Louisiana, a party started in eight canoes from Michilimackinac to descend and explore the Mississippi River and establish missions at different places. This party was under the lead of Father Francis Joliet de Montigny, a native Frenchman, but ordained in Quebec. Tonti, La Salle's lieutenant in 1683, had obtained of the explorer a grant of land on the Arkansas River, which the French government confirmed to him subsequently. When he established his post here, in 1686, he was anxious to have a mission settled on the spot, and in 1689 he gave to Father Dablon, superior of the Jesuits in Canada, a deed for a piece of land, six acres, near the fort, on which a chapel and mission house were to be built and a lofty cross reared. Tonti provided that this was to be done by November, 1690, but there are no records to prove that it was done. When it became known in Canada, however, that a colony was to be planted by D'Iberville in Louisiana, St. Valier, the bishop of Quebec, claimed that the new settlements and the whole valley

[1] Captain Bar (whose name is given by Iberville as Captain Louis Bank or Banks) appears to have been connected with the enterprise of Daniel Coxe, one of the original proprietors of New Jersey, for the planting of *Carolana*, the history of which was published in 1722. The claim rested in part upon the alleged discovery made fifty years before by the English Captain Wood. The point where Bienville met Captain Bar and turned him back was called by the French *the English turn*, and is said to have been the site of the English defeat by Jackson in 1815.

of the Mississippi were in his diocese, and, consulting the Jesuit Seminary at Quebec, procured from them the establishment of a mission on the Lower Mississippi. Montigny was chosen to be the pioneer of this mission, and was invested with the authority of vicar-general. He is spoken of as "a man of vast designs and boundless zeal;" and Gayarré, in his "History of Louisiana," eulogizes him as the worthy descendant of that Galon de Montigny who was the standard-bearer of France at the battle of Bouvines. In company with Montigny were Father Antony Davion, a priest of the same seminary, Father John Francis Buisson de St. Cosme, a native and a priest of Quebec, and the Sieur de Vincennes, who gave his name to a village of the Miami Indians on the Wabash River, he having a trading-post and a lieutenancy there. Vincennes, whose family name was Buissot, is said to have been a nephew of Louis Joliet, the companion of Father Marquette. Tonti accompanied the party as far as the Arkansas, and St. Cosme's narrative of the journey is overflowing with expressions of obligation and gratitude to him. "He facilitated our course through several nations," says St. Cosme, "winning us the friendship of some and intimidating those who from jealousy or a desire of plunder had wished to oppose our voyage. He has not only done the duty of a brave man, but also discharged the functions of a zealous missionary. He quieted the minds of our employés in the little vagaries that they might have; he supported us by his example in the exercises of devotion which the voyage permitted us to perform, very often approaching the sacraments."[1]

From Mackinac the voyagers proceeded to Green Bay, where the Jesuits had a mission among the Winnebagoes, Pottawattomies, and Sacs and Foxes; and thence made a detour to the Illinois River, fearing to go by the Wisconsin, on account of the hostility of the Fox Indians. They descended by way of Milwaukee and Racine to Chicago, where there was a Jesuit mission to the Miami Indians.[2] There were two Jesuit missionaries at Chicago at this time, they having a house there. The Indian village numbered over one hundred and fifty cabins, and there was another village quite as large about a league distant. The missionaries accompanied the Indians in their different migrations, and it is probable that they had a house in every considerable stopping-place of the savages. The portage which St. Cosme describes was from the Chicago River to the Kankakee, and thus into the Illinois River. Navigation on the Illinois River began at La Salle's old fort. There was another fort at Lake Peoria, where also was the village of the Peoria Indians and the Illinois mission, then in charge of Father Marest. St. Cosme thinks it the best and most promising of all the Jesuit missions, there being a number of converts, among them the principal chief of the Illinois, whose name was applied to the village of Kaskaskia.

The party reached the Mississippi on the 5th of December, and finding it free of ice, proceeded to descend at once. Below the mouth of the Missouri and the painted rocks described by La Salle, the party landed on the Illinois side and proceeded to the Indian town of Kawechias (Cahokia), of which name this seems to be the first mention, though it is evident that Montigny must have heard of it either from Tonti or Father Marest. The Illinois here were in mourning in consequence of their losses from an attack of the Shawanese and the Chickasaws, in which they had lost many warriors. It gives one a new idea of the range and military strength of the Chickasaws to find them almost simultaneously operating on Lake Pontchartrain in Louisiana and opposite St. Louis. At the town of the Tamarois, an Illinois tribe some miles below, the Indians told them that they had never seen any Black Gown, except Father Gravier, who had visited them a few days before that. This would seem to fix a limit for the date of the establishment of the missions of Cahokia and Kaskaskia, which has been very hard to determine, and has been placed much earlier than this year. From the Ohio to the Arkansas St. Cosme does not see anything remarkable except the pelicans and the canes, which now begin to grow along the river's bank. Christmas-day was spent among the Quapaw Indians. Father Davion was given a station as missionary to the Tunicas Indians and Father Montigny took one among the Taensas, supposed to be a branch of the Natchez. St. Cosme remained among the Tamarois. Father Thaumur de la Source, in a letter which accompanies St. Cosme's narrative, says, "The finest country that we have seen is all from Chicagou to the Tamarois. It is nothing but prairies and clumps of wood as far as you can see. *I will mention also, that many Canadians marry among the Illinois.* I shall not come down within two years to know whether they will settle this country." Father de la

[1] Early Voyages Up and Down the Mississippi, John Gilmary Shea, p. 47.

[2] This was a very early and important station of both traders and missionaries, and Charlevoix thinks it was visited by Nicolas Perrot as early as 1671. This, however, says Shea, is only an inference of the historian, not borne out by Perrot's manuscript. Marquette and Joliet touched here on their return from the Mississippi in 1673, and Marquette wintered here in 1674. Allouez was here in 1677, and it must have been known to La Salle at quite an early period in his extensive explorations.

Source did settle there himself, however, for Charlevoix found him at Cahokia in 1721.

D'Iberville arrived out on his second voyage on Dec. 7, 1699. He brought with him a Canadian, a kinsman of his own, by name Le Sueur, and some thirty workmen. Le Sueur had been sent to Louisiana by M. L'Huillier, farmer general, to explore for minerals. He was a voyageur, familiar with the northwest, having been one of the party of Nicholas Perrot and Father Marest who, in May, 1689, planted a cross and took possession of Minnesota in the name of the French king.[1] He had found a mineral which he esteemed valuable in 1695, had built a fort near it on the Upper Mississippi, two hundred leagues above the mouth of the Illinois, and had obtained from the home government permission to work this green earth (which probably was thought to contain silver). Le Sueur and his miners proceeded up the Mississippi from Biloxi, arriving at Tamarois in the country of the Illinois in June, 1700. On September 1st Le Sueur reached the mouth of the Wisconsin River. He had encountered on the way up two or three detachments of Indians in canoes, and as many small parties of Canadians. The latter were in pursuit of trade, while the Indians were upon the war-path. Le Sueur still pushed up the Mississippi, beyond the mouth of the Chippeway, and in his journal describes Lake Pepin and the caverns in the adjacent hills. He left the Mississippi at the mouth of the St. Peter's (the Minnesota) River, which he ascended to the Blue Earth River, on which his fort had been established in 1695. The post was enlarged and named Fort L'Huillier. Le Sueur's narrative, as made up by La Harpe, is valuable from the amount of information it gives respecting the Sioux Indians and their habits. His mine never came to anything, and he returned to France in 1702.

While Le Sueur was ascending the Mississippi, Father Gravier was going down that stream from the Miami mission at Chicago. As Le Sueur went up the river he was met at the mouth of the Illinois by a Canadian, who gave him a letter from Father Marest, warning him of hostile acts of the Sioux above. It is possible that this messenger may have been traveling with Father Gravier's party. Father Gravier found the Kaskaskias band in the act of migrating from their town on the Illinois River and descending the Mississippi, as he seems to have supposed, to go to Louisiana. But it is more likely that they were simply making their annual journey to their lower towns on the Kaskaskia River, where, in fact, they stopped, Father Marest accompanying them. Leaving the Illinois and the priests at Tamaronha (Tamarois,—Cahokia and Kaskaskia country), Father Gravier descended the river to assist Father du Ru, who was D'Iberville's chaplain, and had a mission among the Houmas Indians. Gravier describes the buffaloes as lining the banks of the river as he went down-stream, and speaks of seeing fifty bears in a single day. These bears were always traveling from south to north. Gravier also found distinct traces of the English on the Mississippi at this early day. In one instance it was a small band of Mohegan Indians, below the mouth of the Ohio, who spoke in the Algonkin and Shawanese dialects, and traded much with the English. This may have been by the way of the Ohio and the Alleghany Rivers, the Dutch traders from Albany getting access to the headwaters of the latter stream by favor of the Iroquois. But Father Gravier also found in a village of the Arkansean Quapaws swords and guns of English make, which they said had been brought to them the previous year by an English trader, who had prejudices, and made threats against the Jesuit missionaries. This trader probably had come to the Mississippi through the country of the Chickasaws, and he most likely started from South Carolina or Georgia, though it is possible that he may have descended into the Indian country along the well-beaten path of the Cherokees, through the Cumberland and Shenandoah valleys. The fact of the presence of an Englishman on the Mississippi in 1699 seems to remove the obstacle of impossibility which stood in the way of the alleged earlier journeys in that direction undertaken by Englishmen, as, for instance, Col. Wood, in 1654, who traversed Kentucky as far as the Mississippi, and Capt. Bolt (or Batt who reached the Mississippi through Kentucky in 1670. It also gives new interest to the legend of the twenty-three Spaniards who are reputed to have been wrecked at the mouth of the Mississippi in 1660 and to have ascended that river, the Ohio, and the Alleghany, as far as the site of the present town of Olean, thence proceeding to Onondaga, from which point they were forwarded to New York.[2] The chief

[1] Rev. E. D. Neill, History of Minnesota, p. 144.

[2] One account of this excursion of the Spaniards is given in a note to Stone's "Life of Joseph Brant." There is reputed to have been a French mission in 1666 in the Onondaga country, at the town of Pompey, the Jesuits having gone there at the solicitation of Karakontie, the Onondaga chief. The Spaniards are said to have come here three years later, piloted by Iroquois captives whom they had found among the southern tribes. The object of the long journey was silver, they having mistaken the Iroquois' description of salt incrustations for signs of that metal. The Spaniards left their canoes at Olean Point, and could be convinced that the French in the Iroquois town were

of the Kappas, when questioned by Gravier, recollected the visit of Father Marquette to his tribe twenty-seven years before, or pretended to do so. Father Gravier evidently did not entertain a high opinion of the Lower Mississippi, either as a place for colonies or a field for missions, and he doubts if the court will consent to maintain the settlements there when it discovers that there are no mines and that all the country is subject to inundations every year. The fort on the Mississippi whence he wrote, at Poverty Point, thirty-eight miles below the site of New Orleans, was, he said, apparently selected out of regard for the mosquitoes, which he fancied must be more abundant there than in any other place in the world. "In sooth," he says, "they have given us little truce for seven or eight days, but at this moment they sting me in close ranks, and in the month of December, when we ought not to be troubled by them, there was such a furious quantity that I could not write a word without having my hands and face covered, and it was impossible for me to sleep the whole night. They stung me so in one eye that I thought I would lose it. The French of this fort told me that in the month of March there is such a prodigious quantity that the air is darkened with them, and that they cannot distinguish each other ten paces apart."

It will be noticed that in these various narratives there is distinct evidence of a floating population of Canadian French, voyageurs and *coureurs des bois*, along the Mississippi, and in and around the Indian towns on its banks, and between it and the lakes, from about 1685. There is no evidence, however, of any distinct French *settlements* in this section, except only the missions, anterior to the year 1700. The Indians themselves were migratory in their character. The missionaries accompanied them in their wanderings, so as not to lose their influence, and Mr. Shea is probably right in supposing that at the time of D'Iberville's first voyage Tonti's fort on the Illinois was the only permanent French establishment west of the lakes, unless we may add to the list Le Sueur's fort on the Blue Earth, which was abandoned by at least a part of its garrison, and Tonti's little fort and mission at Arkansas Post, in regard to the occupancy of which at that time there is no positive intelligence. It had been La Salle's plan to gather the Indian hunters of the Illinois, Miamis, and allied tribes, with the *coureurs des bois*, around the fort of St. Louis des Illinois, so as to have a large and strong town there, at once capable of resisting the raids of the Iroquois and of producing large results in the fur trade. The Jesuit missionaries, as they by degrees converted or brought the Illinois under their influence, succeeded in breaking up their migratory habits and in gathering them into towns. They did not, however, succeed in making them strong enough to repel the assaults of the Five Nations, and hence, when the Illinois Indians planted themselves permanently, they abandoned their large settlements of Kaskaskia, Peoria, etc., on the Illinois and on the borders of Lake Michigan, and went to reside in their winter quarters of Cahokia, Tamarois, and Kaskaskia, on and near the Mississippi, opposite St. Louis. The narratives just quoted from indicate the beginning of these towns, the population of which was reinforced by tribes dwelling lower down the river, who dreaded the assaults of the Chickasaws, and by *coureurs des bois* and half-breeds, who were roaming about in search of peltries. It was probably by a gradual and, in many cases, imperceptible process that these Indian towns became converted into French villages, and hence the clouds that conceal the dates of their supposed beginnings. Mr. Dillon justly says, in his "History of Indiana," "neither the occasional presence of a missionary, nor the sojournings of adventurous explorers of the country, nor the periodical visits of fur-traders, can be fairly regarded as the founding of civilized settlements." Nor can a migratory Indian town be looked upon as a fixed and stable plantation, and the prairie Indians were much more nomadic than their brethren in the East. In 1795, Little Turtle, chief of the Miamis, said to General Wayne, "The prints of my ancestors' houses are to be seen everywhere in this portion. It is well known by all my brothers present that my forefather kindled the first fire at Detroit; from thence he extended his lines to the headwaters of Scioto; from thence to its mouth; from thence down the Ohio to the mouth of the Wabash; and from thence to Chicago, on Lake Michigan." In such a state of things a town could not be said to become permanent until the influence of the whites predominated, and houses took the place of lodges. The chimney is the only anchor of a house, and the Indians never built chimneys.

La Salle's fort, on the St. Joseph's River of Michigan (near the site of South Bend), was built as early as 1679, but the first permanent settlement west of

---

deceiving them in denying any acquaintance with deposits of the precious metals. Both parties began to "prospect" for mines, Indian jealousy and suspicion were excited, and finally, on All-Saints' Day, 1669, the entire party, French and Spanish, were murdered, none being left to tell the tale. The story, however, is exceedingly improbable, for La Salle and the Recollect Fathers, as was shown in the preceding chapter, were in this very country at that time. The authorities for the other alleged explorations are given by Collins in his "History of Kentucky," but they are chiefly slender or conjectural.

Lake Erie was made by Antoine de La Motte Cadillac at Detroit in 1701. In that year Cadillac, who was a witty attaché of Frontenac's at Quebec and had commanded at Michilimackinac in 1694–96, where he had quite a garrison, a large Indian village, and a town of fur-traders and *coureurs des bois* under his protection, went from Montreal to Detroit, established a fort, and laid out a town. In 1705 the French king gave La Motte authority to concede land to actual settlers. The concessions were in the shape of cumbrous leases, with many feudal conditions attached, an annual rent to be paid in peltries, timber and mineral privileges reserved to the crown, restrictions imposed for the protection of game, etc. The grantee was bound to plant or help to plant a May-pole in front of the principal manor-house every first of May; he could not sell the land without permission of government and the payment of a tax, nor mortgage without leave, nor work at particular trades without a license, nor grind his corn except at the mill of the manor, nor buy nor sell except under many restrictions. Under such circumstances it was natural for adventurers like the *coureurs des bois* and the fur-traders, all of whom traded spirits to the Indians for furs, to keep away from the government plantations and seek places for their settlements where they could enjoy more freedom. In 1702 the Sieur de Juchereau established such a post south of Lake Erie, in company with the Jesuit Father Mermet, either on the Ohio, as is commonly supposed, or, as some hold, at the Miami town on the Wabash which was subsequently called Vincennes. La Salle's and Tonti's fort of St. Louis des Illinois appears to have been abandoned about the year 1700, or about the time that Father Gravier speaks of the movement of the Illinois Indians to the South. It was not long after this date, certainly, that Kaskaskia became a permanent settlement. Charlevoix, when he was at Cahokia, complaining of the folly of planting a town so far inland, was told that when it was first settled it was immediately on the bank of the river, which had receded from it so far in that brief interval. The reverse of this happened at Fort Chartres, on the Mississippi, in a line with Kaskaskia. According to Capt. Pittman, "when the fort was began, in the year 1756, it was a good half-mile from the water-side; in the year 1766 it was but eighty paces; eight years ago the river was fordable to the island; the channel is now forty feet deep." Cahokia, or, as Pittman calls it, Kaoquias, "the village of Sainte Famille de Kaoquias," was the first settlement on the Mississippi. Its site was not well chosen, as it was liable to be flooded. "The land was purchased of the savages," says Pittman, "by a few Canadians, some of whom married women of the Kaoquias nation and others brought wives from Canada, and then resided there, leaving their children to succeed them."[1]

We must conclude, in view of all the facts, that Cahokia (or Tamarouha) and Kaskaskia began to be French settlements about the time of the permanent removal of the Illinois Indians from their summer to their winter quarters. This, as Father Gravier's "Relation" shows, was in 1700. Peoria probably had at that date a colony of French trappers and hunters. Vincennes, the Miami town, became a French post in 1702 by the establishment there of the Sieur de Juchereau. The evidence for this is complete,—the only doubt having arisen from the fact that the first French explorers applied the name "Ouabache" to the whole Ohio River instead of to its Indiana branch solely. But Gravier's "Relation" shows conclusively that in 1700 this confusion no longer existed, and the Ohio and the Wabash were clearly distinguished from one another, and each was called by its own appropriate name. The language of Father Marest's "Relation" in 1712 is, "*Les François étoient établis au Fort sur la fleuve Ouabache; ils demandèrent un missionaire; et le Père Mermet leur fut envoyé.*" Mermet went with Juchereau in 1702; his ministry was among the Mascoutin Indians; there never was any French fort on the Ohio, nor were the Mascoutins ever that low down. They were about Vincennes, where the Piankeshaws had a village, as also the Twightwees had one at La Salle's post on the St. Joseph's. Oct. 19, 1705, M. de Vaudreuil wrote to the French minister that he had sent "Sieur de Vincenne to the Miamis." For this M. de Pontchartrain reprimanded M. de Vaudreuil, saying, "His majesty desires that you cause the Sieur Vincennes to be severely punished,—he having carried on an open and undisguised trade." In 1712, however, M. de Vaudreuil again sent Vincennes to the Miamis. In the year, 1712, both Cahokia and Kaskaskia have an authenticated existence—by the record. There was a church and a mission in each place,—Notre Dame de Cascasquias and La Sainte Famille de Caoquias. The former had grown to be quite a considerable town. The French and Indians lived contentedly together.

[1] "The Present State of the European Settlements on the Mississippi, with a Geographical Description of that River. By Capt. Phillip Pittman. London, 1770." Pittman says in his book "was originally wrote at the request and for the perusal only of the secretary of state for the colonies." He made several attempts to get up the Mississippi before he could succeed, and at one time proposed to go disguised as a Canadian voyageur, but was dissuaded. He writes like a careful observer, and his maps and plans are very good.

"You call us your children," said an old Shawanese chief to Gen. Wm. Henry Harrison when the latter was Governor of Indiana; "why do you not make us happy as our fathers, the French, did? They never took from us our lands; indeed, they were in common between us. They planted where they pleased, and they cut wood where they pleased, and so did we. But now, if a poor Indian attempts to take a little bark from a tree to cover him from the rain, up comes a white man and threatens to shoot him, claiming the tree as his own." This speech explains precisely the reason why the French got along so amicably with the Indians, and why there is an irrepressible conflict between the Anglo-Saxon and the Indian. The Frenchman had no land-hunger. He was a trapper or a trader, and his attempts at agriculture were neither elaborate nor extensive. Besides, he knew how to accommodate himself *socially* with the savages, entered into all their sports and games, and took a squaw in every village to which he came.

The Illinois were a social race. They had none of the taciturnity with which their kinsmen are, perhaps wrongly, credited, but had the manners and the vices of a city population. From the first they seemed to have formed a strong attachment for the French. La Salle and Tonti made a powerful impression upon them, and the Jesuit missionaries knew how to maintain and extend their influence. Thus the Frenchman was always welcome to the villages of the Illinois, and, whether the missionary or trader went west by the route of the Illinois River or by that of the Wabash, he had to pass by an Illinois town. The *coureur des bois* did not care to leave his hunting-grounds so far behind him as to carry his peltries to Quebec or Montreal, and the fur-trader was only too happy to meet him half-way in the Indian towns and relieve him of his goods at an enormous enhancement of the profit. Thus the Indian towns at the portages and landing-places gradually became the homes of the hunters and trappers and the visiting-points of the traders, and thus we can understand what M. de Denonville wrote in his memoir to the home government dated 8th March, 1688, that the French had "divers establishments" on the river Mississippi, "as well as on that of the Oyo, Ouabache, etc., which flow into the said river Mississippi." Kaskaskia and Cahokia were seated in "a country replete in all the bounties of nature." The soil produced every sort of fruit and grain,—"the deer, the buffalo, and the elk furnished in those days bountiful supplies, the rivers abounded with fish, while the forest and the feathered tribes afforded articles for comfort and for trade. Surrounded thus by good things, what more could a Frenchman have desired, unless it were a violin and a glass of claret? The former we are told they had, and we have good authority for saying that they drank excellent wine from their own grapes."[1] There are deeds on record at Kaskaskia which bear the date of 1712, says the authority just quoted. This town was beautifully situated on the point of land formed by the junction of the Kaskaskia River with the Mississippi,—not immediately at the confluence, but three or four miles above, as Philadelphia was located with respect to the Delaware and Schuylkill Rivers. The site of the town is a deep alluvial plain, with high bluffs on the side of the Kaskaskia River opposite. In Cahokia the land is too low, and liable to be flooded by every rise of the Mississippi. After the establishment of Fort Chartres in 1718, Kaskaskia became the seat of government of Upper Louisiana, and was of consequence enough to be assumed as the centre from which all distances were measured in the surrounding country. In 1721 it was the capital of the Louisiana "district of Illinois." From this date the French settlements on the Mississippi must be treated as integral parts of the Louisiana system.

That system did not overflow with liberality nor any other kind of grace. It was military at one pole and intensely ecclesiastical at the other. Louis XIV. was besought by the Huguenot refugees in England and America for leave to move in a body into Louisiana, colonize it, and loyally hold it as a fief of the crown. They would doubtless have developed and improved the country rapidly. But the king replied that he had not expelled them from France to enable them to build up their heresy in America, and in the code of 1724, for regulating the province of Louisiana,—a code promulgated by royal ordinance "in order to maintain the discipline of the Apostolic Roman Catholic Church,"—the director-general and officers were commanded "to remove from said country all the Jews who may have taken up their abode there; the departure of whom, as declared enemies of the Christian name, we command within three months, including the day when these presents are published, under pain of forfeiture of their bodies and estates." In article second of the code all slaves are commanded to be baptized and educated in the same church, and article third says, "We prohibit any other religious rites than those of the Apostolic Roman Catholic Church, requiring that those who violate this shall be punished as rebels, disobedient to

[1] James Hall, Sketches of the West.

our commands. We prohibit all meetings for this purpose: such we declare to be unlawful and seditious assemblages, subject to the same penalties inflicted upon masters who shall permit or suffer it with respect to their slaves."

The military hand did not rest less lightly than the ecclesiastical. Before Crozat took charge of the colony the administration, while quarreling among themselves, united to oppress and "regulate" the colonists. Nobody was free except the sixty or seventy Canadians who led a roving and dissolute life among the Indians. The imbecile government meddled with everything, and created a hundred abuses under the pretext of correcting one. It sought to repair its impotence by its ubiquity. It could not teach the colonists to keep themselves from starving, but it could force them to regard the province as a prison. Thus, Bienville, the most enlightened and energetic man in Louisiana, and the one who had its interests most sincerely at heart, could write to the home government in the following terms: "I have ordered several citizens of La Rochelle to be closely watched, because they wish to quit the country. They have scraped up something by keeping taverns. Therefore it appears to me to be nothing but justice to force them to remain in the country, on the substance of which they have fattened." Bienville also asked leave to exchange Indian slaves for negro slaves in the West Indies. "We shall give," he said, "three Indians for two negroes. The Indians, when in the islands, will not be able to run away, the country being unknown to them, and the negroes will not dare to become fugitives in Louisiana, because the Indians would kill them." In 1712, Anthony Crozat obtained his charter from the king. It was time, for the colony was almost at the last gasp. The letters patent to Crozat cover an immense and extraordinary grant. It was a gigantic monopoly of an embryo empire. It said that "upon the information we have received concerning the disposition and situation of the countries known at present by the name of the province of Louisiana, we are of opinion that there may be established therein a considerable commerce, so much the more advantageous to our kingdom, in that there has been hitherto a necessity of fetching from foreigners the greatest part of the commodities which may be brought from thence; and because, in exchange thereof, we need carry thither nothing but commodities of the growth and manufacture of our own kingdom, we have resolved to grant the commerce of the country of Louisiana to the Sieur Anthony Crozat, our counselor, secretary of the household, crown, and revenue, to whom we intrust the execution of this project. We are the more readily inclined hereunto, because his zeal and the singular knowledge he has acquired in maritime commerce encourage us to hope for as good success as he has hitherto had in the divers and sundry enterprises he has gone upon, and which have procured to our kingdom great quantities of gold and silver in such conjunctures as have rendered them very welcome to us. For these reasons, being desirous to show our favor to him, and to regulate the conditions upon which we mean to grant him the said commerce, after having deliberated this affair in our own council, of our certain knowledge, full power, and royal authority, we, by these presents, signed by our own hand, have appointed and do appoint the said Sieur Crozat solely to carry on a trade in all the lands possessed by us, and bounded by New Mexico and by the lands of the English of Carolina, all the establishments, ports, havens, rivers, principally the port and haven of the isle Dauphine heretofore called Monaere; the river of St. Louis, heretofore called Mississippi, from the edge of the sea as far as the Illinois; together with the river St. Philip, heretofore called Missouri, and of St. Jerome heretofore called Ouabache, with all the countries, territories, lakes within land, and rivers which fall directly or indirectly into that part of the river St. Louis." Crozat was to have a fifteen years' lease of this territory; to search for and open mines and reap the profits of mining, less one-fifth to the crown, and to send a vessel once a year to Africa for slaves. He was to own in perpetuity all the land he improved, the buildings he put up, and the manufactures he established; and for nine years he was to receive fifty thousand livres a year for public expenses, after that to bear all the charges of government himself; and he was required to send two ships to Louisiana every year, laden with colonists and supplies.[1]

[1] Crozat, the recipient of these vast favors, or the man whose shoulders these immense burdens were imposed, had been a farmer of the revenue, a merchant also, who, in the words of a contemporary, "had prospered in opulence to the astonishment of all the world." Gayarré attaches a romance to his name that he was peasant-born, foster-brother to the son of one of the noblesse, who educated him and procured the advancement of his fortunes in trade; that he had an only daughter, who was lovely, refined, and possessed of every accomplishment, fell in love with the heir of the Lauzuns. To secure such a husband for his child Crozat needed to be a Medici, so that trade and wealth might supply what was lacking in blood, and to this end Crozat took his Louisiana contract. He failed; the daughter died of a broken heart, and Crozat expired beside her bier. It is unfortunate for Gayarré's romance, however, that Crozat lived many years after he surrendered the government of Louisiana to the king's hands, and he probably made money by the operation. He died in 1738, at the age of eighty-three, before the Louisiana estates had developed their full value.

Crozat found his new province in a slipshod state. There were five or six forts, three or four hundred beggarly colonists, and about seventy-five Canadian *coureurs* who took the king's pay as militia. The new manager of the colony was a business man. He sent for La Motte de Cadillac from Canada to act as Governor, retained Bienville as lieutenant-governor, and reinforcing the colony with men and goods, directed a vigorous search after mines, while seeking the means of introducing French goods into Mexico. Gayarré laughs at Cadillac, who seems to have been as proud and poor as Frontenac, but no Governor could have built up Louisiana under the circumstances, no matter what his abilities. Cadillac wrote home that the inhabitants were no better than the country,—they were the scum and refuse of Canada, ruffians, vagabonds, profligates. He declared that the colony was not worth a straw as it was, but he hoped to make something of it. He did not succeed, though he came near doing so, if his advice to the ministry, to give the colonists as much land as they wanted, without conditions, had been taken. It was not taken, however, and Cadillac was sent off on a wild-goose chase after gold-mines, while Bienville, with whom the Governor quarreled, though his was the only clear head in the province, secured peace with the Natchez Indians. Cadillac encountered much laughter and opposition in his efforts to carry out his ideas of government. "There are as many Governors here as there are officers," he wrote. "Every one would like to perform his duties according to his own interpretation of them." The colony, he said, was "a monster without head or tail, and its government is a shapeless absurdity. . . . Verily, I do not believe that there is in the whole universe such another government." Crozat finally dismissed him, in the bluntest way, for incompetence, but the new Governor, De l'Epinay, did not succeed any better, and finally, in August, 1717, Crozat threw up his charter.

The Regent d'Orleans was practically king of France in this time of the minority of Louis XV., and the kingdom was overwhelmed with the debts incurred by Louis XIV. in pursuit of glory. Crozat had accomplished nothing for Louisiana and for France, but some of his agents had extended the limits of the French possessions in several directions. St. Denys, a hero of romance, had planted the French standard far up on the Red River, and on the Rio Grande and the Rio Bravo. Another and permanent post was established on the Sabine. Charleville had reached the Cumberland River, opened trade with the Shawanese, and established a post where Nashville now is, in 1713, while Fort Toulouse was built on the Coosa River, above the mouth of the Tallapoosa, and Bienville completed Fort Rosalie at Natchez in 1716. The immense province of Crozat had paid nothing to legitimate enterprise, but that fact probably made it more valuable for purposes of speculation, and France was just in that bankrupt and desperate condition which fits a country to become the prey of speculators. The regent was an adventurer himself, and adventurers flocked about him. Legitimate financiering offered no prospect or hope, and this opened the door wide to illegitimate financiering. When Crozat surrendered his charter, the Council of State received it gladly, resolving that it was to the interest of France that Louisiana should be fostered and preserved; that this was an undertaking beyond the strength and resources of any individual; and, as such enterprises would not be proper for a king, on account of the inseparable commercial details, Louisiana should be intrusted to a company. This was the origin of the Company of the Indies, chartered by the Parliament of Paris less than a month after Crozat withdrew from the colonial business. The Company of the Indies was the contrivance of the faro banker John Law, the friend of the regent, who had undertaken to restore the collapsed finances of the state by creating something out of nothing. He had started the Bank of France, and, to give a show of stability to the operations of this stock-jobbing concern, he proposed the Western Company, or the Company of the Indies, another stock-jobbing concern, for its support. One bubble could not sustain itself, but the bubble which rested on another bubble had something solid under it, so people thought. The bank would be very profitable if it had the revenues of the Indies Company out of which to get its dividends. Louisiana was only a dream in France, but Law and the regent took care that it should be a handsomely gilded dream. All France for a while was seized with the infatuation of sudden riches, and the result was the most gigantic speculation ever known, followed by the worst financial crash and the most wide-spread ruin.

The Western Company speculation, however, which crippled France, was not without its advantages to Louisiana. The company had a monopoly of the revenues of the province, but it needed to improve the condition of the province in order to show any revenues. Some, at least, of the one hundred million livres of the original subscription of Louisiana stock had to be spent in Louisiana. The company was under bonds to introduce into the province six thousand whites and three thousand negro slaves. Bienville became Governor. He determined to settle on the river, and in 1718 he selected the site and planted

the present city of New Orleans, giving to it the name of the dissolute regent. A company of two hundred miners and assayers, under command of Francis Renault, was dispatched to the Upper Mississippi. On his way to Louisiana Renault stopped at San Domingo and bought five hundred negro slaves, whom he took to the Illinois country,—the beginning of slavery in Missouri, for Renault's slaves worked in the lead-mines west of Ste. Genevieve. Boisbriant, the king's lieutenant for Louisiana, who arrived out in the spring of 1718, proceeded up the river, assumed the government of the Illinois district, and built Fort Chartres, on the Mississippi, not far from Kaskaskia. This post thus became the centre and seat of government of the Illinois district, and population gathered around about it. To hasten the colonization of Louisiana, the company made numerous and extensive grants of land, with provisions attached requiring the importation of settlers. Law obtained a tract of twelve miles square on the Arkansas, to which he transplanted fifteen hundred German emigrants from Alsace; Leblanc and others got a grant on the Yazoo, which they planted; Bernard la Harpe secured a grant at Natchitoches; De Meuse at Point Coupée; St. Reiné among the Tunicas; Diron d'Artagnette at Baton Rouge; Paris Duvernay at Bayou Manchac; Du Muys at Tchoupitoulas; the Marquis d'Artagnac at Cannes Brulées; Madame de Chaumonot at Pascagoula, etc. The settlements on the Sabine and at Natchitoches and the exploits of St Denys alarmed the Spaniards, who now pushed several posts into Texas, occupying and fortifying San Antonio de Bexar, Bahia, and Goliad, and then advancing as far as Nacogdoches and founding the mission of San Miguel de Linarez. La Harpe, who built Natchitoches in 1719, made many explorations westward into Texas, conciliating the Indian tribes and setting up trading-posts. He now pushed beyond the Spaniards and established a trading-post still farther up the Red River, at an Indian town one hundred and fifty leagues beyond Fort Natchitoches, in what is now Arkansas. War having broken out between France and Spain, Bienville reduced Pensacola, while a Spanish expedition crossed from Santa Fé to the Missouri River. This expedition was intended to excite the Pawnee or Osage Indians to make war on the Missouri Indians, who were allies of the French. The party crossed to the Missouri River, in the neighborhood of Sabine County, where they fell in with the Missouris, and, mistaking them for the Osages or Pawnees, revealed their plans to them, and were in consequence massacred in the night. This bold attack led the French to erect a fort on an island in the Missouri River, about the mouth of the Osage River.

Five hundred slaves were brought over from Africa in 1719, and by 1722 there were 2100 Guinea negroes in the colony, the annual importation after that ranging from one hundred to three hundred. A man slave sold for 600 livres and a "likely" woman for 500 livres. In February, 1720, five hundred and eighty-two emigrants arrived out from France. They included some women from the streets, and even from the houses of correction and the hospitals of Paris, who were thought to be good enough to become wives of the Canadian colonists. Many other settlers began to come out, and explorations were pushed and trading-posts established in various quarters. The years 1722-23 were full of disaster and gloom for Louisiana. Law's Mississippi bubble had burst, the company was a wreck, and the seven thousand recent emigrants in the new province found their supplies suddenly shut off. The result was famine, and many starved to death. Indian wars also broke out in several places, and the garrison at Fort Orleans in the Missouri (near Jefferson City) was massacred. The Chickasaws captured the Yazoo fort, and finally the Natchez Indians broke into revolt, and were exterminated before they would submit. Terrible storms devastated the crops and laid the fields waste, and the troops in some of the garrisons mutinied. In 1733, however, when the government of the India Company ceased, it was seen that the colony had grown and developed greatly. The population was over seven thousand, including some men of enterprise and wealth, agriculture had become the established pursuit of the people, and there were a great number of new and prosperous settlements. In the Illinois and Wabash sections in particular great crops were produced, supplying the lower sections and yielding besides an exportable surplus. The peltry trade from this section was valuable and important, and a good many flourishing towns had sprung up here. The whole country had an established civil government and the vicar-general at New Orleans, representing the diocese of Quebec, saw that religious instruction was amply supplied. In short, there can be no doubt of the exactness of the thoughtful Stoddard's conclusion that "whoever takes a correct view of the transactions of the Mississippi Company must be convinced that it was of infinite utility to Louisiana, perhaps the preservation of it, particularly as it possessed energy and resources. . . . From this period may be dated the gradual progress of the colony to a more eligible condition, though it was occasionally interrupted by the Indians and Spaniards."

It was about this time that Louisiana began to fee

the proximity of the English upon its eastern border. The Chickasaw Indians, and sometimes the Choctaws, were more or less under the influence of English traders and hostile to the French. Some of the dispersed Natchez took refuge among the Chickasaws, and when Bienville demanded their surrender another war began. Bienville from New Orleans and D'Artagnette from Fort Chartres marched against the Chickasaws in 1736. Their stronghold was on the headwaters of the Tallahatchee, and at Pontotoc they were able to defeat the French army under Bienville and his Choctaw allies, compelling the veteran to retreat, while D'Artagnette, Vincennes, their Canadian forces and their allies, the Illinois Indians, headed by Chicago, were crushed on the Yallabusha, in an assault upon another of the Chickasaw towns. The Illinois ran away, the best of the Canadian troops were slain, and D'Artagnette and Vincennes, taken prisoners, with the faithful Senat, the Jesuit missionary, were reserved for the stake and the torture. Bienville renewed the attack on the Indians in 1740, but his military genius had left him with his youth, and a treaty with the Chickasaws showed that he dreaded to encounter them again. With this his public career of forty years in Louisiana ceased, and he was superseded by the Marquis de Vaudreuil. From this time until the outbreak of war with England and the English colonies in 1754, Lower and Upper Louisiana had a season of quiet prosperity and continual advancement. In 1754, M. de Vaudreuil became Governor-General of Canada, and M. de Kerlerec succeeded him as Governor of Louisiana. The French had increased their settlements, and colonists were coming in every year, as they had been steadily doing since 1740. Poverty and shiftlessness had given place to a diversified and profitable husbandry, the culture of indigo, sugar, and tobacco being added to that of the cereals, and Louisiana now began to export largely.

But the pressure and encroachments of the English increased steadily. The French had explored the Ohio, ascertained the geography of Upper Louisiana, and attempted to connect it permanently with Canada and lower Louisiana by a line of forts, which were placed pretty much where La Salle had long ago indicated. The expectation of the French seemed to be that the barrier of the Appalachian Mountains would constitute a perpetual boundary between their territory and that of the English. The French courted and won favor with the Eastern Indians, who were greatly exasperated at the appropriation of their lands in Pennsylvania. In 1753 the disaffection of the Eastern tribes seemed so general that the French were encouraged by it to advance their frontiers. They erected forts at Crown Point, Niagara, Rivière du Bœuf, and at the junction of the Alleghany and Monongahela Rivers. These advances were too significant to be disregarded by the English, who had already learned the value of the lands west of the mountains. A series of military operations ensued, which resulted in the conquest of Canada and the expulsion of the French from all those parts of Upper Louisiana lying east of the Mississippi River. This was the immediate cause of the settlement of St. Louis.

It is difficult to name the precise period when the English government and colonies became acquainted with the resources and the capabilities of the Mississippi valley. The French were certainly much more forward in acquiring a knowledge of these regions, as they were also in settling them. But it is still the fact that the charters under James I. and his successors, while giving a definite front upon the Atlantic Ocean, with distinctive parallels of latitude to mark the boundaries between the different colonies and companies, claimed that the territory granted extended in every case through to "the South Sea." What that meant exactly neither grantor nor grantees knew in anywise, but the time was now coming when an interpretation of the charters and patents would be forced. The grant of "Carolana," which has already been spoken of, was never perfected by a settlement, and it only led to a feeble and ineffective protest when Oglethorpe planted his colony in Georgia. The English explorations towards the Mississippi and the ascents of that river, if they ever were made, bore no fruit, and it seems probable that the earliest knowledge of the fact that there were regions of surpassing fertility on the western side of the Appalachian Mountains was gained by the English in 1710, when Lieutenant-Governor Spottswood, of Virginia, at the head of the exploring party fantastically named by him "The Knights of the Golden Horse-Shoe," crossed the Blue Ridge Mountains and saw the fertile lands of the valley of Virginia, and beyond. But, while the French were completing their chain of posts from Quebec to New Orleans, the English contented themselves with checking their rivals in the Chickasaw country, interfering with them on the Gulf of Mexico, and challenging their advances in the section between Lakes Ontario and Champlain. The first indication of an intention to advance the frontier practically (aside from the careful reservations made in European treaties and the assiduous nursing of Iroquois pretensions to the indefinite extension of their hunting-grounds westward) was made in the establishment of Fort Oswego, in 1722. In fact, the English knew astonishingly

little of the sections over which the French *coureurs des bois* had been roaming and ranging at will for a generation. We have only scant and uncertain traditions of English traders passing thitherwards now and then, and these experimental journeys could not have been very numerous, for every English trader who crossed the mountains knew that he risked his scalp at every mile of his route. Spottswood, as the result of his explorations, proposed to the British ministry in 1716 to form a company for settling on the Ohio, and James Logan, Secretary of Pennsylvania, who often met the Delaware, Shawanese, and Iroquois Indians, and was well advised of what was being done by the French in Ohio and Indiana, was almost importunate in insisting on the necessity of establishing British outposts in Western Pennsylvania, on the mountains, and on Lake Erie and the Ohio River. The ministry was indolent, however; home affairs were concern enough for it, and it was loath "to give umbrage to the French."

In 1729, Joshua Gee, a hard-headed Englishman, published in London an ingenious discourse on trade, in which he insisted that it was essential to the maintenance of British commercial supremacy that colonies should be extended westward to the Mississippi and its tributaries. About 1730, John Salling and Thomas Morlen, adventurous Virginians and borderers, crossed the Blue Ridge, it is reported, intent upon making an exploration of the "Upper Country," which the inveterate hostility between the Indians and the Virginia "Long-Knives" had kept an unknown region. They crossed into the valley, traversed it as far as the headwaters of the James River, and had come near the Roanoke when they were captured by Cherokees. Morlen made his escape; Salling was carried prisoner into Tennessee and adopted as a member of the tribe. Subsequently, while on a hunt in Kentucky, Salling was captured by the Illinois Indians and taken to Kaskaskia. After various adventures and six years of captivity, he was finally ransomed by the Governor of Canada and exchanged through Fort Orange, New York, and Williamsburg. His story, on his return, of the rich and fertile regions and mighty rivers and prairies he had seen fired the popular imagination. Winchester, Va., had just been settled,[1] and John Lewis and John Mackey, wishing to find new settlements, employed Salling as their guide. The three established themselves in the valley of Virginia, near the head of the James, and here, in 1736, John Lewis was visited by Burden, agent of Lord Fairfax, who had a patent for extensive tracts in the northern neck. While Burden was with the Lewises he captured a bison calf, which, on his return to Williamsburg, he presented to Governor Gooch. That official, in return, made Burden a grant of half a million acres of land west of the Blue Ridge and the Shenandoah, upon condition that he settled a hundred families upon the tract within ten years. Burden complied with the terms of this grant, and did it so well that some of the most distinguished families in Virginia are derived from the colonists on Burden's grant. Among these may be named the McDowells, Crawfords, McClures, Alexanders, Wallaces, Pattons, Prestons, Moores, Matthews, etc., names familiar likewise in Western annals.

In 1742, John Howard crossed the mountains from Virginia, descended the Ohio in a skin canoe, and was taken prisoner by the French on the Mississippi. This journey, however, has none but tradition to rest upon, though De Haas seems to fancy that the English claims to "priority of discovery" have partially their source in Howard's supposititious journey, the real priority claim standing upon Cabot's discovery alone, and the assumption that that gave rights which extended clear across the continent. This was supplemented by the purchase of the claims of the Iroquois Indians, who pretended to the right, by conquest, of all the territory north of the Cherokee country and east of the Mississippi. The Five Nations had indeed made successful raids upon all this region, and they asserted their supremacy throughout all of it, saving only so much as was occupied by the Miami confederacy. If this claim had been good the English were rightful owners, for they had certainly bought out the Iroquois pretensions, both in the treaty of 1684, negotiated by Lord Howard and Governor Dongan, and in that of 1726, when the Indian confederacy ceded all their lands to England, in trust for themselves, however, "to be protected and defended by his majesty, to and for the use of the grantors and their heirs." France, by the treaty of Utrecht, was debarred from invading the territory of England's Indian allies, and consequently, if the validity of the Indian claim could be established, it carried everything else with it. But this cannot be done. The convenience and the policy equally of the European nations required them to agree, by common consent to the principle that Indian titles covered no more than the good will of the Indian nations conveying them. The Indian's deed was a relinquishment, valid against himself, but not necessarily of effect in favor of others. With his conveyance all his own rights ceased, but he had not the power at will to designate

[1] By Joist Hite, with sixteen families from Pennsylvania, in 1732.

the successors to whom he wished those rights to pass. The treaties referred to, therefore, and equally the treaty of Lancaster in 1744, must be regarded as nugatory in their effects upon the French rights of possession in the Ohio and Mississippi valleys. This Lancaster treaty had been negotiated between the Six Nations and commissioners from Pennsylvania, Maryland, and Virginia, with the aid of the well-known Pennsylvanian interpreter, Conrad Weiser.

In 1744, at the same place, another treaty was negotiated, to which not only the Iroquois, but the Twightwees (or Miamis) and the Shawanese, were equally parties, and all these Indians surrendered lands upon the condition of protection.[1] The fact of the negotiation of these treaties shows that the colonial and imperial governments of the English had awakened to the fact of the value of the lands in the "Western country." The treaty of Aix-la-Chapelle had not distinctly defined the boundaries between the British and French possessions in the West; both claimed large territories which the Indians still possessed, but which were becoming prospectively valuable as immigration increased and cheap land was less easily accessible. The claim of the English by right of discovery, such as made by men like Howard, was speedily backed by claims founded on possession and occupancy; for English traders at least, if not settlers, began to pour into the new country. The technical form of the general English pretension was as follows: "That all the lands or countries westward from the Atlantic Ocean to the South Sea, between 48 and 34 degrees of north latitude, were expressly included in the grant of King James the First to divers of his subjects, so long since as 1606, and afterwards confirmed in 1620; and under this grant the colony of Virginia claims extent so far west as the South Sea, and the ancient colonies of the Massachusetts Bay and Connecticut were by their respective charters made to extend to the said South Sea, so that not only the right to the sea-coast, but to all inland countries from sea to sea, has at all times been asserted by the crown of England."

An active and often fatal rivalry now began in the Ohio country between English pioneers and French occupants and traders, the latter, as a rule, having the sympathy of the Indian tribes. The French historians, while in general terms they impeach the treachery of "*perfide Albion*" in these struggles, have not shown themselves unintelligent to the general issue and the causes which led to it. M. Barbé Marbois, in his very manly and satisfactory history of the cession of Louisiana (in which indeed he was a leading actor), speaking of the times of which we now write, says, "The chase, the amusement of civilized man, is the principal business of savages. The French, having become equally capable of fatigue with the Indians, were always ready to accompany them, and to second them in all circumstances; they therefore scarcely ever experienced the treachery so commonly employed towards the English, who attempted to form isolated settlements. But, besides the inconvenience arising from this dispersion, there was another obstacle to the progress of the French colony: the officers from Europe had, for the most part, only false notions with respect to colonial government. They were named through favor, and the most important places were oftentimes only filled by dependents, who accepted them in hopes of making or re-establishing their fortunes." The wide dispersion of the French settlers, which made them incapable of offering an effectual resistance to British encroachments, seems, however, to have proceeded from the fact that the French traders, trappers, and hunters followed the Indians from place to place. It suited the convenience of their business for them to do so, and then, moreover, they thus eluded the petty inspections and local tyranny of the Canadian and Louisiana governments, which men accustomed to the woods and the lakes and rivers found it very hard to bear.

But the Indians soon discovered that, if the French

[1] Upon this matter of adventurous and supposititious titles from the Indians it may be as well to say that Wheaton has shown conclusively that the courts will not even "take notice" of any land title not derived from the general government, and in each case this title must be recognized by the government which is concerned. In the third volume of the "United States Reports," p. 543, it is explicitly stated that "*Discovery constitutes the original title to lands on the American continent;* and the title thus derived was the exclusive right of acquiring the soil from the natives, and establishing settlements upon it." (3 Wheaton, U.S. Rep., 543.) In explanation of this position it is added by Wheaton that "the Europeans respected the rights of the natives as occupants, but asserted the ultimate dominion to be in themselves; and claimed thereby the power to grant the soil while in possession of the natives." The Indian right of occupancy, moreover, was one which a tribe could pass to a government, but which neither tribe nor individual could pass to individuals. The Miamis could sell to Parliament or to Pennsylvania, but not to Weiser nor to La Salle. The United States, as successor to Great Britain, insisted upon the fact that they had "a clear title to all the lands within the boundary lines described in the treaty, subject only to the Indian right of occupancy,"—the "right of occupancy" being entirely different from title derived from right of sovereignty. "These rules," says another Supreme Court decision, "accord to the Indian the right of possession only. They deny him title, except he receive that title from this government or its assigns." Discovery alone, therefore, does not give title; but it always proceeds from "discovery followed by possession." But the full chain of title will be found more fully discussed in our eleventh and twelfth chapters.

were more kindly and sociable, the English traders paid them better prices and made the business of hunting more lucrative. The British traders had more capital, less time to spare, and they bought rapidly. To make the business they were upon go off still more rapidly, they were very liberal with their rum and spirits. The Pennsylvanian traders went into the Ohio wilderness in considerable numbers, and they found means to interfere materially with the business of the French. They were rough men, mountaineers, rude in manners, carrying their lives in their hands. Their dress was half Indian; they were experts in the use of the rifle, and they did not scruple to use their deadliest weapons in their frequent feuds. The roughest and most adventurous of these border characters were generally employed as retainers of the fur-trader; they drove his pack-horses in the long train across the mountains and rivers; protected him from outlaws and Indians, and, when he had reached camp, they scattered about among the Indian towns, hunting-camps, and wigwams, trading goods suitable to the wilderness traffic for furs and peltry. The trade which thus sprung up was valuable enough to the bordermen of Pennsylvania to excite the emulation of Maryland and Virginia; one consequence of which was the establishment of the Ohio Company in 1749. Lawrence and Augustine Washington were both connected with this scheme; but the founders and chief persons in the enterprise were John Hanbury, a London merchant of wealth, and Thomas Lee, president of the Council of Virginia. When Lee died, Lawrence Washington became chief manager of the Ohio Company, and promoted its interests with intelligence and judgment. Conrad Weiser, the Lancaster (Pa.) interpreter, had been to a meeting of the Shawanese at their village of Logstown (on the north side of the Ohio River, seventeen miles below the site of Pittsburgh) in 1748, and he had seen how valuable the lands were all through this section. His mission, in fact, while it was in part to conciliate the Shawanese and make them presents, in order to neutralize the influence of Peter Chartiez, a French half-breed (who had recently dwelt in Philadelphia, but was now a refugee among the Shawanese, and seeking to engage them in hostile acts against the English), was, in fact, also to learn whether or not the tribes could be induced to look favorably upon a large acquisition of land upon the Ohio by the English. Col. Thomas Lee had been one of the commissioners of Virginia at the Lancaster treaty in 1744, where he had become acquainted both with Weiser and the Shawanese. When Weiser returned from his visit to Logstown the Ohio Company was formed, with ten other Virginians in it besides Lee and the two Washingtons; the king, upon being petitioned, at once ordered the government of Virginia to grant to the company half a million acres of land west of the mountains, to be held free of quit-rent for ten years, two-fifths of the land to be located forthwith, and settled by planting one hundred families upon it within seven years; besides which, a fort was to be built for the protection of the settlement. About the same time other companies for the colonization of the West were formed in Virginia, including the Loyal Company, which had 800,000 acres, and the Greenbrier Company, which was granted 100,000 acres.

The Ohio Company, however, could not move so briskly but it was anticipated by the French. Before its charter was drawn and in hand Vaudreuil's successor, the Marquis de la Galisonnière, Governor of Canada, sent Louis Celeron de Bienville, with a battalion of three hundred men, to the Ohio to make peace with the Indians and renew the French possession of the country. Celeron at several points on his march planted stakes, with plates of lead at their base, bearing inscriptions in French to the effect that in 1749, Louis XV., through Commandant Celeron, had buried these plates "as a monument of renewal of possession which we have taken of the said river and all its tributaries; and of all the land on both sides as far as the sources of said rivers; inasmuch as the preceding kings of France have enjoyed it, and maintained it by their arms and by treaties, especially by those of Ryswick, Utrecht, and Aix-la-Chapelle." Celeron also captured sundry Pennsylvania traders in Ohio, and sent them home to Governor Hamilton with letters notifying him that in the future all such intruders would be rigorously dealt with. At the same time the Miami Indians sent wampum-belts to Governor Hamilton, notifying him that the French with their buried plates, were trying to steal the country from the Indians, and assuring him that their friendship for the English would endure as long as the sun and moon ran round the earth. Governor Hamilton and the Pennsylvania Council sent an envoy to the Ohio Indians in the autumn of 1749, in the person of George Croghan, a veteran trader, who knew the Western country very well. He was amply supplied with presents, and had with him Andrew Montour, a Canadian half-breed, for interpreter. The Ohio Company had just sent out an agent to explore lands on the Ohio on its account. This was Christopher Gist, a native of Maryland, a hardy and expert pioneer, whose home was on the banks of the Yadkin, in the same section from which Daniel

Boone afterwards started out on his path to Kentucky. Gist made his way to the Ohio by the Indian path through Cumberland, Md., the path which later became the bed of the National turnpike road. At Logstown he found the "half-king," Tanacharisson, a Seneca chief, in power. The half-king was a member or vassal of the Iroquois confederacy, but his people were mixed,—some Iroquois, some Delawares, some Miamis and Shawanese. Gist found some of Croghan's rough people in Logstown, and discovered Croghan was only a few days in advance of him. He pursued at once and overtook the Pennsylvania agent at Muskingum, a town where the Mingoes and the Wyandots had pitched their wigwams. Gist and Croghan now concluded to act in concert on account of the hostility of the French. They raised the English flag and called a council of the Ohio Indians to meet at Logstown in the spring. They next explored the chief parts of Ohio, including Piqua, chief town of the Twightwee or Miami confederacy, over which the sachem of the Piankeshaws then presided. A treaty of alliance was made with the Miamis, who sent home some French envoys with rather a hostile message. Gist descended the Ohio almost to Louisville, then he crossed over into Kentucky, followed the river of that name to its source in the Cumberland Mountains, crossed the headwaters of the Great Kanawha, the ranges of the Alleghany and Blue Ridge, and finally reached his home on the Yadkin, having made a journey of over a thousand miles, the great r part through an unexplored wilderness.

The French at once dispatched Captain Joncaire, "a veteran diplomatist of the wilderness," to prevent the Ohio Indians from concluding the proposed treaty with the English. Joncaire was the best possible person to have charge of such a mission. He had been captured by the Iroquois when a child, adopted into the tribe, learned their language and manners and customs, and, since his return to civilization, had been repeatedly employed as ambassador to or mediator between the Indians, and he had not unfrequently led their war-parties. But the council at Logstown was proof against even Joncaire's persuasions, though it was said of him that he had the wit of a Frenchman and the eloquence of an Iroquois. They rejected his gifts and his propositions. The English, they told him, were their brothers, and "Onontio" (the Governor of Canada in Indian phrase) had no rights or pretensions on the Ohio except such as the Indians could afford to disdain. The commissioners of Virginia, Messrs. Fry, Lomax, and Patton, in the conference at Logstown in the spring of 1752, finally procured from the Miamis, Shawanese, Delawares, and Western Iroquois a deed confirming the Lancaster treaty of 1744 in its full extent, consenting to a settlement on the Ohio, or rather southeast of it, and guaranteeing to it the protection of the Twightwee confederacy. Meantime, the alliance of the English with the Miamis had been in some measure sealed in blood. The French had attacked some Pennsylvania traders at a post at Pickawillany, near Dayton, Ohio; the Miamis defended them and were defeated, losing fourteen warriors, while the traders were carried off prisoners to Canada. This war, thus begun, was maintained on the Ohio and extended to Canada, while there was still apparently profound peace and the most elaborate *entente cordiale* between France and England in Europe. Practically, it did not cease until the French were expelled from Canada and from all their territory in America.

Joncaire blustered and threatened, but Gist, having returned to the Ohio, completed his surveys of the territory ceded by the Indians to the Ohio Company, and laid out a town and fort on Chartier's Creek, near the site of Pittsburgh. Gist had fixed his residence west of Laurel Hill, not far from the Youghiogheny, and eleven families of pioneers crossed the mountains with him. But the French were not ready to yield the Ohio country yet awhile, and, in spite of treaties, they knew how to deal with the Indians better than the English. An old Delaware sachem, seeing Gist planting his surveying stakes along the Ohio all the way from the Monongahela to the Kanawha, said to him, "The French claim all the land on one side the Ohio, the English claim all on the other side; now, where does the Indians' land lie?" But the Indians knew of old that their French fathers were not near so land-hungry as their English "brothers." Besides, the French were building forts, and arming them, in a systematic and persistent fashion. In 1753 they had completed their works at Presqu'isle (Erie), on Lake Erie; Fort Le Bœuf, on French Creek (Waterford, Pa.), and Venango, mouth of the same stream. On the opposite side of the stream to Venango, Fort Mitchell was built. Before the end of that year Fort Du Quesne was also projected, and a fort at Logstown.

These encroachments on what was claimed to be English territory caused a degree of agitation in the colonies. The Governor-General of Canada had told Tanacharisson, the half-king, that none of the Ohio lands were the Miamis' or belonged to the English either, and that the French meant to build a fort at the forks of the Ohio. The Ohio Company complained loudly to Governor Dinwiddie, of Virginia, and he did not disregard the appeal. He was him-

self a stockholder in the company. He sent a commissioner, Capt. William Trent, to expostulate with the French. Capt. Trent went to Logstown, and thence to Piqua. He found the place in ruins and the French flag flying above it. He lost heart and came home, his commission not discharged. Dinwiddie now selected George Washington to do the important errand. Washington was in the militia; he was a surveyor of experience, though only twenty-two years old, and he was familiar with the affairs of the Ohio Company, of which his brother Lawrence, just deceased, had been managing director. His instructions were chiefly to find out what the French were doing in Ohio, and what forces they had there. He was also to communicate with the friendly Indians, and renew relations with them as allies of Virginia. Washington set off at once, being joined at Wills' Creek by the pioneer, Christopher Gist. Both the journal of Washington and that of Gist in relation to this expedition have often been published, and there is no need to recite their contents over again. Washington found out that the French on the Ohio were receiving reinforcements from New Orleans as well as from Canada. After a conference with the Indians at Logstown, Washington passed on to Venango, where he was entertained by Joncaire in a jovial way. The French claimed the whole Ohio country in virtue of La Salle's discovery, and vowed that they would prevent it from being settled by the English. After a visit to the French post at Presqu'isle, and encountering numerous delays from the French and dangers from the Indians, Washington and Gist were enabled to return home. They had not accomplished much in the way of diplomacy, but had gathered information such as left no room for doubt of the formidable character of the French forces in Ohio, and their determination to prevent the Virginians and Pennsylvanians from making settlements there. It was evident, also, that they were preparing to occupy the Ohio River in the spring. Capt. Trent was ordered by Governor Dinwiddie to the frontier, to occupy and fortify the site in the forks of the Ohio. Washington was to raise a company and go out to take command of the new and important post. Dinwiddie besought the other colonies to aid him in resisting the French invasion, but New York sent only money, and Pennsylvania debated whether it really was invasion or not. Meantime, before the Virginia troops could take the field, the French were active. They mustered in force at Venango in April, 1754, descended the Alleghany in their bateaux, and captured the new fort at the mouth of that river, with its puny garrison. This was the first act of the war, which ended only with the end of New France and French rule in America. Capt. Contrecœur, who demanded the surrender of the fort, claimed that the country upon the Ohio had been confirmed to his king by the treaty of Aix-la-Chapelle. He also accused the English of employing Indians in the beginning of the struggle for supremacy. The war which ensued was certainly as much an Indian war as it was an intercolonial struggle between France and Great Britain for the control of the North American continent. It was attended with a thousand atrocities, and the deep hatreds engendered by the massacres of settlers on the borders of Virginia, Maryland, and Pennsylvania still subsist among their great-grandchildren, who are to-day the pioneers of the far West. The capture of Nova Scotia was a substantial fruit of the early English operations, but the defeat of Braddock brought the tomahawk and scalping-knife into regions which had been exempted from Indian raids for fifty years, and sent a thrill of horror through every British colony. The Shawanese raided the valley of the Blue Ridge, and the Cherokees broke up the settlements on the Clinch and Holston Rivers, while in Pennsylvania the Delawares, at their headquarters at Kittaning, overawed the whole State, and compelled forts to be erected at the pass of the Swatara, at the forks of the Schuylkill, at Shippensburg, Carlisle, and Gnadenhütten.

The next year was one of disaster to the British army and of misery to the British colonies. But in 1757 William Pitt became Prime Minister of Great Britain, and proceeded to organize victory on sea and land and in three continents at once. By the end of 1758 England had recovered all she had lost and acquired a new prestige. Fort Frontenac and Fort Du Quesne both fell after the capture of Louisburg by Boscawen, and Christian Frederick Post, the brave and devoted Moravian missionary, after a perilous journey in the heart of the savage wilderness, succeeded in paving the way for the pacification of the Indians. In 1759, Wolfe captured Quebec, while Amherst occupied Ticonderoga and Crown Point, and Sir William Johnson, successor to Prideaux, received the surrender of Fort Niagara. On Sept. 8, 1760, M. de Vaudreuil, Governor-General of Canada, capitulated in form, and the English were given undisturbed possession of every French post and town in the province of New France. The war was still prosecuted, however, in Europe until February, 1763, when the peace of Paris was negotiated. England restored Havana to Spain, but received in return East and West Florida. France ceded to Spain, by a secret article of the treaty,

all of Louisiana lying west of the Mississippi, while England took from France not only the whole of Canada, but also all of Louisiana east of the Mississippi, the boundary being "fixed irrevocably by a line drawn along the middle of the river Mississippi, from its source to the river Iberville, and from thence, by a line drawn along the middle of this river, and the Lakes Maurepas and Pontchartrain, to the sea," including also Mobile and every place on the east side of the Mississippi except the city of New Orleans and the island on which it stands. The navigation of the Mississippi was made free to both nations.

By this treaty sixteen French posts and towns north of the Ohio River were surrendered to the English, including Vincennes, mouth of the Ohio, Cahokia, Kaskaskia, and Fort Chartres. There were also in this "Illinois country," as the region west of the Wabash was called, the villages of St. Charles and Ste. Genevieve on the west side of the Mississippi, and Prairie du Rocher on the east side. But, in fact, at first the cession was only nominal. The French were loyal in the extreme to their ancient government, and the Indians were the allies and the friends of the French, with whom they had always lived on the best terms of intimacy. The British garrisons in the various posts which had been surrendered by Vaudreuil's capitulation were only sure of the ground inside their ramparts, and not always safe even within these narrow limits. The Indians looked upon the British as their natural foes, and did not consent to believe themselves obliged to submit either in consequence of the capitulation or the treaty. The French traders and *coureurs des bois* hated the English bitterly, and encouraged the Indians in their hostile attitude. The results of this were soon seen in the conspiracy of Pontiac, when nearly every post in Canada and the West was surprised and captured by the Ottawas and their allies, who, however, invariably spared and protected the French, while murdering and torturing the English. This conspiracy broke out only two months after the ratification of the treaty of Paris, and, when Pontiac could no longer maintain the war, he fled, broken and dispirited, to the Illinois towns, and took refuge there and in St. Louis among his friends the French.

When George Croghan, the famous pioneer and scout, now the commissioner of Sir William Johnson, went west in 1765 to learn the disposition of the French and secure their aid, if possible, in preventing a recurrence of Indian wars, he was not prepossessed by what he saw at Vincennes, where he was taken by a party of Indians who had made him their prisoner. "On my arrival there," he wrote, "I found a village of about eighty or ninety French families settled on the east side of this river, being one of the finest situations that can be found. . . . The French inhabitants hereabouts are an idle, lazy people, a parcel of renegadoes from Canada, and are much worse than the Indians. They took a secret pleasure at our misfortunes, and the moment we arrived they came to the Indians, exchanging trifles for their valuable plunder. . . . The French have great influence over these Indians, and never fail in telling them many lies to the prejudice of his majesty's interest, by making the English nation odious and hateful to them. I had the greatest difficulties in removing these prejudices. As these Indians are a weak, foolish, and credulous people, they are easily imposed on by a designing people, who have led them hitherto as they pleased. . . . The Indian (Twightwee) village consists of about forty or fifty cabins, besides nine or ten French houses, a runaway colony from Detroit during the late Indian war; they were concerned in it, and being afraid of punishment, came to this post, where ever since they have spirited up the Indians against the English. All the French residing here are a lazy, indolent people, fond of breeding mischief and spiriting up the Indians against the English, and should by no means be suffered to remain here." Croghan is a prejudiced witness, but his facts are valuable. They are corroborated from other sources, all going to show that the French in the Illinois settlements were impelled to seek the other side of the Mississippi not only by their dislike of the English and their attachment to French institutions, but also by the dislike and suspicion manifested by the English towards them.

The Illinois settlements at the time of the treaty of Paris were under the government of M. de St. Ange de Bellerive, commanding at Fort Chartres. He was subordinate to M. d'Abadie, Director-General of Louisiana, who lived in New Orleans. The secret of the surrender of the country west of the Mississippi to Spain was not known or suspected by the French authorities, and, as soon as they knew of the treaty of Paris and that the Illinois country had been abandoned to the English, both D'Abadie and St. Ange exerted themselves to extend and increase the French settlements on the west bank. D'Abadie, in June, 1763, had granted to Pierre Laclede Liguest and his associates a charter, giving them power to trade with the Indians in Missouri and establish the necessary posts among them. Laclede, with his party, including Auguste and Pierre Chouteau, ascended the Mississippi River for New Orleans, and reached Ste. Genevieve on November 3d. It is here that the history of St. Louis properly begins.

There were only two French settlements at that time on the western bank of the Mississippi above the post of Arkansas. One was a trading-post on the present site of New Madrid, the date of the establishment of which, according to doubtful tradition, was 1740. The place was simply a resort of traders and hunters, who killed great numbers of bears and manufactured bear's grease for sale, shipping it to New Orleans by the Kaskaskia traders. The creoles consequently called the bend of the river on which the settlement was established *L'Anse de la Graisse*, or Greasy Bend. The old village of Ste. Genevieve, the other settlement within the limits of Missouri at this time, was founded about 1755. Here it was that Laclede landed, and here he might have established himself, except for the fact that the beautiful plateau on which the town stood (three miles below the present town) was too far from the mouth of the Missouri River to suit his purposes. He crossed to Fort Chartres, and, wintering his party there, explored the western bank of the river for a site for his town.

In 1765, Captain Stirling, of the British army, came to the Illinois settlements by way of Detroit, and received the surrender of Fort Chartres from St. Ange, the latter retiring with his garrison of twenty-one men to the western side of the river. Stirling demanded the allegiance of the people of the French settlements, and guaranteed to them the protection of the British government for their persons, estates, and religion. This did not, however, reconcile them to the English rule, and so many crossed the river to the French settlements on the west bank that Fort Chartres lost seventy out of eighty families, and Cahokia very nearly in proportion. It was the disbanding of a happy people, not overly rich nor prosperous; not enterprising at all, except in the hunt and the adventurous long voyage of canoe and flat-boat, but kindly, merry, hospitable. Their villages, built in long, narrow streets on the margin of a prairie or the wood-fringed bank of a stream, were made compact and crowded, so that each might hear his neighbor's voice and have the chance to vie with him in volubility. Their houses were simple, plain, uniform, but solidly built, of stone or adobe, and each with its porch and garden. Every village had its "common-field" and its "commons," in which each householder had an equal fee-simple property, and the "common-field," essentially a communal estate, was tilled by municipal regulation, for the joint benefit of all the community. The "common," in the same way, afforded pasturage for the stock of the village.

"Care," says the compiler Monette, "was a stranger in the villages, and was rarely entertained many days as a guest. Amusements, festivals, and holy days were frequent." All danced alike, the patriarch and the infant, the matron and the priest; all had the same faith, the same forms of worship; all dressed alike, and had the same simple manners and the same round of domestic tradition. All spoke the same *patois*, a soft and bastard French, lacking the verve and elasticity of the French of Paris, and pervaded by the genuine creole languor and drawl. The men wore the blanket capote, with hood and cape, long vest, blue shirt, and short breeches. In winter the hood of the capote protected the head; in summer, a blue cotton handkerchief was worn about it. The women dressed in the short jacket and petticoat which is so common a garb of the peasantry; in winter they wore stout moccasins and clogs, but in summer went barefoot.

The government was mild and paternal; the commandant had both civil and military jurisdiction and despotic power, but he lived among his people like the father of a family; he treated them kindly, they obeyed, respected, and loved him. They had few schools, little learning, no science. Education was of the simplest; its limits were what the village cure permitted and what the parish clerk was capable of imparting. Their courts were void of form and technicalities, and the many delays, uncertainties, and formalities of the English and American courts, when first introduced into this "terrestrial paradise" of Illinois, became a source of much annoyance and inconvenience, and often of grievous loss, to the unsophisticated *habitans*.

CHAPTER IV.

THE FOUNDING OF ST. LOUIS.[1]

"It was nearly two centuries and a quarter after the brilliant but ill-fated expedition of De Soto before any systematic effort was made for the settlement of the valley of the Upper Mississippi. In 1673, M[arquette]

[1] [The present chapter is given in full from the manuscript of Prof. Sylvester Waterhouse, of Washington University. The notes are his also, except in cases where it was thought expedient to amplify the text from other sources—manuscript or printed. In these cases the addition is indicated by the author's initials or by reference to the authority in the case. Of Mr. Waterhouse it is needless to speak, as he is so well known in this community. He himself says of the manuscript furnished by him to the author of the present volumes, that the facts contained in it "are derived largely from original manuscripts of the period, which are in the French and Spanish languages, the latter being that of the inhabitants of the country, nearly all of whom

quette and Joliet sailed down the Wisconsin in birch canoes, and then with their frail craft explored the Mississippi to the mouth of the Arkansas. In 1680, Hennepin traced the Upper Mississippi from the confluence of the Illinois to the Falls of St. Anthony. In 1682, La Salle, starting from Illinois, descended the Mississippi to its mouth. These intrepid and heroic pioneers revealed to the world the magnitude of the Mississippi and the richness of the valley which it drained. But so gradual was the progress of settlement, that it was more than eighty years after the explorations of La Salle had made known the wondrous wealth of the Mississippi valley before the trading-post of St. Louis was founded.

"But at length the resources of Upper Louisiana began to attract the attention of commercial enterprise, and in 1762 the firm of Maxent, Laclede & Co.[1] obtained from the Governor-General[2] of Louisiana an exclusive control of the fur trade of the Missouri and other tribes of Indians as far north as the river St. Peter.[3] This monopoly was a guarantee of wealth, and the company immediately took steps to avail themselves of the valuable privileges of their charter. Liguest was the youngest member of the firm, and to him was assigned the task of selecting a site for a trading-post in Upper Louisiana. Nature had spe-

were descendants of that nationality, and the banish the official language of the government from the year 1770. For the use of many of these documents I am indebted to my friend Augustus de Lassus, the only son of the last of the Spanish lieutenant-governors of this upper portion of Louisiana, residing as he has for many years past in St. François County, who sent me a large mass of his father's official and private papers; to my old friend, G. S. Chouteau, the last surviving son of the original Col. Auguste Chouteau, who had much to do with the founding of the place, and who lived with us a period of sixty-five years, until his death in 1829, at the ripe old age of seventy-nine. To Dr. Charles Gratiot and sister, of Cheltenham, in this city, grandchildren of the first Charles Gratiot, a prominent personage of the little village from the year 1780 until his death, at the age of sixty-five years, in 1817, and others to whom I am largely indebted for the invaluable aid I derived from the use of their documents."]

[1] "The style of the firm varies. But the above is the form of the signature attached to several documents in the office of the St. Louis recorder of deeds.

"There were five or six partners in the firm.

"Maxent is written in a variety of ways. Even Laclede himself sometimes spells the word Maxan. But doubtless Maxent is the correct form. In all probability it is the same name that was borne by many families in France under the ancient régime. The full name of Laclede's partner was Gilbert Antoine de St. Maxent. [St. Maxent is named by Gayarré as a leading merchant of New Orleans.]

"In fourteen instances in which the name of Laclede occurs in the archives it is written 'Pierre Laclede Liguest.' In the body of legal instruments, whether drawn by himself or by a notary, this is the almost uniform orthography. But whenever Laclede signed his name to a document, the signature is invariably 'Laclede Liguest.' In several grants of land his name is written without the 'Pierre.' By his associates Pierre Laclede Liguest was always called 'Laclede.' The given name, so familiarly known to the first settlers of the little trading-post, has become the historic title of the founder of St. Louis. In social life the use of the surname was infrequent. The following examples illustrate the early French preference for brief names:

"Antoine Vincent Bouis was generally called Antoine Vincent. Baptiste Lamie Duchouquette was popularly known as Baptiste Lamie. The address of Benito Vasquez was simply Benito. The common designation of Charles Fremon Delaurière was Fremon. The signature of the last Spanish Governor of St. Louis was Charles Dehault de Lassus, but the full name of the father was Pierre Charles Dehault de Lassus de Luzière. In the village of New Bourbon, where the Governor's father held command at the time of the transfer, he was always called De Luzière. 'Pierre de Luzière was known in France, and by the Baron de Carondelet, by the name of Dehault de Lassus, and during the French Revolution he took the name De Luzière.'

"Albert Tison and Fremon Delaurière, Nov. 27, 1832.—*Commissioners' Minutes*, vol. vi. p. 55.

"Two own brothers of the Governor bore the respective names of Camilius de Lassus and Jacques Marcellin Ceran Dehault de Lassus de St. Vrain. The interminable title of the latter was shortened in common address to St. Vrain.

"Laclede also exemplified the French habit of abbreviating proper names. Undoubtedly his full name was Pierre Laclede Liguest, but probably the illustrious pioneer will be best known in after-time by his middle name.

"Still, in personal address, French custom permits the separate use of Christian or surname; accordingly, in the following pages, either title has been employed to designate the founder of St. Louis."

[2] "It is generally stated that the company's charter was derived from Governor d'Abadie. Col. Auguste Chouteau asserts that the license was secured in 1762. (Hunt's Minutes, vol. i. p. 107.) His statement is strongly corroborated by circumstantial evidence.

"M. d'Abadie was appointed commandant March 16, 1763, but he did not reach New Orleans till June 29, 1763. (Gayarré's History of Louisiana, vol. ii. p. 96.) It is obvious that he did not perform any official acts prior to his arrival. But the date of his actual assumption of office was only five weeks before the departure of Laclede to found a trading-post in Upper Louisiana. (Hunt's Minutes, vol. i. p. 107.) This short interval, barely sufficient to afford the members of Laclede's firm an opportunity to get acquainted with the new magistrate, was quite too brief for the slow formalities that delayed the grant of so important a privilege. Besides, many of the goods which formed Laclede's outfit were purchased in Havana. In those days of slow transportation, several months must have been consumed in procuring the necessary merchandise. In 1763, such an enterprise as Laclede contemplated was an undertaking of great difficulty and slow accomplishment. It is probable that the preparations for so arduous an expedition occupied not less than a twelvemonth.

"These facts and presumptions seem fully to justify the inference that the charter of Laclede's company was obtained not from Governor d'Abadie, but from his predecessor, Governor Kerlerec."

[3] Auguste Chouteau, April 18, 1825. (Hunt's Minutes, vol. i. p. 107.)

cially fitted him for this service. He was fortunately endowed with the attributes of bravery, sagacity, and love of adventure, which insure success in pioneer enterprises.[1]

"Under the royal license and the instructions of his firm, Liguest at once began active preparations for his northern expedition. With a few hardy men, attracted by their fondness for wild adventure, he left

[1] Of Pierre Laclede Liguest, the founder of St. Louis, but little of his personal history is known, further than the fact that he was a native of France and a partner in the commercial house of Maxent, Laclede & Co., of New Orleans, for some years prior to his adventure to this Upper Louisiana in 1763–64. Nor have we much to relate concerning him during the fourteen years of his residence in this his "village of St. Louis," as whatever documents there might have been in possession of himself or family, at the period of his death in 1778, that might have enlightened us in relation to his personal history, went into the possession of Auguste Chouteau, his principal business companion and clerk during these fourteen years (surviving him for more than fifty years, and succeeding him in the title of founder of the place, as having witnessed the erection of the first house here), and doubtless have been lost or destroyed, as none are to be found at this day, either in the possession of the last survivor of Chouteau's sons, still living in the place, or the numerous descendants of Laclede in these parts [these papers were entrusted to Nicollet, and destroyed by fire while in his possession]; consequently whatever we may have to say of Laclede is derived mainly from the meagre facts concerning him that are to be found in the archives, etc., and from tradition.

Laclede having completed his arrangements for his voyage to this upper country, sailed from New Orleans in his barge, with his family and outfit of merchandise for his Indian trade, on the 3d day of August, 1763, and arrived at Fort Chartres, some twenty miles above Ste. Genevieve, on the 3d of November following. In leaving New Orleans he had contemplated landing at Ste. Genevieve, the only settlement at that period on the west bank of the river in this upper country, but arriving there and finding no place in which to store his goods for the winter, the village being some two miles back from the river, at the suggestion of the commandant at that post he proceeded on to Fort Chartres, where he was kindly welcomed by the commandant, M. Neyon de Villiers. Here he landed his goods and prepared to spend the winter, in the course of which he rode upon horseback with a small party to Cahokia, the uppermost village and settlement, crossed to the west side, explored the country to the mouth of the Missouri, and up that stream for some distance, selected the spot for the location of his trading-post, marked it by blazing the trees, and returned to Fort Chartres to await the spring opening of the river.

It was while spending the winter at Fort Chartres that news reached there of the cession of that side of the country to Great Britain, and the consequent determination was formed by many of the inhabitants to leave the country rather than to become subjects of that power. This suggested to Laclede the idea of laying out a village around his contemplated trading-post, and inducing them to come over to the west side and settle themselves around him; for otherwise it is evident, that had that side remained under the subjection of France, but few of those who did come over, the most of them natives of the soil where their fathers had been established for a period of eighty years, and where they lived in comfort and ease, would ever have dreamed of abandoning their homes simply for the purpose of crossing to the west side (which they might have done long previously had they been so disposed), and in a measure begin life anew. Consequently it follows that the sudden springing up of St. Louis into a village in the brief space of a year or two was the effect of the cession of the east side to England; otherwise it would in all probability have been but a trading-post, with perhaps a few families scattered around it in the progress of time, for the next forty years. This is made manifest from the fact that, in that long period, the increase was so slow that the place numbered but nine hundred and twenty-five souls at the date of the transfer to the United States in 1804.

We find but little more to add to this brief notice of Laclede. His residence of fourteen years in the village of his projection was mainly devoted to the prosecution of his business affairs. On his return from a voyage to New Orleans, in the spring of 1778, he died on his boat, near the mouth of the Arkansas River, on the 20th day of June, and was interred in the wilderness at that point. If anything was done at the time to mark the spot where his remains were laid, it was soon obliterated, as in searching for the place, but a few years thereafter, a trace of the spot could be found.—From MS. notes of F. S. Billon.

The doubts and discrepancies in regard to Laclede seem to be partly removed by the following sketch of his life and history which was furnished by the indefatigable Margry to Hon. E. B. Washburne, while United States minister to France. It seems to cover some of the facts necessary to a full understanding of the case.—J. T. S.

"MINISTERE DE LA MARINE ET DES COLONIES,

"Friday, Sept. 7, 187[illegible]

"MONSIEUR LE MINISTRE,—On my return home yesterday I hastened to look up the documents which are to be published by Congress, and in the sixth volume I have found those which I had gathered concerning Pierre Laclede.

"I am all the happier for having had the occasion of conversing with Mrs. Washburne on that subject, inasmuch as I shall be able to indicate the connections of the founder of St. Louis, which are not such as stated in a newspaper of that city, 1845, according to the report of Mr. Nicollet.

"I shall be thankful to you for all the information you may be pleased to give me concerning Laclede and Mr. Gratiot, one of the founders of Galena, if I have understood rightly. I will begin by giving you myself all the information I have collected about the pioneer of St. Louis.

"Pierre Laclede Liguest was a native of the parish of [illegible] Valle d'Aspre, diocese d'Oloron en Bearn, about fifteen leagues from Pau (Basses-Pyrénnés). He was the younger brother of Mr. Laclede, *maître particulier des Eaux et Forets* of the province of Bearn, pays de Soule et Basse Navarre. (I do not think this has ever been published.) Pierre Laclede went to Louisiana in 1755, and founded a commercial establishment in New Orleans.

"The war of 1756 having involved him in great embarrassment, he obtained in 1762, as a reward for the services which he had rendered, the exclusive privilege of the fur trade. He went up to Illinois, accompanied by two young men, one of whom was called Pierre Etienne Auguste Chouteau, when the treaty of 1763 put an end to his privilege. He did not lose courage; he bought from his partners their share of the [illegible] and leaving Fort Chartres, he crossed over to the west side of the Mississippi and selected the spot where St. Louis now stands as the site of his future establishment, which he left Auguste Chouteau to start, on the 15th of February, 1764. It was several years in building it up. Having returned to New Orleans, he again left that place in May, 1778, although

New Orleans Aug. 3, 1763.[1] His boats, unshapely in structure and heavily laden with goods destined for the Indian trade, were ill adapted to encounter the impetuous current of the Mississippi. It required an exertion of the utmost strength of the oarsmen to force the unwieldy craft up the stream. Even on the lower river there were at that time very few villages, but from Natchez to the settlements in the Illinois country—a distance of about seven hundred miles—the wilderness was peopled only by savages. At length, after months of weary toil, Laclede reached Ste. Genevieve. This village was then the only large French settlement on the west side of the Mississippi. The exact year of its foundation is not known, but there is legal evidence of its existence in 1754. Tradition ascribes its origin to the proximate date of 1735.[2] But in 1763, though a place of commercial importance, it had no room for the storage of Laclede's goods, or for the entertainment of his men. At this time M. de Neyon de Villiers was commandant of Fort de Chartres. Informed of the difficulties which beset Liguest, De Neyon relieved his embarrassment by an invitation to store his merchandise at Fort de Chartres until he had erected his own warehouse at the trading post which he was about to establish. After a brief rest from the fatigues of his voyage, Laclede resumed his journey, and reached Fort de Chartres in just three months from the day he left New Orleans.[3]

Placing his goods in the custody of the fort, he again set forth to accomplish the object of his mission. With a few companions he ascended the Mississippi to the mouth of the Missouri, carefully observing all the natural advantages of situation. On his return, with a full knowledge of the merits of the several localities, he promptly chose the spot on which St. Louis now stands as the site of his trading-post. Its local superiority relieved him of the embarrassment of a doubtful choice. High, salubrious, and central, the situation possessed the twofold excellence of fitness for healthful residence and of matchless facilities for commercial exchange. Liguest expressed his delight at the attractions of the place in a prediction whose fulfillment has rendered it historic. Upon his

Aug. Chouteau

return to Fort de Chartres, in the fullness of his enthusiasm, he assured the commandant that "he had found a situation where he intended to establish a settlement which might become hereafter one of the finest cities of America."[4]

"Auguste Chouteau," then a lad of thirteen, had ac-

---

stick, and died on the way, within one day's march of the post of the Arkansas. He was said to be fifty-four years of age; he was, therefore, born about the year 1724.

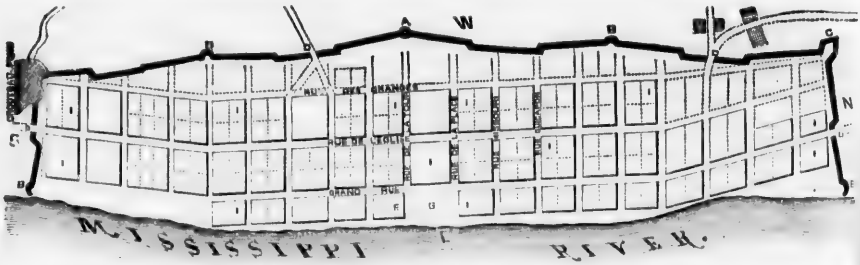
"Allow me, Monsieur le Ministre, to renew to you the expression of my respect, and my best wishes for you and yours.

"PIERRE MARGRY,
"11 Rue de Mont Thabor."

[1] "Hunt's Minutes, vol. i. p. 107."

[2] Pittman, who is accurate and had good sources of information, says (writing in 1769–70), "The first settlers of this village removed about twenty eight years ago from Cascasquias." This would make the settlement about 1741–42. The people of St. Louis, he adds, get all their flour from this place. This would explain why the people of Ste. Genevieve called St. Louis "*Main Court*." The St. Louisians retorted by attaching the nickname of "*Misère*" to Ste. Genevieve.—J. T. S.

[3] "Hunt's Minutes, vol. i. p. 107."



[4] "Chouteau's Journal."

[5] "Auguste Chouteau was born in New Orleans, Aug. 14, 1750. This date was furnished by his son, Gabriel S. Chouteau, who, born in St. Louis, Dec. 31, 1794, still survives. Through the courtesy of Mr. John N. Dyer, of the St. Louis Mercantile Library, several important facts have been obtained from Mr. Chouteau which could not be derived from any other source."

Note of Mr. Billon: "Chouteau was in his youth esteemed as an unusually intelligent lad by Laclede, who had great confidence in his business capacity, so that when he attained his manhood in the year 1771 he became the junior partner of the St. Louis branch of the New Orleans house of Maxent, Laclede & Co.; and at the death of Laclede in 1778, he was a large creditor of the house, and eventually succeeded to the business established by Laclede.

"He made several voyages to New Orleans in 1779 and 1780 for the purpose of closing its affairs with Col. Maxent, the senior of the house in that city.

companied Laclede on his voyage. Bright and active, he won the confidence of his patron and was promoted to trusts beyond his years. In the events which attended the founding of St. Louis his name occupies a place of historic prominence. Before leaving the site which he had selected, Laclede marked the trees for the future identification of the locality, and informed young Chouteau that as soon as the Mississippi was free from ice he must return to this spot, fell the forest, and put up cabins for his men. The winter months were spent in active preparations for the future settlement. An open spring permitted an early resumption of the work of colonization. Acting under the direction of Liguest, young Chouteau[1] left Fort de Chartres with about thirty men, and arrived at the selected site on the 14th of February, 1764.[2] Early on the morning

ST. LOUIS AS PLANNED IN 1764. (Description in chapter on Topography.

"Mr. Chouteau was very methodical and systematic in all his business affairs, and particularly careful in preserving and filing away all his papers, of however trivial a nature, so that at his death in 1829 they filled a large chest, and passed into the possession of his son Henry, the only one of the four who was a business man,—numbering several thousand, and equal in number and bulk to the whole of the papers in the archives of the Spanish days; the accumulation of the sixty years he had been engaged in business, comprising bills, receipts, deeds, leases, letters, and multifarious papers, with those of a dozen or more estates of deceased persons that he had closed up as executor,—viz.: Robidou's, Clamorgan, Loosêl, Alex. Clark, Hortiz, Verdon, and others, all assorted according to their nature, and labeled by himself. Of these, the letters alone amounted to several hundred, labeled under the initial letter of the alphabet. Mr. Chouteau, during his residence in the place through the whole of the Spanish domination of forty years, had no other title than plain Mr. Chouteau, engaged in his legitimate business of merchant, Indian trader, and running his water mill, the only one in the country; but after the country had passed to the Americans in 1804, at which period he had attained the age of fifty-four, he was constantly in office in some capacity or other,—judge of the Common Pleas Court, justice of the peace, colonel in the militia, town trustee, United States agent for Revolutionary pensioners, president Bank of Missouri, commissioner to treat with Indians, etc., etc., which, together with his own private business, and that of several large estates, for example, his father-in-law, Mr. Cerré, seldom left him an idle moment.

"I have spent much time in looking through these voluminous papers, with the hope that I might find something relating to the private history of Laclede, such as his nativity, age, etc., or something relating to the history of the times, but in this I was much disappointed,—the only documents relating to Laclede [illegible] were his title deeds to a few concessions and purchases of lands and lots in the village, which subsequently became the property of Chouteau, and his final settlement of the estate of Laclede with Col. Maxent in the city of New Orleans, in July, 1[illegible]. The inventory of Laclede's estate, taken shortly after his death, with the public sale of his effects, is on record as it should have been, and doubtless with whatever papers there might have been, and no doubt were, relating to his past life and history, must have been taken down to New Orleans by Chouteau, and delivered over to Maxent as the settlement; and it is an annoying fact, and a source of profound regret, that at this day so little is known of the antecedents of the man who founded our St. Louis,—of all others, he whose history should be in the hands of all our people." But there will be occasion to say much more about Mr. Chouteau as the history progresses.

[1] His brother Pierre was not one of the original four. He arrived a few months after the settlement had been made. Nov. 24, 1825, Pierre Chouteau deposed that 'he came to St. Louis about six months after the foundation of the same.' *Hunt's Minutes*, vol. iii, p. 85; *Commissioners' Minutes*, pp. 282, 283.

[2] "The time of this occurrence has been a subject of controversy. The date of an event so striking could scarcely fail to impress itself upon the memory of the leading actors, and presumably no man in the world knew the day of his arrival better than Mr. Chouteau himself, and he, with possibly one exception, always asserted that he reached the selected site in February, 1764. This is the date originally given in the document called 'Chouteau's Journal.' With a view to establishing the authenticity of the writing, the Journal was taken to the venerable G. S. Chouteau, the last surviving son of Auguste Chouteau, Sr. In the presence of the writer he carefully inspected the manuscript with a powerful magnifying glass, and then unhesitatingly affirmed that the handwriting was his father's.

"The explicit and positive statements of the following letter settle beyond further question the date of Chouteau's arrival:

"'St. Louis, Jan. [illegible]

"'Professor S. Watertown:

"'My dear Sir.—My father came to the place where St. Louis now stands February 14, 1764. In telling his children of the part which he performed he always said that the 14th of February was the date of his arrival. The origi-

of the 15th his men began the humble labors which subsequent events have rendered memorable. They cleared a space in the primeval forest and sheltered themselves with temporary scaffoldings. They then put up a tool-shed and a few log huts. These first buildings, the rude beginnings of a metropolitan greatness, were erected on the block on which Barnum's Hotel now stands. Laclede selected a site for his own residence, and laid out a plan for the future village.[1]

in the Journal was February, but somebody afterwards substituted March for the preceding month. In the French, in which the Journal was written, the "Fevrier" was not erased, but "Mars" in larger and heavier letters was written over it. The original word, unobliterated by the alteration, is still legible. I know my father's handwriting as well as I do my own, and I am sure that the Journal was written by him. The letters bear the unmistakable peculiarities of his style. After my father's death the manuscript was found among his papers. It remained for a while in charge of my brother, Henry Chouteau, and then, after his decease, was placed in my hands by his widow. The Journal was in my possession for more than twenty-five years before it was transferred to the custody of the Mercantile Library. While it was in my keeping I often looked over the pages and examined the writing, and I am as certain as I can be without having seen him write it that the word "Fevrier"—as well as the rest of the Journal—is in my father's handwriting. If he himself changed the date, he must have done it in a moment of forgetfulness. But a single contradiction, even if genuine, cannot be allowed to outweigh the uniform and oft-repeated declarations of a lifetime. If my father made the substitution that is found in his Journal, it was simply a lapse of memory, and, so far as is known to me, the only time in his life in which he ever mentioned March as the date of his landing at this place. He must be a bold man who will venture to assert that during a very long career Col. Chouteau only once correctly remembered the most remarkable event in his life.

"'The few pages that exist are not all that my father wrote upon the history of St. Louis. He kept a journal for twenty years. It contained a full account of the leading events of our early history. It was replete with important information. When N. J. Nicollet was gathering materials for a work on the West, he solicited the privilege of consulting my father's Journal. The diary was sent to him at Baltimore, and was burned while in his custody. The fragment that remains, having been written in an old account-book that was not sent to Mr. Nicollet, escaped the fire.

"'Very respectfully, your humble servant,

"'GABRIEL S. CHOUTEAU.'

"The view expressed in the preceding letter is confirmed by other facts.

"In his deposition before Recorder Hunt, in 1825, Mr. Chouteau asserts twice that he arrived at the site of St. Louis on the 15th of February, 1764. A sworn statement made with the emphasis of a repetition is certainly entitled to consideration. This deposition was taken only a few years before his death, and his mind dwelling probably upon the more important date upon which the work of founding St. Louis was actually begun, might naturally make a mistake of one day, but not of a whole month.

"The Journal must have been written while Col. Chouteau was still in full physical vigor, for his letters are firm and clear cut. The deposition was taken about four years before Mr. Chouteau died.

"Here, then, are three statements that are in substantial accord agreeing in the month, they differ only by a day. The declarations made under oath show that the memories of a vigorous old age virtually coinciding with the recollections of mature manhood, sanctioned not the substituted date, but the original entry.

"Again, Mr. Chouteau states in his deposition that he left Fort de Chartres on the 10th of February. He came by boat. The distance from Fort de Chartres to St. Louis is about fifty miles. A boat driven by such a large and powerful crew as Chouteau had could easily make the trip in three or four days. But the assumption that he landed here on the 14th of March implies that it took him one whole month to make a voyage of fifty miles.

"That Chouteau came here in February is also confirmed by a deposition of Baptiste Riviere. (Hunt's Minutes, vol. ii. p. 109.) Riviere states that

"'He came to St. Louis in the first boat that came to this town with Auguste Chouteau. This deponent says his father left Kaskaskia (at the same time he left Fort de Chartres) with a cart in which was Mrs. Chouteau and her children, and this cart was accompanied by Laclede Liguest, who arrived about the same time the boat did from Fort de Chartres.'

"Kaskaskia and Fort de Chartres are about the same distance from St. Louis. Even an ox-team could make the journey in three or four days. Consequently, if the above statement of Riviere is trustworthy, it is certain that Chouteau came to this place in February.

"Auguste Chouteau died Feb. 24, 1829. The inscription on his tombstone states that he arrived at the site of St. Louis Feb. 14, 1764. The epitaph was written by his son-in-law, Mr. Gabriel Paul. It is fair to presume that an inscription of such moment was not adopted without the consultation and sanction of the family. Therefore this date, which could only have been originally derived from Mr. Chouteau himself, expresses the belief of his children and kinsmen that the 14th of February was the day of his arrival at this spot."

[1] On the 16th of February, 1764, Auguste Chouteau, with thirty picked men, nearly all mechanics, disembarked at the selected place, and on the following morning commenced work on sheds for the protection of the tools and provisions; immediately after a few cabins were built. At this time a fine growth of timber skirted the river, generally extending as far back as what is now known as Fifth Street, but it varied in width, with occasional openings, leaving the margin of the river entirely free from timber. The heaviest growth was on the square now occupied by Barnum's Hotel, and this was the place where the first buildings were erected.

A bluff, some twenty or thirty feet above the river, extended the whole length of the intended village: back of this was a gentle swell, upon which they built their cabins, and still beyond them were two other swells, the last bounded by what is now Fourth Street, and then came what was long known in the records as La Grande Prairie.

"July 29, 1825, Baptiste Riviere testified that 'he came to St. Louis in the first boat that came to this town with Auguste Chouteau. This deponent says his father left Kaskaskia at the same time he left Fort de Chartres, with a cart in which was Mrs. Chouteau and her children, and this cart was accompanied by Laclede Liguest, who arrived about the same time the boat did from Fort de Chartres.'—*Hunt's Minutes*, vol. ii. p. 109.

"St. Louis owes its title to a mingled sentiment of piety and patriotism.[1] Under the illusion that the vast domain lying west of the Mississippi was still a French possession, Liguest named the newly

"From this deposition it appears that Chouteau and Liguest reached the spot at about the same time. It is indeed scarcely probable that Liguest would intrust the exclusive control of so important an undertaking to a youth of only thirteen. The presence of Liguest is attested by Chouteau himself. In a deposition dated Nov. 16, 1825, he says that 'when he first came to the recent St. Louis, and laid out the town *under the directions of Laclede Liguest, they* established the warehouse where the market now stands.'—*Hunt's Minutes*, vol. iii. p. 72.

"Doubtless the foundations of St. Louis were laid under the personal supervision of Laclede Liguest, and the part which the youthful Chouteau performed was limited to an intelligent execution of his instructions. But such a service was a high honor for so young a lad."

[1] "'Mr. Laclede, on his arrival, named the town St. Louis, in honor of the King of France.'—Auguste Chouteau, April 18, 1825, *Hunt's Minutes*, vol. v. p. 107.

"Many persons have wondered that a city deriving its title from a dissolute monarch should be called *Saint* Louis. The surprise springs from a misapprehension. Louis XV. was not canonized. If the place had been named directly after the king it would have been termed Louisville, or Louisbourg. According to French custom it requires the addition of 'ville' or 'bourg' to convert a personal into a local designation. St. Louis was named after the patron saint of Louis XV. The member of the Catholic Church has a patron saint. The veneration of the saint was an 'honor' to the king. Every christening of the child designates its patron. The saint bearing the same name as that given to the child becomes its patron. Therefore, as the baptismal name of the French monarch was Louis, his patron saint was Saint Louis. Hence the title of this place combined loyalty and piety. It 'honored' the king by reverence of the saint. It blended in itself a recognition of royalty with the consecration of religion. This explanation, so familiar to every intelligent Catholic, and so little known to Protestants, is due to the suggestion of Mr. O. W. Collet, keeper of the Museum of the St. Louis Historical Society."

King Louis IX. of France was canonized and placed on the calendar of saints by Pope Boniface VIII., in the year 1297. The anniversary of the death of St. Louis occurs on the 25th of August. When the pioneer emigrants from France commenced to build on the site now covered by the city of St. Louis, they selected as the patron saint of the embryo city the monarch whose name commences this paragraph, and bestowed his name upon the infant colony. The Cathedral Parish, commonly so called, but more correctly the Parish of St. Louis, was organized soon after the commencement of the settlement here by Laclede in 1764, and St. Louis' day has ever since been observed as a festival in the parish.

Louis IX., or St. Louis, was born in Poissy, April 25, 1215, and succeeded his father, Louis VIII., in 1226, being then in his eleventh year. During his minority his mother, Blanche of Castile, a woman of great talent and deep piety, acted as regent. This lady bestowed upon her son every care in his education, and especially gave great attention to his religious training. The celebrated Neander, in his "Kirchengeschichte," draws a most interesting picture of the religious side of the character which the assiduous care of his mother had formed for her son, but which we have not the space to reproduce here. On reaching his majority Louis engaged in a war with Henry III., King of England, and defeated the English at Taillebourg, at Saintes, and at Blaye, in 1242. Soon after he concluded a peace with the English king. At a subsequent period King Louis fell dangerously ill. During the critical time he made a vow that if he recovered from the sickness he would go in person as a crusader. He did recover, and in accordance with his vow he appointed his mother, Blanche of Castile, regent, and sailed, August, 1248, with an army of forty thousand men, to Cyprus, whence in the following spring he departed for Egypt,[2] thinking by the conquest of the country to open the way to Palestine. He succeeded in capturing Damietta, but was afterwards defeated and taken prisoner by the Saracens. The price of his ransom was named at one hundred thousand marks of silver, which was paid by captors, and Louis was released May 7, 1250, with the fragments of his army, reduced in number to six thousand men. He proceeded by sea to St. Jean D'Acre, and remained in Palestine until the death of his mother, which event happened November, 1252. Louis was then compelled to return to France to assume the government.

He applied himself with great assiduity to the task of governing his kingdom, united several provinces to the crown by the lapse of feudal rights or by treaty, and made many important changes in the administration, the general tendency of which was to increase the royal power. During this time a code of laws was brought into use, now known as the "Etablissements de St. Louis." July 1, 1270, Louis embarked upon a new crusade, and sailed for Tunis. Here a pestilence broke out in the French camp, by which the greater part of the French army was destroyed. The king himself was attacked, and died at Tunis, Aug. 25, 1270. Such in brief are the important events in the life of the monarch whose name has been bestowed upon the city, and who is the patron saint of the oldest parish in the city.

Louis IX. of France, Saint Louis, combined the religious fervor of his father, Louis VIII., with the distinguished traits of his grandsire, Philip Augustus. He was, says the Abbé Gayarré, "the incarnation of virtue, and what is more extraordinary, of virtue born on the throne and preserving its native purity in spite of all the temptations of royal power. In vain would history be taxed to produce a character worthy of being compared with one so pure. Among heroes, he must certainly be acknowledged as one of the greatest; among monarchs he must be ranked as the most just; and among men, as the most modest." He was a great warrior, of the most undaunted personal courage and the ablest generalship. He was a great king, for "he sought the welfare of his people more than the aggrandizement of his territories: he formed the best laws that could be adapted to the time, administered them often in person, and observed them always himself; he was a good man inasmuch as he served God with his whole heart, and considered all his communion with his fellows to do his duty according to his sense of obligation." This is high praise, but it is well deserved. The code of laws framed by this monarch, who was as brave and reproachless as Bayard and devout as St. Martin of Tours, was as remarkable in its way as the capitularies of Charlemagne or the Code Napoléon. He never did a wrong act, and he even went upon his crusades, not for his own glory or his own salvation, but because he deemed himself bound by a solemn vow. When he was taken prisoner at Damietta he could readily have escaped, but disdained to fly and left his companions in arms in captivity. In the hands of the Saracens he was threatened with the torture because he refused to

founded post in honor of Louis XV., the reigning sovereign of France.[1]

"According to tradition, his companions, in grateful recognition of his services, desired to call the place Laclede, but the founder[2] modestly declined the justly deserved distinction.

"The arrival of the English troops at Fort de Chartres, to take possession of the territory which the treaty of Paris had ceded to the British crown, was daily expected. In anticipation of this event, Laclede deemed it important to remove his merchandise to St. Louis prior to the occupancy of the country by the English. But a singular incident detained him for a time in St. Louis. The growing settlement, menaced by an unforeseen danger, demanded his presence and protection. It was a fortunate accident that there were no Indian villages in the immediate neighborhood of the new post.[3] Possibly this fact may have been one of the reasons that led to the selection of the site. Jealousy of an invasion of their heritage might have incited the natives to hostilities fatal to the helpless colony.

"The Illinois Indians claimed to be the owners of the ground on which St. Louis stands.[4] But they never disturbed the French settlers, and never demanded remuneration for the occupancy of their land.

"Yet even the remoteness of the Indian villages did not wholly exempt the colonists from savage annoyance. Having heard of the presence of Frenchmen in their country, a band of about one hundred Missouri warriors, with several hundred women and children, came down to the settlement. The date of their arrival was Oct. 10, 1764. The ostensible object of the visit was to procure a supply of provisions. The food given for the purpose of conciliating the savages proved a dangerous gift. The visitors were so delighted with the hospitality of their reception that they avowed a determination never to leave their generous entertainers. For a while Liguest tried by pacific measures to rid himself of his troublesome guests. He was then digging a cellar for his new house.[5] The squaws were employed in making the excavation. They carried away the dirt in wooden platters and baskets.[6] It was hoped that their aversion to steady work would induce them to leave the place, but the wages which they received reconciled them to their labor. The warriors would not work. Larceny was their only regular industry. The temptation for them to steal whatever they could lay their hands on was too great for successful resistance. At length the patience of Liguest became exhausted. Seeing no probability of their voluntary departure, he tried the virtue of intimidation. He threatened, in the event that they did not at once retire from the village, to bring over the French troops that were stationed at Fort de Chartres and expel them by force of arms. The menace proved effective. Reluctantly the Indians withdrew, and never again molested the settlers. Relieved at last of this source of solicitude, Laclede at once returned to Fort de Chartres to superintend the removal of his merchandise. A de-

ransom. On this we have the authority of Joinville and of Matthew Paris. The remarkable character of St. Louis is evidenced by the strong and durable impression it has made upon men ever since his death. No name is more frequently borne by the Frenchman than that of Louis. St. Louis has become the patron saint of France, and we can trace the extent of the French settlements in America by the places which bear the name of Louis, in compliment at once to the saint and to his descendant and successor, Louis XIV., a *grand monarque* as selfish, greedy, and sinful as St. Louis was the reverse. Besides the St. Louis of which we write, Louisiana, Louisville, Louisbourg, Bay St. Louis (named by Iberville), and St. Louis des Illinois and St. Louis de Texas (named by La Salle), there are over a dozen other St. Louises and still more Louisvilles in the United States. There was an order of knighthood of St. Louis, created by Louis XIV. in 1693, of which a member or two may still survive. The last knight of the order was created in 1830.—J. T. S.

[1] "The cession of this territory to Spain was not proclaimed in New Orleans till October, 1764."—*Martin's History of Louisiana*, vol. i. p. 346.

[2] "In the following paragraph the foundation of St. Louis is strangely ascribed to St. Ange: 'Civil government being established under the authority of Great Britain, a few months after, in the post, St. Ange, the French commandant there, crossed the Mississippi with a number of his countrymen, who were desirous to follow the white flag, and laid the foundation of the town of St. Louis, which, with that of Ste. Genevieve, was the first settlements of the country now known as the State of Missouri.'"—*Martin's History of Louisiana*, vol. i. p. 350.

[3] "A few years after the foundation of St. Louis a band of friendly Indians was permitted to settle at the lower end of the village.

"Some few years after (1766), a band of Peoria Indians obtained permission to build a village, and they did build one immediately where Judge Bent's house now stands; and in after-times this prairie or common field was called 'Prairie du Village Sauvage.'—Auguste Chouteau, June 3, 1825, *Hunt's Minutes*, vol. ii. p. 7.

"Baptiste Riviere also speaks of 'the Indian village where Judge Bent now lives.'—July 29, 1825, *Hunt's Minutes*, vol. ii. p. 39."

[4] "Hunt's Minutes, vol. i. p. 107."

[5] "For several years Laclede's was the only house that had a cellar."

[6] "Having remained here fifteen days, in the course of which I had the cellar of the house which we were to build dug by the women and children. I gave them, in payment, vermilion, awls, and verdigris. They dug the largest part of it, and carried the earth in wooden platters and baskets, which they bore on their heads."—*A. Chouteau's Journal.*

sire to insure the safety of his goods was not his only motive in making this transfer. He disliked the English, and did not wish to be the recipient even of their favors. This aversion to the British fostered the growth of the infant settlement. The Seven Years' War in Europe had recently closed, but the bitterness of feeling which it excited still pervaded the colonies of the New World. The Peace of Paris changed the bounds of empire in America as well as in Europe. By this readjustment of imperial limits all of Louisiana lying on the east side of the Mississippi, with the single exception of the island of New Orleans, became a dependency of Great Britain. But the French residents of Eastern Louisiana indignantly resented the transfer. They preferred to abandon their homes rather than become subjects of the British crown. When, in June, 1764, in accordance with the instructions of Governor d'Abadie, M. de Villiers, the last French commandant of the Illinois country, withdrew from the province in anticipation of the arrival of the English forces, many French families from Fort de Chartres, St. Philippe, and Prairie du Rocher accompanied him to New Orleans. Others, entertaining the erroneous belief that the west bank was still a part of the French empire, went to St. Louis.[1]

"It is stated that the immigrants from Illinois were so alarmed by the visits of the Missouri Indians in the fall of 1764 that they fled to the east side of the Mississippi. Their flight reduced the colony to its original number. But after the withdrawal of the Indians the settlers, reassured of safety, returned to St. Louis.

"The Indians also hated the stern and imperious character of the English, and consequently transferred to St. Louis a large part of the fur trade which they had formerly carried on with Fort de Chartres, Kaskaskia, and Cahokia. This combination of circumstances so materially increased the population and business of St. Louis, that the village became in the first year of its life one of the most important places in Upper Louisiana.[2]

"St. Louis soon became the germ of other settlements. Carondelet, St. Charles, Bonhomme, Florissant, and Portage des Sioux are the offspring of the fruitful young colony.

"In a letter dated the 21st of April, 1764, the King of France officially announced to M. d'Abadie the Governor-General of the province of Louisiana that by the secret treaty of 1762 the island of New Orleans, and all of the French territory on the west side of the Mississippi, had been ceded to Spain. When, in the following October,[5] this change of allegiance was proclaimed to the people of Louisiana there was a sudden and violent outburst of public indignation. The citizens denounced with bitter execration the dastardly impolicy of the French monarch who had, by this inglorious act of surrender, alienated loyal subjects and relinquished a magnificent empire. When, in the course of time, the news reached Upper Louisiana, this feeling of public dissatisfaction was equally intense. An active opposition to the change of domination was organized. Spain, fearing armed resistance to its authority, resorted to amicable measures, and deferred the exercise of its sovereignty. Governor d'Abadie died Feb. 4, 1765, and it was said that mortification at his inability to execute the commands of his royal master hastened his death.[6]

[1] Mr. Billon's note: "It was not until the news of the cession of the east side to the English was made known to this upper country, and a few persons had crossed from the other side in 1764 on his invitation, that Laclede began first to conceive the idea of a village springing up around his trading-post (as was the case with all the other villages in this western region at that early day, they originated either in trading-posts or missionary establishments). He prepared his plat for his village late in 1764 (perhaps 1765). There were at that time but some ten or twelve individuals that had possession of lots, so marked on the plat

"But in the following year (1765) so large a number came across from the other side and built on lots assigned them verbally by Laclede, that in the early part of the following year, 1766, the system of recording concessions was established, and the first one issued April 27, 1766.

"So that in these two years the place sprung, as it were, almost at once into quite a village."

[2] "The statement of Gayarré (History of Louisiana, p. 23) that St. Louis contained only fifty one inhabitants in 1769 is clearly wrong.

"In his 'History of Louisiana,' vol. ii. p. 2, Judge Martin says, 'One of the first acts of O'Reilly's administration was an order for a census of the inhabitants of New Orleans. No census was taken in the rest of the province, but from circumstances to the *preceding* and succeeding years, the following statement is believed to be correct.'

"In the table appended by Gayarré eight hundred and fifty-one is given as the approximate population of St. Louis.

"It will be observed that the conflicting estimates are for the same year.

"From the list of only those inhabitants whose names tradition has preserved, and from the number of lots assigned and cabins known to have been built in 1765 and 1766, it is certain that the population of St. Louis in the latter year could not have been less than five hundred."

[3] "Gayarré's History of Louisiana, vol. ii. p. 110."

[4] "Martin's History of Louisiana, vol. i. p. 339."

[5] "Gayarré's History of Louisiana, vol. ii. page 114

[6] Mr. Billon's note: "The cession from France to Spain was from Nov. 3, 1762, and the arrival of Ulloa at New Orleans to receive possession, March 5, 1766, three years and eight months after the cession. Why this long delay of the Spanish? It would seem as if he were in no hurry to accept his elephant.'

"At first no organized form of civil government existed in St. Louis. The few mechanics and hunters who accompanied Laclede were bound to each other by the ties of personal friendship and common interests. The restraints of law were not needed to preserve public order.

"His imperial charter doubtless vested in Liguest discretionary powers of government. But, unwilling to transcend the express privilege of his royal license, Liguest preferred to devote his attention exclusively to his mercantile interests. Indisposed to assume political responsibility, he exercised only those civil functions that were essential to the welfare of his infant colony. It was indispensable that the settlers should have a title to the ground on which they built their cabins. Accordingly Laclede granted allotments of land, with the right of use until the inchoate claim was confirmed by an authority competent to confer a full title.

"But the accession of immigrants was gradually changing the condition of the young settlement. When M. De Neyon evacuated Fort de Chartres, June 15, 1764,[1] he confided to St. Ange de Bellerive the important duty of surrendering the country to the English authorities. The principal forts to be delivered to the British were Peoria, on the Illinois River; Marsiac,[2] on the Ohio; and Vincennes, on the Wabash. A fort on the Osage River and another on the Kansas, about four hundred miles from the mouth of the Missouri, though not comprised in the territory ceded to the English, were also included in the order of evacuation.

"St. Ange, with one captain, two lieutenants, and a company of forty men, remained in charge of the post until the arrival of the British troops. On the 10th[3] of October, 1765, St. Ange, in the name of the King of France, delivered to Capt. Sterling, the accredited commissioner of his British majesty, formal possession of the Illinois country. Soon after the act of transfer St. Ange withdrew his command to St. Louis.[4] The presence of an indolent soldiery

[1] "D'Abadie was not Governor. He was appointed by the French king *after* he had ceded the country to Spain, simply as director-general to supersede Governor Kerlerec, who was ordered to France to give an account of his administration, and hold the country until the arrival of the Spanish to receive possession, and to reduce the military establishment to four companies *ad int. im.*

"It was naturally supposed that the Spanish, imitating the example of the British, who lost no time in taking possession of their portion of the cession below, and were only prevented by the hostility of the Natchez tribe of Indians from ascending the river to receive their portion of this upper region, would take early possession of New Orleans and the district of country ceded to them below, but it seems they were in no hurry to do so.

"While awaiting their arrival, Mr. d'Abadie, a European Frenchman, fell a victim to the climate, and died Feb. 4, 1765, after a residence in the place of but twenty months, and Captain Aubry, of the French regulars, the senior officer in the place, succeeded to the command.

"In the mean time, the delay of the Spanish in taking possession tended largely to strengthen the popular belief of the inhabitants below, that the cession to Spain was but a temporary measure for political reasons, and that before long they would be retroceded to France; and when eventually, after exceeding three years' delay, Ulloa did appear, although no opposition was made to his landing with his two companies, yet the French declined to make to him a formal transfer of the place as is usual in these cases, and Ulloa would not assume the responsibility of endeavoring to take a forcible possession. This delay led to the subsequent troubles below, which resulted so disastrously for the French population of the place."

[2] "Fort Marsiac (not Massac, nor Massacre)." —*Nicollet's Report*, p. 79.

"Chouteau (in his journal) calls it Marsinque. Stoddard, History of Louisiana, p. 234, says the fort was named Massac in commemoration of an Indian massacre. Martin's 'History of Louisiana,' vol. i. p. 333, asserts that the fort was styled Massac in honor of its commander."—*Monette's History of the Mississippi Valley*, vol. i. p. 180.

[3] Capt. Pittman states that the surrender took place on the 20th of October. But the 10th of October, given on the authority of Davidson and Stuvé, "History of Illinois," p. 162, is probably the correct date. Aug. Chouteau states that St. Ange and his troops reached St. Louis July 17, 1765. —*Hunt's Minutes*, vol. i. p. 107.

[4] "According to Davidson and Stuvé, 'History of Illinois,' p. 163, St. Ange retired from Fort de Chartres with only twenty one men, but the several garrisons under the charge of De Villiers comprised about one hundred men. When this officer evacuated the Illinois country sixty-three soldiers escorted him to New Orleans. The rest of his troops, numbering about forty men, temporarily guarded Fort de Chartres, and after its surrender to the English accompanied St. Ange to St. Louis."

Mr. Billon's note: "Capt. Louis St. Ange de Bellerive was a Canadian by nativity, and was about sixty years of age at the date of the transfer at Fort Chartres, October 10, 1765. He had been in the military service of France, in the Canadas and in Illinois, for some forty years, and had only attained the rank of captain, promotion in these Western wilds being very slow.

"After giving possession of the c[illegible]r side to Capt. Sterling on the above date, he came over to St. Louis, bringing with him Capt. François de Volsay, Lieuts. Louis Belestre and Lefebvre Desbruisseau, Sergeants Auguste Nicholas Vincent and Pierre Mortardy, Corp'ls Jean de Lage, Claude Tuion, Lambert Bon Varlet, Damours de Loubièrres, Jean Comparios, Jean Oliver, and other soldiers to the number of about twenty men.

"The wives of De Volsay and Belestre were nieces of St. Ange, daughters of his brother-in-law, Governor Neyon de Villiers, and were married at Fort Chartres prior to the transfer. It does not appear whether St. Ange was ever married. I think not, as no mention is found on record of any wife or

[1] "D'Neyon de Villiers, who had the command of the Illinois district, abandoned it on the 15th of June, 1764, and arrived at New Orleans on the 2d of July with six officers, sixty-three soldiers, and eighty of the inhabitants, including women and children."—*Gayarré's History of Louisiana*, vol. ii. p. 115.

did not improve the morals or tranquillity of the colony. The need of an organized government to repress the growing tendencies to disorder and to punish violations of the law became urgent. Under the stress of a felt necessity, and without the sanction of Spanish authority, the people unanimously vested in St. Ange the powers of civil government until the arrival of his legally appointed successor. It was reasonably presumed that Spain would promptly imitate the example of England in taking possession of its newly-acquired territory. It was not at all anticipated that years would elapse before the assertion of the Spanish right of sovereignty.

"St. Ange was now over sixty years of age. A veteran in military experience, he held the rank of captain in the French service. He was well fitted for the trust which the public voice had summoned him to administer. His practical wisdom, fair dealing, and natural tact alike endeared him to his countrymen and to the Indians. His powerful influence among the natives was not at all diminished by the knowledge of his strong attachment to Pontiac, the famous chief of the Ottawa Indians. The popular authority temporarily conferred upon St. Ange all the powers that legitimately belong to a Governor. But personal preference restricted the executive functions of the new magistrate to the maintenance of public order, concessions of land, and the direction of the military department of the government. If St. Ange had performed the civil duties of his office, the public records would bear evidence of the fact. But the archives contain no legal documents attested by St. Ange as acting Governor. But the civil functions which M. de Bellerive declined to exercise were discharged by Judge Lefebvre[1] and Joseph Labuscière. Lefebvre, a native of France, had sought his fortunes in the New World. During his stay in New Orleans, he obtained from M. de Vaudreuil, the Governor-General of Louisiana, the grant of an exclusive right of trade with the Indians of the Illinois district. He came to Fort de Chartres in 1744. During his residence at that post he held the office of judge.[2]

"Joseph Labuscière came to the Illinois country from Canada. At Fort de Chartres he followed the vocation of notary and scrivener.

"These Frenchmen, sharing the antipathy which

child, and as by his will he left his property to the children of De Villiers. St. Ange died Dec. 27, 1774, aged about seventy years, at the house of Mrs. Therese Chouteau, southwest corner of Main and Chestnut Streets."

[1] "His full name was Joseph Lefebvre d'Inglebert Desbruisseau."

[2] Mr. Billon's note of the establishment of the first government:

"After Laclede had established himself in his new trading-post of St. Louis, by the erection of his buildings in 1764, during the progress of which he had extended a general invitation to all those on the other side dissatisfied at the idea of being transferred to a nation they had for long years look... upon as their hereditary enemies, and heretics in religion, ... come over and settle on this side, and had laid out his plat ... his prospective village, a large number from the settlements ... that side, as well as a number from Ste. Genevieve and N... Orleans, came to the place in 1765, in which year it sprang ... almost at once.

"Laclede, by virtue of the license granted him by the Fre... authorities below to select his own point for his Indian tra... was considered by all those who came to settle around him ... the legal proprietor of the new place, and all grants of lot-w... made by him for a time verbally.

"Among the first of those who came over from Fort Ch... were Joseph Lefebvre d'Inglebert Desbruisseau and J... Labuscière. The former had been a prominent man in ... day. A native of France, he had come up from New Orl... in the year 1744, with full authority from Governor Vaud... for the exclusive trade with the Indians of the Illinois coun... and for a number of years subsequently had served in the ... pacity of judge at Fort Chartres. Died Aug. 15, 1766.

"Joseph Labuscière was a lawyer and notary, styling h... self the king's procureur (attorney), and appears to have ... a very important personage in the incipiency of the villag...

"After Capt. St. Ange had transferred the country on ... other side to Capt. Sterling of the British army, on Oct... 1765, he crossed over to this side with his remaining men, ... bering about twenty, discharging the various functions of ... retary, notary, scribe, etc.

"It is stated in some of the annals of the other side ... after the death of Captain Sterling, less than three mo... after he was placed in possession of Fort Chartres, St. A... at the request of the people there, went over and took ... porary command in December, 1765, until the new B... commandant, Major Frazer, should arrive. There is n... to doubt the correctness of this statement, for the reason ... although many crossed over to this side in 1765 as state... a much larger number yet inhabited the other side, and s... Ange had been for so long a period their military comman... they entertained for him kindly feelings of affection and ... respect for his authority.

"Again, St. Ange's name does not appear on any doc... as commandant for some time after the *government* was ... motion, in April, 1766. Lefebvre, who styles himself ju... St. Louis, having been such at Fort Chartres, and Labus... who had been the royal notary and attorney on the other ... appear to have taken charge of the civil affairs of the ... place, as all the early papers found in the archives appe... have been executed in the presence of one or the other ... last two parties.

"Labuscière appears to have been the custodian of the ... papers during this temporary government under St. Ang... he delivered them over to the first Spanish Governor, Pi... St. Ange contenting himself with simply affixing his sig... to the land grants as commandant.

"Up to this time, the winter of 1765–66, Laclede had ... cised the only authority in the place, which, having now to ... a village of several hundred souls, it became necessary fo... good order and security of the inhabitants, while awaiting ... advent of the new owners of the soil, that there should ... temporary government of some kind established, to frame...

their countrymen felt towards the English, came to St. Louis shortly after its settlement, and were soon associated with St. Ange in the administration of affairs. Some papers relating to private business were executed before Labuscière, acting in the capacity of notary, early in 1766. The first of these papers, dated Jan. 21, 1766, is the oldest document recorded in the archives of St. Louis. The system of registered land grants was commenced in April, 1766. The first concessions bore the signatures of St. Ange as acting Governor, and of Joseph Lefebvre as former judge. Presumably it was De Bellerive's object to lessen, by this association of another name with his own, his personal responsibility for granting lands which no longer belonged to the French crown. Lefebvre died in August, 1766. After his death all legal documents were executed by Labuscière, and kept in his custody. Though the land grants were all drawn by Labuscière, they were signed by both the acting Governor and the notary. When, in May, 1770, the Spanish authorities took possession of St. Louis, Labuscière delivered to Governor Piernas one hundred and ninety-four legal documents. The accuracy of the papers was attested simply by the signature of the notary.[1] The acting Governor did not indorse

regulations as might be necessary for the village *ad interim*. For this purpose St. Ange, with the unanimous approbation of the inhabitants, was vested with the functions of temporary Governor; but, not choosing to assume the sole responsibility of making concessions to individuals of lots and lands now the possessions of their new sovereign, Lefebvre, who had been judge on the other side, was associated with him for that purpose in the temporary civil governments of the place, and Joseph Labuscière, a man of legal knowledge, who had filled the position of the king's attorney, was assigned to the position of acting secretary and executed all the official writings of the temporary government.

"Under this arrangement, the temporary administration of acting Governor St. Ange and his colleagues went into operation on April 27, 1766, that being the date of the first recorded grant on file in the archives.

"Judge Lefebvre filled his position less than four short months. He died on Aug. 15, 1766. Labuscière then assumed his place as the associate in the government of Captain St. Ange, and appears to have discharged the functions of that office almost exclusively until the assumption of the Spanish authority, in May, 1770, as all the official documents are in his handwriting, or executed in his presence, the signature of St. Ange appearing but rarely.

"Joseph Labuscière came from Canada to the Illinois, and was married at the little village of St. Philippe, on the other side, now extinct, to Catherine Vifvarienne, born in that village of Canadian parents; possessing some education, he claimed to be the king's attorney, and acted in the capacity of notary and writer.

"He was among the first to come over to the west side, and his grant of block No. 13 is the first recorded in the Livre Terrien (land book). He participated for a time with St. Ange and Lefebvre in the temporary government.

"After the establishment of the Spanish authority by Capt. Pedro Piernas, May 20, 1770, he had nothing further to do with the management of public affairs, but continued to exercise the calling of notary and scrivener for many years. I think he died elsewhere, as his death is not found on record either in the archives or the church register. He left three sons, Joseph, Jr., Louis, and Francis. His first document in the archives is of date January, 1766, and the last, May, 1770.

"After the temporary government was set in operation by Laclede, St. Ange, Lefebvre, and Labuscière in 1766, and the doings of the same made a matter of record, the work was all done by Labuscière. The land-grant books and nearly all the original documents in the early archives are in his handwriting, and only the first fifteen grants of village lots are signed by St. Ange and Judge Lefebvre until the death of this last in August, 1766, but a few months after the establishment of the temporary government, and from that date by St. Ange and Labuscière.

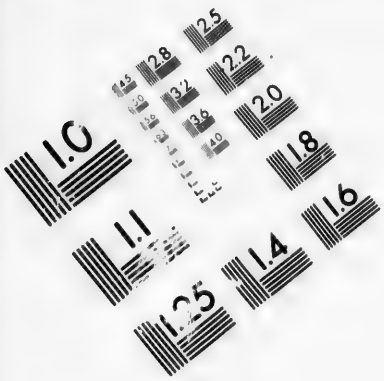
* * In January, 1766, the first document found registered in the archives is the sale of a lot and house (northwest quarter of Block 35) by Jacques Denis, a joiner, to Antoine Hubert, merchant, dated Jan. 21, 1766, and the first recorded grant of a village lot (Block 13), April 27, 1766, previous to which date parties had received possession of their respective localities with the sanction of Laclede in the capacity of original proprietor under his authority from the Governor below."

He appears to have been the factotum of the village, at first officially associated in the government, and then as legal adviser, notary, and general writer, for some twenty-five years.

"There was no letter 'x' in his name, but from his general carelessness in his signatures, the letters 's' and 'c' were so nearly joined together that his name when it first appeared in print after the transfer to the United States was taken to be 'Labuxière,' and always so printed.

"Judge Joseph Lefebvre Desbruisseau. Of this gentleman we know but little. He was a native of France and in New Orleans prior to 1744, in which year 'Governor de Vaudreuil granted him the exclusive privilege of the Indian trade in the upper country or Illinois district.' (Gayarré.)

"He came from France with or about the time of Governor Marquis de Vaudreuil, in 1743. He had married in France Marie Ursule Diacre.



"He settled at Fort Chartres, or Kaskaskia, where he became the judge, and came over in 1765, in which year he built a small house of posts at the southeast corner of Main and Locust, on the lot assigned him by Laclede, and died here in August, 1766.

"Their son,—the only one mentioned was born in 1743,—Pierre François Branot Joseph d'Inglebert Lefebvre, became a lieutenant in the French service. He was married in St. Louis, Nov. 10, 1768, to Miss Margaret, daughter of Bardet de Laferne, surgeon in the king's service. Lieutenant L. died in New Orleans in 1770; no children; his widow subsequently became the wife of Jos. Segond, a merchant of the early day from France. She died there in 1844 at a very advanced age, leaving a numerous posterity."

[1] Mr. Billon's note, *Archives of* 1766:

A full catalogue of all the documents found in the archives, written by, and in presence of, Joseph Labuscière, from April, 1766, to May 20, 1770, the day that Piernas commenced his administration. Copied from the original in the handwriting of Labuscière.

the certificate of correctness. These facts justify the inference that St. Ange did not administer the civil functions of the government.

"It is a singular incident in the history of St. Louis that its first form of government, though instituted in a period of rigid imperialism, was distinctly republican in character. The authority under which De Bellerive ruled was conferred by popular action.

Documents, in all	194

All the above-enumerated papers were executed by Labuscière as notary and *ex-officio* secretary of the temporary government, in whose custody they were held until handed over by him to Governor Piernas, May 20, 1770.

Of the above one hundred and ninety-four documents, the only one executed in presence of St. Ange as commandant was that of Roussel to Vifvarenne, April 20, 1769.

Lefebvre was associated with St. Ange in the concessions from April 27 to Aug. 12, 1766, and died shortly after that. After his death, Labuscière executed the papers alone, being associated with St. Ange in the concessions only.

Catalogue of the papers executed in the presence of the several Governors, and deposited by them in the archives during the French and Spanish dominations, copied from the originals in their respective handwritings.

(The original from which I copied these appears to be simply a list of the official and printed papers executed in the presence of each of the Governors successively, who appears to have made, at the end of his administration, a list of his official acts, and passed it over to his successor in office, and after the close of the administration of Capt. Stoddard they were stitched together, making some two hundred pages of foolscap in a dilapidated condition, ragged and mouse-eaten.)

These papers, which had never been recorded in the French and Spanish days, were long after the transfer to the United States recorded in their original language in six large volumes, which, after being translated into English, were copied with the originals into fourteen large volumes, now known as The Archives.

Translation.

A list of the official papers executed in presence of Labuscière, former attorney of the king, and notary under the French government, from the year one thousand seven hundred and sixty-six to the 20th of May, one thousand seven hundred and seventy.

To Mr. Don Pedro Piernas, Captain of Infantry, Lieutenant-Governor of the establishments of the Illinois and dependencies belonging to his Catholic majesty.

Year 1766.

Trial, judgment of the council, and other documents relating to the sale of the effects of the salt-works of Mr. Datchurut, St. Gene.

Sentence to death of Michael Degoust.

Indenture of Lorina, a negro girl of Miss Laferne, to Mr. Laderoute.

Marriage contract of Toussaint Hunaud and Marie Josepha Beaugenou, April 20.

Do. of Paul Kiercereau and Marie Josephe Michel, May 10.

colonists with the full sanction of law, he yet sustained the popular choice by his personal approval,—the appointment of officers whose purely ministerial functions did not involve the grant of lands vested in the Director-General of Louisiana, until Spain assumed control of its possessions. In the exercise of this right, Governor Aubri completed the organization of the civil government of St. Louis by the appointment of two judges, an attorney-general, and a notary.

"Several events, interesting from the novelty of their first occurrence in the little colony, took place in 1766. The first marriage recorded in the archives was celebrated on the 20th of April, 1766. In the following May the rite of baptism was first administered. No church having yet been built, Father Meurin performed the ceremony in a tent.

"The first recorded mortgage was executed on the 29th of September, 1766. The first grist-mills of St. Louis were probably built in the same year.[1]

"In the summer of 1767, the hopes of a reunion with the mother-country—which the loyal Frenchmen had never ceased to cherish—were effectually extinguished by the announcement that Spain had appointed officers to take possession of Louisiana. After the terms of the treaty of 1762 had been proclaimed to the residents of Louisiana the people were unremitting in strenuous endeavors to prevent the surrender of the ceded province. They remonstrated

Also the register of the concessions of lands and lots of the village of St. Louis, filled up as far as folio 35 on the back,—said concessions granted by Messrs. St. Ange and Lefebvre, and Mr. Labusciève.

I certify the present statement to be true, containing all the deeds, etc., that I registered while in charge of them at the post of St. Louis, of which I retain a duplicate copy. St. Louis, this 20th August, 1771. LABUSCIERE.

[1] "Mortars and hand-mills were first used. (Reynolds's My Own Times, pp. 66, 77.) The unsuccessful experiment of windmills was tried. 'About 1784 or 1785, Joseph Motard erected a windmill on the lot claimed, and the mill remained on the lot at least ten years, and occasionally went.' (Commissioners' Minutes, vol. iii. p. 272.) For the location of this mill see the following reference: Hunt's Minutes, vol. i. pp. 169–171.

"'Antoine Roy built his windmill about ten years ago.'—Louis Brazeau, Nov. 28, 1808, *Commissioners' Minutes*, vol. iii. p. 374.

"Before 1800, mills were erected beyond the limits of the village.

"'Ezekiel Lard built a saw- and grist-mill in 1798 on his land in Missouri Bottom, between Cold Water and Bellefontaine. (Commissioners' Minutes, 1808, vol. iii. pp. 241 and 244.) These references define with sufficient precision the situation of the mills."

against the transfer to Spain, and petitioned for a retrocession to France. But protests and supplications were alike unavailing. The treaty of 1762 imposed humiliating duties upon the French king. But Louis XV. did not shrink from the fulfillment of his inglorious obligations. It is certainly creditable to the monarch that he did not aggravate an ignoble policy by a violation of his plighted faith. But when the colonists found that their prayers had been unheeded and that Spain was actively preparing to enforce its authority, the popular resentment threatened to culminate in open revolt. What could not be accomplished by entreaty it was resolved to effect by force.

"Meanwhile, the King of Spain had appointed Don Antonio de Ulloa the Viceroy of Louisiana, and sent him with a body of troops to establish Spanish authority in the province. De Ulloa reached New Orleans March 5, 1766.[1] Rios, the Spanish officer sent to take military possession of Upper Louisiana, arrived at St. Louis Aug. 11, 1768.[2] Both of these officers found the temper of the people so hostile that they did not venture to establish the government which they had come to administer. They were unwilling to incur the responsibility of exercising an authority which could only be enforced by an effusion of blood. Though Rios went through the formality of taking military possession of Upper Louisiana, he did not venture to assume any civil functions. During the whole period of his stay in St. Louis, St. Ange still continued to administer the government. The futility of peaceful efforts to inaugurate Spanish supremacy constrained De Ulloa to relinquish an office whose duties he was not permitted to discharge. It is probable that De Ulloa, in view of his intended evacuation[3] of the province, instructed Rios to retire from Upper Louisiana. At all events, on the 17th of July, 1769,[4] this officer withdrew his forces from St. Louis, and the province was again free from the presence of foreign soldiers. The departure of the Spanish troops was hailed by the French settlers with acclamations of joy.

"The inclemency of the winter of 1768–69 was extraordinary. It was so cold that orange-trees were killed on the borders of the Gulf, and ice was formed on the banks of the Lower Mississippi.[5]

[5] "Martin's History of Louisiana, vol. i. p. 356."

"One of the memorable incidents of 1769 was the arrival of Pontiac in St. Louis. He came to visit his friend, St. Ange de Bellerive. He was received with a hospitality highly gratifying to the illustrious chieftain. The public curiosity was delighted with the opportunity of seeing a warrior who had shown such conspicuous evidences of greatness. His patriotic devotion to the interests of his race, his grasp of mind and power of military organization, his skill in planning campaigns, and his exploits on the field of battle, had rendered his name justly famous in the annals of Indian warfare. A chief whose martial prowess had caused the slaughter of two thousand Englishmen was naturally an object of interest to the French, but the appearance of the warrior disappointed expectation. He had become a sot. Thwarted in his great ambition to expel the English and unite all the Indian tribes in one powerful confederation, he had sought to drown the memory of his blighted hopes in the forgetfulness of inebriation. While the guest of St. Ange he received an invitation to visit his French friends in Cahokia. The danger of venturing into the presence of English foes was imminent, but all efforts to dissuade him from accepting the perilous hospitality failed. In spite of friendly remonstrance he went to Cahokia, and, after partaking too freely of the bounty of his French hosts, wandered away into the woods in the helpless stupor of intoxication. While in this defenseless condition Pontiac was murdered by a Kaskaskian Indian, whom an English trader had bribed to kill him. St. Ange deeply regretted the death of his friend. In accordance with his instructions, the body was brought to St. Louis and buried with military honors; but as no stone was erected to mark the place of interment the spot was in the lapse of time forgotten, and now the tread of myriad footsteps passes daily over the unknown grave of the illustrious chieftain.

"It was during this period that St. Louis received the nickname of 'Pain Court.' In the early times but few of the French settlers devoted themselves to farming. Hunting and trading with the Indians were more attractive pursuits. The limited village did not always produce an adequate supply of grain. The sobriquet probably owes its origin to a spirit of good-natured raillery. St. Louis, with a jocular reference to the poverty of its inhabitants, had called Carondelet 'Vide Poche.' The frequent scarcity of bread in St. Louis afforded an opportunity for retaliation, and 'Vide Poche' avenged its comical insult by applying to St. Louis the nickname which for many years supplied its rivals with a fund of derisive allusions.

"Trifling incidents sometimes suggest startling com-

parisons. The contrast between the little village with its scanty supply of breadstuff and the metropolis which is now one of the great grain centres of the world is impressive. That a mart whose manufacture is now more than two million barrels of flour, and whose yearly receipts and shipments of grain exceed eighty-three million bushels, ever felt a lack of bread seems incredible."

CHAPTER V.

CLIMATOLOGY, GEOLOGY, AND ARCHÆOLOGY.

ST. LOUIS is the central point of the greatest river system on the globe. The valley of the Amazon embraces a broader area of territory, but that of the Mississippi is still the greatest of all valleys in every respect which concerns man and the sustenance, progress, and development of the human race; and St. Louis is situated at the controlling-point of this valley. In variety, extent, and utility of productions the Mississippi exceeds all other rivers. Unlike any other of the great rivers which span continents in the course of their progress, the Mississippi flows from the north to the south. The Nile, its nearest parallel, descends from south to north. The Amazon, the Orinoco, the St. Lawrence, the Plate, the Yangste, the Hoangho, the Danube, move in a general direction from west to east, thus failing to embrace that great extent of latitude of climate and of productions which their immense areas of water-shed would otherwise entitle them to. But the Mississippi, while its headwaters are cooled by the trickling rills and the clear lakes denoting the beds of ancient glaciers, and its stalwart body is invigorated by the strength of the temperate zone, bathes its tawny and impetuous feet in the tropics. The pine and the hemlock crown its head, the oak and the walnut give robustness to its middle, and it rests amid the regions of the cypress and the palm. If we should conceive the river, indeed, under the image of a tree, rooted in the Gulf of Mexico, we would find the great city of which we write situated precisely at the most convenient and eligible point to the three great branches which unite to make the trunk stream: the Missouri, the Upper Mississippi, and the Ohio.

This point is not only the geographical and hydrographical centre of the Mississippi basin; it is also the centre of greatest production. We have shown already[1] how all the various streams of immigration and population seeking settlements and homes converge upon St. Louis. In the same way, St. Louis is the point of gathering for market of the products of the wheat region of the Northwest, the cereal plain lying between Lakes Michigan and Superior and the headwaters of the Missouri, extending north from the Missouri, the Illinois, and the Wisconsin Rivers into the higher parts of Manitoba. It is the centre also of the great corn and wheat country of the thirty-eighth to forty-first parallels, which begins in Western Kansas and extends to Western Virginia. It is the distributing point of the products of the elevated grazing plains of Texas and the far West, and its control of coal, iron, and wood, the materials of cheap manufacturing production, are making it the point to which the cotton crop of the Southwest necessarily gravitates. The upper and lower waters of the valley tributaries, both of them, bring to St. Louis the woods used in all manufactures in which timber, lumber, and their components are factors. The city is just upon the western edge of the Illinois coal-basin and upon the eastern edge of the Missouri coal-basin. It is adjacent to two great deposits of lead, and the largest masses of iron ore in the world are immediately convenient to its furnaces and foundries.

This valley of the Mississippi, and especially the part of it nearest to St. Louis, has always been recognized peculiarly as a centre of prolific agricultural production. When the French first explored the river they found "the great American bottom," on the opposite side to St. Louis, the seat of numerous and prolific Indian tribes, who cultivated corn and raised large crops, the prairies around covered with herds of bison and the river teeming with fish. These Indians had planted themselves among a great collection of mounds, the vestiges of a still older but entirely extinct civilization, of which not even a tradition survived. The plain from Cahokia to Kaskaskia and the banks of the river opposite, from the mouth of the Missouri to Ste. Genevieve, bear conclusive evidence of having been at one time the site of a great city, the centre of an agricultural people, who had fixed habitations and constructed gigantic public works. These works did not consist merely of mounds and the lines of fortifications; they comprised also works of civil engineering, of vast conception, executed on the largest scale. The Mound-builders not only built levees, protecting their fields from inundation, and enabling them in times of drought to irrigate wide spaces; they adopted besides a vast system, similar to that developed in Italy during the last century under the intelligent supervision of Leopold, Grand Duke of Tuscany, for preventing inundations

[1] Chapter I.

and restoring swamps and marshes to cultivation by intercepting the silt brought down by floods, and with it at once raising the level and increasing the fertility of their lands.

This system, which was applied on a moderate scale in ancient Egypt, was brought to great perfection by the Mound-builders, and some vestiges of the extensive works constructed by them may still be traced. The plan of these works was, by means of a succession of dams and waste-weirs, to intercept the muddy flood-waters, retain them until their earthy contents had been precipitated, and then drain off the clear water. The deposits of alluvium thus secured would, in a succession of years, suffice to raise the surface of the country above flood-mark and convert swamp into dry and solid ground. A race which is competent to promote agriculture by a comprehensive system of civil engineering must be very far advanced in the scale of civilization. Now, St. Louis and the opposite plain was the site of the Memphis of this elder race, and they owed their civilization to the surpassing fertility and the wonderful climatic advantages of the place where they had planted themselves, just as the Nile made Thebes and Memphis, and Nineveh and Babylon were the products of the Tigris and the Euphrates. Rivers create a loess of population quite as fully as they pile up a loess of fertile soil.[1]

The basin of the Mississippi, of which St. Louis is the key, comprises an area of 2,455,000 square miles. It extends through thirty degrees of longitude and twenty-three degrees of latitude,—an area greater than

[1] On this subject, of such great archæological interest to St. Louis, we do not suppose we can do better than call attention to the subjoined article from the thoroughly competent pen of Louis J. Du Pré, of Memphis, Tenn., which was published in the *Southern Magazine* of June, 1874. The title of the article is "Archæological Aspects of the Lowlands of the Mississippi," and it was written soon after one of the great periodical overflows and inundations of that stream. The writer, it must not be forgotten, has a theory not only as to past conduct, but also as to the efficacy of expedients and possibly remedies in the future. This may have biased his conclusions, but we are sure has had no effect upon the statement of facts adduced by him.

"Just below Cape Girardeau, Missouri, on the western shore of the Mississippi, there is a deep fosse more than one hundred feet wide. It extended, at an unknown period in the world's history, westwardly, from one hundred to one hundred and fifty miles, to the headwaters of the White and St. Francis Rivers. Its obvious purpose was the diversion of a large volume of the superabundant water of the Mississippi into smaller tributary streams. At intervals of twenty or thirty miles other canals, still plainly defined, parallel with the first, and in many places filled with water, and designed to lessen the flood-tide of the mighty river and render overflows harmless, traverse the lowlands. I have traced these ancient canals many miles. Palpably enough they were not only designed to render calamities such as now desolate rich plantations from Cairo to the Gulf impossible, but the internal commerce of wide districts and of dense and mighty populations was most cheaply conducted by means of these highways. For long distances towing-paths, lifted above the banks of these canals, may be plainly discerned, and not far from Osceola, Arkansas, brick abutments of a bridge have been unearthed. In many localities there are *aguadas*, or artificial lakes paved with adobe. These were constructed perhaps as fish-ponds, or designed to subserve the purposes of the reservoirs dug by Egyptian monarchs along the shores of the Nile. From these and from the canals opened by the wisest masters of Egypt the farms during the dry season were irrigated. Herodotus tells that after these artificial lakes and canals were dug the recurrence of famine in Egypt was wholly impossible. When the Mound-builders reared earthen pyramids and worshiped the sun in the lowlands of the American Nile, they too made canals, and paved great lakes and broad threshing-floors, and made brick, as did the Israelites of old, even here in the valley of the Mississippi; and mounds were here upheaved, as were nilometers of stone that measured the height of floods in Egypt and in the valley of the Euphrates.

"Each land-owner's selfishness lends to the construction of dykes or 'levees' along the shores of the great river. Forty years ago each planter in the lowlands built his own levees. Then all land within five miles of the river was taxed for this purpose. Later, counties and parishes assumed the growing burden. It became greater each year, and the task of protecting the country more and more intolerable, till at length States found the costliness of the work enormous, and to-day the intervention of Federal power is asked, and a vast sum proposed to be invested in earthen walls designed to hedge in the turbid, resistless, ever-murmuring flood-tide of this stupendous, restive, untamed 'inland sea.' Xerxes sought to fetter the waves of the deep, and lashed with chains the impatient billows that balked his purposes of vain ambition. They are hardly wiser than the Persian king who would lift up earthen walls to imprison the resistless current of the mightiest river of the continent; and how infinitely wiser that extinct race which utilized for commercial purposes the floods whose capacity for mischief levees or dykes only aggravate!

"Cotton is the leading product of the lower valley of the Mississippi, as was wheat when the Mound-builders constructed broad, paved threshing-floors, above which bins made of adobe were everywhere uplifted. These paved floors, covering many acres, are often found in the lowlands. Leaves and trees decaying through forty centuries constitute a superimposed loam, and patient observations of the annual growth in thickness of this deposit will tell with proximate accuracy how many ages have elapsed since the patient, toiling, primeval race reared its tombs and temples along the shores of the great river. If the wisdom of those that ruled the mighty toiling multitudes had approved, great walls, heightened each year, would have confined the river to its proper channel. If this object had been effected the area of water-surface exposed to the action of the sun's rays would have been lessened certainly twenty times, and the quantity of moisture lifted up by evaporation and diffused from clouds diminished in the same ratio. Wet and dry seasons would have supervened to curse the lowlands, and the cotton-fields of this magnificent valley would be no more valuable than those of India. Whether the Mound-builders grew cotton or flax there may be no means of ascertaining. Skeletons unearthed from the base of a mound at the slightest touch become an impalpable powder, and on their surfaces are only

that of all Europe when Russia, Sweden, and Norway are left out of the account. The basin of the Upper Mississippi has an area of 169,000 square miles, and a height of 1680 feet above the sea-level. The river, at 1330 miles above its mouth, has a width of 5000 feet, and a mean discharge of 105,000 cubic feet per second. The Missouri is 3000 feet wide at the mouth, with a mean discharge of 120,000 cubic feet per

marks of threads and interstices of fine cloth in which the corpses of these Adams and Eves of this oldest world were enwrapped. In future explorations of mounds this inquiry as to the materials of the Mound-builders' clothing may be determined. The mounds on the heights at Memphis, at their base one hundred feet above the river's surface, surely contain bodies which have never been submerged. If these be exhumed, and, as is commonly found in the sepulture of these people, rosin has been used to prevent decay of flesh and bones, it will be known whether flax or cotton were cultivated to make winding-sheets more enduring than the unnumbered years that invest the very word 'Mound-builder' with vague, shadowy memories.

"The average width of the lowlands, from west to east, between Cairo and the Gulf of Mexico, is forty-five miles. The river's channel is of the average width of one mile. Now and then, as at the heights of Memphis, it is narrower, and at such points very deep, and the current swift and strong. At other places it is expanded into an open sea, and this is very shallow. In these facts we find an explanation of another which the Mound-builders comprehended, and we practically do not. Where the stream is wide and shallow, its mud in suspension is rapidly deposited, and the channel rapidly filled. When the river rises, shallow little streams begin to steal very slowly over and out of the banks into the lowlands. They move out very lazily, and therefore deposit mud very rapidly. In fact, the alluvium is most rapidly deposited at the river's very edge. The stream thus upheaves perpetually its own banks, and, as every traveler on steamers has observed, occupies a ridge from the Chickasaw Bluffs at Memphis to the Balize. In truth the Mound-builders were too nearly sane to aid the river in upheaving its banks, thus rendering crevasses doubly ruinous. This process of up-building the banks is often continuous through a series of months and years. At length an extraordinary flood or force in the current, or its slight diversion by a fallen tree, or the caving of the natural or artificial levee, or an aperture made by crayfish, furnishes an exit for the pent-up volume of uplifted waters. The crevasse is steadily and rapidly enlarged, and the uplifted current, defying all obstructions, overwhelms everything in its path. Houses, cattle, 'piecaninnies,' and people, and the richest estates are swept away, and the escaped flood-tide of the 'inland sea' carves out for itself a new channel in the lowest possible portions of the lowlands. By the same processes as before the banks of this new channel are uplifted and again broken down, and thus within a given period there is not a point in the valley between the hills, forty-five miles apart, over which the river's current has not rushed angrily, or moved placidly or sullenly to the sea. It actually vibrates as a pendulum from the eastern to the western hills, which constitute the only barriers it recognizes as impassable and indestructible.

"Not many years ago, just below Memphis, on the western shore of the river, and opposite the great mounds on the heights at Fort Pickering, there stood another lofty mound. The river, ever changeful in its course, broke down old barriers, and from a southern was diverted to a western course. The great mound slowly disappeared. It had certainly been erected after the river selected for itself its present channel at the base of the Chickasaw Bluffs. How long does the Mississippi pursue the same narrow path? May not observations persistently made through a series of years determine the time in which these changes certainly and regularly occur? May we not thus learn, at least proximately, the date of erection of the mound which recently disappeared? It may be well to explain that while the river is uplifting its banks it is also elevating its bed. Wherever the volume of water is widely diffused the force of the current is lessened, and alluvial matter deposited at the bottom and on its banks. The river thus absolutely 'levees' itself, and at the same time renders other levees seemingly indispensable. Thus we find that the average annual maximum height of the water at flood-tide along the whole length of the river is now seven feet above that of 1830.

"There is a rude drawing carved on the face of a flat piece of sandstone dug, I am told, from a mound near Fulton, Tenn., a little village on the river-shore seventy-five miles above Memphis. The carved lines are here reproduced, and letters and figures supplied that the strange hieroglyphics may be utilized. Evidently it was sought to be shown by some Mound-building mathematician that levees were worse than useless. The drawing presents a 'leveed' cross-section of the channel of the Mississippi. I can make nothing else of it. As every intelligent dweller in the lowlands knows, the average rate of descent of the shore from the river is fourteen feet in five thousand. The nearer the water's edge the lower the levee essential to the country's security; and as the river is constantly elevating its banks and its bed, the levees must be constantly uplifted. The rude drawing on the sandstone tells its simple story after this fashion (Fig. 1):

Section of the Channel of the Mississippi as drawn by a Mound-builder.

FIG. 1.

River-bed at Memphis ninety feet deep.

The nearer the levee to the water's edge, the more speedy its destruction by abrasion or by the falling in of the unsteady banks. Far beneath these the resistless current often carves its way. If the levee be erected a mile from the shore, of course it must be fourteen feet higher than if built at the water's edge, and of the same relative height at any given distance from the boisterous current.

"There is another wonderful process of uplifting the channel of the Mississippi, steadily progressive through all seasons and through all ages. I am not sure that the Mound-builders were cognizant of the facts to which I refer. These will be more readily comprehended by reference to the appended diagram. Cairo is about four hundred feet, civil engineers say, above the water-level of the Gulf of Mexico, as shown by the perpendicular line in Fig. 2. As the river annually and rapidly lengthens itself, encroaching each year, by depositing vast quantities of mud at the Balize, upon the domains of the Gulf, it also lifts up its bed, as illustrated in this diagram:

second, and the area of its basin is 518,000 square miles. The Lower Mississippi has a width of 2470 feet at its mouth, and its basin comprises an area of 1,244,000 square miles. Its mean discharge per second is 675,000 cubic feet. The Mississippi and its tributaries afford an internal navigation of 9000 miles for steamboats. The main stream is navigable from its mouth to St. Paul, 1944 miles, and from St.

FIG. 2.

A. Water-level of Gulf.
B. Cairo, 400 ft. above level of Gulf.

BG. Water-level of river A.D. 1874.
BH. " " A.D. 3600.
C. Height of water at site of New Orleans 1800 years ago.
D. Present height of water at New Orleans, 14 ft. above level of Gulf.
E. Height of water at N. O., A.D. 3600, 28 ft. above level of Gulf.
F. Balize 1800 years ago.
G. Balize to-day.
H. Balize A.D. 3600.

It will be readily observed that as the mouth of the river is removed from Cairo, the straight lines from Cairo to the Balize, one thousand miles long and representing the river's surface, are constantly elevated. The rise and fall of the river at New Orleans is now fourteen feet. If the mouth of the river be farther removed, the rise and fall of the water at the city will be steadily increased, and *pari passu* forever with the extension of the river's length. Not only is the bed of the river thus constantly elevated at all points below Cairo, but the river now rises, from this and other causes hereafter explained, six feet higher at Cairo than thirty-eight years ago. As new farms are rapidly opened, forests swept away, and boundless plains and hill-sides cultivated along the shores of the interminable river, its channel becomes shallower and more rapidly filled when forests no longer obstruct the country's drains. Overflows through each successive year will be more sudden, and rising to unprecedented heights unless outlets be made, as by the Mound-builders, will render this magnificent valley almost uninhabitable.

"There is no evading the necessity. If Lowell and the East would have cheap cotton, and grow rich as never before, it is only needful that the scheme of leveeing the Mississippi, a scheme as absurd as its perfect achievement is impossible, be abandoned, and the wiser policy of the Mound-builders adopted. The river Po, like the Mississippi, as the Hudson and Connecticut do not, brings down vast quantities of detritus from mountain-slopes; and like the Mississippi, the Po upbuilds its own banks, and the people have aided until its bed is above the summits of church-spires in towns and villages along its course. Armies, as negroes once did the Mississippi, watch the river and the walls that uphold and hedge it in, that the charming valleys after the snows melt in the Alps and Apennines may not be overwhelmed and desolated. Infinitely better for the hapless Italians if the river's superabundant waters were diffused and utilized in countless canals. Unhappily, the Italians never learned lessons of practical wisdom at the hands of the Chinese, or at those of the Mound-builders, a people who knew the use of canals as well as the Chinese and Egyptians. The Ganges is restricted to the narrowest possible confines, and India is striated by railways instead of canals. The costlier mode of transporting heavy products of Indian agriculture seems to be preferred, and the country's wealth-producing capacity is greatly lessened. The fires lighted by sun-worshiping Parsees still blaze perennially and undimmed, as in forgotten ages, upon a great mound's summit in Calcutta; but along the shores of the Mississippi and in cities that crown its banks, the light of the Mound-builders' genius, like the sacred fires that illumined their temples and watch-towers, have gone out, and incorrigible folly reigning everywhere in the lowlands, lifts up earthen walls to hedge in the mightiest drain of the continent. Wendell Phillips, with pleasing alacrity, has mounted the rostrum once a week through a quarter of a century to tell mankind that 'there is nothing new under the sun.' Very certainly it is now discovered that the proposition—supposed not long ago to be wholly new—to construct canals connecting rivers of this magnificent valley with one another and with the great lakes and Mexican Gulf was partially effected by a race of men older than Cyrus or Solomon or David.

"Whether the Mound-builders dug other canals than those that connected the Mississippi with the sources and confluent streams of the St. Francis and White Rivers, I am not prepared to say. If as wise as clodhoppers, who would control flood-tides of little streams, always draining first the lower side of the farm, they surely connected the Mississippi with other outlets farther south. Very certainly there was no such absurdity practiced by the Mound-builders as that contemplated by the bill considered at this hour by the American Congress, involving a vast expenditure of money in improving the river between St. Louis and Cairo, when there is no exit at the Balize for the country's wealth. Moreover, the Mound-builders never would have constructed a railway spanning half the continent, to reduce rates of transportation, when a ship-canal from New Orleans to deep water in Barataria Bay would cost infinitely less, and transfer freights in conjunction with the river at one-fourth or one-fifth the cost of railway carriage between the same commercial points. Quite as stupid as the proposition of St. Louis, a reanimated Mound builder would assert, is that of the New Orleans Towboat Company, coming through the Chamber of Commerce of that city. Congress must dig a ship-canal, quoth the tugboats, but not such a canal as will obviate the necessity for the employment of those delectable tugboats. This canal must leave the river eighty miles below New Orleans. It would be ruinous (to the tugboats) if a locomotive towed the 'Great Eastern' from Fort Livingston, on Barataria Bay, forty miles through a slack-water canal, at a cost of fifty dollars, to the foot of Canal Street. New York would then control the cheapest and most abundant grain crops of the world. Western farmers would save enough, because of cheapened transportation, in a single year to pay for four such canals, costing forty millions each. Unhappily, the towboats would lose five thousand dollars on each ship of twenty-five hundred tons that came through and went out of such a canal; and therefore ships, as Congress proposes to provide, must still be consigned to the tender mercies of tugboats employed to resist the strong current from Fort St. Philippe eighty miles to the city's wharves.

"Drains for the lowlands, constructed by Mound-builders, suggested the necessity for the diversion of rivers wholly or in part from their present channels. If a canal, its volume of water regulated at will by locks and dams, connected Red with Atchafalaya River, and the Arkansas, through Bayou Bartholomew, with Red River, and the Missouri from its farthest point of southern deflection with the Arkansas, we would have practically two Mississippi Rivers parallel with one another. Inundations would be impossible. When icy barriers are swept

Anthony to Sauk Rapids, 80 miles. The Missouri is navigable at ordinary water to a point sixty miles above the mouth of the Yellowstone, 1894 miles, and at high water to Fort Benton, 2644 miles. The Ohio is navigable to Pittsburgh, 975 miles; the Monongahela to Geneva, 91 miles; the Tennessee to Muscle Shoals, 600 miles; the Cumberland to Burksville, 370 miles; and there is slack-water navigation amounting to 550 miles on other Ohio tributaries. The Minnesota River is navigable to Patterson's Rapids, 295 miles; the St. Croix to St. Croix, 60 miles; the Illinois to La Salle,

away from beds of mountain torrents, and snows accumulated through dreary winter months come down to overwhelm homes and farms everywhere in the valley of the Mississippi, as did the Mound-builders of old at Cape Girardeau, we would open the gateways of great canals, and footprints of desolation could be seen no more along the shores of the majestic river. The flood that left the Missouri through a canal extending from Kansas City to the Neosho would induct water into the Mississippi at the mouth of the Arkansas before it would have reached by its present route the mouth of the Ohio. Floods from melting snow and ice in the Rocky Mountains, that reach the lowlands annually in June, have cost Lowell and Manchester and Leeds countless millions; and yet no adequate means are even *proposed* either to unfetter the commerce of this valley by opening a ship-canal from New Orleans itself to the sea, or to double the exportable wealth of the United States, by perfecting, by means of canals, those systems of drainage and of transportation employed by a race of men that preceded the 'aborigines' in the possession of these plains, capable of producing unexampled wealth.

"It was a sad fate that befell a people who suggested by their wisdom and deeds most beneficent measures of public policy cursorily discussed in these pages. The primeval race might furnish, if proper researches were made, other lessons in practical statesmanship. No adequate means have been employed to ascertain the character or value of the contents of the magnificent mounds everywhere in the lowlands in the vicinity of Memphis. The great mound near Blackfish Lake, twenty miles west of Memphis, is hollow. From an opening near the base countless rattlesnakes are evoked by warm sunbeams of spring-time, and nothing less reckless or potent than nitro-glycerine would dare encounter hissing reptiles whose downy bed is the dust of nameless generations. Peaceful in habits of life were the Mound-builders. Their industry and practical skill were as remarkable as the indolence and shiftlessness of the Red Indians. Instead of *leveling* their farms, these in many places were uplifted by incalculable toil. Levees prevent the outflow of water behind them. It stands there till evaporation removes it, and people sicken and die who breathe an atmosphere polluted by this levee system, on which Congress proposes to expend thirty millions or more. Infinitely wiser, if the purpose be to enrich all these States, to employ the convict labor of all on a great canal from Memphis, situated, as this city is, just below the point at which American rivers and canals freeze, to the southeastern Atlantic coast.* The execution of this task would cost very little compared with its inestimable value. Having derived these reflections from facts incident to the conduct of the Mound-builders, and from suggestions made by living evidences of their toil and genius, it is to be deplored that so little of what might be known of their conduct and modes of life is ascertained. Money is wanting. Without it excavations cannot be made; and strangely enough, though the industry of this peculiar race was tireless as their numbers must have been countless, nothing more valuable than copper and bronze implements, and in one instance an idol of bronze, with urns and vases of terra-cotta, have been found. Tartar mounds along the northern shores of the Black Sea contain vast quantities in value of golden ornaments of the dead. Bodies of chieftains or kings have been exhumed wrapped in sheets of gold. Strange if these people, who within a recent geological period redeemed the lowlands of Arkansas from floods at the cost of unexampled toil, had no money, and only zinc and copper and bronze implements. The assumption is seemingly so absurd, that however often I have failed, I have never opened a mound without consciousness of keen anxiety and eager expectations. If the Mound-builders had durable valuables, they will surely be discovered in the vicinity of the great battle-field on which not only an army, but a race was exterminated. From a point on the Mississippi seventy miles above Memphis, along a line west from the river, there is a series of defensive earth-works. There are earthen walls defining parallelograms and ditches and circular forts and long defensive lines. From these the Mound-builders were steadily driven back until the final struggle for the mastery of the country, and for national and personal existence, was fought five miles above the point of confluence of Little Red and White Rivers. A broad deep ditch connects the two streams, and buried within it is said, are myriads of Mound builders' skeletons. I am credibly informed by one who traversed this battle-field and scanned it closely, and dug into the deep receptacle, that a million men may have fallen there. It was the ditch which my 'rebel' fellow-countrymen never found,—'the last ditch,'—and in it I am persuaded fell the last of the Mound-builders of the lowlands. It left no survivor. No whispering tradition recites their deeds, no monumental marble recounts their triumphs or defeats. A more fearful than Noachian deluge, the silence of utter oblivion swept over them, over their homes and tombs and cities. The same black cloud that blinded the eyes of American tradition drifted around the globe, and they who builded Egyptian pyramids, and dug canals to utilize superabundant waters of the Nile and Euphrates, and excavated aguadas in Mexico, and reared massive temples in Arizona and Central America, or lifted up tumuli along the shores of the Caspian and Black Seas,—all these were stricken down and palsied at the same instant by some lightning's shaft of annihilation. Did the world begin life afresh from the date of the extermination of the Mound-building races? Was there another creation? and is there no bridge to lead research and vague curiosity, that is stalking blindly among wonderful remains of unknown peoples, over this fathomless, measureless chasm separating books, men, history, and traditions of our age from those of the Mound-builders? We deplore the fortune of those who fill unnamed graves, of those whose fame is attested by no enduring stone; but here, in all this matchless valley,—matchless in exuberance of its products as once in its density of population,—there lived a mighty prehistoric race who have left monuments alone, and there are no names or deeds or virtues on record. Tradition is speechless, and Memory, on the shores of a narrow sea, gazes backward with lack-lustre eyes into mists of black oblivion."

* The Missouri at Kansas City is 725 feet above the water-level of the Gulf. The Arkansas at Fort Gibson is 560 feet above the Gulf; Fulton, on Red River, 242 feet; and the Arkansas at Pine Bluff 240 feet, and Bayou Bartholomew 93 feet above the Gulf.

220 miles.[1] "At the mouth of the Missouri the Mississippi first assumes its characteristic appearance of a turbid and boiling torrent, immense in volume and force. From that point its waters pursue their devious way for more than thirteen hundred miles, destroying banks and islands at one locality, reconstructing them at another, absorbing tributary after tributary without visible increase in size, until at length it is in turn absorbed in the great volume of the Gulf."[2] The course of the lower river is in a series of curves, from ten to twelve miles in diameter, with a very regular sweep around near to the point of departure. These loops, or horse-shoe bends, where the river sometimes cuts through in a straight course at high water, form bayous, crescent-shaped lakes, shut out from the current by sand-bars. The bluffs are the only properly habitable parts adjoining the stream, and, along the lower river, these nearly all occur on the east side. They are beds of river or ancient lacustrine deposit, resembling and similar in character to the Rhenish loess, consisting of beds of yellowish loam, sand, and clay, resting upon still more ancient beds of lignite.

The delta of the Mississippi River properly begins at Cape Girardeau, Missouri, where the superfluous waters first seek an outlet, through the St. Francis, White, and other rivers, into the Red River. Below these are found the Atchafalaya, supposed to be the original outlet of the Red River, and the bayous called Manchac, Plaquemine, and Lafourche. Above Cape Girardeau the stream loses gradually its exclusively alluvial river character and begins to admit the confinement of regular banks. The upper river is clear as the Rhone, and even at St. Louis the sediment-laden current of the turbid Missouri has not yet commingled with the clear blue of the upper stream, nor reduced it to the apparent color and consistency of tar, boiling and bubbling in some mighty caldron.

The geology of the river-bed is peculiar. From Cairo to the Gulf the bed does not contain any of the river's own alluvium. The alluvium is found abundantly in the overflowed bottom-lands on each side of the stream, but where the current flows a trough has been hollowed out deep down in a tough blue clay, which the force and volume of the mighty body of water keeps always scoured out and clean. From the mouth of the Ohio to that of the Missouri the same trough is found, but the bed is St. Louis limestone to a great extent. The blue clay is cretaceous in origin, the remains of the bed of a vast cretaceous sea that once extended from the base of the Rocky Mountains to the Atlantic coast. At the time this deposit was formed the Mississippi River had no existence. In the tertiary epoch, which succeeded this upper cretaceous, the oceanic lake was narrowed to an estuary, banks of loess being formed on either side. Inside this range of bluffs another deposit of recent alluvium was formed, and the river, thus contracted, cut its trough down through the alluvium, the loess, and the tertiary, until it had made a bed for itself in the cretaceous clay. The river was thus subsequent to the tertiary period, but it had begun to flow as at present, only with a much greater volume of water, previous to the deposition of the loess. The fossils found in the different strata prove this chronology with clearness and accuracy. In the tertiary none but marine fossils are found; in the loess are many fresh-water shells and the remains of quadrupeds allied to existing genera.[3] The present position of the loess or bluff formation presupposes, however, a vertical movement or upheaval of two hundred and fifty feet. The alluvium deposit varies from twenty-five feet deep at Cairo, Ill., to forty feet at New Orleans, and its breadth at Napoleon, Ark., is seventy-five miles; this, however, is the widest point. The sediment from which this alluvium deposit continually falls down is in the proportion of one to fifteen hundred by weight, and one to twenty-nine hundred by bulk in suspension in the water. The mean annual discharge is assumed at 19,500,000,000,000 cubic feet; consequently, 812,500,000,000 pounds of sediment, equal to a deposit of one square mile two hundred and forty-one feet deep, are yearly emptied into the Gulf of Mexico.

Humphrey and Abbot's tables show that the maximum depth of the Mississippi is 118 feet, at Natchez; the mean depth between the Red and Arkansas Rivers is 96 feet. The least low-water depths on the bars are: at St. Louis, 2 feet; Memphis, 5 feet; Natchez, 6 feet. The range between high and low water is, at Rock Island, 16 feet; at the mouth of the Missouri, 35 feet; at St. Louis, 37 feet; at Cairo, 51 feet; at Carrolton, 14 feet; at the head of the Passes, 2.3 feet. The fall of the Lower Mississippi is $\frac{3.2}{100}$ of a foot per mile; of the Ohio, $\frac{4.3}{100}$ of a foot; of the Missouri, below Fort Union, $\frac{9.5}{100}$ of a foot; of the Upper Mississippi, below St. Paul, $\frac{4.2}{100}$ of a foot.

A portion of the valley of the Mississippi has a

[1] These and subsequent facts and figures are derived from the standard work of Humphrey and Abbot, the United States topographical engineers, on the "Physics and Hydraulics of the Mississippi River."

[2] *Ibid.*

[3] J. W. Foster, "The Mississippi Valley." Dr. Foster notes among the quadrupeds identified by Prof. Leidy a lion, two bears, two species of megalonyx, two tapirs, a horse, an elephant, and a mastodon, all extinct, as well as fossils of the existing *Cervus Virginianus*.

volcanic character, and is subject to earthquake disturbance. New Madrid is the centre of this region of disturbance, the waves of which, however, have more than once extended in a milder form to St. Louis. In the end of the year 1811, and from that time on to 1813, a series of severe shocks was felt at New Madrid, sufficient in violence to modify the surface of the country materially, and to destroy forever its prospect, which was then excellent, for becoming a trade and business centre of importance. H. M. Brackenridge, the intelligent and agreeable author of "Views of Louisiana" and "Recollections of the West," visited the place in 1811, just previous to the telluric outbreak, and his description is that of an exceptionally good witness. The district had three-fifths as great a population as that of St. Louis, and it was an objective-point of considerable immigration both from the East and from New Orleans. Vessels descending from the Ohio River regularly made it their stopping-place, and Brackenridge says that "though in a low state of improvement at present, it ought to become important. It will be the store-house of the produce of an extensive and fertile country; and from the St. Francis, and the lakes which lie southwest, it may derive important advantage. New Madrid was laid out twenty-four years ago, by Col. George Morgan, on an extensive scale and an elegant plan. It was chosen as one of the best situations on the river. The town contains four hundred inhabitants, one-third Americans, living in a scattered way, over a great space of ground." One of the largest mounds in the Western country, twelve hundred feet in circumference and forty feet high, was here, and Brackenridge found traces of a great ancient population. The country in the vicinity comprised a vast plain of the richest soil, "handsomely diversified with prairie and woodland;" it was esteemed healthy and was beautiful in appearance.[1]

The earthquakes desolated it, "creating yawning fissures, and converting dry land into lakes, some of which are fifty miles in circumference." The shocks occurred in connection with a telluric activity dis-

[1] In confirmation of this, we present the following curious original document from the manuscript collections of F. L. Billon:

"Enumeration of the
Inhabitants of New Madrid,
Their Slaves, Cattle, and Crops,
1796.

[1] To Mr. Charles Dehault Delassus, Lieutenant-Colonel admitted into the stationary regiment of Louisiana, and military and civil commandant of the post and division of New Madrid.

"Sir the Commandant,—Before handing you the first census of New Madrid under your commandment, I have ventured upon a sketch upon the origin of the settlement of this post, and the causes which have retarded its growth and chiefly its cultivation. If former defects have kept it until this time in a species of stupefaction, your sagacious views and the zeal you exhibit to second the good will of Mr. the Governor-General of this province towards this settlement can in a little while efface the trouble it experienced in its birth.

"I was present, Mr. Commandant, when you pronounced with effusion these words which I wish that all the inhabitants might have heard,—words which depicted so frankly your kind intentions and the interest which Mr. the Governor takes in us.

"'The Governor,' said you, 'is surprised at the languor exhibited by this settlement, and its little advance. He desires its prosperity. I will reflect upon its failure,' added you, 'and will endeavor to remedy it; I ask your assistance. If the inhabitants need encouragement, if they stand in need of help, let them inform me of their wants, and I will convey them to the Governor-General.'

"This offer was appreciated by those near you. Little accustomed to hear the like, they wondered at you, admired you, and appeared to rest content.

"Nevertheless, different statements were spread among those who heard you. Why so long a silence since your generous offer? Is it distrust on their part? Is it profound reflection to better further your views? Or may it not be self-interest that induces some to remain silent? I am ignorant of their motives, and limit myself to the hope that they will eventually break their silence and make known to you their salutary reflections.

"If my knowledge equaled my desires, I would hasten with all my power, Sir the Commandant, to tender you the homage of my services; but they fall too far short to allow me to hope that they could be of any utility to you. I will confine myself solely to communicate to you such knowledge as I have acquired, and my reflections thereon, since I have been at this post, and may a series of these reflections assist in your benevolent heart some happy idea that may tend to the advantage and prosperity of this colony.

"Some traders in pursuit of gain came to L'Anse à la Graisse* (cove of fat or grease), a gathering-place of several Indian nations, and where as tradition tells they found abundance of game, and especially bears and buffaloes; hence the name of L'Anse à la Graisse. A first year of success induced them to try a second and to this, others. Some of them determined to establish their homes where they found a sure trade and unlimited advantages, divided there among themselves the lands. The bayou named since St. John was the rallying-point, and the land the nearest this then became settled. Therefore we find that Messrs. Francis and Joseph Lesieur, Ambrose Dumay, Chatoiller, and others divided among themselves this neighborhood,—property which M. Fouché, the first commandant, considered as sacred, and which he did not disturb. The profits of the trade of L'Anse à la Graisse having been heard of as far as the post Vincennes, the St. Maries, the Hunots, the Racine, the Barsalous, etc., of that place accomplished for some years very advantageous trips. They flattered themselves, moreover, that the Indians at L'Anse à la Graisse traded with them amicably, whilst those of America were treacherous towards them,

* Abounded,—you might say the fat of the land.

tributed over half a hemisphere; an island was elevated three hundred and twenty feet above the sea in the Azores; the city of Caraccas, in Venezuela, was destroyed, with ten thousand of its inhabitants; the volcano of St. Vincent broke into eruption, and subterranean noises of a frightful character were heard on the llanos of Calabazo, which shocks were distinctly felt, and their character noted, at Cincinnati.

and made them averse to inhabit a post where their lives were in constant danger.

"Nevertheless, an unfortunate anarchy, a singular disorder prevailed at L'Anse à la Graisse; all were masters, and would obey none of those who set themselves up as heads or commandants of this new colony. A murder was committed by an inhabitant on another. Then their eyes were opened; they began to feel the necessity of laws, and some one at their head to compel their observance. They bound the culprit and sent him to New Orleans. Everything tends to the belief that the commandants of the posts of Ste. Genevieve and of St. Louis had during these transactions apprised the Governor-General of what was occurring at L'Anse à la Graisse. But a new scene was in preparation.

"One Morgan, having descended the Ohio, the first year that traders settled at L'Anse à la Graisse, he examined, in passing, the land, and found it suitable to fix here a settlement. Returning to America (U. S.), he removed and succeeded in bringing down to this post several families. He selected for the village the elevated ground where are at present the habitations of Jackson and of Waters near the Mississippi. They built some houses on the land; and full of his enterprise and the success he expected from it, Morgan descended to New Orleans to obtain, not encouragement simply in his plans, but proprietary and honorary concessions beyond measure. He was baffled in his pretensions, and did not again set his foot in the colony.

"These various occurrences determined the Governor-General to send a commandant to this post, and M. Fouché was selected. Men are not gods, they all possess in some respects the weaknesses of human nature. The predominant one of the first commandant was self-interest; and who in his place would not have been? Sent to a desert, in the midst of savages, to introduce the laws of a regulated government to new settlers as barbarous as the Indians themselves, what recompense would he have received for neglecting his personal interests? What obligation would the new colony have been under to him? None.

"M. Fouché was the man that was wanted for the creation of this colony, busying himself at the same time with his own interests as that of those of the inhabitants, with his own amusement as well as others, but always after having attended first to his business; and by a singular address, if he sometimes plucked the fowl, he not only did it without making it squall, but set it dancing and laughing. M. Fouché remained but a very short time at this post, and done a great deal; in eighteen months he divided out the country, regulated the land necessary for the village and that of the inhabitants; he built an imposing fort, promulgated the laws of the king, and made them respected; he was the father and friend of all, lamented, regretted, and demanded again from the Governor-General by the unanimous voice of all the inhabitants. In all his labors, was M. Fouché assisted by any one? Had he overseers at the head of the works he prescribed? Not at all. He alone directed everything; he laid out the work; penetrated the cypress swamps to select the useful trees; he walked with the compass in hand to align the streets and limit the lots; he demonstrated by his example to the perplexed workmen how much men with but little main strength, but with intelligence and dexterity, can multiply the extent of the same and surmount obstacles.

"His administration was too brief to ascertain the good he might have done had it continued the ordinary period. What is certain is that during the eighteen months that he was in command there came to New Madrid the largest portion of the families that are still there, and it was he that attracted them there.

"M. Portell, successor of M. Fouché, commanded this post during five years. The population did not increase under his administration, and the growth of agricultural labor was but slightly perceptible. [*Note.*—M. Portell, a man of distinguished merit, equally in the military as in the cabinet, was superior to his position, and if he failed, it was because he did not place himself on a level with the sort of people he had to govern.—P. A. L.]

"M. Portell did not value the inhabitants sufficiently to do them a substantial favor, nor did he use the proper means to improve the condition of the colony. He was not a man of the people, and when by chance his interest required him to assume the character, he was extremely awkward in it. They perceived that he could not play his part, and that a residence at court would have infinitely better suited him than one in a new settlement ill-composed. M. Portell had a good heart; he was by nature noble and generous, but his mind was somewhat mistrustful and suspicious, and his age placed him in a position to be influenced by his surroundings. I am convinced that if M. Portell had come alone to this colony, he would have exhibited much less weakness, and that his time would have been much more taken up for the public good than it had been. The little progress made by the colony must not, however, be attributed to the apparent indifference which seemed to form the base of M. Portell's character,—physical and moral causes retarded its advancement.

"At the period when M. Portell assumed his command he found the inhabitants at this post made up of traders, hunters, and boatmen. Trade was still pretty fair for the first two years of his residence here, so that nearly every one, high or low, would meddle with the trade and not a soul cultivate the soil. It was so convenient with a little powder and lead, some cloth and a few blankets, which they obtained on credit from the stores to procure themselves the meat, grease, and suet necessary for their sustenance, and pay off a part of their indebtedness with some peltries. Some of them, but a very few, seeded, equally well as badly, about an acre of corn, and they all found time to smoke their pipes, and give balls and entertainments. How often have I heard them regretting those happy days, when they swam in grease, and when abundance of every description was the cause of waste and extravagance, and the stores of fish from their drag-nets gave them whisky at four or five reaux (bits of twelve and one-half cents) a gallon, and flour at four or five dollars a barrel maintained and kept up these festivals and pleasures, which only came to an end when the purses were exhausted!

"M. Fouché, a young man, who during his command of the post never neglected his work or business for amusements, yet found time to be at them all, and often was the first to start them; but M. Portell was not so sociable in this respect; he found fault with this light-headedness and folly, and judged that a colony peopled by such individuals could not attain a very brilliant success.

"At last, game in these parts becoming scarcer, the Indians removed themselves farther off and were seldom here; the traders knew very well where to find them, but the inhabitants

New Madrid was one focus of this wide-spread disturbance, and the shocks were repeated almost hourly for so many months, that the inhabitants who remained finally became inured and comparatively indifferent to them. The district was sparsely settled, the log cabins in which the people dwelt were not easily overthrown, and this prevented the loss of life which shocks of such severity must otherwise have

waited for them in vain,—then grease, suet, meat, and peltries being no longer brought in by the Indians, it was only a few resident hunters and the traders themselves that provisioned the village; the unfortunate habit of not working had gained the day, it was too difficult to overcome it; so great distress was often seen in the country before they could snatch a few ears of green corn from a badly-cultivated field. Three or four Americans at most had as far back as 1793 risked the settlement of farms on large tracts of land; the creoles undervalued them, did not eat their fill of dry corn bread, and smoked their pipes quietly. They were, however, surprised to see that with several cows they often had not a drop of milk, whilst these three or four Americans gorged themselves with it, and sold them butter, cheese, eggs, and chickens, etc.

"By dint of looking into the matter, and waiting in vain for the Indians to supply them with provisions, it struck them that the most prudent thing they could do would be to become farmers. It became then a species of epidemic, and the malady spreading from one to the other, there was not a single one of them but who, without energy, spirit, animals, or plows, and furnished only with his pipe and steel, must needs possess a farm.

"It was towards the close of the year 1793 that this disease spread itself, and towards the spring of 1794 all the lands in the vicinity of New Madrid were to be broken up and torn into rags to be seeded and watered by the sweat of these new farmers. Who can tell how far this newly-awakened enthusiasm might have been carried? It might have produced a salutary crisis, but an unlooked-for occurrence calmed this effervescence. All were enrolled into a militia to be paid from Jan. 1, 1794, and they found it much pleasanter to eat the king's bread, receive his pay, and smoke their pipes than to laboriously grub some patches of land to make it produce some corn and potatoes. These militia-men were disbanded about the middle of 1794. Their pay was already wasted, they found it a great hardship to be no longer furnished with bread by the king, the largest portion of them had neglected their planting, they found themselves at the year's end in want, and clamored as thieves against the king, saying it was all his fault. M. Portell knew well his people and disregarded these outcries.

"In the mean time five galleys had come up in the course of this year, and had passed all the summer at New Madrid, and they had caused a great consumption of food. M. Portell found nothing in the village for their subsistence, and drew his supplies for them in part from Illinois and from Kentucky. He did not let pass the opportunity of making it felt by those of the inhabitants of long residence that they should have been in a condition to have furnished a part of these supplies, but the blows he struck came too late and made but little impression. The hot fever which had occasioned the delirium, where every one saw himself a farmer, had now subsided; none thought any more of it. Some of them who had made a trial of their experience at Lake St. Isidro had so poorly succeeded that the laugh was not on their side, and it needed but little for hunting, rowing, and smoking the pipe to resume their ancient authority over nearly all the colony.

"In 1795 a new fit of the fever struck the inhabitants. The settlement of Fort St. Fernando occasioned a hasty cleaning out of the little corn there was in the colony; Kentucky furnished a little, and Ste. Genevieve supplied a great deal even to New Madrid, that fell short after after having consumed her own supply. This example struck the inhabitants; they saw that if they had harvested extensively they could have well disposed of their surplus,—new desires to go on farms to raise stock and to make crops.

"During these occurrences several American families came to New Madrid. Some of them placed themselves at once on farms, and, like children, our creoles, from a sort of jealousy, clamored against the Americans, whom they thought too wonderful; jealousy stimulated them, and they would also place themselves on farms.

"It is in reality, then, only since the year 1796 that we may regard the inhabitants of this post as having engaged in cultivation, and that it is but yet absolutely in its infancy.

"The population of the years 1794, 1795, and 1796 is nearly about the same, but the crops have increased from year to year, and all tends to the belief that this increase will be infinitely more perceptible in future years.

"In the year 1794 the corn crop was 6000 bushels; in 1795 it was 10,000 bushels; in 1796 it was 17,000 bushels.

"It was in this posture of things that M. Portell left his command.

"It was perhaps impossible, from the foregoing facts, that the settlement at New Madrid could have made greater progress than it has up to this time. It was not husbandmen who came and laid the foundations, it was tradesmen, cooks, and others, who would live there with but little expense and labor, who, being once fixed there, having their lands and their cattle, the Indians having removed themselves to a distance and trade no longer within the reach of all the world, necessity taught them that to procure the means necessary to live they must resort to tilling the soil. The first attempts were difficult, but the inducement of disposing with ease of their crops determined them to labor.

"The first steps have been taken; nothing remains for a wise commandant but to manage everything with prudence, according to the views of the government, to firmly repel idleness and laziness, to welcome and encourage activity, and exhibit to the industrious man that he is distinguished above others, and has earned the protection of the government in giving him tangible proof, either by preference in purchasing from him, or some other manner of recompense. The honest man, the active and industrious man is sensible of the slightest proceeding on the part of his superiors, and it is to him a great expansion to reflect that his labors and fatigues have not been ignored, and that they give him a claim on the good will and benevolence of the heads of a province.

"What a vast field is open to a commandant who would reap advantage by these means, and gain the benedictions of all the worthy inhabitants of a colony!

"I stop here, Mr. Commandant. What I might say further would add but little to the good purposes you design for the progress and success of this place. I have made a concise narration of the origin of the post of New Madrid, and the reasons of its slow growth in agriculture; the census which follows will give you a correct view of its present position. It will prove to you that courage and emulation need but a slight support to emerge from the giddiness where they have so long remained; but for certain the creoles will never make this a flourishing settlement, it will be the Americans, Germans, and other active people who will reap the glory of it.

caused. There are several interesting accounts of the earthquakes by eye-witnesses, or by those who conversed with eye-witnesses, while the shocks were still fresh in their memories. The first tremor was felt on the night of Dec. 16, 1811, after a term of pleasant, warm, hazy weather, like that of the Indian summer. The gay French population was still at the dance

---

"Observe, if it pleases you, sir, that among the habitations granted long since, those given in by Francis Racine, by Hunot, Sr., the Hunot sons, Paquin, Laderoute, deceased Gamelin, Lalotte, etc., have not yet had a single tree cut on them, that those of the three brothers Saint Marie, Meloche, and other creoles are barely commenced. You will see, on the contrary, that the Americans who obtain grants of lands have nothing more at heart but to settle on them at once, and improve them to the extent of their ability, and from this it is easy to draw conclusions.

"Another observation which will surely not escape you, sir, is that the total of heads of families amount, according to the census I exhibit to you, to one hundred and fifty-nine, and that in this number there are fifty-three who have no property. This, I think, is an evil, to which it would be easy for you to apply a remedy. In a country destined to agricultural pursuits and to the breeding of domestic animals, it is too much that one-third of its inhabitants should stand isolated from the general interest, and that the other two-thirds should be exposed to be the victims of a set of idle and lazy people, always at hand in their slightest necessities to satiate their hunger by preying on the industrious.

"I think, Mr. Commandant, that several habitations left by persons who have absented themselves from this post for a long time should be reunited to the domain.

"The following are of this class:

"One Emie Bolduc, absent for over two years, had a place at Lake St. Francis, No. 2.

"John Easton, absent over three years, had a place at Lake St. Eulalie; it is now abandoned. Mr. Walker says he has claims on it. What are they?

"One Tournay had a place at Lake St. Isidro; he associated with him to cultivate it one Gamar. Tournay returned to France, and Gamar has worked for two years at Fort St. Fernando.

"M. Desrocher, why has he not worked his place in the mill prairie which he holds for over four years? Has he not enough with the one he holds at St. Isidro?

"M. Chisholm holds three places; he lives on one he has just commenced to clear, a second is *en valeur*, and since over four years he has done nothing on a third near the village. Has he not enough with two? Why hold land uselessly, and above all near the village?

"The examination you will give the census and the information concerning the property of each head of a family will lead you probably to other reflections. I append to the whole a new map of the village and its environs, as taken after the last abrasion of lands by the Mississippi; this work claims your indulgence; it is not that of an artist, but of one of the most zealous subjects of his majesty; and the only merit it may possess is to demonstrate to you with correctness the number of places that have been conceded in the village, the houses that are built thereon, and the names of the proprietors on the general list, which corresponds with the same numbers as those placed on each conceded place.

"I pray you to believe me, with profound respect, Sir the Commandant, your very affectionate and devoted servant,

"PETER ANTHONY LAFORGE.

"NEW MADRID, Dec. 31, 1796."

NEW MADRID, 31 Fbre, 1796.

rushed out-doors, and all began to pray.[1] The shocks continued during twenty or thirty months, sometimes coming on gradually and increasing in force; sometimes the first shock the most violent and coming suddenly. The waves came from the west or south-west. Fissures six and seven hundred feet long and twenty or thirty feet wide were formed, through which water or sand was spouted forty feet into the air, attended with electric flashes and sparks. Great oaks were cleft in twain, and mighty walnuts and cypresses submerged forty feet under water, at the bottom of newly-formed lakes. Hon. Lewis F. Linn, United States Senator from Missouri, in a letter written in 1836, incidentally gave a graphic account of some features of this earthquake. He was trying to explain the origin of those hills in the St. Francis River country which the French call "*cotes sans dessein*," by ascribing them to telluric agitations. "In the region now under consideration," he wrote, "during the continuance of so appalling a phenomenon, which commenced by distant rumbling sounds, succeeded by discharges as if a thousand pieces of artillery were suddenly exploded, the earth rocked to and fro, vast chasms opened, from whence issued columns of water, sand, and coal, accompanied by hissing sounds, caused, perhaps, by the escape of pent-up steam, while ever

"I find in these papers of Mr. Delassus a census of the inhabitants of Cape Girardeau, returned by the then commandant, Louis Lorimier, Nov. 23, 1803.

"It contains the names of one hundred and eighty-eight heads of families, the only French names are the following six, viz.: Louis Lorimier, Comd't; Barthéléme Cousin, Pierre Godair, Jean Losta, Louis Eustache, Francois Berthiaume.

	Males.	Females.	Total.
Whites	545	481	1026
Blacks	90	90	180
Population	635	571	1206

"*Note.*—I am inclined to think that this must have included the country for some miles around, as the population of St. Louis at that day was barely one thousand.

"F. L. BILLON."

(It included the whole district.)

[1] "A witness was in the midst of a great forest when the first great shock was felt. He was a field sportsman, and was accompanied in this hunt by a Frenchman of Little Prairie. He acknowledged that the frightful scene around effectually unnerved him. When the earth was rocking beneath his feet, and the tallest trees waving, like tempest-tossed spars on the ocean, over his head, 'his knees smote together' and gave way, and he found himself in the most devout attitude, imploring the Director of visible power to lend that protection no mortal could compass. The Frenchman, relying on human effort, exclaimed, with national vivacity, 'Monsieur Walkare! No time for pray! Sacré Dieu! Gardez-vous les branch.' And a shower of dried limbs from a tree-top overhead disturbed his devout exercises, and they saved their lives by flight to the nearest prairie."—*Wetmore's Gazetteer of the State of Missouri*. St. Louis, 1837.

and anon flashes of electricity gleamed through the troubled clouds of night, rendering the darkness doubly horrible. The current of the Mississippi, pending this elemental strife, was driven back upon its source with the greatest velocity for several hours, in consequence of an elevation of its bed. But this noble river was not thus to be stayed in its course. Its accumulated waters came booming on, and, overtopping the barrier thus suddenly raised, carried everything before them with resistless power. . . . The day that succeeded this night of terror brought no solace in its dawn. Shock followed shock; a dense black cloud of vapor overshadowed the land, through which no straggling sunbeam found its way to cheer the desponding heart of man, who, in silent communion with himself, was compelled to acknowledge his meekness and dependence on the everlasting God." Timothy Flint, the intelligent traveler, visited this region seven years after the earthquake, and has left the following graphic account of it:[1]

"From all the accounts," he says, "corrected one by another, and compared with the very imperfect narratives which were published, I infer that the shock of these earthquakes, in the immediate centre of their force, must have equaled, in the terrible heavings of the earth, anything of the kind that has been recorded. I do not believe that the public have ever yet had any adequate idea of the violence of the concussions. We are accustomed to measure this by the buildings overturned and the mortality that results. Here, the country was thinly settled. The houses, fortunately, were frail, and of logs,—the most difficult to overturn that could be constructed. Yet, as it was, whole tracts were plunged in the bed of the river. The graveyard at New Madrid, with all its sleeping tenants, was precipitated into the bend of the stream. Most of the houses were thrown down. Large lakes, twenty miles in extent, were made in an hour; other lakes were drained. The whole country, to the mouth of the Ohio in one direction, and to the St. Francis in the other, including a front of three hundred miles, was convulsed to such a degree as to create lakes and islands, the number of which is not known, and to cover a tract of many miles in extent, near the Little Prairie, with water, three or four feet deep; and when the water disappeared, a stratum of sand, of the same thickness, was left in the place. Trees split in the midst, and lashed one with another, are still visible over great tracts of country, inclining in every direction, and at every angle to the earth and the horizon. They described the undulations of the earth as resembling waves, increasing in elevation as they advanced, and when they had attained a certain fearful height, the earth would burst, and vast volumes of water and sand and pit-coal were discharged as high as the tops of the trees. I have seen a hundred of these chasms which remained fearfully deep, although in a very tender alluvial soil, and after a lapse of seven years. Whole districts were covered with white sand, so as to become uninhabitable. The water at first covered the whole country, particularly at the Little Prairie; and it must, indeed, have been a scene of horror, in these deep forests, and in the gloom of the darkest night, and by wading in the water to the middle, for the inhabitants to fly from these concussions, which were occurring every few hours, with a noise equally terrible to beasts and birds, as well as to man. The birds themselves lost all power and disposition to fly, and retreated to the bosoms of men, their fellow-sufferers in the general convulsion. A few persons sank in these chasms, and were providentially extricated. One person died of affright; and one perished miserably on an island which retained its original level in the midst of a wide lake created by the earthquake. . . . A number perished, who sank with their boats in the river. A bursting of the earth just below the village of New Madrid arrested the mighty stream in its course and caused a reflux of its waves, by which, in a little time, a great number of boats were swept by the ascending current into the mouth of the bayou, carried out, and left upon the dry earth, where the accumulating waters of the river had again changed the current. There were a great number of severe shocks, but two series of concussions were particularly terrible, far more so than the rest; and they remark that the shocks were clearly distinguishable into two classes: those in which the motion was horizontal, and those in which it was perpendicular. The latter was attended with the explosions and the terrible mixture of noises that preceded and accompanied the earthquakes in a louder degree, but were by no means so desolating and destructive as the other. When they were felt, the houses crumbled, and trees waved together, and the ground sank, and all the destructive phenomena were conspicuous. In the interval of the earthquakes, there was one evening—and that a brilliant and cloudless one—in which the western sky was a continued glare of vivid flashes of lightning and of repeated peals of subterranean thunder, seeming to proceed, as the flashes did, from below the horizon. They remark that the night, so conspicuous for subterranean thunder, was the same period in which the fatal earthquakes of Caracas occurred; and they seem to suppose those flashes and that event parts of the same scene."

The chasms had a general direction from southwest to northeast, and were of an extent to swallow up not only men, but houses. They occurred at intervals of less than half a mile, and the people felled tall trees across them, riding upon the trunks and in the branches to escape being engulfed. The destruction of property and values was so great that Congress was forced to come to the relief of the people, passing a law granting to each proprietor whose land was destroyed a section of land in the Boone-Lick country, the desolated farm being relinquished to the government. Some of the fissures still discharge gases and blasts of air, and earthquake shocks are occasionally felt in the section, but none of such severity as those described.

The fertility of nearly all the soils in the valley of the Mississippi is as phenomenal as its extent is great. This does not apply merely to the alluvium and lands produced originally or subsequently reinvigorated by inundation, but also to the yellow loam of the loess or bluff-formations and the deep, black soil of the prairies, both level and rolling. All are deep and seemingly inexhaustible. Volney made the discovery in the course of his travels, and subsequent observation

[1] Recollections of the Last Ten Years in the Mississippi Valley. 1826.

and experiment have confirmed it, that the productiveness and fertility of the valley of the Mississippi are due to the northeast trade-winds of the Atlantic Ocean, which, entering the Gulf of Mexico and crossing the peninsula of Yucatan, finally make their way, surcharged with moisture, up the valley of the great river as southeast and rain-bearing winds. The prairies, says Dr. Foster, are not due to the texture of the soil, nor to annual burnings, nor, as Lesquereux, the geologist of Illinois, supposes, to peat-growth, but to unequal supply of moisture and an alternating excess and deficiency of rain-fall throughout the year. That the prairies never were forest regions is evident from the fact that no entombed tree-trunks are found in the prairie sloughs, as they have been in all swamps and marshes of forest sections. The irregular and deficient supply of moisture, while it causes the disappearance of trees, does not materially affect agriculture until the highly-elevated plains of the West are reached; in fact, according to Dr. J. G. Cooper, "most crops will succeed much better with less rain than is necessary for most trees to thrive." The rains which water the Mississippi basin are unequally distributed as to the seasons of the year, those of spring and summer being largely in excess. In winter the mouth of the Mississippi is in the area of greatest precipitation, eighteen inches, this excessive amount declining, as we ascend and approach the confines of the densely-wooded region, to seven inches; in the prairies the condition of moisture varies from five to three inches; in the treeless plains, from two inches to nothing. In autumn the river-mouths are in the area of greatest precipitation, twelve inches, decreasing to eight inches on the edge of the forest; ranging from eight to five inches in the prairie, and from four inches to nothing on the plains. In summer the range is as follows: densely-wooded region, fifteen to twelve inches; prairies, twelve to eight inches; plains, eight to four inches. In spring the range is fifteen inches at mouth of river and Pensacola, ten inches at Fort Laramie, and Chicago and Cheyenne each eight inches. Dr. Foster remarks that "a region where the annual precipitation is slightly in excess of twenty inches, I infer from observation, is unfavorable to the growth of trees, even were that moisture equally distributed, but where three-fourths of it is precipitated during the spring and summer, the grasses flourish and mature to the exclusion of arborescent forms. The effect of this peculiarity of the climate is to extend the cultivation of the cereals much farther west than could be done if the moisture were equally distributed, and to afford rich pasturage to immense herds of buffalo, up to the verge of the Rocky Mountains, over a region which, if the rains were equally distributed, would present still more inhospitable features."

Of course, this motion of the atmosphere and mode of precipitation of its moisture has much to do with the climate of the country. Climate is a result of numerous and complex conditions. The geographical position of a country, and also its topographical configuration, must be taken into the consideration. The climate of Missouri is typical, in many respects, of the general climate of the "interior,"—a climate of extremes both in temperature and degrees of moisture. The altitude above the sea of that part of Missouri which binds upon the Mississippi River varies from two hundred and seventy-five feet in the southeast corner to four hundred and forty-five feet in the northeast,—a rise of only one hundred and seventy feet in five degrees of latitude, or not much more than six inches to the mile. Nothing can better prove the fact that Eastern Missouri lies within the great prairie plain of the interior. The Missouri River rises from four hundred feet at its mouth to over one thousand feet at the State line, a fact which shows that the true prairie begins to merge into the elevated plain before half the State has been traversed from east to west. These are all circumstances germane to any consideration of the climatology and geology of St. Louis. The accurate observations of thermometrical and barometrical variations at St. Louis extend over a period of more than forty years. The mean temperature of St. Louis is found to lie between 53 degrees 24 minutes and 58 degrees, or say about 55 degrees 30 minutes Fahr., and the range of extremes is from 22½ degrees below zero to 104 degrees above,—equal to an extreme fluctuation of 126½ degrees. Dr. Englemann has prepared a table illustrating the seranges, which is published in connection with Campbell's "Atlas of Missouri." It is as follows:

	Winter.	Spring.	Summer.	Autumn.	Whole Year.
Mean temperature.	33.3°	55.4°	76.8°	56.3°	55.6°
Highest mean.....	40.4°	62.2°	80.1°	60.5°	58.2°
Lowest mean.....	26.4°	48.6°	72.0°	51.3°	53.4°
Range of highest temperature.....	49° to 81°	85° to 97°	93° to 104°	82° to 102°	93° to 104°
Range of lowest temperature.....	—22 to +4°	0° to 28°	43° to 57°	—1° to +28°	—22° to +10°

No such ranges and fluctuations are known upon the seacoast. The extreme daily range of temperature in spring and winter is sometimes as great as 56 degrees, in fall and summer 40 degrees. The last frosts in spring occur between March 13th and May 2d, the average being April 5th; in autumn the earliest frosts set in between October 4th and November 26th, the mean being October 27th, the limits between the freezing-point

thus ranging from 184 to 252 days, with an average of 205 days. Dr. Englemann observes that "the progress of vegetable development can best be appreciated by the observation of common and well-known wild or cultivated trees and shrubs. Thus we find that the first in bloom is the alder and the hazel, next—not rarely retarded by intervening cold spells—the soft or silver-leaf maple; and a few days after this, our common white elm blooms, between February 24th and April 15th, on an average, March 19th. During the next following days roses, syringas, gooseberries, and many other bushes, and the weeping willows, show their young leaves. About two weeks after the elms—between March 18th and April 25th, on an average about April 2d—the peach-trees open their first blossoms, and are one week later in full bloom. Plum and pear-trees and sweet cherries blossom about the same time, or a few days later, and then the sour cherries, and the glory of our rich woods, the redbuds. Between March 21st and May 1st (mean April 14th) the early apple-trees begin to bloom; and between March 28th and May 10th (mean April 20th) may be said to be in full bloom. Syringas bloom about the same time, crab-apples five or six days later, and a few days after them the quince-bushes. The acacia, or black locust, native of our southeastern border, and cultivated everywhere about farms and in towns, begins to bloom between April 11th and May 23d, on an average May 1st, and six to ten days later is in its fullest fragrant glory. Ripening strawberries and cherries and blooming roses closely follow it, and the catalpa, a very singular bloomer, comes in full development generally between two or three weeks after the acacia. The maturity and harvest of the winter wheat immediately succeeds the catalpa, between June 10th and July 1st, usually about June 20th."

In connection with this branch of climatology, a very careful and intelligent observer, the late Hon. Thomas Allen, long ago (in 1847, in fact) furnished an interesting paper to the *Horticulturist*, then conducted by the lamented Downing. That eminent writer on rural affairs, almost the founder of landscape-gardening in the United States, could appreciate good things in his line, and was delighted with Mr. Allen's contribution, of which he said he had seen no account of the West so full of real information to those interested in rural affairs, and none in which that intelligence was conveyed "so concisely, justly, and correctly." We shall have occasion farther on to quote other portions of Mr. Allen's paper; what he says of temperature, and the germination, flowering, and ripening of plants, is as follows:

"The climate does not correspond with that of the same latitude on the sea-coast. It differs in respect to the prevalency of certain winds, in variableness, and in being perhaps not hotter, but drier in summer. Our spring seasons are often wet; our summers frequently dry. The autumn is often a perpetual 'Indian summer,' delightful as can be imagined. Yet frost appears sometimes in October, and November may bring severely cold weather. The consequences upon vegetation of a dry summer, succeeded by a fine and late-growing autumn, we may have occasion to advert to. The winters are generally mild: the average mean temperature of the winter months for several years being, for example, about 30°. Snow sometimes falls in various depths under twelve inches, but rapidly disappears. It not unfrequently happens that we can plow in every winter month, and for weeks together artificial heat is not required in our green-houses. Two winters ago ice was not formed in sufficient quantities to supply our ice-houses. Yet I have heard it said that the Mississippi has been known to be frozen over below the mouth of the Ohio. Last winter that river was firmly closed above and more than sixty miles below this city for more than a month. In the mean time there were many warm and sunny days.

"The month of February often tempts all vegetation by its genial warmth, and the horticulturist has to lament the premature swelling of his fruit-buds, doomed, alas! to repeated and killing frosts in March and even in April. Indeed, the month of January is sometimes as mild here as the month of March generally is in Philadelphia. For example, the mean temperature of that month in 1845 was 41°. Ducks and geese began to fly northward, bluebirds appeared, and several shrubs put forth leaves. Coldest point, 22°; warmest, 71°; range, 49°. The mean of February was 43°; of March 42°; but the range was greater in both these months than in January. Coldest point in March, 20°; warmest, 74°; range, 54°. In April the mean was 64°; coldest, 30°; warmest, 85°; range, 55°. And in all the months of the year we have sudden and great variations, the thermometer often ranging 20° within two or three hours. The frosts of early April generally find the apricot, the peach, the cherry, the plum, in full bloom. I have heard some of the older inhabitants insist that a *full crop* of peaches is not realized more than once in five years, owing to premature blossoming. My own experience is corroborative of the general fact, which also applies to apricots and nectarines. Yet some of our trees wholly escape, and are overburdened with fruit, as is the case the present year, notwithstanding severe frosts near the middle of April.

"In 1841 the greatest cold was 6° *below* zero, January 17th. The greatest heat 102°, July 13th. Variation, 108°. Greatest heat in February, 79°; greatest cold, 4°. We consider a cold February and March most favorable for our fruit. The mean of February, 1845, was 43°. We had very little fruit that year. The mean of February, 1846, was 32°. We have an abundant crop. The greatest heat of the present unusually hot year all over the country was 98° early in July. No rain of any consequence for more than two months.

"The average mean temperature of seven years prior to 1836, according to our late Association of Natural Sciences, was as follows:

January	29.5
February	34.5
March	42.7
April	58.6
May	65.2
June	73.1
July	78.1

November	49.2
December	33.7
Annual range, 108°.	55.2

This is 5.2° hotter than what is said to be the medium annual temperature of the whole earth. It is six or seven degrees hotter than the average temperature of London; two or three degrees *less* than that of Washington City; one or two degrees *less* than that of Cincinnati, Ohio, and New Harmony, Ind.; if the published meteorological statistics of those places are correct. Only two degrees hotter than that of Philadelphia, and eight degrees hotter than that of Boston. About eleven degrees less than that of New Orleans. Yet St. Louis has the reputation of being excessively hot.

"The annual and monthly range of the thermometer is much greater at St. Louis than at London or New Orleans. It is less than at Albany and Newburgh, and much less than at many other towns in New York. There is more uniformity and more humidity in the climate of London than in that of St. Louis. The thermometer will indicate as high a degree of 'greatest heat' at Albany in summer as it will in St. Louis; and in winter it will show the 'greatest cold' at Albany. But we have the greatest heat for the greatest length of time at St. Louis, and the sun's rays seem to be more direct and scorching. We have no mountains, except in the south interior part of Missouri, while the country is comparatively flat far off to the north and south, and vast prairies stretch to the east and west of us. The prevailing winds follow the general course of our Great Valley, modified at times by the blasts from the great plains in the west, and from the prairies and lakes to the east and northeast. Fortunately for us, the east wind does not often for many continuous days bring to us the epidemic effluvia which are generated in the great Senegambian Bottom, that stretches along the opposite shores.

"The average number of dry days of four years was 260 for each year; of wet days, 105; of sunshine, 314; of no sunshine, 51; of thunder-storms, 53.

"The summer of the present year has been unusually dry, favorable for insects injurious to fruit, and would have proved entirely destructive to corn and potatoes but for the rains of the last of August. But the year 1844 was more destructive from too much wet. I think, however, that, as we have no mountains, and the primitive forest is gradually disappearing, future observations will show that the average number of dry days will increase, and that the moisture of our soil and the waters of our streams and small lakes will diminish.

"The nights of summer often *feel* as oppressively hot as the days, but not always. The thermometer sometimes falls twenty degrees soon after sunset. There is, in bright moonlight nights, an extensive radiation from the surface of the fields. The thermometer will indicate eight or ten degrees lower temperature at the surface than it will at ten feet above. Dew is rapidly distilled. The night air is humid. Fogs sometimes arise, but they are not frequent. The commonest diseases of the country are bilious and remittent. New immigrants can scarcely labor in the field under the scorching sun of summer. Ague and fever is often found in the low grounds and along the river 'bottoms.' Where vegetation is most luxuriant there is the greatest decompositton. A vegetable diet is the most suitable for the summer months. Fruit also, in moderation, I believe to be better than animal food in warm climates. Fully ripe, and sound and healthy itself, it seems naturally adapted and intended for the use (not abuse) of man, but more particularly in that climate where the man and the fruit grow together.

"The following table is an approximation to the times of the flowering, etc., of the fruit-trees in St. Louis:

Apricots	March	2 to	March	10.
Peaches	"	17 to	April	1.
Cherries	"	30 to	"	5.
Plums	"	30 to	"	5.
Early apples	April	5 to	"	15.
Gooseberries	"	5 to	"	—
Pears	"	5 to	"	—
Winter apples	"	25		
Strawberries, ripe			May	15.
Raspberries, "			June	12.
Currants, "			"	12.
Cherries, "			"	12.
Apricots, "			July	4.
Blackberries, "			"	15.
Plums, "			"	17
Siberian crab, "			"	17.

"Peaches and Isabella grapes begin to ripen early in August, and are abundant the last of that month.

"The Red Juneating Apple, or Early Red Margaret, sometimes bears two crops in one season (the second inferior to the first), and I have seen it blooming the third time the same season.

"We sow seeds for early salad and cabbage under glass in January and February. Plant Irish potatoes for early crop in February. Sow parsneps, carrots, radishes, lettuce, onions, cress, and early peas in open ground last of February or early in March. About first of April, transplant broccoli, cauliflower, cabbage, lettuce, spinach, and plant sweet potatoes in hot-bed. Sow annuals (flowers) about the first of May. Begin to cut asparagus early in April, and green peas are on our table as early as the middle of May. We have had frosts, however, even after that time. Plant sweet potato sets about first of May. Dig early potatoes early in June. Corn of the Golden Sioux and Tuscarora kinds, and summer squash, eatable June 20th. Gather garden seeds about the last of July. Early planting is essential to get crops well set before the summer drouth.

"Animated Nature.—Crows stay with us all winter, and roost on the shrub-oaks of the rolling land back of St. Louis, in tens of thousands, flying to the east side of the river early in the morning. They are chiefly injurious to corn in the ear. Robins, larks, bluebirds, and buntings appear in the warm days of winter. Wild pigeons sometimes fly north as early as 1st of February. Ducks, geese, brant, and cranes fly north in February and March. Quails and pinnated grouse are abundant all the year. Sparrow-hawks are very numerous in autumn, and feed on large grasshoppers. Birds in variety appear in March. Bees are often tempted out of their hives in winter; some years begin to work in March, and I have taken full boxes of newly-made honey as early as the 5th of May. The same hive will, in favorable seasons, bear robbing three times, and throw off, perhaps, three or four swarms of young bees. Insects in countless number and variety flourish from early spring till November, attacking, some of them, every kind of shrub, tree, fruit, and animal. The red spider, the aphis, and the scaly insect infest our greenhouses. The striped bug and others attack the *Cucurbitaceæ*, often destructively. The curculio, the peach-grub, and the apple-worm are all numerous, and in some seasons overwhelming. The grasshopper, in summer, in dry seasons, is nearly as injurious as the locust. The army-worm occasionally mows our meadows for us. The gopher, or pouched rat, and the mole are injurious to our gardens; and the former sometimes burrows under the apple-tree and destroys the bark of the roots. But we are diminishing the number of these little animals. Rats and mice are also numerous. We protect the birds and the toads, and multiply ducks and turkeys to aid us in our warfare against the insects.

"You will observe, then, that our soil is good; our summers long, and our winters mild; that our climate is quite variable that we are liable to have warm Februaries and late frosts; wet springs and summers of drouth; late growing autumns, suddenly terminated, and myriads of insects in great variety. We have, therefore, our advantages and discouragements. Some years, then, we shall be blessed with great crops, while in others we shall be nearly destitute of any. Some of the evils to which we are exposed are susceptible of amelioration, others are beyond our control. The average results encourage us to persevere in planting orchards, cultivating gardens, and otherwise improving our estates."

The Mississippi at St. Louis freezes over about once in four or five years, partly in consequence of heavy

ice floating down from above. When frozen it remains closed to navigation from one or two to four, and even six weeks, the ice sometimes being solid enough to permit the passage of the heaviest teams.

The comparatively dry climate of Missouri is shown by the "relative humidity" of the atmosphere, which is only sixty-six per cent. of complete saturation, the driest season, as has already been shown, being the spring. There is a large percentage of clear weather, the autumn particularly being distinguished for the number of cloudless days. The average number of clear days in a year is 143; of partially clear days, 173; of days entirely cloudy, only 49. The average annual rain-fall at St. Louis, according to Dr. Englemann, is 41 inches, the variations between particular years, however, being as great as from 25 to 68 inches. Snow is not very frequent, nor are there many "laying" snows, though deep ones sometimes occur, obstructing travel. The earliest falls of snow known to meteorological observers were on October 5th, the latest on April 16th. The Mississippi is generally low in the fall and winter months, rising between April and June. The highest rise above low-water mark is about forty-four feet, the average about twenty-five feet.

Of the geology proper of St. Louis County there is not a great deal to say in a work of this character, which does not pretend to scientific fullness nor precision. There is a superstructure of rocks and soils of the quaternary system, embracing alluvium, bottom prairie, bluff, or loess, and drift. Immediately underlying this is the carboniferous system, the characteristic rock of which in St. Louis is the St. Louis limestone, which attains its greatest development and a depth or thickness of from two hundred to two hundred and fifty feet at this point. In some parts of the county a saccharoidal sandstone, one hundred and twenty-five feet deep, belonging to the magnesian limestone series, and the lower Silurian system, may be found beneath the St. Louis limestone; but, for all practical purposes, the latter may be assumed to be the foundation rock. Upon it rests a ferruginous sandstone, of the carboniferous or mountain limestone series, the normal thickness of which is 195 feet. The lower coal-measures, 140 feet, are above this; next succeeds drift, 55 feet thick; bluff, or loess, the normal thickness of which is 200 feet; bottom prairie, 35 feet thick, and alluvium, 30 feet thick. These maximum depths of strata are of course not all found at St. Louis, nor in St. Louis County. The bluff, or loess, at St. Louis, as measured at St. George's quarry and the site of the Big Mound, is fifty feet thick. This formation contains many fossils, and organic remains of lacustrine, amphibious and land species, indicating its origin in the deposits made by a fresh-water lake, surrounded by land and fed by rivers. In the words of Prof. Swallow, who first determined its character and gave its name to the bluff-formation (which Lyell had previously identified as similar to the loess of Europe and China), "These facts carry the mind back to a time when a large portion of this great valley was covered by a vast lake, into which, from the surrounding land, flowed various rivers and swollen streams. We see the waters peopled with numerous mollusks, the industrious beaver building his habitation, the nimble squirrel, the fleet deer, the sedate elephant, and huge mastodon, lords of the soil. There must have been land to sustain the elephant and mastodon and Helices; fresh water and land for the beaver; and fresh water for the Cyclas and Lymneas."

The important formation denominated St. Louis limestone is made up of beds of hard, crystalline, gray and blue cherty limestone, "interstratified with thin layers of argillaceous shale." Some strata consist of a bastard silico-magnesian limestone. Sometimes the fracture is dull and earthy, sometimes conchoidal. Often it shows changes in color, is alternately silicious and argillaceous, and has a peculiar jointed structure, like the sutures of the human skull. Its stratigraphical position is between the ferruginous sandstone and the Archimedes limestone; its range in Missouri is not extensive outside of St. Louis County, and its economical value is very great. Some forms, as those in which magnesia predominates, have excellent hydraulic properties; the calcareous strata yield a very pure and superior lime for general use, and the calcareous and silicious strata are good for building purposes, flagging and curbing, and macadamizing. The fossils found in the St. Louis limestone are numerous and characteristic, including *Lithostrotian Canadense*, *Syringopora*, *Echinocidaris*, *Terebratula Roisyii*, *T. Spirifer*, *Fenestella*, *Productus cora*, *Echinocrinus*, *Palæochinus*, *Crinoidea*, *Palæochinus multipora*, *Poteriocrinus longidactylus*, *Avicula*, *Pecten Missouriensis*, *Arca*, *Cardiomorpha*, *Actinocrinus parvus*, etc.

In the bluff or loess formation in St. Louis and vicinity the fossils found include *Amnicola lapidaria*, *Helix concava*, *H thyroidens*, *H. striatella*, *H. monodon*, *H. electrina*, *H. arborea*, *H. hirsuta*, *H. lineata*, *H. minuta*, *H. labyrinthica*, *Helicina occulta*, *Limnea fragilis*, *L. reflexa*, *Physa plicata*, *P. gyrinea*, *Planorbis trivolvis*, *Pupa armifera*, *Succinea obliqua*, *S. campestris*, *Valvata tricarinata*, etc. In the Archimedes limestone of St. Louis County the

characteristic fossils are *Pentremites florealis, P. laticrniformis, Productus punctatus, Euomphalus planorbis, Archimedipora archimedes*, and *Psammodus*.

Dr. Shumard gives what he considers a typical section of the strata and general lithological features of the St. Louis limestone, from a point on the Mississippi River about a mile and a half below the arsenal. Commencing ten feet above the water-level, the ascending series is as follows:

	Feet.
1. Bluish-gray, coarse-textured, sub-crystalline limestone, in thin strata, with characteristic fossils and fish-remains	13
2. Light-gray and bluish-gray silico-calcareous rock, with nodules and thin seams of chert	5
3. Buff and bluish-gray, hard, silicious limestone, finely granular in texture	6
4. Same as preceding, with much chert through it	8
5. Compact, light-gray, silicious limestone, thick beds, even fracture	7
6. Light-drab, compact, brittle limestone, with smooth, angular fracture	3
7. Gray, mottled limestone, fine granular texture, mottled with chert	44
8. Bluish-gray, sub-crystalline limestone, with cavities of brown calcareous spar	10
9. Light-drab, compact, lithographic limestone, smooth, splintery fracture	2
10. Earthy, decomposing, ferruginous limestone	1
11. Gray, close-textured limestone	4½
12. Earthy, decomposing, ferruginous limestone	0¾
13. Light-drab, variegated, brittle, lithographic stone	1¾
14. Light-drab, fine-textured, lithographic limestone, smooth, splintery fracture, fine spar veins, with clouding of delicate flesh-color and reddish-brown	4¾
15. Same as No 9	7
Total thickness	116¾

At St. Louis the strata of this limestone are nearly horizontal, and continue so until near Carondelet, when they rapidly dip to the southwest, and pass under the bed of the Mississippi. The slight dip of the strata at St. Louis is westerly.

The quaternary deposit overlying this bed-rock of the city is about twenty feet thick at the site of Chouteau's Pond, near Poplar Street, comprising, in the ascending series:

	Ft.	In.
1. Light ash-colored ferruginous clay	2	3
2. Fine silicious sand		6
3. Ash-colored clay		4
4. Yellow and gray sandy clay	2	0
5. Fine sand	5	
6. Soil and subsoil	5	

The limestone at Barrett's Station, of which the St. Louis custom-house is built, is the Archimedes limestone, from a bed twenty-one feet in thickness. In various parts of the county the Encrinital limestone is found underlying this, of a thickness differing according to the locality. Underneath is the Chemung group, and beneath that again, in the western part of the county, the Trenton group.

The bluff, or loess, is found in all parts of the county when excavations are made, varying in thickness from ten to forty feet. It was in this deposit that the bones of the mastodon were found, in Flora gardens. The Big Mound consisted of this bluff stratum, having a depth of thirty feet. At the Bremen quarries it is twenty-five feet thick. The clays of this loess are excellent for brick-making and coarse pottery, and the pebbles are superior for grading and graveling purposes.

The carboniferous system is largely developed in St. Louis County, yielding four-fifths of the entire underlying rock, and extending from the Mississippi River westward. It includes all the formations of the general slate system, from the middle coal series to the Encrinital limestone inclusive. The coal-measures occupy an area of about one hundred and sixty square miles in the northeastern part of the county. The middle coal-measure, as examined at Charbonniere, on the Missouri, shows sixty feet of slope, six feet of rough limestone masses imbedded in clay, six feet impure fire-brick clay, two feet hard, compact blue-gray hydraulic limestone, eight feet yellow argillaceous shale, stained with ochre, thirteen feet of purple, sandy shale, with micaceous particles intermingled, forty-six feet blue, argillaceous shale, six feet greenish fossiliferous shale, eight feet dark sandy shale, and then the coal-seam, eighteen inches thick. Under this seam is found the micaceous sandstone, which overlies the lower coal series. It is soft, brown, fine-grained, crumbling, lying in thick beds, and oxidates and is disintegrated easily on exposure to the air. In some places it lies upon a five-foot bed of fire-clay. In others it is compact enough to be quarried and used for building purposes.

Underneath this group of strata the lower coal-measures are always to be sought. The descending series is clay, fire-clay, limestone, shales, and then coal. At a shaft on the Rivière des Peres, six miles from St. Louis, we find the following order in the descending series:

	Feet.
1. Yellow clay	5
2. Light-colored sandy clay	4
3. "Tumbling rock" (limestone blocks in clay-beds)	6
4. Red clay	6
5. Blue clay	7
6. Light-gray earthy limestone	3½
7. Very compact, hard, dark-gray limestone	2½
8. Dark-blue shale	2
9. Coal	5
10. Slope (unexposed rocks)	80
11. St. Louis limestone	26

The coal, where mined, is usually found at a depth not exceeding forty feet; the maximum thickness is about five feet; the minimum working thickness is not much under three feet, and the yield is about eighty bushels per diem per hand,—twenty-eight bushels representing the long ton. All the coal of

St. Louis County is of the bituminous variety, burning with a good flame and yielding a gray ash. In some cases, leaf-like laminæ of sulphuret of iron are found in it, and in others, thin plates of crystalline carbonate of iron, vertical to the strata. The fossil plants in this coal are usually too much carbonized for identification, though the structure of *Calamites* and *Equisetæ* have been recognized. In regard to the extent of these coal deposits of St. Louis County, Spencer Smith writes to the effect that it is much greater than is commonly supposed. The county is in the centre of the great Western coal-field, the largest in the world. The measures here are not outlying nor distinct from those of the general bed, but, on the contrary, are homogeneous with it. Mr. Smith says,—

"The Cheltenham and Gravois beds and their vicinity are supposed by many to be the only localities where coal can be found in this county. This is a mistake. There is a large tract of the St. Louis coal-field still comparatively unexplored. An examination of Dr. Shumard's geological map will show that there is an extensive coal-basin, of which the North Missouri Railroad is nearly the diameter.

"Commencing at Grand Prairie, we may trace the coal-measures along the bluffs of the Mississippi at Watkins' Creek, thence westwardly, crossing Cold Water Creek to the Missouri River, thence along this river to Charbonniere, where the coal crops out in the bed of the river. From near St. Charles the boundary may be traced southeasterly toward the Mississippi, including the Cheltenham and Gravois mines.

"This report, made in 1855, did not exaggerate the extent of this field, but rather restricted it, as some discoveries of coal outside of the boundaries there described demonstrate.

"What distinguishes the coal-field of the district along the North Missouri Road is the circumstance that it contains coal-seams which are entirely wanting in the district heretofore mined. All the coal obtained in the Cheltenham field is from the lowest beds of the 'lower coal series;' the 'middle and upper series' are wanting. Along the Missouri River, and in other places which have been examined, the 'middle series' is known to exist. If we concede (and proofs derived from the geological reports of all those who have surveyed this district are very strong) that it is a part of the other coal-fields known to exist farther north, then where the series is complete there are six beds of greater or less thickness. Of these the second is the one most valuable, the thickest and the best coal.

"So here we see a large district in which the coal-measures are known to exist, but which have never been practically examined. A few years since a few attempts were made, but they all stopped at the first vein of coal, supposing it to be the bed which had been worked for so many years at Cheltenham. This thin vein is known to exist nearly over the whole coal district, and overlying the best workable beds. Deeper explorations would probably strike those lower series where all such beds have heretofore been found.

"It will thus be seen that the geological survey indicated the existence of coal in this region, and later observations have served to confirm that report."

The fire-brick clay of St. Louis is excellent in quality and inexhaustible in quantity. The St. Louis limestone is esteemed one of the best and cheapest building materials anywhere to be found. The magnesian limestone or marble, both of St. Louis and the adjacent counties, is very fine, pure, white, and resists enormous pressure.

It is a property of the St. Louis as of some other limestones that it is a highly cavernous rock, water infiltrating through it readily and hollowing it out. Numerous "sink-holes" on and near the site of the city indicate the existence of caves beneath it; and indeed some of these have been explored and more or less utilized, though as yet none have been found to bear comparison with the stupendous and wonderful caves of Kentucky and Virginia. The city had hardly outgrown the proportions of a village, however, before it began to receive the distinctive title of "Mound City," from the remarkable artificial structures which crowned the terraces of the bluff. The "Big Mound"

THE BIG MOUND AT ST. LOUIS IN 1869.

of St. Louis, once one of the most striking and remarkable features of its landscape, was finally cut down and carted away in 1869, its cubic masses used to make a railroad "fill." Before it disappeared, however, it had come to be recognized, in connection with the mounds at Cahokia and other places in the Great American Bottom, on the opposite side of the river, as being among the most remarkable archæological remains in America, and much conjecture and a great deal of controversy have been employed upon it.

Brackenridge, in his "Views of Louisiana," has remarked upon the curious circumstance that the early French writers, the most intimately acquainted of any Europeans with Indian manners and customs, and the only Europeans who dwelt with the Indians in their villages and lodges, have made no mention of the numerous antiquities of the Mississippi valley. Yet they were permanent residents at Cahokia from about the beginning of the eighteenth century. Capt. Carver appears to have been the first writer who noticed the mounds, and attributed their origin to a race more civilized

than that which occupied the country in which he found them. Brackenridge, who had spent his childhood in Ste. Genevieve, returned to the West in 1810, and traveled through the country extensively, and in a spirit of intelligent pursuit of knowledge and careful observation. His account of the St. Louis mounds is very clear. He had frequently examined them, he said. "They are situated on the second bank just above the town, and disposed in a singular manner; there are nine in all, and form three sides of a parallelogram, the open side towards the country being protected, however, by three smaller mounds, placed in a circular manner. The space inclosed is about four hundred yards in length and two hundred in breadth. About six hundred yards above there is a single mound, with a broad stage on the river side; it is thirty feet in height and one hundred and fifty in length; the top is a mere ridge of five or six feet wide. Below the first mounds there is a curious work, called the Falling Garden. Advantage is taken of the second bank, nearly fifty feet in height at this place, and three regular stages or steps are formed by earth brought from a distance. This work is much admired. It suggests the idea of a place of assembly for the purpose of counseling on public occasions."

In taking away the Big Mound in St. Louis in 1869, many human remains were found at different depths below the surface. Some of the contemporary accounts of the removal of the mound, and the progress of the excavation, are curious, not to say comical, and one adventurous newspaper wit invented the discovery of a secret tunnel, leading under the Mississippi and communicating with the interior of the big tumulus at Cahokia. What follows below embraces a very good account of some of the conjectures in regard to the origin of the mound, and a very good description of its appearance at the time of its removal:

"A paper was read some weeks ago before the St. Louis Academy of Science by Professor Spencer Smith, and afterwards published with their approval, which advocated with considerable pertinacity and show of argument that the Big Mound was a natural formation; that it was not the work of any primeval nation, who here expended years of labor without any design; that it was improbable that this immense heap of earth was piled up by human hands; that no evidence of design was found which required us to believe it to be of artificial construction; that it was worse than useless as a fortification; that as a point of lookout it does not command a wide extent of country much greater than the smaller one farther down the river; that no charred remains of bones or wood were found, indicating it to be a place of sacrifice; that no remains of tools were found either in the mound or its vicinity showing the implement used to heap it up; that some bones and a few Indian ornaments were exhumed near the top, but not in any position which gave evidence of design in placing them there; and finally, because it is not of an oblong shape, sloping north, having its steepest side down-stream, and because the earth found on the top resembles the sediment deposited in the reservoir. Therefore it must, *ex necessitate*, be a river deposit or a sand-bar. Professor John Russell, of the *Missouri Statesman*, so we are informed, was the first to suggest this explanation, which has been taken up by Professor Smith, and is the prevailing opinion among the members of the Academy of Science. A simple statement of the facts in the case may point to another possible explanation.

"The Big Mound was situated on the northeast corner of Mound and Broadway. It was in vertical height thirty-five feet from the grade of the adjacent street, of oblong shape, in a north and south direction, with a regularly defined outline and base. In an old lawsuit, Maguire *vs.* Taylor, for sixteen arpents of land at the northeast corner of the mound, we find some incidental descriptions which were worth quoting. One statement is that its sides were well defined, and the foot of the mound was as well defined as the north wall of the court-house. In fact, in a deed of Brazeau to Labaum, in 1798, the foot of the Big Mound is made the point of departure for a precise and technical description. Farther on we find the following: 'The Big Mound, a most noted monument in St. Louis, called by the French La Grange de Terre (earth barn), is an artificial erection situated on the first bank of the prairie, west of the bank of the Mississippi, at the distance of about twenty-eight arpents north of the northern wall of the fortifications of the old Spanish town of St. Louis, and about four and one-half arpents west of the bank of the river. . . . The bank on which the mound stands is the eastern boundary of the Grand Prairie, covered by the St. Louis common-fields, and the land descends with a gentle slope from the brow of it to the small prairie or bottom-land between it and the river. This bank of the prairie is about four and one-half arpents west of the river-bank, where the mound stands, and about sixty feet above the level of the prairie, along the brow, and it runs nearly parallel with the river at that distance from it for a mile or so southwards.'

"The crest or highest point of the mound, at the time the excavation commenced, was by measurement one hundred feet east of Broadway. A vertical section at this point to the base of the hill, showing wavering lines of demarkation between four different homogeneous strata, well indicated as the distance from the street, but hardly distinguishable upon a closer examination.

"The depth of these strata varied, but averaged eight feet, the lowest one being ten feet, and of a solid, original, compact, yellow, adhesive clayey formation. The three upper strata above this foundation were dark in color, resembling a loam or soil, and friable in structure, constituting a homogeneous earth, easily separated and thrown down by the heavy pointed iron bars which were thrust into them. The top of the mound slanted eastwardly about seventy feet, and, with the exception of a single grave, which was made within the memory of men still living, near the apex of the mound, all the remains were found in this substratum of clay, thirty-five feet east of the apex, twenty-five feet below a horizontal line drawn from the top, in a long trench or grave dug four feet deep in the original clay, by eighteen feet wide and about seventy feet long, extending under the length of the mound on its eastern slope. The western side of the grave is distinctly defined, and shows the marks of the instruments used in its construction. The earth fell off from this side, leaving it sharp and regular, and showing the stains and discolorations made by the gases escaping from the decomposing body below. The bodies were placed in a reclining position, east and west, with the head toward the east, and were in a very advanced state of decay, the bones

being very dry and porous and easily pulverized in the hand. Several pieces placed in water floated one-half above. The soil around them was very dry and the whole without odor. These bones were all of a rather large size.

"The writer measured one femur, which was of the length of twenty inches. The fragments of jaw-bones containing teeth are quite large and the teeth sound. The writer has now before him a piece of blanket exhumed, the vegetable fibres of which, twenty in number in the width of an inch, have a scorched appearance. It is of very coarse manufacture, and comes apart on the slightest picking. Some tufts of dark-red, coarse, straight hair, of a pungent odor, were also taken out. Some of the most interesting relics found are now in possession of one of the firemen at the Lyon Engine-House, opposite the site of the mound. They consist of two copper vessels identical in shape, shaped like the bowl of a large spoon, with sharp projections extending from the convex surface of the ornament. They were found placed behind the ears on each side of the skull, with the concave surface down, under which was an oblong bead the size of a pecan perforated through its length. A quantity of smaller beads of the same kind were found near in a circular position, evidently having been strung and wound around the neck and over the head of the recumbent warrior. They might have been placed in this position by the medicine-man of the tribe, with a confidence in some superstitious object which would thus be accomplished. There were also found an immense number of perforated disks from a quarter of an inch to one and a half inches in diameter, and varying in thickness. They are rounded quite regularly, with polished sides, and a perforation whose diameter diminishes towards the centre. Their principal composition is carbonate of lime, and they are made from a marine shell from the Atlantic or the Gulf, several of which, very large, were exhumed from the same grave. The disks were strung together and used for money or ornament or both. It would be an interesting inquiry to know how far these circular pieces resemble the perforated disks found in the low-water lacustrine explorations in Switzerland, where the remains of a primeval nation were found who lived in houses built on piers extended into the lakes, described in the last annual report of the Smithsonian Institute. There were also found in the mound some very small shells with perforations.

"There are, then, two questions to be determined: first, is this mound of natural or artificial construction? and, second, if artificial, what is its probable age?

"We think that the fact that the row of graves found was placed twenty-five feet below the surface, and nearly under the centre of what was the former perfect shape of the mound, is a fatal objection to the sand-bar theory, unless you presuppose that the land at this high elevation above the bed of the river was once free from water, then afterwards inhabited by the race who made the graves, and after that overflowed again by the river which made the sand-bar deposit. This is equivalent to saying that the valley of the Mississippi was inhabited before the period when it was one vast lake, and carries us back to geological eras. But this is no geological question. These graves are situated in the crest of the Pliocene period. There are no upheavals here, nor inverted geological strata. It is a mere question of the antiquities of the human race, and relates to a period long subsequent to the latest geological era. The graves must have been placed there since the subsidence of the water. *But then, how did the earth come to be piled over these remains?* In a very simple manner. It was placed there by the race that made the graves. The homogeneous nature of the superposed soil, the regular and well-defined shape of the mound, and the fact that these relics are found under it at its base, prove that it must have been placed there by artificial means. Their object was to erect a tomb, a place of worship, a fortification, or a monument of the simple earth, more lasting, as the poet has it, than brass, as this has proved to be. The fact that no charred remains nor implements were found in or near the place is no conclusive proof. We are inclined to ascribe a much greater antiquity to this monument than is commonly supposed for two reasons: one, that although the highest conditions for a perfect preservation of the bones were met here, in the total exclusion of air or water in a very dry soil, yet the remains were mouldered in most instances to almost impalpable dust. In the moist climate of Great Britain, under the most unfavorable circumstances as regards preservation, entire and well-preserved skeletons are often found of an undoubted antiquity of at least eighteen centuries.

"Then again, this mound is found in one of the highest terraces left by the subsidence of water in the valley of the river. At the time it was built its banks were caved by the old Father of Waters. Also in the absence of any tradition whatever among the Indians themselves concerning the origin of this monument, for the memory of it is lost to tradition among the original or pre-Spanish occupants of the soil, we are inclined to ascribe its erection to a so-called prehistoric race.

"As to the capacity of such a race to build a structure of this size and extent, we think that the moderns, in the pride of their recent inventions, are very much inclined to underrate the men of antiquity.

"The great number of similar mounds, some of which are evidently intended for fortifications, covered by regular and artfully constructed approaches, and many much larger than this, scattered all over what now constitutes the United States, shows that this land was at one time occupied by a different race of men than the Indians, and the fact that the race needed such immense fortifications for their protection indicates that the population must have been more numerous, and, in order to support the sieges which were to be sustained in these defenses, must have been more agricultural in their character to produce the necessary provisions. The agricultural portion of such a population could easily support the unproductive labor requisite to build the mound. With respect of their being destitute of the necessary implements, we must not be too certain as to the inferiority of the ancients in respect to mechanical appliances and the arts. Who knows what an immense amount of information was destroyed by one fell swoop of the Saracens, who, in the early centuries, burnt the Alexandria Library, the smoke of whose burning ascended for three weeks, and obscured the light of the sun from the earth? Who knows what ancient arts, carefully described in those old manuscripts, then perished? The compass and gunpowder were in possession of the Chinese centuries before the Christian era. Who knows what treasuries of art and knowledge lie yet entombed in the musty, and to the modern Chinese themselves antique, inscriptions contained in their dusty cobwebbed libraries? The ancient Saracenic manuscripts deposited in the University of Salamanca and other Moorish libraries are yet to be ransacked before their treasures are unearthed. The ancient race that peopled this continent were every way competent to erect this monument.

"The world is much older than the chronology of Bishop Butler. The history of the human race is yet to be written, and the men of antiquity are yet to have justice done them."

The mound at one time was built upon and occupied by the residences of many of the old French settlers. A newspaper paragraph, written at the time of its leveling, says,—

"Col. Chambers once was a member of the committee that waited on old Mr. Benoist, recently deceased, in reference to the mound. The committee wanted Mr. Benoist to donate his part in the mound to the city; the other proprietors, it was expected, would then follow, and give up their parts also to the city. The plan was to change the whole mound and its surroundings, which at the time occupied about three or four blocks, into a public garden, with a kind of a pavilion on the elevated ground in the centre, with other localities for public entertainment; to plant it with trees and shrubbery, and surround it by an iron rail-fence. Mr. Benoist, though a generous gentleman in many other ways, refused, and the whole plan fell to the ground on account of his opposition."

At a contemporary meeting of the Missouri Historical Society, Jan. 7, 1869, the Hon. John F. Darby, always deeply interested in the history and archæology of St. Louis, gave some reminiscences of the mound.

"This mound," said he, "was a subject which had often been treated of by Col. Benton when he was editor of the *St. Louis Enquirer*, and he wrote many papers upon it. Then, within the speaker's recollection, the bluffs ran along the Mississippi River from the Big Mound to the foot of Market Street. When the river was low, there was a large flat rock at the bottom of the street near the mound and at the foot of Market Street, on which timber and drift-wood would occasionally lodge. On the bluff there was a foot-print in limestone rock. This rock was cut out and taken to New Harmony, Ind., about the same time that Owen was starting his new philosophy. The general impression that he (Mr. Darby) then had of the Big Mound was that it was not artificial, but natural. At about 1819 a good many Indians visited St. Louis. Some of them lived in Franklin County, such as the Shawnees. They would come here, march along the streets, and do their begging by singing and reciting; very frequently they would get tobacco and other articles. When they were here on one of their visits one of their chiefs died, and he was buried at the top of the Big Mound. They buried another chief on the Manchester road, near the residence of Mr. Marshall. In 1826 they came regularly, put a post at the head of the grave, and painted it red. The first time that he had the honor of being on the Big Mound was in 1822, when he was a boy. He ran up it on the Christmas-day of that year, and there was then an undergrowth of vegetation on a second bank or ledge. He referred to the meeting of the first Legislature in the Missouri Hotel as it now stands, to the popularity of David Barton, which caused his being sent to the Senate immediately, and to Col. Benton's contest. He said that they met one morning in the hotel and counted how many votes they needed; they found that they could elect Col. Benton by one vote, and that was by a man named Ralls, boarding at the hotel, who was sick on his death-bed. When the votes were being taken they brought Ralls down-stairs on his death-bed, and his name being called he voted for Col. Benton. They took him up-stairs, he died directly afterwards, and they immortalized him by calling the county of Ralls after him. Mr. Darby next noticed the fatal duel between Joshua Barton and Tom Rector. The Rectors were a numerous family, and it was agreed that if Tom got killed another should take his place, and so on, and if he killed Barton he should step out and wave his hat. The origin of the duel was the writing of something by Barton which offended Rector. Barton accepted the challenge on the express condition that Tom Rector would admit that what he had written was true. Rector admitted that it was true, but it was offensive, and he demanded satisfaction. The duel came off on the second bank or ledge of the Big Mound, among the undergrowth. The Rectors went up on the top of the Big Mound to see it. Tom Rector shot Barton, walked to one side, pulled off his hat, waved it as a signal, and the Rectors made one victorious, tremendous shout. There were several smaller mounds, on one of which the first water-works were constructed. It is not uncommon to find them on the banks of the Mississippi and Missouri. A little to the northwest of the Big Mound there was a small pond.

"The president said that a person had made a calculation that if the excavation or pond had been filled by earth from the Big Mound the whole place would be level. This favored the theory that the mound was an artificial one."

There can be no rational doubt of the artificial character of the mounds in the Mississippi valley. There can equally be no rational doubt that the Mound-builders were very different in their habits and manners of life from the wild Indians of the present day. The latter are nomads, the former dwelt in towns and cities, had temples, fortifications, and permanent structures of great extent. The Pueblo Indians of New Mexico approach to what we may conceive to have been the habits of this race, but it cannot be determined, and perhaps never will, that these Indians are the descendants of the prehistoric race which, at a very remote period, peopled the Mississippi valley from the Rocky Mountains to the Alleghanies, and from Lake Superior to the Gulf.

As to the genuineness of their remains, however, all doubts must be set aside. Drift, erosion, loess, no possible geological hypothesis can set aside the facts which prove these remains to be the work of man. This was proved long ago by Thomas Jefferson, Bishop Madison, and Dr. Barton. The works of the Mound-builders comprise fortifications, of which there are almost innumerable examples throughout the great valley, burrows, or places of burial, and mounds or pyramids. The fortifications are usually such an intrenched bank as we might suppose to have been thrown up to guard and make firm the base of a stockade or a row of palisades. The burrows were the ordinary burial-mounds of savages, found always in the vicinity of a village site. The mounds are more elaborate, perhaps more ancient, larger, and may have served for temples, burial-places, forts, or all three together. H. M. Brackenridge, in his "Views of Louisiana," has given a full account of the mounds of Cahokia as they appeared to him in 1810:

"I crossed the Mississippi at St. Louis," he says, "and after passing through the wood which borders the river, about half a mile in width, entered an extensive open plain. In fifteen minutes I found myself in the midst of a group of mounds, mostly of a circular shape, and at a distance resembling enormous haystacks scattered through a meadow. One of the largest, which I ascended, was about two hundred paces in circumference at the bottom, the form nearly square, though it had evidently un-

dergone considerable alteration from the wasting of the rains. The top was level, with an area sufficient to contain several hundred men. The prospect from this mound is very beautiful; looking towards the bluffs, which are dimly seen at the distance of six or eight miles, the bottom at this place being very wide, I had a level plain before me, varied by *islets* of wood and a few solitary trees; to the right the prairie is bounded by the horizon, to the left, the course of the Cahokia may be distinguished by the margin of wood upon its banks, and crossing the valley diagonally south-southwest. Around me I counted twenty mounds or pyramids, besides a great number of small artificial elevations; these mounds form something more than a semicircle, about a mile in extent, its diameter formed by the river.

"Pursuing my walk along the bank of the Cahokia, I passed eight others in the distance of three miles before I arrived at the principal assemblage. When I reached the foot of the largest mound, I was struck with the degree of astonishment not unlike that which is experienced in contemplating the Egyptian pyramids, and could not help exclaiming, 'What a stupendous pile of earth!' To heap up such a mass must have required years and the labor of thousands. It stands immediately on the bank of the Cahokia, and on the side next it is covered with lofty trees. Were it not for the regularity and design which it manifests, the circumstance of its being on alluvial ground, and the other mounds scattered around it, we could scarcely believe it the work of human hands, in a country which we have generally believed never to have been inhabited by any but a few lazy Indians. The shape is that of a parallelogram, standing from north to south; on the south side there is a broad apron or step about half-way down, and from this another projection into the plain about fifteen feet wide, which was probably intended as an ascent to the mound. By stepping round the base I computed the circumference to be at least six hundred yards, and the height of the mound about ninety feet. The step or apron has been used as a kitchen-garden by the monks of La Trappe, and the top is sowed with wheat. Nearly west there is one of a smaller size, and fifteen others are scattered through the plain. Two are also seen on the bluffs, at the distance of three miles. Several of these mounds are almost conical. As the sward had been burnt the earth was frequently naked, and I could trace with ease any unevenness of surface, so as to discover whether it was artificial or accidental. I everywhere observed a great number of small elevations of earth, to the height of a few feet, at regular distances from each other, and which appeared to observe some order. Near them I also observed pieces of flint and fragments of earthen vessels.

"I was perfectly satisfied that here once existed a city similar to those of Mexico described by the first conquerors. Although it might not have been a Licopolis, Persepolis, or Thebes, it is not improbable that it contained many thousand inhabitants. This plain, now reposing in the stillness of death, was once the scene of a busy and crowded population; these temples, now devoted to the idolaters of silence, once resounded with the shouts of war or the songs of peace. The mounds were the sites of temples or monuments to the great men. It is evident this could not have been the work of thirty scattered tribes. If the human species had at any time been permitted in this country to have increased freely, and there is every probability of the fact, it must, as in Mexico, have become astonishingly numerous. The same space of ground would have sufficed to maintain fifty times the number of the present inhabitants with ease, their agriculture having no other object than mere sustenance. Among a numerous population the power of a chief must necessarily be more absolute, and where there are no laws, degenerate into despotism. . . . Hence there would not be wanting a sufficient number of hands to erect mounds or pyramids."

The great mound at Cahokia described by Brackenridge is called "Monk's Mound," from the fact that, as hinted by him above, it was the site of a conventual establishment of the ascetic monks of La Trappe, who settled there about 1809. They devoted themselves to industrial pursuits, and one of their advertisements is now before us, taken from the *St. Louis Republican* of Jan. 24, 1811, as follows:

"NOTICE.—Several persons having showed to the monks of La Trappe a desire to purchase watches, if they would sell them for trade, the said monks, in order to satisfy everybody, give notice to the public that until the end of the year 1811 they will sell watches, clocks, and other silversmith's work, and also fine horses, for the following articles in trade, viz.: wheat, corn, linen, beef, pork, cattle, leather, tallow, blankets, etc.

"URBAIN GUILLET,
"*Superior of the Monks*,
"Cantine Mounds, nine miles above Cahokia.

"N. B.—The above-mentioned articles will be sold at a lower price to whoever shall pay cash."

With some abridgment, we reproduce the account of them given by Brackenridge in his interesting narrative of his visit to Cahokia in 1811:

"The buildings which the Trappists at present occupy are merely temporary. They consist of four or five cabins on a mound about fifty yards from the large one, and which is about one hundred and fifty feet square. Their other buildings, stables, cribs, etc., ten or fifteen in number, are scattered about on the plain below. I was informed that they intended to build on the terrace of the large mound. This will produce a fine effect, especially if painted white; it would be seen five or six miles across the plain, and from some points of view ten or twelve. They have about one hundred acres inclosed in three different fields, including the large mound and several others. On entering the yard I found a number of persons at work, some hauling and storing away the crop of corn, others shaping timber for some intended edifice. A considerable number of these were boys from ten to fourteen years of age. The effect on my mind was inexpressibly strange at seeing them pass and repass in perfect silence. What force must it require to subdue the sportive disposition of boyhood! But nothing is so strong as nature. I admired the cheerful drollery of a poor mulatto lad with one leg who was attending the horse-mill. As the other boys passed by, he always contrived by some odd gesticulation to attract their attention. He generally succeeded in exciting a smile. It was a faint gleam of sunshine which seemed to say that their happiness was not entirely obscured by the *lurid gloom* that surrounded them.

"Fatigued with this scene, which I contemplated apparently unobserved, I ascended the mound which contains their dwellings. This is nearly twenty-five feet in height, the ascent aided by a slanting road. I wandered about here for some time in expectation of being noticed. It was in vain that I nodded to the reverend fathers or peeped into the cabins. In the course of fifteen minutes, Father Joseph, a sprightly, intelligent man in the prime of life, who, I learned, had the government of the monastery in the absence of Father Urbain, came up to me, and, after some conversation, invited me into the watchmakers' shop. I was not a little surprised to find here a shop better furnished than any in St. Louis. Part of it was occupied as the labora-

tory and library; the library, I confess, but indifferent. A few medical works of no great repute, and the rest composed of the dreams of the fathers and the miraculous wonders of the world of saints.

"Two men were at work, and two boys appeared also busily employed. One poor fellow of ten or eleven years of age, seated by a stove and employed in making strokes upon a slate, attracted my attention and pity. He appeared to have just risen from the bed of sickness, or rather from the tomb.

"Father Joseph inquired whether I had dined, and being informed in the negative, had something prepared. My fare was simple, consisting entirely of vegetables, though not less acceptable, for it was given with good will. Having returned thanks to the good fathers for their hospitality, I took my leave.

"I learned that the family of the Trappists consists of about eighty persons, a considerable number of whom are at present from home. The boys are generally Americans; the men are principally Germans and French, with a few Americans. It is said they expect an accession from Europe of about two hundred. It is about a year since they have been settled in this place. The last summer they were much afflicted with fevers, six or seven died, and very few escaped severe illness. The boys particularly appeared of a pale or sallow complexion. They deny, however, that the place is unhealthy. They say that, as in most parts of this country, the emigrant must expect to undergo a seasoning, and that those who died were chiefly old men who had been previously afflicted with chronic complaints. But the meagre diet upon which these people subsist must also have contributed not a little.

"There are things in which no one can deny them praise. They are extremely industrious in various useful employments, and there are excellent workmen among them in a variety of trades. An asylum is offered to such unfortunate wretches (certainly very rare in America) who, aged and friendless, are in danger of perishing of want."

In a later account of a visit to Monk's Mound, in 1837, the writer says,—

"A ride across the American Bottom from East St. Louis to the bluffs, on the Collinsville plank road, discloses to the eye of the curious a large number of ancient mounds. Perhaps a dozen or more of these interesting formations, which are generally supposed to have been built by an extinct race only known as the 'Mound-builders,' may be counted as the bluffs are neared. These mounds are of various sizes and forms. Some are conical, with irregular shapes on either side. Some are truncated, and others have the sugar-loaf form. The largest of the singular elevations are located about two miles west of the bluffs, between the main road and Cahokia Creek, which is known as 'Monk's Mound.' It rises above the surrounding plain to the height of ninety feet, and the base is said to cover an area of forty acres. Its precipitous sides are deeply seamed with furrows, caused apparently by melting snows and rains. The sides of these gullies are elevated and rounded, forming paths, up which the ascent is made, and they are seen to spread from the apex towards the base like the legs of a spider. Some portions of the mound are terraced, and portions are overgrown with forest-trees. There is also an apple-orchard near the base. The summit can be easily reached on all sides, but up one of the gullies a wagon road has at some former period been constructed. The summit is a flat plateau of several acres, with a dwelling near the centre, and a garden now under a good state of cultivation on the north side. The name by which the great mound is extensively known is derived from the monks of La Trappe, who established themselves here in about the year 1810. The mound once belonged to an Irish gentleman who was clerk of the St. Clair County Court. It was bought from him by Maj. Nicholas Jarrot, of Cahokia, and given by him to the monks, and after it was abandoned by them it again reverted to Maj. Jarrot. Mr. Guy Morrison, late of Collinsville, bought it, and we believe at one time built a house there. Some of these facts were communicated to us by Madame Jarrot, the venerable relict of Maj. Jarrot, who still survives in tolerably good health, although in her ninety-third year.

"The building on the summit of the mound is untenanted. It is a low frame structure containing a number of rooms, with a veranda extending along the west and south sides. We who visited the establishment supposed the establishment to be the deserted habitation of the silent old monks, and prompted by a spirit of curiosity, we effected an entrance through one of the windows and proceeded to explore its hidden recesses. It was a ratty old place, and contained nothing which suggested to our minds the peculiar mode of life practiced by the pious members of this religious order. There were old barrels, old broken bottles, old hats, and old scraps of broken furniture scattered here and there. Everything about the premises had a general flavor of mild decay. We were, however, after relics and found none. We subsequently learnt that the dwelling was built long after the monks had evacuated the premises, by a Mr. Hill, who kept a school there. His grave, located near the dwelling, on one of the angles of the mound, was pointed out to us.

"Half-way down the north slope of the mound the mouth of a tunnel is seen, which was dug out several years ago by some explorers with a view of finding the relics of some ancient Mound-builders. But the success which rewarded the labor we were unable to ascertain from the residents in the vicinity, who take no more interest in the matter than the man in the moon. From the character of the strata which compose these formations there is no evidence that the mound is the work of human hands, but, on the contrary, it is a 'spared monument' of the adjoining bluff,—formations left standing apart by the powerful currents of the ancient seas that at one time inundated the Mississippi valley and swept over the American Bottom. Similar mound-like formations are seen all along the bluffs, as at Caseyville, of which there could be no dispute as to the origin. The foot-hills at Golden City, and between Denver and the Rocky Mountains, present similar forms, and the voyager on the Upper Missouri, above Sioux City, will see hundreds of such conical and oblong elevations, studding the bluffs and bottom-lands like hay-stacks and walled battlements, all of which are unquestionably natural formations. But that there are mounds made by human hands for sepulture and purposes of defense or observation there is equally no doubt. Monk's Mound, however, is not one of them. It is nevertheless worthy of a visit by all who take an interest in the various freaks of nature."

The purchaser of the Trappist estate referred to above was T. Ames Hill, a native of Massachusetts, but long a resident of Kentucky and St. Louis. He moved on the property in 1831, erecting a cabin on the very summit of the mound. When he died he was buried in the northeast corner of the plane surface of the pyramid's top. This Cahokia mound, the largest in the United States, is in every way an imposing structure. Mrs. Hill, who lived upon its summit for twenty-five years, says that a large secret entrance into the mound was at one time discovered,

but was filled up again to prevent vermin and wild animals from making their dens within it.[1] The Cahokia tumulus was originally an immense terragon, supported by a heavy terrace on the south and west, approached by a talus; the north base five hundred and sixty feet; south base seven hundred and twenty feet; summit, length, three hundred and ten feet; breadth, one hundred and forty-six feet. The north side is the most precipitous. The terrace approaches from the south and west, and is one hundred and twenty feet deep; the talus approaches from the south, and is fifty-five feet broad at top, one hundred and twenty feet long, and one hundred and twenty-five feet broad at base. Height of mound, ninety-one feet. The superficial area of the summit is two acres; of the base, six acres, and the solid contents are estimated at twenty-five million cubic feet.

Wills de Haas contends, from observation, that nowhere in the United States are the mounds so large and numerous and arranged with so much system as those on the American Bottom. "They present, indeed, a city of mounds, a vast and mysterious collection of monumental remains." This system is repeated and continued on a scale almost equally large at New Madrid. The American Bottom is the most extensive and valuable alluvial in the United States. It stretches from opposite the mouth of the Missouri to the Kaskaskia, a distance of over eighty miles, with an average breadth of seven miles. Its fertility is inexhaustible; its scenery is varied and picturesque; and the prehistoric races made it their favorite abode, built their mounds, and gathered their dwellings upon it. The Indians found by the whites upon these sites did not even pretend to any knowledge of the builders of the mounds. They had no traditions concerning them.

To their superstitious souls these great works were simply *maniton*,—supernatural,—because mysterious and inexplicable. Nor has the acute and scientific investigation of the present day thrown any real light upon the history of the mounds, who built them, and how and when they were constructed. We do not know, we may almost despair of ever learning whether the Mound-builders were autochthones or immigrants, or from whence they derived their knowledge of agriculture, working stone, making cloth and fictilia. Mr. de Haas remarks that

"Two grand groups of ancient tumuli loom up on the broad surface of the American Bottom. They are distant from the central figures about six miles, but connected by a series of smaller mounds, forming a continuous chain, and constituting one grand and extensive system of tumular works,—unequaled for size, number, and interesting feature on either the sub-continents of America.

"One of these groups stands within the city limits, and adjacent to East St. Louis; the other six miles to the northeast, lying chiefly north of the Ohio and Mississippi Railway. These are connected, a series of tumuli, stretching along Indian Lake and Cahokia Creek; the entire system, including those along the bluff, numbering over two hundred.

"These, collectively, present a vast city of mounds in ruin. They undoubtedly constituted the seat of a great power,—a community little less populous perhaps than that now centring within an area of twenty miles of this great modern metropolis of the West. The upper group, containing the most important monuments, was doubtless the citadel of the ancient empire. It comprises over sixty mounds, arranged with great system, and in marked position toward each other. The great mound, constituting the principal feature, is supported by four elevated squares, and numerous large tumuli of manifest importance in the system.

"The mounds comprising these respective groups are conical, ellipsoidal, square, and parallelogram. Some are perfect cones, others the frustrum. They vary in height from five to ninety feet, in some instances presenting an angle of nearly sixty degrees. They are all of earth taken from the surrounding plain or bluff, and constructed with symmetry, neatness, and manifest design.

"It is claimed as a noticeable fact that corresponding excavations can be observed near most of the mounds. I have noticed this quite marked in some instances, but only in such localities where the vegetable mound was found underlaid with a deposit of sand. With their rude implements and facilities for removing soil the Mound-builders could not make heavy excavations, but would rather avail themselves of that most readily removed.

"I have failed to detect near any of these mounds the *fosse* so frequently noticed near the Ohio valley tumuli. They compared in general external appearance, internal structure, and arrangement to the ancient tumuli of other parts of the country, except those of an elliptical type. This class occurs more frequently here than elsewhere. The square mounds find counterparts in the elevated squares at Marietta, Ohio.

"A general design is manifest in all the ancient earth-works of America. In the Ohio valley they are found in connected systems. In the Mississippi valley, or that part lying opposite this city, they occur alone in tumular erections, arranged in groups, with outstanding guards, system, and unmistakable design.

"The remains of art found among these mounds—stone implements, fictilia, etc.—indicate a knowledge quite equal if not in advance of art remains from the mounds of Ohio, West Virginia, Kentucky, Indiana, etc. There is a decided difference between some of their stone implements, which will be more particularly noticed hereafter. This fact induces the belief that they belong to a different people. As to the object of the mound, without attempting to advance a hypothesis based on incomplete observations, it may be safely assumed that all mounds wherever, whenever, or by whomever constructed, were *primarily* designed as places of sepulture. This we read alike in the simple and often scarcely distinguishable tumuli in the valley of the Mississippi or the isles of Britain, as we do in the huge tumuli on the Cahokia or the vast earthen and mega-

[1] Many of the larger tumuli had chambers in their interiors; but, as the Mound-builders do not seem to have understood the principle of the arch, they simply framed a square chamber of timber, two uprights and a cross-piece to tie them, and, when these timbers rotted, the roof fell in.

lithic monuments of Northern Europe or the valley of the Nile. They were often devoted to other uses, but the great first purpose was sepulchral. They doubtless often served a triple purpose,—tomb, temple, dwelling-place. The large square works possibly supported the houses of important personages, or picketed around as places of defense. The great mound probably supported the principal temple, also the house of their cazique or king. Others served as guard-posts, and still others as places of defense."

The early inhabitants on the Mississippi had three modes of burial: inhumation in a horizontal position, the body having a regular grave, generally stone-lined; inhumation in a standing or sitting position; and cremation, the body burnt and the ashes and carbonized bones preserved in a vase or urn. Many cinerary urns have been discovered in the course of the exploration of barrows and mounds. All the art and industrial remains of the Mound-builders show them to have belonged to what is called the Stone Age. But few metallic remains have been found in the mounds of St. Louis and the American Bottom, and these only copper and for ornament. Various curved shells have been found, showing the use of wampum and the fact that the Mound-builders had intercourse with the coasts of the Gulf of Mexico and the Atlantic or Pacific Oceans. The Mound-builders had attained great proficiency in working stone. Their weapons are often of exquisite design and perfect workmanship. Their tools were rude, chisels and hatchets, hammers and knives of granite, hornblende, nephrite, and their arrow-heads, spear-points, knives, fluting instruments, etc., are of quartz of every grade, from black chert to opalescent chalcedony. Mr. de Haas remarks that

"One type of these flint implements is most universal. These are *agricultural*, proving beyond doubt that the people who used them tilled the soil. Two distinct styles prevail,—one long, like the blade of a spade; and the other identically our modern hoe, the eye being substituted by a double notch. These vary in size,—the longer from six to fifteen inches and four or five inches broad; the other about the diameter of an ordinary garden hoe. These implements show usage,—the parts entering the soil being highly polished, such as nothing would so readily effect as attrition in sand and loam. These implements are quite anomalous,—nothing of the kind having been discovered in the Ohio valley, or, so far as I am aware, east of the Mississippi or in Europe.

"A variety of other flint implements have been discovered, unlike any heretofore found. Also, a large granite implement, which may have served for dressing hides or crushing corn. I notice, however, a total absence of steatite and serpentine ornaments and amulets, so common in Ohio valley mounds."

The pottery found in connection with the mounds of St. Louis and the American Bottom presents a great number of curious and instructive examples of the fictile art. Mr. de Haas thinks that the ancient potter of the Mississippi valley was but little inferior in skill to the potters among the ancient Egyptians. The Mound-builder did not use the potter's wheel: his ware was all hand-made; and much of it was only sun-dried or fire-baked in a very inadequate and inefficient manner. Two or three different styles of manufacture have been discovered,—one, a breccia of clay and pulverized mussel-shell or white spathic carbonate of lime. The ware is of irregular thickness, tough and capable of resisting the effects of moisture, dilatation, and shrinking. The ornamentation is neat and plain, rude lines, dots, chevrons, and zigzags being the chief patterns. The vessels found comprise urns, vases, cups, dishes, etc., and some of them have handles made in imitation of familiar animals. They are chiefly mortuary in their purposes, it is probable.

A. J. Conant, of St. Louis, who is probably as competent as any scientist in the country to discuss the subject, has written an excellent monograph on the Mound-builders as representatives of the prehistoric man in the Mississippi valley. He divides the mounds of Missouri and the American Bottom into four general classes: burial mounds, caves, or artificial caverns; sacrificial or temple mounds; garden mounds; and miscellaneous works. He first considers mounds in their relations to town sites, producing very good evidence, from the explorations of Dr. Beck, in 1822–23, that St. Louis was a town site with numerous sacrificial and burial mounds. In Dr. Beck's diagram we find two square pyramids, three large conical mounds, and six smaller cones, forming a rude parallelogram, the Big Mound covering its left flank at a distance of six hundred yards. The late Col. John O'Fallon's mansion, on the Bellefontaine road, was built on one of these Indian mounds, and he reported that, in excavating the foundations, human bones by the cart-load, with stone axes and arrow-heads in great numbers, were taken out. The woods west of the dwelling were full of small mounds, thrown up apparently by the Mound-builders as sites for their houses, all having hearth-places, whereon were vestiges of charcoal and ashes.

Mr. Conant looks upon the Big Mound of St. Louis as a typical burial mound. If its magnitude or the size of its vault is to be taken for a standard, he thinks it would seem to have been the tomb of the most holy prophet or the royal race. The sepulchral chamber within it, which long ago fell in, was of unknown length, but could be traced for seventy-two feet. The manner of its construction seems to have been as follows: the surface of the ground was first made perfectly level and hard; then the walls were raised with an outward inclination, made compact and solid, and plastered over with moist clay. Over these a roof was formed of heavy timbers, and above all the

mound was raised of the desired dimensions. The bodies were placed evenly upon the floor of the vault, a few feet apart, equidistant from each other, their feet towards the west. A great number of beads and shells were found mingled with the black mould that enveloped the bones. These beads, identical with those found in the Ohio mounds, are cut, according to Prof. Foster, from the shell of the Busycon, of the Gulf of Mexico, though some are made of the common mussel-shells of the neighborhood. These beads are so numerous that the whole body of the corpse, from head to thigh, must have been covered with them.

The great Monk's Mound at Cahokia is looked upon as the most perfect specimen of a temple mound in the United States. It is better preserved and the most finished model we have of the forms of the Mexican teocallis and the temples of Yucatan. On the top of these mounds, in one corner, was always a smaller elevation, upon which the sacred fire was kept burning, and in front of which all sacrifices were made.

The garden mounds, small, flat elevations, Mr. Conant thinks were thrown up by the Mound-builders for the cultivation of maize and other crops. In thin lands a richer soil was thus obtained; in flat lands the disasters of flood and moisture were avoided. It is possible also that the edges of these garden mounds were defended by stakes, to prevent them from being trampled down by the deer and the immense herds of bison which roamed everywhere. Wheat found in an urn in one of these garden mounds in Utah is said to have germinated and returned a good yield of a new and prolific variety.

Among the potteries found in the Missouri mounds are drinking vessels, moulded in the form of owls, of gourds, etc. Dr. Foster, in his excursus upon the prehistoric races of North America, thinks that the Mound-builders attained a perfection in the ceramic arts that places them far ahead of the people of the Stone and Bronze Ages in Europe. "We can readily conceive," he says, "that in the absence of metallic vessels pottery would be employed as a substitute, and the potter's art would be held in the highest esteem. From making useful forms, it would be natural to advance to the ornamental." The commonest forms of the Mound-builders' pottery represent kettles, cups, water-jugs, pipes, vases. They ornamented the surfaces of these with curved lines and fretwork, and moulded them or their parts in the image of birds, quadrupeds, and the human figure. The clay which they used was finely tempered, and did not crack or warp in baking. Some of their designs are said to be true to nature, tasteful, and show a degree of refined feeling which approximates to the sense of beauty. Some of the human figures indicate a study of the living model and a distinction of form and attitude such as reveal, in a rudimentary fashion, the artistic feeling. There is a very interesting collection of these fictile treasures in the museum of the St. Louis Academy of Sciences and in the Missouri Historical Society. Oscar W. Collet, Secretary of the Missouri Historical Society, who has paid great attention to such subjects, has made by his own personal unaided efforts a collection of Indian antiquities, which in some respects is considered the finest in the country. The specimens of stone implements of war and the chase are thought to be the largest and best preserved, the handsomest and most characteristic anywhere to be seen. They are arranged upon an excellent plan. The efforts of Mr. Collet, the Historical Society, the Academy of Sciences, F. F. Hilder, Mr. Conant, and others in this direction, will effectually repair to Missouri the loss the State suffered by the dispersion of the splendid Indian Museum begun by Meriweather Lewis, and added to during twenty years by Gen. William Clark.

We have no space to follow Mr. Conant in his comments upon the craniology of the Mound-builders, nor in his speculations in regard to the origin of this extinct race. Enough has been presented to prove that the mounds of St. Louis and the adjacent country are the work of human hands, and that they were the products of the patient labor of a people who had but the slightest resemblance to the Indians whom the white men found in this country when they discovered and settled it. A few important conclusions are obvious from the various facts which have been adduced. There are traces sufficient of occupation and settled inhabitancy to make it apparent that the entire valley of the Mississippi, and especially the vicinity of St. Louis, was the seat of an extensive if not crowded population, which was not nomadic but fixed, and which must have had permanent dwellings, cities, and a stable government and well-defined religion. This population was industrial, and had acquired the rudiments of many arts. For example, the Mound-builders used and knew how to manufacture salt by the process of boiling. The evidence is found in the masses of broken pottery about the salt-springs of Gallatin, Ill., among which are fragments of kettles of a very large size. Brackenridge noted the same sort of remains about the salines of Ste. Genevieve, Mo., as early as 1811. Some of the fragments here showed the kettles to have been as big round as barrels. Our American Indians, when the country was first

discovered, had no acquaintance with the antiseptic and preservative properties of salt.

In the next place, the Mound-builders made textile fabrics and wove cloth out of the cortex of various herbaceous plants, such as the nettle and wild hemp. They cooked their food and regularly used cooking utensils. They pounded their maize in stone mortars (as the Algonkins did also), and the pestles and mortars, of sienite and quartzite, were highly polished, and finished with particular care. Maize was the staple of their food, but was not the only grain they used, for wheat, rice, and a cereal resembling rye have all been found in the mounds. They cultivated a great variety of melons, squashes, and cucumbers, and gathered the pecan, the shellbark, hickory-nut, and the walnut. Using so much farinaceous and vegetable food, it is obvious that the chase was by no means their chief dependence, and, cultivating a wide area of soil, they were able to maintain large populations upon comparatively limited areas of territory.

The Mound-builders had a species of manufacture and of commerce of their own. Copper ornaments and implements made on Lake Superior have been found in Alabama and Mississippi. The Mound-builders are thought to have wrought the mica-beds of North Carolina extensively, and specimens of this mica have been found at New Madrid. They imported marine shells from the Gulf of Mexico and from Long Island Sound. They procured obsidian from beyond the Rio Grande to make arrow-heads and knives, specimens of which are found in Mississippi mounds. The Mound-builders knew something of astronomy and a good deal about practical military and civil engineering. Pyramidal mounds always have their sides to the cardinal points of the compass, and in inclosures the gate generally was on the eastern side. The dams erected by them and the canals they cut show a familiarity with the principles of hydraulics. Their defensive works are admirably calculated to serve the purpose for which they were intended. The sites were invariably well chosen, and the defensive lines to cover and protect these fortresses would have won the admiration of a Vauban.

The Mound-builders were an agricultural people. They selected the most fertile sites for their habitations, and their population was always most dense in sections most prolific in the cereals, and particularly maize. The granaries of the West to-day are those spots where the tumuli of the Mound-builders most abound. In conclusion, all the evidence in regard to this prehistoric race which has been so far collected tends to show,—

1. That the Mound-builders had an organized autocratic government, in which the individual was merged in the state, and thus their rulers could undertake and complete the great works, the remains of which are found in this age.

2. The Mound-builders were a laborious people. Nothing but the united labor of many thousands of men could accomplish such great works as have survived the leveling influence of time through thousands of years.

3. The Mound-builders were not nomads, but had fixed habitations.

4. They were numerous and gregarious, dwelling in populous cities, as attested by the grouping of the mounds.

5. The Mound-builders were acquainted with many of the practical arts of civilized life. They smelted copper, wrought stone, moulded clay into useful forms, built houses, reared mounds, which, like those of Otolum, Uxmal, Palenque, and San Juan Tectihuacan, were no doubt temple-crowned in the distant past. They manufactured salt, made cloth, and had vessels fitted for many uses. They cultivated the soil, raised corn, melons, pumpkins and squashes, and subsisted in a large degree on the fruits of the earth.

CHAPTER VI.

THE INDIANS.

VERY different from the Mound-builders in every respect were the Indians whom the white men found upon the soil of St. Louis and its vicinity, at the time of their first explorations and afterwards when the town was settled. We do not know positively which of the tribes had the best pretensions to the site of St. Louis; but it appears to be the case that while the Illinois Indians claimed the spot, visited it frequently, and may have occupied it permanently in the period of their greatest ascendancy and numbers, the Missouris were the nearest Indians to it, and camped and fished there; while, from the time of La Salle, it is probable that the more powerful Wawsatches or Osages exercised a sort of suzerainty over it. This they were the better able to do from the fact, recorded in the journals of Chevalier de Tonti, that this was a tribe of horsemen, and hunted and made war on horseback, getting their mounts from the wild horses of the plains and by trade with the Comanches and Apaches of Texas and New Mexico. Indian legends seem to concur that the ancestors of

the Natchez Indians, or some tribes very nigh akin to them, were the original occupants of St. Louis and the American Bottom, whence they were expelled by the fierce assaults of the Iroquois and Algonkins, at that time allies. These Indians, whether descendants or not of the Mound-builders, were certainly more nearly allied to them in manners and customs, and in the degree of their civilization, than any other tribes within the limits of the United States of whom we have any knowledge, excepting, perhaps, the Navajo and the Pueblo and Zuñi Indians of New Mexico. Stripping off all the romance with which chroniclers have seen fit to clothe the history of the Natchez tribes, we will still find a nation of sun-worshipers, living in fixed towns, and having a form of monarchical or hierocratical government such as we may readily conceive the Mound-builders to have obeyed.

When Marquette and Joliet descended the Wisconsin and Mississippi Rivers in 1673, they encountered only the Illinois Indians within the limits of Missouri and Illinois,—and their expedition went no farther than the mouth of the Arkansas. In 1682, on the other hand, when La Salle and Tonti descended the Illinois and the Mississippi, and looked into the Missouri and the Ohio, they found both Illinois and Shawanese on the left or east side of the upper river, and on the west side, a short distance up the Missouri above St. Louis, they found the Missouri Indians, and above these the Osages, and probably the Panis or Pawnees. At the time of the establishment of the trading-post of St. Louis, in 1764, by Laclede, the remnant of the Illinois bands was permanently settled at Kaskaskia and Cahokia, a mere handful in comparison with what they had been,—a few families only of the Peorias still dwelling by the lake on the Illinois River which bears their name. They had been ravaged by pestilence and devastated by war. The Iroquois had driven them from their homes at old Kaskaskia and Peoria with fire and hatchet, and the Sacs and Foxes, the Ottawas, and the Miamis and their confederates kept them out. A few years later, as has been already set forth, they either contrived or consented to the murder of Pontiac, while that great chieftain was their guest in Cahokia, and the result was the literal extermination of the tribe. They numbered at least twelve thousand souls in 1670; they had sixty towns in 1700; in 1800 none of the blood survived except in the veins of French half-breeds and about two hundred Kaskaskias (with a few scattering Peorias divided between the east and west sides), afterwards removed to the Indian Territory, and the tribe name had disappeared except as a geographical title.

The Illinois belonged to the great Algonkin race, which held nearly all the temperate parts of North America at the time of the first colonization of this continent. They were the kindred of the Algonkins of Canada, the Chippeways, or Ojibways, of Michigan, the Mohegans of New England and New York, the Shawanese south and the Miamis north of the Ohio, the Powhatans and Nottaways of Virginia, and the Delawares, or Lenni-Lenapes, of Pennsylvania and New Jersey. The name Illinois is a French corruption of a root-word identical with Lenni-Lenape, varying only in affix and suffix; and both nations gave the same meaning to the haughty title,—"We are *the* men." Neither nation, however, though skillful with arms and in the chase, could cope with the Iroquois in the field; and the journal of Tonti and the reports of La Salle and the French missionaries are full of thrilling accounts of how the Six Nations invaded their territory, captured their strongholds, massacred their women and children, and pursued their flagging warriors over the prairies for hundreds and hundreds of miles.

The Illinois lived well in a fat prairie country, yielding crops a hundred for one, and abounding with game of every sort. They were a comely and accomplished race, the women handsome, the men bold, versatile, vivacious, talkative, but treacherous, lazy, and licentious to such a degree that they had even adopted the unnatural vices which are commonly supposed to attach themselves only to the pampered civilization of outworn cities. When the Jesuits succeeded in converting them, and making them good Catholics, they became effeminate as well as idle, and lost concern for the chase as well as for arms.

About the time of the first white colonies in North America, there seems to have been a general movement among the Indian tribes, looking to the reform and consolidation of their political institutions. We cannot determine whether the impulse to this was received from within or without; but it is certain that the establishment of the confederacy of the Five Nations was either preceded, or very swiftly followed by confederacies of the New England, and the Virginia, Georgia, and Tennessee tribes; by the Huron confederacy in Canada, the Miami confederacy in Ohio and Indiana, and the Illinois confederacy in Illinois. The latter tribal union comprehended the several bands of the Kaskaskias, the Tamaronos, the Mitchigamis, the Cahokias, and the Peorias. Their chief towns were on both sides of the Illinois river, from Chicago to the Mississippi, and their winter quarters were in the Great American Bottom, from Cahokia to Kaskaskia. Even before La Salle built

Fort Crevecœur their towns on the Illinois had become favorite resorts of the wild French trappers and hunters, the *voyageurs* and the *coureurs des bois*, and later on, their villages of Cahokia and Kaskaskia on the Mississippi became French villages as well; the points of meeting between the fur-traders and the half-breed children of the wilderness who roamed the interior of the continent, traversed its mountain passes, and trapped on all its streams, from the Rio Grande and the Gila to the Columbia and the Yukon, and from the Gulf of Mexico, on the south, to Hudson's Bay and the Great Slave Lake on the north.

The general Algonkin tradition, as preserved by Heckewelder (and also by Rafinesque, in the translation which he furnished to Nicollet of the so-called *Walum-olum*, or bark record of the Lenni-Lenape), points to a migration of that nation from the north into the country of the Missouri River, whence they crossed the Mississippi between the lakes and the Ohio, driving southwards the Alligewi, the original occupants of the soil. The latter, it is said, lived in towns, were very numerous, and had strong fortifications. This *Walum-olum*, a song learned by heart, the arrangement of the parts of which is determined by memoriter characters written on bark, would be a very remarkable chronicle if we could repose complete confidence in its genuineness; but that we cannot do upon the evidence vouchsafed to us by the brilliant but erratic Rafinesque. As it now stands, its authenticity is about upon a par with the poems of Ossian and the Book of Mormon, excepting that its *internal* evidence is rather in its favor,—that is to say, it does not contradict, it only amplifies the extant Indian legends; and it may be all very true, only we have no more than Rafinesque's word for it, and the concordance of the symbols used with the well-known picture-writing of the Delawares and Ojibways. The *Walum-olum* (meaning literally "painted sticks") consists of five divisions, two devoted to Indian cosmogony and a diluvial legend, the other three recording the migrations, battles, resting-places, and names and order of succession of the chiefs of the Algonkins. The song is said by Rafinesque to have been obtained by the late Dr. Ward, of Indiana, from the remnant of the Delawares on the White River. The metre is apparently that of Hiawatha, some at least of the verses terminating in homophones:

> "Wemipayat guneunga shinaking
> Wunkenapi chanelendam payaking
> Allowelendam kowiyey-tulpaking."

The legend goes on to relate that after the flood the true men (Lennapewi) were with the turtle, in the cave-house, the dwelling of Talli. It was cold, it snowed, and from the north plain they went south in search of milder land and game. In the new land the northlings separated from them, and the Snakes (enemies) fled and hid.

"In vast numbers, in a single night, they went to the Eastern or Snake Island, all of them marching by night in the darkness over the waters of the hard, stormy sea. The northlings, the easterlings, the southerlings (*Shawanapi*), the beaver-men, the wolf-men, the hunters or best men, the priests and medicine-men, with their wives and daughters, and their dogs. They all arrived at the land of firs, where they tarried; but the western-men, hesitating, wished to return to the old turtle-land." The next song tells of a long sojourn in the fir-land, under many chiefs; making war on the Snakes, and slowly wending southward till they came to *Shililaking*, buffalo-land, in the plains beyond a hollow mountain. Here, on the Yellow (Missouri) River, they built towns and *raised corn on the meadows*. There Taminend reigned, the greatest and best of chiefs, and all was peace, because all men were his friends. But this golden age was not maintained under his successors; there was war north and south, until at last Opekasit (East-looking said, "Let us go to the sun-rising," and many went eastward together. The Mississippi was reached, and the nation tarried long on its west bank. The contest with the Alligewi was long and doubtful after the river was crossed, but at last the enemy fled southward, "and all the people were pleased. South of the lakes they settled their council-fire, and north of the lakes were their friends the *Talamatan*. Next was Linniwalamen, who made war on the Talamatan (the Hurons)." The division and separation of the tribes is next described. The *Nentegos* (Nanticokes and *Shawanis* went to the south-land. The country was occupied from Maine to Albemarle Sound, from Niagara to Kentucky, from Lake Erie to the Chesapeake, by the Algonkins, and the Iroquois and the Eries trembled. The Algonkins made war on the Cherokees and the Creeks. They had alliances with the *Hilliniki* (the Illinois), the *Shawanis*, and the *Kenowikis* (Kanawhas or Canoes), and were friends of the *Wemiamik* (Miamis, Weas, or Beaver-children), and the *Tuwas* (Ottowas), and *Tulamatans*, or Hurons. The wide range of these affinities and relationships is very noticeable. The record concludes as follows:

"Then the children divided into three parts, the *Unamini* (or Turtle tribe), the *Minsimini* (Wolf tribe), the *Chickimini* (Turkey tribe).

"*Epallakchund* was chief, and fought the *Mahongwi* (Mengwi, or Mingoes, or Iroquois), but failed.

"*Langomwei* was chief, and the *Mahongwi* trembled.

"*Wapachikis* (White-crab) was chief, and a friend of the Shore people.

"*Neauchipat* was chief towards the sea.

"Now from north and south came the *Wapagachik* (White-comers).

"Professing to be friends, in big-birds. Who are they?"

A supplementary and modern fragment tells, in the tones of a Jeremiah, who these *Wapsinis* (East-people) are, "who came out of the sea to rob us of our lands." It recounts the friendship of Penn, the subsequent wars, and how the Delawares were driven to Ohio and Indiana, ending with "*Kithtilkand* and *Lapabonit* were the chiefs of our two tribes when we resolved to exchange our lands and return at last beyond the *Masispek*, to our old country.

"We shall be near our foes, the *Wakon* (Osages), but they are not worse than the *Yankwisakon* (English snakes), who want to possess the whole Big-island.

"Shall we be free and happy then, at the new *Wapahani*? We want rest and peace and wisdom."

There is a certain degree of verisimilitude about this narrative which gives it a great interest to every inquirer, and at least makes him wish its genuineness could be established. If that were done, it would at once take rank as one of the most valuable ethnic records in existence. Until that is done, however, we must be content to regard it with suspicion, and to hang no theories upon it.

The Indians on the west side of the Mississippi who had anything to do with St. Louis or its site at or previous to its settlement, were, as has been stated, the Missouris and the Osages, with now and then the Pawnees. The latter tribe were akin to the Tunicas, a southern Indian race, roaming originally south of the Arkansas, and probably of the same nation as the Comanches. At the period of the settlement of St. Louis their headquarters were on the Platte. The Osages certainly, and the Missouris probably, were of the great race of the Dacotahs or Sioux, a distinctive American nation whom the early French explorers found occupying all the region about the headwaters of the Mississippi, from Lakes Superior and Michigan across to the Missouri, and thence southward, on the west side of the Mississippi, as far as the Arkansas River. The main tribe had not yet become horsemen, but they were entirely a nomadic race.

The Missouri Indian bands, as has already been known, paid Laclede and Chouteau a long and disagreeable visit while they were laying off the original town of St. Louis, and their squaws helped to dig the first cellar ever excavated within the limits of the present city. They appear to have been comparatively harmless savages, easily controlled and intimidated. The tribe was quite numerous at one time, its villages being situated on the Missouri east of Jefferson City, but it soon yielded to the pressure of civilization. The French fur-traders, trappers, voyageurs, and coureurs, ascending the Missouri River from New Orleans and Canada, early made their homes among these savages, and repaid their hospitality by corrupting them with drink and disease. Later, when the tribe was removed farther west and settled on the Platte, near the Otoes, it sunk into a truly deplorable condition. It had received much aid from the government in the shape of money and instruction; teachers, smiths, and farmers were attached to its service, but all to no good. The evil spirit seemed to have become domiciliated in its lodges, the people were jealous, discontented, and factious, and there were continual orgies and bloodshed. They finally conceived such a deep-rooted prejudice against the spot occupied by them, on the north side of the Platte, under the impression that an evil manitou infested the place, that, in a moment of drunken riot, they set fire to their village, and it was burned to ashes. They then pitched their lodges in the prairie, on the south side of the river, whence they were finally removed to the Indian Territory.

After Pontiac's war, there was a great commotion and many changes of location among the Indian tribes east of the Mississippi, the ultimate effect of which was to give much trouble to Missouri and St. Louis. The State never had a great Indian war, but it suffered continually from Indian raids and riots during a long period of time. The pressure of population into the western parts of New York, Pennsylvania, Maryland, Virginia, and North Carolina, and the beginning of settlements in Tennessee and Kentucky, drove great numbers of the Eastern Indians into Ohio and Indiana. The Mohegans, Delawares, Wyandots, Nanticokes, Shawanese, Kanawhas, Five Nations, Cherokees, all made their way into the territory of the Miamis, while the restive Dacotahs pressed the Mascoutins, Sacs and Foxes, and Kickapoos down into the territory of the Illinois. At the same time land companies and land speculators began to purchase Indian titles by the wholesale. The French colonists did not seek such an occupancy of Indian lands as would expel the original proprietors from them, and they tilled the soil and built their cabins alongside of and at peace with the natives wherever they planted themselves. Not so, however, the colonists of English descent. They demanded a clear title, undisturbed possession, and no redskin neighbors, and they enforced these demands with their rifles. From the time of the treaty of Lancaster, in 1748, the most persistent efforts had been

made to drive the Indians west of the Ohio at all points, and much bloodshed was the result. After the surrender of the French settlements east of the Mississippi in 1761–63, and the occupation of Kaskaskia, Post Vincennes, and Detroit by the English, a number of western land companies were established, intended to operate in the track of British expeditions sent out to subdue the savage "hostiles." Of these, we need refer to but two in this connection, the object of which "Dunmore's war," in 1774, ending in the desperate battle of Point Pleasant, was certainly undertaken to promote. On July 5, 1773, at a public council held in Kaskaskia, an association of English traders and merchants, styling themselves "the Illinois Land Company," obtained from ten chiefs of the Kaskaskia, Cahokia, and Peoria bands a deed for two very large tracts of land on the east side of the Mississippi. The first of these covered what is now known as the "Egypt" district of Illinois; the second, what is now the central part of Illinois, with the river of that name for its north boundary for ninety leagues. The members of this company were principally London and Pennsylvania merchants, including the Francks and Hamiltons. The other company referred to bought from the chiefs of the Piankeshaws, through Louis Viviat, a merchant of the Illinois country, all the best lands of the Wabash valley, to the extent of thirty-seven million four hundred and ninety-seven thousand six hundred acres. The purchase was made Oct. 18, 1775, of eleven Piankeshaw chiefs, and the members of the company purchasing were the Earl of Dunmore and his son; Louis Viviat; the Francks, of London and Philadelphia; Thomas Johnson, Jr., and John Davidson, of Annapolis, Maryland; William Russell, Matthew Ridley, Robert Christie, Sr. and Jr., of Baltimore; Peter Campbell, of Piscataway, Maryland; William Gaddes, of Newtown Chester; William and Daniel Murray, Nicholas St. Marlin, and Joseph Page, of the Illinois country, and Francis Perthuis, of Canada. The occupancy and settlement of these lands was prevented by the outbreak of the Revolutionary war. In April, 1780, the Wabash and the Illinois Land Companies were united into a single company, and their agents were repeatedly before Congress (in 1781, 1791, 1797, 1804, and 1810) for a confirmation of their claims, which, however, was always refused. The consideration paid by the Wabash Company to the Indians for their grant of thirty-seven and a half millions of acres was five shillings in cash, 400 blankets, 22 pieces of stroud, 250 shirts, 12 gross star gartering, 120 pieces of ribbon, 24 pounds vermilion, 18 pair velvet laced housings, 1 piece of melton, 52 fusils, 35 dozen large buckhorn handle knives, 40 dozen couteau knives, 500 pounds of brass kettles, 10,000 gun-flints, 600 pounds gunpowder, 2000 pounds lead, 400 pounds tobacco, 40 bushels salt, 3000 pounds flour, 3 horses, 11 very large silver arm-bands, 40 wrist-bands, 6 whole moons, 6 half moons, 9 ear-wheels, 46 large crosses, 29 hair pipes, 60 pairs of ear-bobs, 20 dozen small crosses, 20 dozen nose-crosses, and 110 dozen brooches. There is some satisfaction in knowing that this outrageous purchase was never confirmed.

After the Revolution, the British having deserted their Indian allies in the West, they were left in a wretched condition of discontent and partisan and predatory war, constantly in collision with the numerous streams of immigration now pouring in from every quarter, and with border lines unsettled. Vir-

ginia claimed the whole of the Northwestern Territory, by right of original charter, and by conquest also as the result of the daring and successful expedition of George Rogers Clarke against Kaskaskia and Vincennes. The Spaniards also put in a claim to a part of Illinois, in consequence of the expedition from St. Louis up the Illinois River in 1781. Harmar, an

then St. Clair, and finally Wayne were sent into the Indian country to pacify them. The former two were defeated, but Wayne conquered a peace, and the treaty of Greenville, which he negotiated, was observed until Tecumseh and his English allies were able to foment new discontents. After Gen. Harrison broke the power of Tecumseh's confederacy, there was peace in the sections east of the Mississippi until the outbreak of the Sacs and Foxes under Black Hawk, which was the last breath of Indian war that disturbed St. Louis.

But during all the interval between the cession of Louisiana, in 1804, and the end of Black Hawk's war, the growing town was greatly vexed by migrating or vagabond Indians, who infested its streets in the track of hunters and trappers, and made it a border town indeed. There were a good many murders by Indians during this period, some committed within the immediate precincts of the town. The first murder trial in St. Louis after the cession to the United States, was of an Indian for killing a white man. Several cases of this sort will be found referred to elsewhere, in the course of this volume. During this period the tribes and fragments of tribes that had been struggling against the ever-rising tide of white immigration between the Ohio and Mississippi had been gradually pressed westward, until nearly all of them had finally crossed the latter river, and were settled between it and Western Kansas. Several tribes pitched their wigwams within St. Louis County. As late as 1820 there were eighteen hundred Shawanese encamped within twenty miles of the city, and they were far from being good neighbors. Close contact for twenty years with the white man had corrupted and degraded them inconceivably. Jacob Burnet, in his "Notes on the Northwestern Territory," has given a graphic description of this sort of contamination, which took place under his own eyes. After speaking of the original happiness of the Indians, their dignity of character and simplicity of manners, he says,—

"Unconscious of the ruinous consequences that were to follow their intimacy with white men, they ceded to the American government large and valuable portions of their territory at nearly nominal prices. These lands were settled by Americans, in whose purity and friendship the unsuspecting savages had great confidence; nor did they awake from the delusion till their habits of sobriety and morality had been undermined by the unprincipled white men with whom they associated, and until the vices engendered by intemperance and idleness had contaminated every tribe.

"The consequences of this degeneracy very soon terminated in their ruin. The hunting excursion ceased to be pleasurable; the labor of raising their usual crops of corn and beans became drudgery, and their chief delight was in the excitement produced by ardent spirits. The consequence was that their subsistence became precarious; they often suffered for food; their health declined; they raised but few of their children; their self-respect, their dignity of character and heroism, inherited from their ancestors, were lost; the ravages of intemperance and its kindred vices reduced their numbers and scattered their tribes; they became in their own estimation a degraded, dependent race. The government, availing itself of their weakness and want of energy, succeeded, by bribes and menaces, in obtaining the best portions of their country, and eventually in driving them from the land of their birth to a distant home in an unknown region.

"This distressing chapter of aboriginal history began at the treaty of Greenville, in 1795, and terminated in less than fifty years. The writer of these notes witnessed its commencement, progress, and close. Prior to that treaty there had been no friendly intercourse between the Indians and the white men of the United States, in consequence of the war which existed between them. That intercourse and its destructive consequences began immediately after the restoration of peace. Until that time the nations were numerous, powerful, and uncontaminated.

"The yearly journeys of the writer to attend the General Court of the Territory at Detroit made it necessary to go through some of their villages, and convenient to visit others, and often led him to their hunting-camps, which gave him many opportunities of seeing them in their villages and on their hunting excursions, and of becoming personally acquainted with some of their principal chiefs and warriors. At that time their hospitality was limited only by their means of indulging it. The corrupting influence of their new associates was just commencing, and had made but little progress. They retained the distinctive marks of their national character. Their deportment showed that they felt conscious of their strength.

"In their general intercourse with white people their manners and deportment manifested their consciousness of equality. They had lost nothing of the self-confidence which they possessed when the national and State governments admitted their independence, and met them in council as equals and friends. They were, however, unconscious of their comparative numerical weakness, and of the corrupting influence of their new associates. In a few short years their eyes were opened, their delusion vanished, and their last hopes sunk in despair.

"It would be unjust to form an opinion of the original inhabitants of this country by a reference to their descendants of the present day. In the short period of half a century they have been so changed that scarcely a trace remains of what they were when their country was first entered by the pioneers of our race, an event which sealed their destiny.

"In journeying more recently through the State, the writer has occasionally passed over the ground on which, many years before, he had seen Indian towns filled with families of that devoted race, contented and happy; but he could not perceive the slightest trace of those villages or the people who had occupied them. All the settlements through which he passed on the Maumee and Auglaize, from Fort Wayne to Defiance, and from thence to the foot of the Rapids, had been broken up and deserted. The battle-ground of General Wayne, which he had often seen in the rude state in which it was when the action of 1794 was fought, was so changed in its appearance that he could not recognize it, and not an indication remained of the many populous Indian villages he had formerly seen extending many miles on either side of the river. Flourishing towns and fields cultivated by white men covered the ground which, thirty years before, was the property and home of the nations of the forest.

"The contrast was striking, and excited a train of unpleas-

ant recollections. It was a natural inquiry, 'Where are the multitudes of people who were formerly seen here, amusing themselves on these Rapids, taking the swift muskelunge with their bows and arrows?' They were then independent and undisturbed owners of the country, which had descended to them through a long line of heroic ancestors, and which they expected their children would continue to possess when they were gone.

"It was far from their thoughts that in a few years they would be expelled from these homes and driven to herd with strangers in a strange land. They did not expect to hear so soon the same chilling salutation which was addressed to the eloquent bard of Mantua by the Roman soldiers to whom his paternal villa had been allotted by the agrarian laws of Italy,—'*Hæc mea sunt; veteres migrate coloni.*' The final catastrophe of that noble race was witnessed by the people of Cincinnati a few years since, when the remnant of the Wyandots, the last of the braves of the Ohio tribes—'*reliquiæ Danaum atque immitis Achillei*'—arrived at the landing and ascended the steamboats that were to convey them from the places of their nativity into hopeless banishment."

Such were the forlorn and degraded tribes and fragments of tribes which, between 1804 and 1825, poured across the Mississippi River at or near St. Louis. Nor were these hordes innumerous. Four tribes were represented at the treaty of Fort McIntosh in 1785; the Six Nations at that of Fort Stanwix in 1784; the Shawanese, Wyandots, and Delawares at that of the mouth of the Great Miami in 1786; the Six Nations, Wyandots, Delawares, Ottawas, Chippeways, Sacs and Foxes, and Pottawattamies at Fort Harmar in 1789; and at Greenville, in 1794, there were present, among those who signed the treaty, members and representatives of the Wyandots, Delawares, Shawanese, Ottowas, Chippeways, Pottawattamies, Miamis, Eel Rivers, Weas, Kickapoos, Kaskaskias, and Piankeshaws, several of the tribes being in several branches and belonging to various localities. Between 1804 and 1825, twenty-one tribes crossed the Mississippi River at or about St. Louis, having an aggregate membership of over thirty thousand souls.

The best enumeration of the Indians west of the Mississippi at the beginning of this century with which we are acquainted is that made by H. M. Brackenridge, in 1811, in his "Views of Louisiana." He had traveled extensively among the savages himself, ascending the Missouri above its junction with the Yellowstone, and his statistics are at once trustworthy and concise. He begins his chapter by remarking the rapid decrease of the Indian populations. Tribes and nations which were populous along the river when the whites came had either become entirely extinct or dwindled away to a few individuals. The Tensas, the Bayou Goulas, the Natchez, all numerous in the days of Tonti, D'Iberville, and Charlevoix, were now extinct. So likewise were the Houmas, the Wabashes, the Abenakis, the Tarakas, the Kappas, and the Tacucas. The Illinois once numbered twenty thousand; there remained scarce forty families. Even the Osages, who once had twenty-two towns, had only fifteen hundred warriors left, and the Missouris numbered but four hundred and fifty souls all told. Brackenridge notes the Shawanese villages near St. Louis, and calls the tribe "a sober and orderly people." Stragglers from all the tribes might be seen in all the towns at every season, selling their game and fish. There were thirty thousand Indians on the Missouri. They had been much more numerous before the small-pox got among them. "All the tribes which at this day wander over the immense plains of the West are but wretched remnants, not probably more than the tenth part of the numbers which existed fifty years ago."

The following is an abstract of part of Brackenridge's table of the Indians in Upper and Lower Louisiana in his time:

Tribe.	Warriors.	Souls.	Country.
Big Osage, Little Osage, Big Tracks	1500	5500	Osage, Missouri, and Arkansas Rivers.
Kansas	300	1500	Kansas River.
Pawnee Loup	400	2000	Platte and Kansas.
Pawnee Republ	350	1600	Kansas.
Pawnee Loup (2)	300	1500	Wolf and Platte.
Omahas	250	800	North of Platte.
Poncas	80	450	Missouri at the Qui Court
Otoes and Missouris	80	450	Platte and Elkhorn.
Cheyenne	500	1600	Head of Cheyenne River
Mandans	350	2000	1600 miles up the Missou
Sankees (Sacs)	500	2500	Below Falls of St. Anthon
Sioux bands	1500	6000	Mississippi and Missouri
Foxes	300	1000	Falls of St. Anthony.
Shawanese	300	800	Mississippi and St. Fran
Chickasaws and Cherokees	500	2000	White River.
Arkansas	200	1000	Arkansas River.
Caddoes	110	500	Arkansas and Red.

The fixed agricultural villages on the Missouri were limited to those of the Osage, Omaha, Ponca, Pawnee, Mandan, and Aricaree tribes. The Pawnees at that time were located in the forks of the Kansas, the Otoes and Missouris below Wolf River. They were all, however, hunters, and roved the plains in the season of game, having great numbers of horses and dogs. They still used the bow and arrow principally in hunting, if not also in war, and the strongest object of their veneration and worship was the buffalo head, looked upon as a powerful *Manitou*. The trade with the Indians Brackenridge did not find to be in a wholesome condition. The Spanish *régime* had countenanced shameless corruption and frightful abuses. The government farmed out the trade of localities to individuals, taxing it heavily; the monopolists in return extorted exorbitant prices for their goods. On the other hand, says Brackenridge, "the British policy has been to give their goods on a very

small profit, but to sell their liquors enormously high. After an Indian has once supplied himself with the articles of which he stands in immediate want, he becomes lazy and ceases to hunt; but with the hope presented to his imagination of obtaining a keg of whiskey he will toil incessantly."

Of the Osage or Wasatch Indians, Brackenridge mentions that their language is the root-tongue of adjacent tribes, but he does not seem to have found out that it is a dialect of the language of the Dacotahs. "These people," he remarks, "have been noted for their uncommon stature; this is somewhat exaggerated, though they are undoubtedly above the ordinary size of men. The wandering or semi-wandering nations of Louisiana may be characterized as exceeding in stature the whites. The Osages are reputed warlike, but this arises from their being at war with all their neighbors, and not from any uncommon degree of bravery. When compared with the Shawanese and the nations east of the Mississippi, they might with more propriety be regarded as a treacherous and cowardly race." The Kansas used to be the biggest rogues and scoundrels of the Missouri, says Brackenridge, but the Pawnees have beaten them so severely that they are better behaved. The Ottoes (Otoes, *Wadooktada*) are the descendants of the ancient Missouris, the remnant of that once numerous nation living with or near them. The language common to the two tribes is remarkably lofty and sonorous, and the tribes, greatly reduced in numbers, are brave and warlike, seeming to be kinsmen of the Pawnees, with whom their relations are extremely friendly. Brackenridge gives a better character to the Pawnees than they were generally credited with in his time. The Poncas and Omahas, quiet, industrious people, speak a dialect of the Osage; the Aricarees, our author says, were originally Pawnees. Of the Saukees, or Sacs and Foxes, he says that they were in his time located one hundred and forty leagues above St. Louis. They traded with the merchants both of Mackinaw and St. Louis. "The country which they claim lies principally on the east side of the Mississippi. On the west side they claim the country of the ancient Missouris by right of conquest, without defining any portion to the Ayûwas (the Des Moins Indians). To them may be ascribed the destruction of the Peorias, Kaskaskias, Cahokias, Missouris, and Illinois."

Du Pratz, the not very reliable early historian of Louisiana, gives a sketch of the travels of a sort of Indian Anacharsis whom he met about 1760, and describes as possessing a very solid understanding and great elevation of sentiment. This was a Yazoo Indian, *Moncachtape*, "pain-killer," whom the French called "the interpreter," from his familiarity with many native dialects. He lost his wife and children, and thereupon became a traveler, about the middle of the eighteenth century. He first sojourned among the Chickasaws, then went to the Chaouanons (Shawanese), in Tennessee and Southern Kentucky. From their country he proceeded to the mouth of the Wabash, and ascended the Ohio until he found himself in the territory of the Iroquois. After viewing the Falls of Niagara, he descended the St. Lawrence to the Gulf. On returning to the Ohio he constructed a canoe, and descended to the Mississippi and down to the Yazoo. In his next journey he ascended the Mississippi and the Missouri, being entertained by the Tamaroas (a band of the Illinois) and the Missouri Indians, dwelling among the latter long enough to acquire their language. He found them only a few days' voyage above the mouth of the river. Proceeding still farther westward, he came to the Kansas and then to the Otoes, ascending the Platte to their village. His journey did not end until he had reached the Western slope and the navigable waters of the Columbia River. It is noteworthy that he found the Missouris opposite the Illinois and not far from the Mississippi, and that the site of the Otoe village in 1750 was just about the same as that occupied by the tribe a hundred years later.

The Missouri Indians disappeared too early, and left too few and faint traces of their character to be associated with the history of St. Louis. The Osages were the most important tribe and the most distinctive people among the red men of Missouri, and of them we are able to furnish a pretty full and accurate account from the studies of persons who knew them well. We have already quoted what Brackenridge had to say of their stature. Their countenance is rather comely, with black, brilliant eyes, aquiline nose, and generally regular features. *Tah-hrin-sca* (or White Hair), the great chief of the Big Osages, is said, besides being a person of great good judgment, to have been the handsomest man of his nation. He was at the time we speak of forty years of age. An anecdote is related of him while he was with several braves in Washington City. The President, Gen. Taylor, wishing to pay him a deserved compliment, remarked that he believed he beheld in him the comeliest man of his nation. As the compliment was being interpreted, not a muscle of the noble chief's countenance was moved, but, bowing gravely, and with a show of approval to his host, he replied, "You have spoken the truth, my Father: I believe you!" The reply shows the readiness and absence of all ceremony with which an Indian usually

receives a well-bestowed compliment. The personal endowments so liberally bestowed on the men is not fully shared in by the Osage females. Their women have generally coarse and irregular features. The ungainliness of feature, however, is atoned for by a well-knit and graceful form, possessed with very rare exceptions by all the females of the nation.

The general character of the Osages is precisely that of the majority of Indian tribes. They are brave, but not to a fault. They see no impropriety in retreating, on ordinary occasions, from great personal danger. They are warm friends when a sufficient cause of liking is afforded them, and will endure severe privation and undergo serious suffering to render a service. Unlike many other Indians, they are not discreditably vindictive. Ever ready to resent an affront, they can with time, or with what they may deem a sufficient reparation, forget a serious injury.

Although the Osages was one of the first nations with whom the white traders dealt (the Chouteaus had a post on the Osage River long before the beginning of this century), they yet retained to a very late day, in all their purity, their original habits, callings, and general mode of life, discarding, despite the constant contact in which they were placed with the whites, every idea of turning their attention to agriculture or other useful pursuit. Until they were removed to the Indian Territory, they had a strip of land in Kansas fifty miles long, bordering on Bates and Jackson Counties, Mo., with an abundant hunting range westward. There were two principal tribes and several villages, and the soil and pasturage being good in their reservation, they were comfortably well off.

What the precise origin of the Osage nation is we cannot pretend to determine accurately. A tradition is extant among them that many years ago their forefathers lived on the borders of immense lakes,—our Northern lakes,—and that they frequently journeyed westward, for the purposes of hunting and making war upon the tribes who possessed the territory they now inhabit. The tradition may very possibly be true. Old traders now living remember well the day when they were scattered all through Missouri, even to the Mississippi River. Whatever particular locality they may have originally emigrated from, it is evident that the nation was formerly much more numerous than now, and that large bodies have left it, from time to time, since they crossed the Mississippi, to establish a distinct and separate government of their own. With other evidences, this is told us in the fact that many of their neighboring tribes speak, with some differences, their own language. Thus the Quapaws, who inhabited the prairie to the southwest; the Kansas tribe, over about Council Grove; the Arkansas,—now few in number, and promising soon to be quite extinct,—who were scattered along the Arkansas line, all speak the language of the Osages, with, of course, such variations as distance and difference of customs and callings will naturally bring about. The language of the Otoe tribe, formerly near Council Bluff, is also so like the Osage that the two nations readily understand each other. The probabilities are that they were all at one time a single nation. Some cause of dissension induced separation at various times. They are near neighbors, and live now on friendly terms, extending to one another every ordinary courtesy.

The government among the Osages is simple in the extreme, indeed, hardly deserving the name of government. Each great division (of the Big and Little Osages) has a "great chief," who nominally is the head of the nation, but whose authority, in fact, does not extend so far as that of many others below him. His official list of duties includes merely the presiding at councils, calling the attention of the nation to any subject which may require their immediate discussion, and entertaining distinguished guests. The great chief derives his distinction or his power—whatever name it is entitled to—hereditarily. After the principal division in the nation of Big and Little Osages follow several subdivisions, each of which has its particular chief, who is elected for some victorious deed or appointed by the great chief. This also is an honorable distinction merely, which gives them no power. Third and last in order are the "braves," who come in much greater number, and with whom the authority of government really lies. These are self-made men, who earn their distinction by their valorous deeds and brilliant achievements on the battle-field. No matter if he be the pauper of the nation, if he have scarcely attained the age of maturity, or if he be stooped and crippled with years, the person who will accomplish an act to entitle him to the distinction of brave becomes immediately invested with all its honors and all its benefits. A brave is the favorite of the nation, and his counsel will be blindly followed where the word of the chief above him would not be hearkened to.

To give an idea of the plan and appearance of an Osage villages, as also to impart an insight into the habits and mode of life of the entire nation, it is necessary only to select one especial village, with whose population, in our remarks about manners and customs, we shall more particularly familiarize the reader. We choose for this purpose to select the vil-

lage of the Big Osages as it existed before the removal of the tribe from Kansas, situated some fifty-six miles west of the Missouri line, and about on a parallel line with the town of Ste. Genevieve, on the Mississippi. The Neosho River, flowing about a quarter of a mile west of the village, was concealed from it by a dense forest, lining its borders and extending from either shore to a distance of three or four hundred yards. This timber consisted principally of splendid oaks, walnuts, hickories, and mulberries. Beginning at the wooded strip near the Neosho, and extending as far back as the eye can reach, the prairie rises gradually and evenly. It is unbroken by abrupt descents or elevations, save some three or four miles to the east of the village, where is encountered an occasional mound, evidently the work of nature, but which, from its singular locality and peculiarly symmetrical proportions, at first approach appears to be the result of human labor. The situation of this village, just at the outskirts of the timbers, allowed its population the enjoyment of the various desirable changes of temperature and weather. Thus the warm summer months brought the prairie breezes, which at times become so violent and so chilling as during the night to require, for the mere sake of comfort, additional clothing or fire. In winter, when the blast is at all times disagreeable, a removal to the woods, only a short distance off, will insure a sufficient shelter. The prairie, moreover, furnished abundant and excellent pasturage for the horses in spring and summer, and when this had gone, the timbered strip in winter offered a passable supply.

The village of the Big Osages numbered about two hundred lodges, distant generally from fifteen to twenty feet apart, and rising in every direction with but little regard to their order of arrangement. Before or after the oppressive heat of the day, when its population was in full life and motion, it presented quite a picturesque, if not an imposing appearance. Its numerous parties of savages, in wild accoutrement, were scattered here and there, some engaged in horse-racing, others earnestly disputing the victory in our own Christian game of "prisoner's base;" others, again, separated from the throng by some out of the way lodge, welcomed the recital of every ludicrous occurrence with renewed bursts of boisterous laughter. A little farther on, its many bands of wild horses were quietly enjoying the luxurious abundance which the prairie affords, or, in frolicsome humor, cavered madly in every direction through the grass. From every quarter were heard the shouts of children, the sound of beating drums, and the songs of lovers and of warriors. The varied scene, in a word, equaled the wildest imaginings of Indian life, and must be seen to be fully appreciated. The lodges—every one of which is designed to accommodate a single family only—vary from seven to ten feet in breadth, and from twenty-five to a hundred feet in length, according to the number of its tenants. A family of five persons will occupy a lodge of twenty-five or thirty feet long. An Indian lodge is constructed after this fashion: The necessary number of small green hickories, eight or ten in number, are, in the first place, firmly secured in the ground in two parallel lines, whose length and distance from each other are the limits of the tent. The ends above are lashed together, so that the whole forms a continuous arch. These are afterwards overlaid with mats carefully fastened at short distances, and offering a reliable resistance to wind and rain during even the most severe storms. The low, marshy tracts occasionally encountered in the Osage prairies furnish a tall species of grass, which, when properly dried, serves as an excellent material for making these mats. The lodge having been erected, dirt is heaped against the matting at its foot, to secure it in the event of violent gusts of wind, and a few feet off a deep trench is dug to carry off the water. Holes are made at the roof of the lodge to allow the escape of smoke from the fires within, and over these holes dressed buffalo-skins are thrown loosely to prevent the rain from entering.

Though cleanliness is not an indispensable characteristic of the Indian, the interior of an Osage lodge presents, nevertheless, a remarkably neat and orderly appearance. While the Osage will make his most sumptuous repast on dog-meat, and while he will go about in times of mourning for months with probably half an inch of dirt daubed over his face, he never fails to expend some care on the cleanliness and comforts of his habitation. The lodge floor is spread with buffalo robes and bear-skins. Hunting accoutrements, horse trappings, kitchen utensils, clothing, etc., are ranged along the sides of the tent, where they will not interfere with the movements of the inmates. The head of the family has a fireplace in his lodge for each of his wives, at which she cooks, and near which she places her bedding and all the personal property and clothing, culinary utensils, etc., he may allow her. An utter stranger, in entering a lodge, may, by this domestic arrangement, know the precise number of wives maintained by his host. We may as well allude here, also, to a singular custom of hospitality. When a visitor has crossed the threshold, whatever fireplace he chooses to sit by, the wife whose fire it is, and whom he is supposed to honor by the preference, immediately rises to prepare him a collation. Her neglecting at any time to show her

guest this attention is an evidence that he is regarded as an enemy, or, at all events, that he is unwelcome.

No difference occurs in the size or mode of construction of the lodges, other than that which may arise from the greater or less number of their inmates, or from the wealth of their owners. The same species of covering precisely shelters the great chief and his brave as that which protects the humblest pauper in the nation, and, on account of this similarity externally of all lodges, it is difficult, without being intimate with every walk, alley, and by-path in the village, to find the residence of an acquaintance who may live a little distance off.

In the old times, before the Osages lost their Kansas lands, two annual periods of intense activity broke up their life of quiet, indolent indulgence. These were in June and November, the time of their spring and winter hunt at each season, for buffalo on the plains, and deer, elk, and antelope in the timber. The summer hunt is for meat alone, the late fall hunt for meat and skins and furs. Each hunt used to occupy about eight weeks, including the journey of six or seven hundred miles to the Grand Saline or to Bent's Fort and back.

Although plunged in a state of ignorance and barbarism from which, like the majority of other Indian tribes, there is little hope that they will ever be redeemed, the Osages have indeed a cause for self-congratulation in the abundance which meets them at every side. Neglecting the cultivation of the fertile soil they possess, and shunning, in fact, every industrious and useful employment, they seldom lack the necessaries of life, and frequently enjoy many of its luxuries. If anything could repay the loss of mental and moral improvement consequent on a civilized state, certainly their many advantages of climate, of soil, and of game of every description would repay these savages tenfold.

While they are at home, the Osages—we allude to the men in particular—do absolutely nothing that is useful and profitable. The history of a day in the Big Osage village is told in a few words. At early dawn, the time for rising, the singular and rather ludicrous custom of bemoaning whatever loss they may have sustained, or whatever evil, great or small, real or imaginary, may have befallen them, is indulged in by the population. An introductory moan in one lodge will be answered by a hysteric cry in the next, and the sounds of the two probably will be drowned by the violent sobs of a third yet more inconsolable mourner, who has chosen a position at his lodge door. In this way the work of sorrowing progresses until at last the entire village is in tears. The loss of a near relative, the death of a favorite dog, the illness of a hunting-horse, or any injury to some cherished trinket, all enter on the same footing in the category of legitimate themes for this species of mourning. Nay, as absurd as it may appear, should no nearer cause of sadness have occurred, an Osage will even shed tears as he leaves his bed, and bewail in the most pitiable terms the death of some remote ancestor whom he never knew. The time for such extraordinary ebullitions of sorrow is limited to fifteen or twenty minutes, after which every trace of care disappears, and the most light-hearted cheerfulness probably will follow.

How the matutinal mournings just described originated we can have no idea. It seems to be an ancient custom, however, and is religiously adhered to by every division in the nation. To proceed with the history of a day, the women busy themselves afterwards in preparing meals, while the men look after their horses that generally have been grazing in the prairie adjacent to the village. The remainder of the day is passed by the males as they may find most agreeable. While the women are engaged almost every hour in cooking (for an Osage will eat as many as ten or twelve meals during the day), or during short intervals, mayhap, in repairing the hunting accoutrements of their husbands, the men pass their time in racing, dancing, gambling, and other games of various descriptions. As night approaches they congregate in numerous parties at the largest and most convenient lodges, where, encircling a little fire-place, they remain frequently until within a few hours of dawn, engaged in dancing and in social conversation. Almost the sole topics of conversation with the men are women, war exploits, hunting, and horses. The night is rarely allowed to pass without several dances, accompanied generally by singing and by the beating of the drum. These drums, giving a dull, monotonous sound, are readily made from a keg half filled with water and overspread at one end with a dressed sheep-skin.

The ludicrous custom spoken of above of weeping for their ancestors, like Mark Twain shedding tears at the tomb of Adam, sufficiently demonstrates the fact that the Osages belong to the race of the Dacotahs. Among that nation this custom is universal, and has been noticed and commented upon by all travelers, from Hennepin down. It doubtless had its origin in some obscure superstition or tradition of the race, and must not be attributed, as some travelers have sought to do, to a tendency to hypocrisy. In point of fact, people are continually deceiving themselves about the manners and customs of savages, and there is no

greater mistake, for instance, than to suppose that the American Indian is morose, taciturn, and unsociable. In regard to this a clever writer has said that—

"When a party of savages visits one of our cities, where a crowd is constantly at its heels, and where there are an hundred eyes to stare at it from every side, it is but natural that these persons should be reserved, and that they should carefully conceal the many emotions of astonishment and admiration brought into play by the curious things they see. About two years ago we sat in a circus, near a party of six Sioux, none of whom, we know, had ever before witnessed such feats of agility and equestrianism as were there shown them. To lend yet more interest to the entertainment, we learned from their interpreter that in a few minutes after their entrance every member of the party, believing the human frame altogether too frail to undergo such exertions, had convinced himself beyond the possibility of doubt that the performers were fictitious figures, made to ride, jump, and run by some ingenious mechanical contrivance which they did not understand. With such additional matter for wonderment, the party sat in almost utter silence, like so many statues, to all external appearances not at all surprised, and but poorly entertained. The feeling in this instance should be understood. The savage spectators were only carrying out one of our own wise saws, 'to do in Rome as Romans do,' and, no doubt, showed their good sense in this, as they do under other similar circumstances, by restraining every extraordinary manifestation of astonishment. This can give no correct idea of the Indian at home. No race is more sociable, probably, and more impulsive than the Osage Indians; none receive the narration of an amusing anecdote with greater gusto, follow a tale of sorrow with more extravagant exclamations of sympathy, and, in a word, spend more of their time in sociable conversation than they. With an uncontrollable curiosity to know the history of those about them, and a desire ever awake of relating their own exploits in battle-field or hunting-ground, their most pleasant moments are those consumed in a social interchange of experience and sentiments.

"The only school for mental and moral improvement the Osage youth finds is the example set by his elders. He is assigned no teachers, and, so far as the mode of employing his time and the acquirements—either of good or evil—he chooses to master are concerned, he finds himself a free agent from his earliest infancy. Some attention, however, is paid the proper development of his physical powers,—indeed, some portions of the training he undergoes while preparing him for the hardships he is destined to encounter in after-life is characteristic of the general barbarity of his tribe.

"An infant has hardly inhaled the first breath of life when he is conveyed to the water-course nearest at hand, and, during the bitterest wintry weather as in the mildest day in summer, is given a copious bath. Afterwards, being swathed in suitable raiment, he is placed in the charge of some other nurse than his mother. A week ensues, when he is reclaimed by the parents, and is placed in his cradle, a curious and simple article of domestic convenience, which is then never left till the occupant has become old enough to learn to walk. The cradle consists simply of a plank about a foot, probably, longer than its intended occupant. The child, having been laid flat upon it, is secured firmly by strips of blanket and other bandages. These begin at the feet and end only about the shoulders. They are compressed more particularly about the loins and pit of the stomach, with a view to throw out as much as possible and to expand the chest. Secured snugly after this fashion, the child in the lodge is placed 'on end' out of harm's way; in mild, genial weather it is left without near the lodge door, or—during the temporary absence of its nurse—hung up to the limb of a tree, where it basks quietly in the sunshine, without danger of molestation from the dogs and wolves that may infest the vicinity. On a journey the cradle is hung to the saddle-bow, and, while still offering every security to its little prisoner, proves thus no inconvenience to the rider.

"After he has learned to walk, and until he is old enough to depend on his own exertions for maintenance, the child is allowed to remain about his parents' lodge, abstaining always from every species of onerous labor. When about twelve years of age he becomes herder to his father's drove of horses, and begins also to learn the use of the bow and fire-arms. At sixteen or eighteen years he is invested with the honors and responsibilities of manhood, and shares the labors and participates in the amusements of his elders about him.

"The healthful tendency of the constant bodily exercise taken by the Osage Indians from their earliest youth is manifest in the extraordinary powers of endurance with which in time they become endowed. We need give, by way of illustration, only a single instance, that of an *accouchment*,—an alarming crisis in the lives of our own females, whose physical developments, in the majority of cases, have been retarded from the lack of necessary exercise.

"An Osage female is rarely confined to a sick-bed from the effects of child-birth. On the summer hunt of 1825, when the nation was only a few days out from their village on the Neosho, an elderly female, whose critical situation would have indicated an early confinement, followed in the rear of the train. An hour or two after the tents had been struck one sunshiny morning, a trader, the only white person among the population, heard some groans issuing from a small copse of wood, as he was about to pass it, and, hastening in its direction, found the woman on the point of giving birth to her child. To his proffered call for assistance the patient raised the most strenuous objections, and could only be prevailed on after repeated entreaties to accept some additional clothing, which was finally left her. The trader repaired to his party, and an hour more probably had ensued, when the woman overtook them, to all evidences in excellent health and spirits, and bearing in her arms a fat, bright-eyed little papoose. This is one only out of a hundred instances which occur daily to show the wholesome result of the frequent bodily exercise taken by the Osages."

The Osages are not subject to many diseases, which is fortunate for them, for their pharmacopœia is not rich, and their practice both of physic and surgery is very primitive indeed.

If all the curatives included in the denomination "Indian remedies" had the majority of their properties in common with the remedies resorted to during illness by the Osage Indian, then would the system be a most absurd and dangerous species of quackery. The Osages have certain roots for the cure of snake-bites, which occasionally are administered successfully, but which almost as often effect no satisfactory result; they resort in some diseases to vapor baths, taken in temporary lodges thrown up for the purpose, with or without result as the propriety of the remedy might determine; in local and other affections, attended with acute pain, they apply dry and wet cups, the cups being made of buffalo horn; and finally, wherever a

wound has been inflicted, they are careful always to keep the injured part very clean. These include all the rational remedies we can bring to mind which the tribe bring to their assistance in times of sickness.

The medicine-men of the Osages, while in the discharge of their professional duties, are invested with all the dignity and honors enjoyed among us by graduated doctors of medicine. The treatment, with its results, of a little girl, the daughter of a brave, who on a certain occasion, having been struck violently with some hard substance on the left arm, was threatened with its loss, may give an idea of their medical profession and their mode of practice:

The child, owing to an abundant secretion of pus in her wound, had suffered intensely for several days, when her case was at last submitted to one of the most distinguished medicine-men in the nation. An hour or two after he had been sent for, the doctor, accoutered in the most fanciful habiliments his wardrobe furnished, and having his face and arms well coated with green and red paints, made his appearance at the lodge door. He was received by the family with demonstrations of the most profound respect, and was left alone with his patient, the only uninterested spectator present being a white trader, who was allowed to remain by especial favor. Having inquired from his patient the seat of her disease, the medicine-man began his treatment with a species of solemn exorcism. Throwing his hands aloft, he abjured the evil spirit that possessed the invalid, in a kind of half-supplicating and half-threatening strain, to leave her. Afterwards lying at her side, and applying his lips and teeth to the spot which was most painful, he pulled the skin violently from one side to the other, keeping up all the while a very absurd and peculiar nasal grunt, interrupted now and then with a threatening exclamation against the disease. This continued for some ten or fifteen minutes, when, increasing the vehemence of his strange guttural murmurs, and pulling the flesh violently with his teeth, he sprang suddenly to his feet, and spat from his mouth a small frog, which when he entered he had kept carefully concealed for this purpose. The frog in this case was the evil spirit which had possessed the invalid. Pointing to it, and panting from his recent excitement, the doctor exclaimed in an exulting tone, "Rejoice, my daughter, you are now cured! Behold the bad spirit that infected you! You suffered much, because he is large: have no more fear, he is now quite harmless." Then producing a pinch of powdered root of aromatic flavor, he scattered it over a fire near the sick-bed. The remnants of the disease would be carried away, it was intended, by the smoke. Two days after this operation a young brother of the little invalid was seized with the idea of pricking her arm at several places with his knife. Thus, fortunately, he allowed the pus to discharge itself. Repeating this surgical operation several times, his sister soon became convalescent. The medicine-man, however, had, in this as in all other similar instances, the credit of the cure. He was feasted and courted by the family; and, finally, as a more substantial remuneration for his professional services, presented with a beautiful hunting-horse.

In almost every disease the ridiculous ceremony described above takes place. The disease is always some evil spirit; and this evil spirit is, in turn, a frog, or a small pebble, or a grasshopper, or aught else which the medicine-man may choose to select. The incantation will, as a matter of course, invariably remove it. Afterwards nature, or the accidental adoption of some rational remedy, may effect a cure, which in all instances is attributed to the mystic powers of the medicine-man.

In the event of a death, the corpse is enveloped in a blanket and taken immediately to its place of interment, generally a mound or some other prominent spot. It is covered with earth and stones, and stakes are afterwards driven at either side and crossed over as a protection against the wolves. The nearest relatives only of the deceased go into mourning. The male mourners array themselves in their filthiest and most shabby habiliments, cover their faces with dirt, and allow their hair (which, with the exception of the scalp-lock, is always shaved closely) to grow. The females dress themselves likewise in their worst garments, and clip their hair close to the head. Both are reserved and morose during the entire season of mourning, abstaining from a participation in the amusements and employment of those about them, and leading, as much as their domestic ties will allow them, a secluded life.

When a death occurs among the Osages, the mourning of the nearest kinsmen of the deceased is not laid aside until they have made his or her spirit some species of offering. Oftentimes, for weeks and months together, the opportunity for a suitable sacrifice not having occurred, they will remain shorn of every ornament, and will religiously adhere to their tattered garments and soiled visages,—emblems of mourning,—continuing to shun the society of those about them. The nature of an offering may differ according to the character and achievements of the deceased. To steal the horse or burn the lodge of an enemy, to perform valorous deeds of any nature whatever, to sacrifice an animal or some cherished property, or, finally, to take the life of a fellow-creature, may (with all but a wife) each, under certain circumstances, prove sufficient

cause to doff one's mourning. The sacrifice of human life in such instances is frequent. So much a matter of course have such atonements become, that a mourner will sometimes take the life of his beloved friend to expiate the death of his near kinsman, and the probabilities are that he will not even be brought to task for the murder. In the summer of 1833, whilst the cholera was raging in its greatest fury, it attacked and carried away, among others, the daughter of the first brave of the nation. This brave was also the very intimate friend of a trader living among the nation, a gentleman connected with the fur company, who had had the command of his present post for many years. The girl's corpse had hardly grown cold when, on the evening that she died, her father, who had been sitting pensively among a noisy throng, suddenly assumed an air of ferocious determination, and as he rose to his feet disengaged his battle-axe from his belt. "My daughter has gone," he said, as he advanced to the lodge door; "she wants a worthy person to accompany her to the hunting-ground above. I shall take the life of our pale-faced brother." No white person was more esteemed than the trader to whom he alluded, and the prospect of his speedy doom cast a gloom over the throng who had overheard the mourner's determination. So sacred, however, was his terrible obligation considered that not one dared raise a word of remonstrance. The brave proceeded on his fatal errand, and as he reached the trading-house knocked violently at the door. Unhappily for himself, a Canadian employé, one Louis Bernard, who happened at the time to be in the room, answered the summons. He was on the point of crossing the threshold when the hatchet was buried in his head. He expired almost instantly. The murderer turned coolly back, and having reached his lodge, proceeded, with grave demeanor, to cleanse his hatchet and to don his beads, bracelets, and other ornaments, and to alter the mourning plight in which he had disguised himself an hour or two before. The death of his child had been properly atoned for, he could now follow his usual daily avocations. He was, of course, never called to account for the murder he had perpetrated; the promptness of his expiation, on the contrary, placed another laurel on his brow.

When, after a death has occurred, a long time is allowed to elapse before an offering is made, the spirit of the deceased, it is supposed, fails to gain admission into the celestial hunting-grounds, and wanders restlessly about its old home on earth, haunting and annoying those from whom the sacrifice should come. Tradition records an incident to show that these spirits can wield a fearful power when it suits their purpose. A tattooer, who had left his lodge on a professional visit, while journeying through the forest, felt a warm breath exhaled several times upon his cheek and shoulders, like that of some invisible person near him. Being weakened and exhausted by fright, he sat himself upon a log, when on a sudden he saw a strange and unearthly figure make its appearance at his side. His tongue clung to the roof of his mouth, and he would have fled; but another breath passed over him, and the mysterious stranger vanished. He resumed his course, and in due time, having finished the tattooing of the person who had called him, was just about to return. Just as the unfortunate man lost sight of the lodge he had left, the breath again touched him, and he was stricken dead. The legend, with many others, is religiously handed down among the Osages, to show the moral obligation of offerings to the dead.

An Indian entertains no idea of the connection between soul and body, and is not impressed by any fears in the contemplation of his approaching end. Without stopping to inquire into the manner of the transition from his earthly to his eternal home, and with not the least apprehension for the consequences of such a change, he hopes merely that his troubles may cease with the termination of his earthly journey, and he will meet his death with firmness. The Osage heaven is the heaven of nearly all American Indians. It is described as a well-timbered and well-watered country, blooming with fruits and vegetation at all seasons of the year, and abounding with every description of buffalo, deer, bear, birds, and other game. The dangers of starvation shall be unknown; the discomforts of a variable and inclement climate shall have passed away; the Indians, as the favorites of the great Master of life, shall occupy the first position among the nations; all men shall be at peace, and plenty and happiness shall smile on all. Many years ago it was customary at the death of an Osage to sacrifice on his tomb all the horses he had owned, and to destroy in the same place, also, all his hunting accoutrements and other property. These immolations, it was believed, supplied the wants of the dead on their journey to the new hunting-grounds. The brave whose tomb was buried in the ashes of a valuable amount of property, and streamed with the blood of a goodly number of horses, was supposed to enter the celestial hunting-grounds at the head of the cavalcade, mounted on his favorite charger, accoutered in his most magnificent costume, and surrounded with all the pomp and splendor that had attended him on earth. This custom is now almost entirely effaced. To this day, however, on certain occasions, the favorite

hunting-horse of the deceased is led to the place of burial, the corpse made to bestride it, and the animal killed. Afterwards both man and horse are buried in the same hole, and the funeral obsequies are performed over both alike.

A wife retains her mourning a full year nearly after her husband has died. The many obligations under which he placed her when living call for particular evidences of regret and gratitude when he is dead. Ten or twelve months after she experienced her loss, the occasion of laying aside the mourning is solemnized with a final ceremony in honor of the deceased. This, like all other religious rites and feasts among the Osages, is characterized with absurdities throughout, and, deprived of its general purpose of honor to the dead, evinces only their uncouthness and barbarity of ideas. A stake, streaming at one end with one or two blankets, calicoes, beads, and other articles of personal decoration, is driven in the ground. About the time the ceremony will begin, it is [illegible]ded by probably a score of friends of the deceased, all of whom are stripped of their ornaments and besmeared on their faces, chests, and arms with clay. The wife, surrounded by a number of volunteer female sympathizers, is stationed near at hand, and holds herself, with them, in readiness to set up a cry of pitiful lamentation at the first tap of the drum by a party in the circle. These lamentations are kept up to the end of the ceremony, the assistant weepers bewailing as loudly and as bitterly as the wife herself. Simultaneously with the first cry and the tap of the drum, one of the party who forms the circle, and who has an emblematic crow-skin suspended from a belt on his back, enters the ring and begins to dance, dropping an occasional word to the spirit of the person whose memory he is commemorating. Afterwards resuming his place in the circle, he passes the crow-skin to his neighbor, who performs the same dance. All in turn follow after this fashion, when, as the last one has finished, the ceremony terminates by a distribution among the assistant female mourners of the calicoes and other presents hanging from the pole. Those who assist in bewailing on such occasions are supposed to pay a high tribute to the memory of the deceased, and are well paid by the surviving relatives. In fact, they represent exactly the hired mourners of some of our Christian countries, with the exception that they are generally better paid, and that they indulge in more extravagant demonstrations of grief.

Ingratitude and selfishness are two passions which among the Osages never fail to entail discredit. The most frightful personal perils, the most trying cravings of hunger, the most disheartening sufferings, cannot excuse a selfish act, neither will the most powerful causes be received as plea sufficient to explain away an ungrateful one. An occurrence which took place among the Blackfeet Indians some twelve or fifteen years ago might have taken place among the Osages as well, and will serve as an excellent example to illustrate the feeling with which in the latter tribe a manifestation of selfishness is received. A family, consisting of the father, wife, two children, and a little step-son, had strayed from their village one winter in search of game, and after an absence of two days, during which their efforts were attended with the worst success, while endeavoring to return they unfortunately took the wrong route. They wandered for some days without so much as a morsel to satisfy the gnawings of famine, when, to crown their distress, the fall of a heavy snow rendered a further prosecution of their toilsome march almost impossible. Hunger, fatigue, and distress had almost finished their work. The father began to speak of the hopelessness of their situation, the mother bewailed over her own sufferings, and lamented the approaching fate of the young ones, to whom she could no longer give nourishment, and the increasing debility of the children was an unmistakable evidence of their approaching end. The family had remained in camp a whole day, when, providentially as it were, the father succeeded in finding and killing a woodcock. Without evincing the least desire to minister to his own wants (a noble species of self-denial met with every day among the Indians), he passed the bird to his wife. The woman seized it with avidity, and after barely warming it over a fire, she served her own children each with its proportion; then, leaving out, despite his cries, the step-child, her husband's little son, she greedily consumed the remainder. All the while her husband who sat on the opposite side, watched her closely and fiercely. As she had finished the last morsel, motioning her to his side, he spoke to her in purport as follows: She had acted selfishly, he said; she had deprived his boy, her step-son, of life when it laid in her power to restore it to him. He had himself felt quite as severely as she the sufferings of hunger, but, with the hope of serving her and the children equally, he had willingly given up his share of the food which the Great Spirit had thrown in his way. She ought to have done like him; she should at least have treated his child as well as she treated her own. She was very selfish, and she brought her doom upon herself. As he concluded his harangue, the maddened savage seized his tomahawk, and, one after the other, butchered her and the three children about her, not making an exception in favor of his step-son, about

whom the difficulty had occurred. Afterwards, leaving his victims in the various positions that he had sacrificed them, and taking only what would suffice to protect him from the cold, he resumed his sad journey. An accident decided that he should be picked up by a wandering party of hunters, to whom he related all that had happened.

An ungrateful trait, like a selfish one, is quickly noticed, and for years afterwards will be alluded to in terms of reproach. There are many modes of expressing gratitude, peculiar to the tribe. The matutinal lamentations, mentioned in a previous number, are at times a species of grateful tribute to some lost friend. Another instance is that of races, had in honor of some favorite horse or dog that may have been dead for several years. These races occur near the spot where the animal died. It may be at the village, or during a hunt, or on a war party. Presents are made by the mourner to the winner of the race, and the gratitude of the first is measured by the liberality of his gifts to the other. With not another claim, an Osage may bring himself into high favor by proving, so far as presents are concerned, nobly grateful whenever the opportunity occurs. The frequent tributes to the memory of the dead owe their origin in fact, in some measure, to the credit which they entail.

In Chapter IX. of the present volume will be found a very complete and authentic account of the only serious Indian attack upon St. Louis, the so-called "affair of 1780." But the early records and newspapers are full of stories of Indian outrages and trials of Indians, and during the war of 1812–14 even the peaceful remnant of the Illinois seem to have taken up arms and menaced the town. The fur trade and fur-traders made it a centre of attraction for the savages, and they could not lay aside their wild ways, even in the streets of the town, when excited by drink. There was generally an Indian prisoner or two in jail awaiting trial or sentence. Brackenridge, in his very entertaining "Recollections of the West," relates how, one day sauntering along the "second bank" in St. Louis, his attention was attracted to one of the towers near the old fort (in one of whose ruined barracks the court was still held) by an Indian who sat near the iron grate, confined as a prisoner for some high offense. The Indian challenged him to a match at checkers and beat him several games. Brackenridge found, on inquiry, that he belonged to the nearly extinct tribe of the Mascoutins, or Fire Indians, whose lodges used to be pitched on the west side of Lake Michigan, between the Illinois and Wisconsin Rivers. He had married a woman of the tribe of the Kickapoos; she had abandoned him for another Indian; he met her accidentally in the streets of St. Louis, pursued, overtook, and stabbed her to the heart. Brackenridge volunteered to defend the man. He had already been in prison eighteen months, and the head chief of the Kickapoos was in St. Louis to demand his surrender to him. The case came to trial, and Brackenridge was successful in his defense, his plea being that an Indian slaying another Indian could only be tried by Indian laws, as he had only violated these. The incident is referred to to show how common Indian disorders must have been in the town at this time, when savages from every part of the country were continually jostling one another in its streets. In the course of his ingenious and able speech for the defense, Brackenridge said, "There are several Indian villages in this county; there are many in different parts of the United States, surrounded on all sides by settlements of white people. Has any grand jury ever thought of examining and inquiring into their doings and actings in their villages? . . . It is not long since, in one of the villages on the Maramec, two women were put to death by order of an Indian council on the charge of sorcery!" Certainly we have the outline here of a rather unpleasant condition of affairs.

As early as 1778 we find a deposition among the records, made by Francis Viettole St. Cloux, to the effect that while hunting on the Illinois River, at Honore's camp, Louis Makas (the Omaha), being near by, took his gun and said he would kill a Frenchman anyhow. St. Cloux dodged the shot, got Louis round the body, called some river hunters to his aid, tied him, and took him down to St. Louis in the boat. "The next morning, arriving home, he went up into the loft and brought down his scalp-lock, saying he had dressed long enough as a Frenchman, he would now dress as an Indian warrior and take scalps." St. Cloux did not like such a savage about his house, so sent for the sergeant and the guard. The Governor sentenced Louis to perpetual banishment, and to be "sent below,"—that is, sent to New Orleans to be sold for a slave to St. Domingo. But Louis filed his shackles loose, cut a hole in the prison wall, and made good his escape. He was pretty much of a desperado, had been a slave in Canada, and committed several murders. June 21, 1788, an Englishman named Kerr from the American side, his wife, son, and two daughters were murdered by Indians on Jacques Clamorgan's farm, six miles north of St. Louis, on the road to Bellefontaine. The Lieutenant-Governor appraised the effects of the Kerr family, which showed a pretty good line of household stuff. In March, 1800, the commandant at Carondelet, Pierre de Treget, re-

ports the murder of Adam House, an old man, and a boy at the Renaute forks on the Maramec.[1] De Treget found the man dead, his body full of wounds, head cut off, and scalped. The boy's head was cut off, but no wounds on his body.

In 1808, July, according to the *St. Louis Republican*, the Osages committed so many outrages on the frontiers that the government permitted the Delawares, Shawanese, and Kickapoos to go to war with them. It was claimed that the combined tribes could put five thousand warriors in the field, while the Pawnees were expected to aid the Osages.

At this time there was considerable excitement in St. Louis over the trial of two warriors of the Ioway tribes for murder, and of a Saukee for killing a white man. All three were convicted, but the Governor reprieved the Saukee and the Ioways were granted a new trial. They were again convicted, but it was difficult to get a jury, sixty-seven talesmen having been set aside as having formed an opinion. The following article from the *Missouri Gazette* of that day is very instructive:

"Having attentively observed the progress of the trials of the Sauk and the two Ioway Indians, and some of the concomitant and subsequent effects, I wish you to give this insertion in your very useful paper. The Court of Oyer and Terminer was composed by Messrs. Lucas and Shrader. During the course of the trial I was powerfully struck with the indefatigable patience and stern impartiality of the judges. They gave the Indians every chance that any white man could expect, coming before the highest tribunal. To the Sauk and two Ioways on their first indictment they assigned Messrs. Carr and Mears, and for the two Ioways on their second indictment, Messrs. Easton and Mears, as counsel for the prisoners. The court was as attentive even to formal exceptions agitated by the prisoners' counsel as if any white citizen of the United States was upon his trial, and, though the universal outcry was 'Hang them!' 'Hang them!' yet the immovable judges inflexibly adhered to the rules of law and to the dictates of humanity and justice.

"They have done themselves much honor in their conduct in this trial, and some of their decisions therein would grace even Westminster Hall.

"During the suspense of this long trial the streets of St. Louis teemed with Indian warriors. They were frequently spectators of the trial of their fellows, and had a place in court assigned for their reception.

"I understand that they incessantly harassed the Governor and Gen. Clark, beseeching pardon for the offenders.

"The Governor and the general held a counsel on Sunday last with some of the chiefs and warriors.

"I think their speeches inspired the Indians with the greatness of the United States and the indissoluble connection that exists between their felicity and the friendship of the American government. Indeed, the chiefs in their reply showed both affection and fear. They were all submission, all compliance.

"The Governor endeavored to quell animosities, to arrest the destructive progress and fury of war, to create and establish a permanent peace among these nations. They appeared inclined to realize his wishes fully, but I cannot guess at their performance. The Governor and the general appeared so well acquainted with the motives that have the entire domain over the heart of Indians, and of the very texture of their minds, and can so easily balance their passions and sway them at pleasure, that they are well calculated to rule that people and attach them strongly to the American government."

The Governor referred to was Col. Meriwether Lewis, of Lewis and Clark's expedition. To show the wholesale character of Indian depredations in his time it is only necessary to read the following advertisement over his own signature:

"On Saturday, the 24th of this month, will be sold at public auction in front of the Eagle Tavern, in the town of St. Louis, six public horses; also the residue of twenty-three horses which were delivered to me in the months of August and September last by the Osage Indians. The terms of sale will be cash, or approved notes, payable at ninety days.

"MERIWETHER LEWIS.

"ST. LOUIS, December 12, 1808.

"P.S.—The horses which were delivered to me by the Osage Indians were acknowledged by them to have been taken from the inhabitants of this Territory."

Not long after this the Delawares and Shawanese resolved upon establishing some reforms, and they did it in a very radical way, as may be gathered from the following editorial from the *Missouri Gazette* of Aug. 16, 1809:

"Having heard of the execution of several Delawares at Shawanese at their towns near Cape Girardeau (on Apple Creek, in that county), we had the curiosity to inquire of Rodgers, the Shawanese chief, as to the truth of the report.

"Mr. Rodgers says that *Waa-be-leth-thek*, a Delaware, and *Tha-tha-way*, a Shawanese chief, summoned him to attend a solemn council at their towns; that on his arrival he found a great revolution was about to take place,—they had interdicted the use of intoxicating liquors and determined to abandon the chase, to raise stock and corn for food, and teach their women to spin and weave their cloths.

"They had established a court to try criminals; four persons were tried, and three men were found guilty, and one woman acquitted. The condemned were led out of town to a thick woods and tomahawked. They were then placed on an immense pile of wood and burnt to ashes. Upwards of one hundred men assisted on the occasion."

Indians seem to have thronged St. Louis every day about this time. One day it is a delegation from the Sacs and Foxes, come to find out something about their fellow-tribesman under sentence of death for murder.

[1] Mr. Billon remarks that the Myro Fork of the Maramec is our present Big River, a large branch coming into the Maramec on the south side, in Jefferson County. *Fourche à Renaute* is Renaute's Fork, or Mineral Fork of Big River, in Washington County, eight or ten miles north of Mine à Burton, now Potosi. "This," he adds, "is the Renaute mentioned by Gayarré and others, who came over from France in 17—, and brought the bricks necessary for the furnaces from Paris with his name on them. Cozens unearthed one of them in surveying in that locality."

The next day it is a gang of Indians arrested for stealing. Here is a paragraph from a newspaper of July 15, 1809: "A party of straggling Taways (Ottawas) have infested this place and neighborhood for several weeks, killing hogs and destroying other property. That part of Illinois Territory between Cahokia and Wood Rivers appears to have been their principal seat of war. In scouring the woods a few days ago in search of their favorite game they took the singular method of moving on all fours and imitating the notes of the mud-lark; one poor devil, being more successful in imitation than the rest, and being much obscured by a thicket, was fired upon and killed. This circumstance has for the present put a stop to their depredations." A third day it is a visit from the big chief of the Mandans, who, commanding many people, and dwelling in a country prolific in furs, must be courteously treated and entertained, and sent home to his village, sixteen hundred miles up the Missouri, under an escort. Pierre and Auguste Chouteau and their sons, with Manuel Lisa, we may be sure (and the record proves it), were of the party.

In 1811, Pierre Chouteau's barn, at the north end of the town, was burned "by a vagabond party of Indians who infest this town and neighborhood." The contemporary report, June 30, 1811, says,—

"Last Monday appeared to be a day of jubilee among them, parading the streets with bottles of whiskey, which are openly sold them by almost every retailer, in defiance of the laws; during their orgies an Indian of the name of *Squinoai* attacked an Ottoway woman in the most populous part of the town, and at mid-day, and put her to death by thrusting an arrow into her neck and down her body. Much mischief is apprehended if some of our whiskey merchants are not made examples of."

About the time of the outbreak of the war of 1812, earnest efforts were made to conciliate some of the tribes adjacent to St. Louis, and get them to make peace with one another. The two paragraphs which follow are evidence of this:

"A deputation of Putawatomies, Kickapoos, and Chipaways arrived here on Tuesday last, with Gomo, the Illinois chief, on their way to see Governor Edwards, who had sent for them. They wait here for his arrival at Cahokia, to open the conference.

"These people came down the Mississippi, with three United States flags flying in their foremost canoes, with the white messengers who were sent for them. The settlers on the river were notified of their approach by Maj. Whitesides, who requested that they should be suffered to pass, and a friendly attention shown them if they came on shore. Yet, with all these precautions, a few dastardly fellows could be found to attack the canoes, regardless of the laws of nations. These heroes fired ten or twelve shots at a party they knew would not return the salute." [April 11, 1812.]

"Some days ago the chiefs of the Great and Little Osage, the Sacs Renard, and the Shawanoes and the Delawares, who reside in this Territory, met here in order to accompany Gen. William Clark to the Federal city. On Tuesday week last they held a council to compose their differences, and endeavor to bury the tomahawk. With the Shawanoes and the Delawares the Osages made peace by promising to cover the dead bodies of the Shawanoes with such remuneration as would be acceptable. With the Sacs and Foxes no treaty could be made, as the Sacs, etc., said they did not come here for that purpose, nor had they taken the opinion of their nation on the subject. The Osages appeared to be anxious for peace, but the Sacs evaded everything on that head by remarking that their numerous neighbors were determined on war with the Osages, and they could not restrain their young men from joining the hostile parties. On the 5th inst. Gen. W. Clark left this place for Washington City, with the chiefs of the above nations." [May 9, 1812.]

For all that the war was made very vexatious to St. Louis on account of the vagrant Indians around it. The Illinois Indians and their kindred and allies took up arms, raised a force of four hundred warriors, and harassed the country, murdering outlying planters and farmers, killing hogs and cattle, and stealing horses. The country opposite St. Louis swarmed with savages, and they made frequent raids to the west side of the river, burning and plundering wherever they came. Their canoes gave them a safe means of escape whenever pursued. After the war the few surviving Illinois, and the Sacs and Foxes as well, were compelled to remove west of the Mississippi. The latter were estimated at that time to have nigh one thousand warriors. The band of Black Hawk, however, which had been most active in its hostility to the whites, refused to submit to this arrangement, and continued to occupy the ancient Sauk town at Rock Island. This fine old warrior had been one of Tecumseh's most trusted lieutenants. He claimed to acknowledge none but British authority, took his warriors into Canada to receive their annuities and subsidy, and returned breathing vengeance against the invaders of the ancient hunting-grounds of the Sacs and Foxes. Two leading circumstances filled him with bitterness against the whites. In 1804 some chiefs of his tribe went to St. Louis to procure the release of two or three warriors who were in custody. While there, so Black Hawk alleged, they were made drunk, and persuaded to sign a treaty relinquishing their lands east of the Mississippi. This treaty had been confirmed by the Sacs and Foxes friendly to the whites after the termination of the war of 1812–14. The chief of these friendly Indians was Keokuk, Black Hawk's rival, who, by his pacific counsels and the force of a rude but impetuous and magnetic eloquence, had succeeded in alienating the majority of the tribe from their allegiance to their hereditary chieftain,

Black Hawk, and preventing him from waging war with the full force of the tribe. As will be presently seen, these discontents led finally to open warfare.

During the war of 1812–14, St. Louis and the adjacent towns were thrown almost entirely upon their own resources in repelling Indian incursions and hostilities. They met the emergency like brave men. Governor Howard, of the Territory, threw up his office and took the field with a commission as brigadier-general, guarding the Mississippi at and above the mouth of the Illinois, and co-operating with Governor Ninian Edwards, of Illinois Territory, in protecting the left flank of Gen. Harrison in his operations along the lakes. The people of St. Louis, for their own part, raised a force of five hundred mounted scouts or rangers. They built a cordon of twenty-two stations, or family block-houses, extending from Bellefontaine, at the mouth of the Missouri, to the Kaskaskia River. Along this line, seventy-five miles in length, the scouts and rangers passed daily, keeping up communications and preventing the enemy from breaking through. The cordon was afterwards extended to the Illinois, Saline, and the mouth of the Ohio. The British and Indians were at Prairie du Chien and Peoria; the Illinois and Missouri troops at Portage des Sioux. The latter took and burnt Chief Gomo's town at Peoria, and the town of the Sauks at Quincy. They failed to capture Prairie du Chien, but they picketed the Mississippi with gunboats, and expelled the Indian canoes from the river.

At Boone's Lick the people of the neighborhood successfully defended their five stockades against frequent assaults of the Indians. At Côte Sans Dessein the resolute creole, Baptiste Louis Roy, aided only by two women, successfully defended his cabin against a hundred savages, covering himself with glory by killing fourteen of them before they withdrew. While he shot with unerring aim, the brave women kept his rifles loaded, and prevented the besiegers from setting the block-house on fire. The action was looked upon as the most successful engagement of the war, and was highly appreciated in St. Louis. Unfortunately, the citizens, in afterwards getting up a testimonial for M. Roy, offended his susceptibilities (for he was as gallant as he was brave), and he could not be pacified.

In July, 1815, the war having closed, the Indians and their deputies were invited to assemble in council at Portage des Sioux, to treat for peace. The commissioners on the part of the United States were Governor Clark, of Missouri, Governor Edwards, of Illinois, and Auguste Chouteau, of St. Louis. Robert Walsh, of Baltimore, then just beginning his public life, was secretary to the commission. Treaties were made with the Pottawatamies, Piankeshaws, Sioux, Omahas, Kickapoos, Keokuk's band of the Sacs and Foxes, the Osages, Ioways, and Kansas Indians. The Sacs of Black River, Black Hawk's band, refused to attend the council or be governed by the treaty which Keokuk had signed. The treaty of 1804, also repudiated by Black Hawk, had ceded an immense territory on both sides of the Mississippi, north of the Missouri and Illinois Rivers, to the Wisconsin and the Des Moins. This cession was confirmed by Keokuk's band in 1815–16, and before 1830 a part of these lands were surveyed and opened for settlement. Settlers began to pour in, and especially upon that part of the tract near to the ancient Sauk town above the mouth of Rock River.

Black Hawk was not a great leader of men, like Pontiac and Tecumseh. He could not control his tribe so well as Keokuk, yet he was a man of strong individuality, brave to a fault, humane even to his worst enemies, tender-hearted, feeling strongly and capable of inspiring a very warm affection in his followers. He was deeply attached to his family; half his opposition to Keokuk proceeded from his ardent desire to have his son, Na-she-as-cuck, succeed him as chief of the combined tribes, and when his daughter died the old chief used to make an annual pilgrimage as long as he lived to her grave on the bank of the Mississippi at Oquawka. The physiognomy of Black Hawk was striking; he had a very fine head with a towering forehead, which reminded every one of the portraits of Sir Walter Scott. In his old age and during his captivity the veteran warrior became garrulous, talked much of himself, and dictated a sketch of his life for publication. In the course of this he imparted some interesting information concerning his people, a part of whom, under the name of Mascoutins, had been under Jesuit instruction at the Green Bay Mission as early as 1688. The Sacs and Foxes, after the women planted corn, had their "crane-dance," at which the young braves did their courting. The national dance is participated in by the warriors only. The braves who have been upon the war-path and killed an enemy can enter the square and recite and act their exploits, but all others were forced to keep out. The impulse given by such an institution among a people so hungry for applause as the Indians may readily be conceived. "I remember," said Black Hawk, "I was ashamed to look where our young women stood before I could take my stand in the square as a warrior."

After the national dance, when the corn was hoed and had got a good enough growth to prevent it fro

being choked by weeds, the young men set out westward to hunt deer and buffalo, and the rest of the tribe went to fish, to dig lead in the mines, and get rushes of which to make mats. The hunters were also equipped as a war-party, in case any of their wandering enemies, the Sioux, should be encountered. The different parties, on their return, exchanged with one another the products of their several industries on a fair basis of reciprocity, and then ensued a season of feasting from lodge to lodge. The favorite amusements were ball-playing, three to five hundred on a side, with large stakes, and horse-racing. After the corn crop was secured the winter hunt began, the Indians getting supplies on credit from the traders. George Davenport, the old Indian trader and founder of the towns of Rock Island and Davenport, would frequently give a credit of fifty to sixty thousand dollars to a single band of Indians, for, as he said, they always paid their debts with scrupulous fidelity. Probity and a strong religious feeling belong to the uncontaminated Indian character. "For myself," said Black Hawk, "I never take a drink of water from a spring without being mindful of the goodness of the Great Spirit." The winter hunt, for furs as well as meat, is made by small parties, scattered over a wide area. As soon as it is completed the Indians return to the lodges of their winter camp, the traders' cabins being near by. Another long season of feasting, card-playing, and other pastimes ensues. As winter is breaking up the young men go out again on the hunt for beaver, musk-rats, and raccoons, and the old men and women resort to the sugar-camp in the maple groves. As this is the wild-fowl season also, provisions are abundant. "After this is over," said Black Hawk, "we return to our village, sometimes accompanied by our traders. In this way the year rolled around happily. But these are times that were!"

Black Hawk was a proud and haughty chief. When he met President Jackson, in 1833, he said, "I am a man, and you are another." In speaking of his outbreak, he said he and his people did not expect to conquer the whites. "I took up the hatchet, for my part, to revenge injuries which my people could no longer endure. Had I borne them longer without striking, my people would have said, 'Black Hawk is a woman,—he is too old to be a chief, he is no Sac.'" When he surrendered himself at Prairie du Chien, he said, "Black Hawk is a true Indian, and disdains to cry like a woman. He feels for his wife, his children and friends, but he does not care for himself. He cares for his nation and the Indians,—they will suffer; he laments their fate. The white men do not scalp the head, but they do worse, they poison the heart; it is not pure with them. His countrymen will not be scalped, but they will, in a few years, become like the white men, so that you can't hurt them, and there must be, as in the white settlements, nearly as many officers as men, to take care of them and keep them in order." In spite, however, of these expressions of manhood, when the steamboat on which he was a prisoner passed Rock Island on its way down the river, in full sight of the beloved village which had been the home of his tribe for one hundred and seventy years, the poor, heart-broken chieftain wept like a child. The scene and its surroundings were too much for his stoicism.

The Sacs and Foxes numbered about three thousand souls and had six hundred warriors when the trouble broke out. Of these, three hundred adhered to the fortunes of Black Hawk (including in the number a few Winnebagoes and Pottawattamies), and with this small army did Ma-ka-tai-me-she-kia-kiak undertake to make war upon the United States, being then a lean, meagre old man of sixty-odd years, and not great stature. The treaties of 1804, 1815, and 1816 gave the Sacs and Foxes full permission to live upon the ceded lands until the United States government offered them for sale. In 1816, Fort Armstrong was built on Rock Island. The Indians did not object to it; but still, as Black Hawk said, they were "very sorry," for it was the best island on the Mississippi and a favorite resort of the Indian youth. In the words of the old chief, "it was our garden (such as the white people have near their big villages), which supplied us with strawberries, blackberries, plums, apples, and nuts of various kinds; and its waters supplied us with pure fish, being situated in the rapids of the river. In my early life I spent many happy days on this island. A good spirit had care of it, who lived in a cave in the rocks immediately under the place where the fort now stands, and has often been seen by our people. He was white, with large wings like a swan's, but ten times larger. We were particular not to make much noise in that part of the island which he inhabited, for fear of disturbing him. But the noise of the fort has since driven him away, and no doubt a bad spirit has taken his place." So Black Hawk, like Socrates and Napoleon, had his guardian Daimon!

Ma-ka-tai-me-she-kia-kiak, the Black Hawk, was no match in policy for Keo-kuk, the watchful Fox. In 1823 the latter, upon the advice of the Indian agent at Fort Armstrong, withdrew with his band to the western side of the Mississippi. He got a present of forty square miles of land for so doing, and at the

same time put Black Hawk in the minority and in the wrong. Black Hawk and his followers, refusing to move, and still claiming to owe allegiance to Great Britain, became known as the "British band." The name itself was enough to condemn them in any Western community. Black Hawk stuck to the old village, with all the conservative instincts and all the crabbed patriotism of an aged warrior who had always hated the Americans, and always looked upon them as aggressors and invaders. He had a right to remain there, under the treaties, as none of the lands were sold, and the whites were intruders. But the squatters about the mouth of Rock River were such people as no Indian band could live in peace with. They were there, in fact, to expel the "British band" and get possession of their fertile lands. They stole the Indians' stock, plundered their corn-fields, burnt their houses, insulted and beat their women, harassed them in every way. There was no redress, no benefit to come from an appeal to justice, for it was the object of officials as well as squatters, of Federal officers equally with those of the State, to force Black Hawk's band to imitate the example of Keo-kuk and remove to the west side of the river. At last, to make their process of compulsion effective, the government sold a few quarter-sections of land at the mouth of Rock River, including the site of Black Hawk's village. He was now requested, or rather ordered, to move away, and refused. The whites made inclosures of the Indians' fields of ripening corn, and the squaws pulled them down. A white trader brought whiskey into the village to sell to the Indians, and Black Hawk rolled the barrel out into the road and knocked the head in.

Governor Reynolds, of Illinois, forthwith issued his proclamation announcing that the sovereign State of Illinois had been "invaded," and calling for volunteers to repel the invaders. A large force at once took the field, the regulars at Fort Armstrong were reinforced, Keokuk interposed his good offices, Black Hawk discovered that his "prophet" had deceived him, and that his promised allies among the Kickapoos, Winnebagoes, and Pottawattamies were not forthcoming. The old chief therefore consented to remove west of the Mississippi with his band, acknowledge Keokuk as head chief, and cease to trade with or visit the British at Malden. This was in July, 1831, and Governor Reynolds made the victory the subject of a pompous dispatch. Black Hawk had prevented any violence from being done. He could have murdered every white man for fifty miles around. He contented himself with warning them off from his corn-fields. He was not satisfied, however, and he made unceasing efforts to secure allies, and especially to get the band of Sacs and Foxes under Keokuk to join him. Once he very nearly succeeded. His emissaries had roused the whole tribe; they danced the scalp-dance, and demanded to be led upon the war-path. Then it was that Keokuk's consummate oratory and statesmanship stood him in good stead. He accepted the issue. He assented to all that was proposed. He would lead them in battle. He knew their wrongs. He felt their thirst for vengeance. But he must lead them, and there was no middle course. They could make war for vengeance, but it was a hopeless war at the start. They could not cope with such an opponent. Vengeance they would glut themselves with, but they must all perish in the attempt. It was their duty therefore, before starting on this expedition, to put all their women and children to death, and then determine that, once across the Mississippi, they would never turn back, but die by the graves of their fathers sooner than see them desecrated. This speech, which is singularly like one made by the famous chief Cornstalk after the battle of Point Pleasant, in 1774, restored quiet and the authority of Keokuk, and completely foiled the emissaries of Black Hawk.

Black Hawk's band, however, was very restless. As he himself expressed it, they often crossed the river to "steal roasting-ears from their own fields." They went up to Prairie du Chien and murdered twenty-eight Menominees under the guns of Fort Crawford. Neopope (*Strong Soup*), Black Hawk's lieutenant, went to Malden, to consult the British commander there. He also consulted the prophet, and was assured that in the spring the Ottawas, Chippewas, Pottawattamies, and Winnebagoes would assist Black Hawk to regain his village. In April, 1832, Black Hawk and his whole band broke the treaty and crossed the river. They were going up Rock River, they said, to plant corn at the villages of their old allies, the Winnebagoes and Pottawattamies. Gen. Atkinson, at the fort, ordered them back, but Black Hawk refused, and the general sent him another message, that if he did not return he would be forced back. Black Hawk went on his way. Governor Reynolds called out the Illinois militia. A part of them, mounted, under Maj. Stillman, came up with Black Hawk at Kiswacokee, where he was treating some Pottawattamies to a dog-feast. Black Hawk sent a flag of truce. He found he could get no allies, he realized his error, and was willing to surrender and be sent back across the river. The flag was fired on. Another party he sent out was captured, and one of his warriors was slain. The main body advanced upon him, and Black Hawk prepared to fight. He had but fifty

braves with him, but at the first volley Maj. Stillman's two hundred and seventy warriors turned and fled. Some of them ran all the way home; most of them put twenty miles between them and Black Hawk before they halted. The place is called "Stillman's Run" to this day. Black Hawk took their camp and everything. Then ensued a border war, short and sharp, with many murders and arsons.

The troops concentrated quickly, however. Black Hawk had no provisions; he was cumbered with women and children,—proof enough that he did not cross the Mississippi at the head of a war-party,—and he did not do much fighting. An unsuccessful attack upon the fort at Buffalo Grove was followed by a brisk retreat. A detachment of volunteers under Col. Posey was met on the way and defeated. "If they had all been like their brave little captain," said Black Hawk, "they would have beaten me." On the banks of the Wisconsin the regulars and volunteers came up with the Indians, and killed forty of them. At Bad Axe, as they were crossing the Mississippi, the troops again came up with the Indians. They were aided by a steamer, which rejected Black Hawk's flag of truce, and a massacre ensued, in which three hundred and fifty Indians, men, women, and children, were butchered. Those who reached the other side of the river were set upon by Sioux marauders. It was a wretched and disgraceful spectacle, a wholly unnecessary slaughter. In this short and very disgraceful Indian war four men who afterwards became famous were in arms against the Indians,—Jefferson Davis, second lieutenant U. S. infantry, Albert Sidney Johnston, Robert Anderson, of the same arm of service, and Abraham Lincoln, captain Illinois volunteers.

Black Hawk fled, but two Winnebagoes who had been fighting in his ranks pursued, captured, and brought him into Fort Armstrong. Another peace was made with the Sacs and Foxes, attended with another cession of territory. Black Hawk, his son, the Prophet, Naopope, the Prophet's brother, and his adopted son were demanded as hostages. They were sent down the river in charge of Lieut. Davis to Jefferson Barracks, at St. Louis, and when there were put in irons and made to drag the ball and chain, like private soldiers under punishment for drunkenness. This was a wretched piece of business, and exceedingly mortifying to the proud old chief. "Was the White Beaver" (Gen. Atkinson), said he, "afraid I would break out of his barracks and run away? Or was he ordered to inflict this punishment upon me? If I had taken him prisoner upon the field of battle I would not have wounded his feelings so much by such treatment, knowing that a brave chief would prefer death to dishonor."

Black Hawk had often been in St. Louis in former times under very different auspices. He had frequently been there to visit his "Spanish Father" before the cession of Louisiana to the United States. He was there when the news of the cession was received, and saw how the inhabitants took it. He was there on his way to the battle-field of the Maramec, in which his father was slain, and he killed five Cherokees with his own hand. He was there three or four times to make war upon the Osages, and to pay friendly visits to Chouteau, or to sell his furs. He was there, also, during the fierce war waged by his tribe upon the Kaskaskia Indians. Now he was there a prisoner, in chains, and measurably on exhibition.

During the winter he and his companions in captivity were visited by a great many people, and the newspaper scribes—"town criers," as they were called by sarcastic Keokuk—wrote them up assiduously. "We were struck with admiration," said one, "at the gigantic and symmetrical figures of most of the warriors, who seemed, as they reclined in native ease and gracefulness, rather like statues from some master-hand than beings of a race whom we had heard characterized as degenerate and debased." "A forlorn crew," wrote Washington Irving, who also saw them, "emaciated and dejected, the redoubtable chieftain himself a meagre old man upwards of seventy. He has, however, a fine head, a Roman style of face, and a prepossessing countenance." When Catlin, the artist, visited Jefferson Barracks for the purpose of painting the portraits of these chiefs, and was about to commence the likeness of Naopope, he seized the ball and chain fast to his leg, and, lifting them above his head, cried, indignantly, "Make me *so*, and show me to the Great Father!" The artist, in refusing, missed the chance of painting the most dramatic picture of the century.

Keokuk, with great generosity, brought his family to St. Louis to visit and minister to his fallen rival, and exerted himself strenuously to procure his release, offering to become responsible in person for the good conduct of the captives. But they had been ordered to Washington, and, after arriving there, were sent to Fortress Monroe. After a confinement of five weeks they were released and returned home, taking the leading cities in their way, and meeting with a reception everywhere second in enthusiasm only to that which welcomed Lafayette. The thronging multitudes, the evidences of wealth and power and commanding genius quenched the old warrior

spirit in Black Hawk. When he returned home, broken and a suppliant, Keokuk received him *en prince*, and the degraded chief bowed his head in silence. Only once did his ancient spirit flash up, when he understood in the council that the President ordered him to obey Keokuk. He sprang to his feet, indignation for the moment depriving him of speech, and then he burst forth: "I am a man, an old man. I will not conform to the counsels of any one. I will act for myself; no one shall govern me. I am old; my hair is gray. I once gave counsel to young men, —am I to conform to those of others? I shall soon go to the Great Spirit, when I shall be at rest. What I said to our great father at Washington I say again, —I will always listen to him. I am done." But this was only a momentary ebullition. Black Hawk recognized the fact of his deposition, and submitted to it. He retired to one of the Sac villages, only once more coming out of his seclusion to make another visit to the East, and then, returning home, died at his secluded camp on the Des Moins, Oct. 3, 1838, aged seventy-two. A notorious body-snatcher stole his corpse from the grave, and sold the skeleton to a surgeon in Quincy, Ill.; but Governor Lucas, of Iowa, compelled the restoration of the old chieftain's bones to his kindred. They were subsequently placed in the Burlington Geological and Historical Society, and were burnt up in the fire which destroyed the building and all the society's collections in 1855.

CHAPTER VII.

TOPOGRAPHY.

ST. LOUIS, says Brackenridge, in his "Views of Louisiana," "is the seat of government of the Territory, and has always been considered the chief town. It was formerly called Pain Court, from the privations of the first settlers. It is situated in latitude 38° 23′ N., longitude 89° 36′ W.[1] This place occupies one of the best situations on the Mississippi, both as to site and geographical position. In this last respect the confluence of the Ohio and Mississippi has certainly much greater natural advantages, but the ground is subject to inundation; and St. Louis has taken a start, which it will most probably retain. It is probably not saying too much that it bids fair to be second to New Orleans in importance on this river."

It will be recollected that Brackenridge was a cool, clear-headed observer, not given to extravagance, when this was written, in 1811, St. Louis had begun to grow. Its population was only one thousand four hundred, and it had only increased about four hundred in six years. Ste. Genevieve and St. Charles were its rivals, and many persons thought it would be outstripped by them, while New Madrid was a much more attractive spot to the immigration which had begun to flow in from the eastward. Brackenridge, however, was confident in his opinion of the site, and in another paragraph he lays his finger upon exactly the strongest resources of St. Louis, and the chief cause of its growth,—its unrivaled position as a distributing centre. "St. Louis," said he, "will probably become one of those great reservoirs of the vall between the Rocky Mountains and the Allegheny from whence merchandise will be distributed extensive country. It unites the advantag three noble rivers, Mississippi, Illinois, and When their banks shall become the residence of millions, when flourishing towns shall arise, can we suppose that every vender of merchandise will look to New Orleans for a supply, or to the Atlantic cities? *There must be a place of distribution somewhere between the mouth of the Ohio and Missouri. Beside a trade to the northern parts of New Spain will be opened, and a direct communication to the East Indies, by way of the Missouri, may be more than dreamt; in this case, St. Louis will become the Memphis of the American Nile.*" When this was written not a steamboat had yet turned its wheels in Western waters, nor had an emigrant's wagon ever gone west of the Gasconade. All navigation was by arks and keel-boats, and the railroad was not yet even dreamed about.

"The ground on which St. Louis stands," continues Brackenridge, "is not much higher than the ordinary banks, but

[1] This is by no means accurate, it is nothing more than an approximation. The exact geographical position of St. Louis has been determined by observations conducted under the Coast Survey, and consequent to the solar eclipse which occurred in August, 1869. The point first fixed was the Washington University; but it will be seen from the official result of the observations given below that the values have been reduced to the centre of the court-house, which forms more appropriately the point from which to announce the latitude and longitude of the city.

In order to reduce the observed values to the centre of court-house, we must deduct from the latitude 25.7 seconds, and from the longitude 2.63 seconds, so that we have finally for the court-house of St. Louis:

	Deg.	Min.	Sec.
Latitude	38	37	37.5
	H.	M.	S.
Longitude	6	0	45.29
	Deg.	Min.	Sec.
Or, in Arc	90	11	19.35

the floods are repelled by a bold shore of limestone rocks. The town is built between the river and a second bank, three streets running parallel with the river, and a number of others crossing them at right angles. It is to be lamented that no space has been left between the town and the river; for the sake of the pleasure of the promenade, as well as for business and health, there should have been no encroachment on the margin of the noble stream. The principal place of business ought to have been on the bank. From the opposite side nothing is visible of the busy bustle of a populous town; it appears closed up. The site of St. Louis is not unlike that of Cincinnati. How different would have been its appearance if built in the same elegant manner, its bosom opened to the breezes of the river, the streams enlivened by scenes of business and pleasure, and rows of elegant and tasteful dwellings looking with pride on the broad wave that passes. From the opposite bank St. Louis, notwithstanding, appears to great advantage. In a disjointed and scattered manner, it extends along the river a mile and a half, and we form the idea of a large and elegant town. Two or three large and costly buildings (though not in the modern taste) contribute in producing this effect. On closer examination the town seems to be composed of an equal proportion of stone walls, houses, and fruit-trees, but the illusion still continues. In ascending the second bank, which is about forty feet above the level of the plain, we have the town below us, and a view of the Mississippi in each direction, and of the fine country through which it passes. When the curtain of wood which conceals the American Bottom shall have been withdrawn, or a vista formed by opening farms to the river, there will be a delightful prospect into that rich and elegant tract. There is a line of works on this second bank, erected for defense against the Indians, consisting of several circular towers, twenty feet in diameter and fifteen in height, a small stockaded fort, and a stone breastwork. These are at present entirely unoccupied and waste, excepting the fort, in one of the buildings of which the courts are held, while the other is used as a prison. Some distance from the termination of this line, up the river, there are a number of Indian mounds and remains of antiquity, which, while they are ornamental to the town, prove that in former times those places had also been chosen as the site, perhaps, of a populous city.

"Looking to the west, a most charming country spreads itself before us. It is neither very level nor hilly, but of an agreeable waving surface, and rising for several miles with an ascent almost imperceptible. Except a small belt to the north, there are no trees; the rest is covered with shrubby oak, intermixed with hazels, and a few trifling thickets of thorn, crab-apple or plum-trees. At the first glance we are reminded of the environs of a great city; but there are no country-seats, or even plain farm houses; it is a vast waste, yet by no means a barren soil. Such is the appearance until, turning to the left, the eye again catches the Mississippi. A number of fine springs take their rise here and contribute to the uneven appearance. The greater part face to the southwest, and aid in forming a beautiful rivulet which, a short distance below the town, gives itself to the river. I have often been delighted, in my solitary walks,[1] to trace the rivulet to its sources. Three miles from town, but within view, among a few tall oaks, it rises in four or five silver fountains, within short distances of each other, presenting a picture to the fancy of the poet, or the pencil of the painter. I have fancied myself for a moment on classic ground, and beheld the Naiads pouring the stream from their urns.[2] Close to the town there is a fine mill, erected

OLD CHOUTEAU MANSION.

really the first park of the St. Louis people. The pond was a lake: the trees around it were of the original forest; it was a place for lovers, for holiday sports; it divided with the Big Mound the attention of visiting strangers. It is not more than forty years ago since Chouteau's pond existed in its original form, a glittering sheet of water, covering an area of one hundred acres, with high grassy banks that sloped quietly down to the water's edge, and were set with tall forest-trees, casting shade enough for a park. The gorge through which the waste of the pond flowed down the river, Mill Creek (from a point between the Seventh Street Depot and St. Joseph's College), was overhung by very tall and large sycamore-trees. The waters of the mill-dam were fresh, clear, and filled with fish, and, as a rule, the boys of the town would much rather take a swim in the pond than go to school. It was out of town; you could only get to it by climbing over the ridge at Sixth Street, and this made it an excellent spot for picnics. The springs to which Brackenridge alludes were Rock Spring, Hammond's and McRea's Springs, and Lucas' Spring—the latter north of Market Street, near Twentieth Street. The site of the Four Courts was a sort of promontory jutting into the lake and occupied originally by the mansion of Henry Chouteau, third son of Auguste. We have before us an account of the pond, running back fifty or sixty years ago, furnished by Mr. Richard Dowling. He says the head feeder of the pond was in old times known as Lyon Springs, and now as Rock Springs, which was for years a place of great resort, and the scene of dance and revelry. The foot of the pond was on Market Street. A ravine ran from Market Street north to about Pine Street, and there was a spring between Chestnut and Pine, on the west side of the present Ninth Street. The spring issued about fifteen feet above the bottom of the ravine. There was another spring on the north side of Market, east of Ninth. There was

[1] Let the St. Louis reader of this conceive of taking a solitary walk along Poplar Street from the Levee westward, and seeking the sweet sequestered shades of Gratiot Avenue for an interval of scholarly reflection.

[2] Naiads emptying their urns into Milk Creek sewer, and the Union Depot classic ground—for third and fourth class freight! But the place must have been pretty, or the memory of the old inhabitants would not have clung to it so tenaciously and so tenderly. Chouteau's pond and mill-seat, they were

by Mr. Chouteau on this streamlet; the dam forms a beautiful sheet of water, and affords much amusement, in fishing and fowling, to the people of the town. The common field of St. Louis was formerly inclosed on this bank, consisting of several thousand acres; at present there are not more than two thousand under cultivation; the rest of the ground looks like the worn common in the neighborhood of a large town, the grass kept down and short, and the loose soil in several places cut open into gaping ravines."

also a noted spring south of the present site of Winkelmeyer's brewery, which was a great place of resort for picnic parties and small Fourth of July gatherings.

The spring was resorted to frequently by Dr. Robert Simpson, John Shade, and Thomas Cohen, who spent the time fishing for croppie and bass. About three or four hundred yards south of the present Clark Avenue, a neck of the pond ran up nearly to a point a little west of the site of the Four Courts, which was called by the old inhabitants "Rack Row." About fifty-eight years ago a boat club was organized, and the club had their boat-house about three hundred yards north of Chouteau's mill. The company which started the club was composed of Capt. George H. Kennerly, Alexander St. Cyr, the Arnold brothers, and others. The members of the club wore a uniform of Scotch plaid pants and jacket.

At Chouteau's mill there was an embankment thrown up on the west side of the hill, which was stockaded with cedar pickets next to the water, and the banks were covered with sycamore-trees, and it was a pleasant resort, on account of the shade, for catching fish. The mill-dam was on the south side of the mill. The fall over the dam was about twenty feet down to the rock, and from the foot of this fall the descent was about thirty feet to the creek, forming, beside the cascade, a steep rapids. South of the mill-dam the ground rose to a considerable elevation, and on this rise of ground Col. Auguste Chouteau had a very fine orchard, comprising different varieties of fruit-trees. On the west side of the orchard the bank was about fifteen feet high; on the west side of the pond was a gradual slope, covered with hazel-bushes, scrub-oaks, persimmon, and grapevines. Most of the inhabitants, who lived in the centre of the town, would resort to this spot to wash clothes. Two or three women would club together, and one, furnishing a cart, would haul out all the clothes of the party. They had large iron pots in which to boil the clothes, and platforms extended out into the water at a depth of two feet, where the clothes would be put in, and, after pounding them out with paddles, producing the same effect as washboards, they would hang the clothes out to dry on the hazel-bushes. The mill-dam before alluded to broke about the year 1826, and a great many fish were caught by everybody, consisting of buffalo, bass, and croppies, and so many were thrown out on the bank as to create a stench so great that the trustees of the town had to get several loads of lime and cover the fish. Chouteau's mill was managed by Gabriel S. Chouteau, who is now eighty-four years old, and one of the oldest natives now in St. Louis. He managed the mill as a water-mill for several years. He had a valuable colored servant named Mosquetu, who was the head miller, a very faithful man. He filled the position many years, and when he retired Mr. Chouteau employed a man named Hoffman as head miller. Some years afterwards Mr. Chouteau put in a steam-engine and ran it until the mill was closed.

The flour made by Mr. Chouteau would compete with the best flour of to-day. The mill supplied the inhabitants with most of the flour consumed until immigration commenced, then most of the flour came from Cincinnati.

As before indicated, Chouteau's pond was generally fed from springs. Among those best known were the Marie Spring, the Curneau Spring, Rock Spring, and others.

This description by the observant Brackenridge seems to be graphic enough and accurate enough to bring the old town up before the eye. It may very well serve for the introduction to some account of the topography of St. Louis from the date of its foundation to the more recent and final settlement of grades and levels. And, in regard to the standard of grades and levels, it is proper to begin by describing the rather peculiar system which is employed in St. Louis for establishing and maintaining this standard. This is ascertained by means of what is called "the city directrix." The employment of this grew out of the following circumstances:

"In 1826 there was, as far as then known, unprecedented high water. The citizens wanted the high-water line established, so that afterwards streets could be graded and houses erected above the water-line. Mr. Paul, under instructions of the City Council, erected a monument as required. This monument was a dressed limestone column two feet square, and was set in front of the southeast corner of the then City Hall, on the Levee, near Market Street. This stone is yet in place, and stands across the curbstone in front of No. 4 South Levee. A hole was cut in this stone to set the monument of the high water of 1844, which was seven feet seven inches higher than in 1826. This last-mentioned monument was destroyed by fire in 1856.

"The top surface of Paul's monument was placed even with the highest line marked by the flood of 1826, and was officially declared the base-line for subsequent and additional surveys of the city, and its additions as to street grades. The curbstone of the sidewalk on the Levee from Plum Street to Franklin Avenue, formerly Cherry Street, was placed on a level of the base-line, and its grade is designated on the street commissioners' map as being at zero. This line was and is officially styled in the ordinances as the 'city directrix

"The elevation of this city directrix above the sea-level has been determined as follows:

"By the United States Signal Service, with barometer measurement, four hundred and four feet above the sea-level at Washington, D. C.

"By the United States Coast Survey, Lieut. Humphrey's barometer measurement, four hundred and eight and a half feet above the sea-level at Mobile.

"By the Pennsylvania Central and the Ohio and Mississippi Railroad surveys, with sight-levels of grades from Philadelphia to St. Louis, four hundred and twenty-eight and one-fourth feet above sea level at Philadelphia.

"These three observations were averaged, and the elevation of four hundred and thirteen and two-thirds feet determined."

[1] Some additional facts in relation to the directrix are necessary to complete our knowledge of the topography of St. Louis. The western limits of the city at that time were about on a line with the present Fifth Street, between Chouteau and Franklin Avenues. The citizens in improving their property, erecting new buildings, and grading streets, desired to have the flood-line accurately fixed and perpetuated, so that all the improvements could be safely located above high-water mark.

Col. Paul located the monument at a point then on the south

This system of measurement seems to be very perfect and very satisfactory. It has a definite base and unit of its own, and is accurately connected with other systems, and, through the coast survey, with the common hydrographic system of the whole country, that which is the basis of land surveys as well as water distance measurements. The result is to give us correct and graphic ideas of the city's topography. The area

east corner of the City Hall and Market, but now on the sidewalk in front of No. 4 South Levee. This monument was a heavy dressed limestone, two feet square, and is yet to be seen in place on the sidewalk. This stone was officially established by the City Council as the city directrix, and has continued so ever since. The top of the curbstone on the Levee from Plum to Cherry Streets is supposed to be kept on a horizontal line with the grade of the monumental stone, and is the "zero" and city directrix line in all surveys of elevations and grades in St. Louis.

About eighteen years after Col. Paul established the city directrix, the Mississippi River rose seven feet and seven inches higher than the flood of 1822.

This was the extraordinary high water of 1844, which continued from June 20th to July 14th. The water was for five days over seven feet higher than the city directrix. The highest point reached on the official gauge, read at that time by Mr. Leopold, was at 4 P.M., June 27th, when the water stood seven feet seven inches, or seven and fifty-eight hundredths feet above the directrix.

A few months after the flood of 1844 the City Council directed that a monument be placed on Col. Paul's monument to indicate to future generations the line of what was then known as the great flood. In accordance with the official directions, a dressed limestone obelisk ten feet high was placed on the initial point of the directrix. In and around this obelisk was cut a deep line, under which was cut the figures 1844, at the elevation of the high water of that year.

In the latter part of 1856 a row of stores, then known as the City Buildings, and located along the Levee from Market to Walnut Streets, was destroyed by fire, and the heat of the fire and the falling walls demolished the 1844 monument, and it was never replaced. The inlet cut into the Reno monument of 1826 to receive and hold the 1844 monument is yet to be seen in its original position on the Levee.

In 1863 the river was lower than it had been during the century, and the City Council instructed the city engineer to have a river gauge established, with the lowest grade of the water for that year used as the low-water mark. This gauge was of wrought iron bars, placed down the incline of the Levee between Market and Walnut Streets, near the initial point of the city directrix. The low-water mark was established at thirty-three and eighty-one hundredths feet below the city directrix, and in reading the gauge the distance below the city directrix is frequently given.

After 1826, as the city was enlarged in area, the city engineers, street commissioners, and public surveyors established "benches" or grade monuments at different points in the city above the original city directrix line. These benches, as they are called by surveyors, have been carefully measured as to elevation above the city directrix, and are frequently resurveyed to insure accuracy. From these benches, about one hundred and fifty in number, all measurements in St. Louis for street, sewer, railroad, and building grades are taken. The surveyors' field charts in the street commissioners' office and in the offices of several of the local surveyors record the location of these benches.

In the street commissioners' office at the City Hall there is a large street map of the city, on which are recorded the grades of improved streets above the city directrix. An examination of the map gives the information that St. Louis, in its area of sixty-two square miles, is situated on twenty-three knolls and hills, varying in elevation from 40 feet to 200 feet above the city directrix.

The highest elevation of land in the city is about one mile west of Shaw's Garden, or four miles southwest of the court-house. The elevation is 195 feet above the directrix, and on this place is the female hospital, which is 57 feet in altitude.

About half a mile southeast of the female hospital is located the insane asylum, a building 120 feet high, placed on elevation 180 feet higher than the directrix, and so situated as to be seen from points ten miles distant, and from two-thirds of the city.

The Christian Brothers' new college on Easton Avenue (St. Charles Rock road) is located on an elevation of 146 feet above the directrix.

The southeast end of Forest Park is 60 feet, and the southwest corner—1¼ miles distant—is 160 feet higher than directrix.

The highest elevation in O'Fallon Park is 110 feet.

The mound in Lafayette Park is 138 feet above directrix.

Below are given some of the principal high buildings in St. Louis, with the grade elevation of site above city directrix, and the altitude of the building in addition:

The west arcade of the Illinois and St. Louis bridge at the vehicle roadway is 68 feet, and the steam railroadway 48 feet above the Levee sidewalk or city directrix.

St. Louis elevator, Biddle Street and Levee, grade 3 feet, altitude 130 feet.

Belcher sugar refinery, new building, Dickson (Bates) and Lewis Streets, grade 29 feet, altitude 150 feet.

Shot-tower, half block north of Belcher's refinery, grade 10 feet, altitude 180 feet.

Central elevator B, Levee and Lombard Streets, grade 0, and altitude 147 feet.

Central elevator A, Twelfth and Cerre Streets, grade 36, and altitude 124 feet.

Chamber of Commerce, Third and Chestnut Streets, grade 50½ feet, and altitude 103 feet.

Missouri Republican building, Third and Chestnut Streets, altitude 112 feet.

Court-house, Fourth and Market Streets, grade 58 feet, and altitude to promenade 138 feet, and to apex of dome 179 feet.

McLean tower, opposite the court-house, altitude to promenade 145 feet, and apex of dome 170 feet.

New custom-house, corner of Eighth and Olive Streets, grade 51 feet, altitude of building 101 feet. The dome of this building will be 109 feet higher than the building. The promenade of dome will be 150 feet above sidewalk.

Singer building, Fifth and Locust Streets, grade 54 feet, and altitude 120 feet.

New York Trust Company's building, Sixth and Locust, grade 56 feet, and altitude 101 feet to edge of roof.

Lindell Hotel, Sixth Street and Washington Avenue, grade 48 feet, and altitude 110 feet.

New Southern Hotel, Fourth and Walnut Streets, grade 59 feet, and altitude 102 feet.

Four Courts, Twelfth Street and Clark Avenue, grade 45 feet, and altitude to apex of dome 140 feet.

Water-tower, Fourteenth Street and Grand Avenue, grade 98 feet, and altitude 154 feet; total elevation above directrix 252 feet.

of sixty-two square miles, the general plan of twenty-three hills and knolls, rising from forty to two hundred feet above the directrix, are data from which a map could almost be drawn without needing to see the place. The expansion of the city until it has spread over all this wide area and taken in all these knolls and hills is a history of a wonderful growth in wonderfully rapid periods. It is in fact a romance, very different from the monotonous story of Chicago's unfolding. For almost sixty years St. Louis was content to remain a little trading city under and on the side of a limestone bluff at the river's edge. Suddenly it climbed to the top of the bluff, found the high level country, and began at once to grow. The old French village and town crouched under the bank, quiescent and passive, like one who hugs the chimney-corner and smokes his pipe, too content with idle ease to be persuaded to move on. The new American city left the old town there undisturbed, and ran away from it to seek its fortune. After that was secured, it turned back to the old town, gave it a thorough shaking up, and dressed it out in such splendid new attire that it was not able to recognize itself any longer.

It is the literal fact that St. Louis did not begin to grow until the country recovered from the financial depression which succeeded the war of 1812–14, culminating in 1819. This depression was so great that it strangled enterprise and arrested immigration. The whole West was ruined by hard times and bad money, and business came to a standstill for the lack of a currency and a medium of exchange. St. Louis was arrested by these adversities just as she had begun to invite an enterprising American population. In 1820 it was very little improved from what it had been in 1780. It still lay all under the hill.[1]

Compton Hill reservoir, Lafayette and Grand Avenues, grade 150 feet, and altitude of walls 30 feet.

Fair-grounds elevator, grade 90 feet, and altitude to promenade 105 feet, and to apex 155 feet.

Below are given the grade, altitude, and total elevation of the principal church steeples in St. Louis. The churches are as follows:

Cathedral, on Walnut, between Second and Third Streets.

St. Patrick's, corner of Sixth and Biddle.

First Presbyterian, corner of Fourteenth Street and Lucas Place.

Second Presbyterian Church, corner of Seventeenth Street and Lucas Place.

Centenary Methodist, corner of Sixteenth and Pine Streets.

St. George's (Episcopal), corner of Chestnut and Beaumont Streets.

Second Baptist, corner of Beaumont and Locust Streets.

Pilgrim (Congregational), corner of Ewing and Washington Avenues.

St. John's (Methodist), corner of Ewing Avenue and Locust Street.

St. Alphonsus' Church, corner of Grand Avenue and Morgan Street.

The first column of figures given is the grade in feet of the site above the city directrix, the second column the altitude of the steeple from the sidewalk, and the third column the total elevation of the apex of the spire above the city directrix.

Churches.	Grade.	Altitude.	Total Elevation.
Pilgrim	130	230	360
Second Baptist	118	235	353
St. George's	114	175	289
Second Presbyterian	93	195	288
Centenary	80	205	285
St. John's (Methodist)	130	150	280
First Presbyterian	56	220	276
St. Patrick's	50	160	210
St. Alphonsus'	130	80	210
Cathedral	32	150	182

The grade, altitude, and elevation of the principal observatories in the city are as follows, the measurement being given up to the promenade or walk:

	Grade.	Altitude.	Total Elevation.
Insane asylum	180	120	300
Water-tower	98	154	252
Female hospital	195	57	252
McLean's tower	58	145	203
New custom-house	51	150	201
Court-house	58	138	196
Fair-grounds elevator	90	105	195
Shot-tower	10	180	190

The grades given above were taken from the street commissioners' map, and the altitudes were obtained from the architects or others who claimed to have positive information on the subject. (These figures and facts are from the *St. Louis Republican* of Dec 17, 1881.)

[1] We read in the recollections of Dr. R. Simpson, an early settler, who came to St. Louis from Maryland in 1809, having the position of assistant surgeon U.S.A., that the town was estimated to contain twelve hundred inhabitants, but few Americans, and those mostly attached to the government service. There were, with sundry cross streets, three main streets,—Main Street proper, Church, now Second Street, and Barn, now Third Street,—but this latter street did not extend farther north than about where now is Pine Street, where it met the forty-arpent lots.

The town was all under the hill, and laid out in squares, and these squares were divided into four lots, so that each owner had room for a garden and some fruit-trees. There were a few brick houses, but many of stone, some few frame, but mostly log buildings, some cabin-fashion and others in French style,—large logs, dressed on two sides, set some eight feet in the ground, with shingle roofs. A sample of the last, and the only one, I believe, left standing, is to be seen at the corner of Third and Plum Streets. Just such a house was on the lot I purchased in the fall of 1811, and in which I lived for a number of years. The shingles were thick, and instead of nails were hung with pegs or straps across the rafters, and made a very good roof, but was rather musical in windy weather. The best residence in the town was that of Col. Auguste Chouteau, who occupied one square of ground, surrounded by a high stone wall, with Main Street in front, the church in the rear, and between Market and Walnut. In speaking of streets, I call them by their present names.

The market square was bounded by Main, Market, Walnut Streets and the river. Maj. Pierre Chouteau occupied a large stone building in what was then called the northern part of the town. The Cabannes resided on a cross street south of Maj. Chouteau's. As you came down Main Street there were Sarpy's

What it was in 1809 it remained in 1818 and in 1822, when it was incorporated. Mr. Billon describes with distinctness what the town was in the former year when he first saw it. He says,—

"Until the incorporation of St. Louis as a city, in December, 1822, and the subsequent adoption of a system of grades for the streets of the city, there had been little, if any, change in the surface of the ground from its first settlement in 1764, a period of nearly sixty years, consequently on my arrival in the place in 1818, I must have found it almost in its primitive state.

"The river-front presented at that day a limestone bluff, extending from about the foot of Poplar Street on the south to above Roy's tower, at the foot of Ashley Street, on the north, this bluff being about on a level with the main street as far south as the centre of the village, at the Public Square, at an elevation of some thirty-five or forty feet above the ordinary stage of the river. From there south to Poplar Street it gradually sloped down to the level of the alluvial flat which bordered the river for about two miles further south.

"There were then but two roads to ascend from the river to Main Street, viz., at Market and Oak Streets. These ascents were very abrupt and rough, and had been roughly quarried through the limestone rock by the early inhabitants with crowbars and hammers to enable them to get to the river for water.

"Main Street, north from Market Street, was generally level, with, perhaps, a very slight ascent; going south from Market Street it ascended some four or five feet to the centre of the block, then Col. Chouteau's. From here it descended with about the same slope as the limestone bluffs to its terminus at Plum Street, where it ran into the river.

"Second Street was about on a level with Main Street near the centre of the village, but from Chestnut Street north to above Vine it was lower than Main, and of course in bad weather was always very muddy, and the lots on the east side were frequently several inches deep with water for days until it dried up by evaporation. The residents of this vicinage remedied it to some extent in 1778 by draining it through the cross street, now Chestnut.

"Second, south of Walnut, had about the same descent as Main Street south.

"Third Street, in the centre of the village, was a few feet higher than Second, but from Chestnut north it ascended gradually up to near our present Washington Avenue, perhaps some twenty-five feet in this distance. From here north it is nearly level. Southwardly, from about Walnut, it descended with about the same grade as Main and Second.

"Of Fourth Street, the highest part was from Elm to near Chestnut. Going north from Chestnut it descended precipitously to Pine, where a gully crossed the intersection of Second Street from northwest to southeast, carrying off the water from a large district north and west of this point, through the centre of the present Block 86 down Chestnut to the river. South from Elm, Fourth Street had a pretty steep descent for the distance of a few blocks, and from there about the same as Third. The very highest point on Fourth was at the intersection of Walnut, overlooking the country in every direction. On this spot the central stone tower was erected in 1780, and here the Spanish Governor constructed the garrison in 1794. There was no Fourth Street south of Elm until after 1822, Col. Easton's inclosure crossing it half-way to Fifth Street. South of this it was but a road, with two or three houses. The limestone bluff which fronted the place was nearly perpendicular. In seasons of low water in the river there was a wide sand-bar extending out a considerable distance from the shore, which when the water was at an ordinary stage was covered, leaving a narrow road of sand at the foot of the bluff. At seasons of high water it would completely cover this, and at times rise some eight or ten feet above the foot of the bluffs."

Brazeau's, Papin's, Conner's, Labadie's, and others. Gratiot occupied a large stone building at the corner of Main and Chestnut; opposite Gratiot, east, was the store of Hunt & Hankesser, the largest in the town. Old Madame Chouteau occupied a long, low building corner of Main and Chestnut, and south end of the same block was Antoine Chenie; opposite Chenie, east, was Pratte, and on the same block was Berthold.

There was, I think, but one house on the hill, the old Spanish garrison-house, with a round stone tower in front, just where

OLD STONE TOWER.

Walnut Street intersects Fourth Street. There were three other round stone towers, or at each end of the town, and one farther up Third Street. There was also a square stone bastion farther north.

St. Louis had been incorporated as a town in 1809 by the Territorial Court of Common Pleas. It was incorporated as a city by the Legislature in 1822. Previous to 1816 there had been no additions to the town as originally laid off by Laclede and Chouteau. In that year Chouteau and J. B. C. Lucas gave a square to the town for a court-house, and offered for sale a large tract on the west end of the town, from Fourth Street to Seventh.[1] This was the first ac-

[1] The following is Judge Lucas' advertisement of the proposed sale:

"The subscriber has been induced to lay out into lots about fifty acres of land, being part of his farm immediately adjoining the town of St. Louis, being comprised in the same plat, and by way of extension northwardly with the southerly new part of the town laid out by Col. Chouteau. These connected new parts perfectly correspond with the old part as to parallel and cross streets. The only difference is that the streets of the new part are nearly as broad again as those of the old part, that they are perfectly straight, and cross each rectangularly. The new site is mostly level and commanding, as it is on an average forty feet higher than the ground on

cession of territory. We will describe it more particularly a little farther on. The streets of St. Louis were not regularly named until 1826, though several of them bore names, as *Rue de l'Eglise*, *Rue des Granges*, *Rue Principale*, *Rue de Barrère*, etc. In July of that year an ordinance was passed adopting formal names.[1]

In 1826 the city had begun to grow, but had not yet quite got out from under the hill. In proof of this take the following from the "Impressions du Voyage" of his Highness Karl Bernhardt, duke of Saxe-Weimar, who visited St. Louis in 1826, in the month of April:

"St. Louis lies upon a rather high rocky foundation on the right bank of the Mississippi, and stretches itself out nearly a mile in length in the direction of the river.

"The most of the houses have a garden towards the water: the earth is supported by walls, so that the gardens form so many terraces. The city contains about four thousand inhabitants. It consists of one long main street, running parallel with the river, from which several side streets run to the heights behind the city. Here single houses point out the space where another street parallel with the main street can one day be built. The generality of the houses are new, built of brick two stories high; some are of rough stone and others of wood and clay in the Spanish taste, resembling the old houses in New Orleans. Round the city along the heights formerly ran a wall, but it is now taken away. At the corners stood massive round guard-towers, the walls of which one still can see. In a northern direction from the city are seven artificial hillocks, in two rows, which form a parallelogram. They belong to the much talked of Indian mounds and fortifications, of which numbers are found on the shores of the Ohio and Mississippi, and which are dispersed over these regions from Lake Erie to New Mexico. There exist neither documents nor traditions concerning the erection of these works, or of the tribe of people who erected them. In some a great quantity of human bones have been discovered, in others, on the contrary, nothing."

But from this period it sprang forward rapidly, and has never since ceased from its process of expansion and growth.

Professor Waterhouse, aided by Mr. Billon's invaluable manuscripts, has written the following concise and accurate sketch of the early topography of St. Louis for the present volume:

"For four or five years after its settlement St. Louis was called a trading-post. This title formed a part of its official designation. Then for about forty years the young colony bore the name of village. Nov. 9, 1809, St. Louis was incorporated as a borough town, and Dec. 9, 1822, it was invested by the State Legislature with the title of city. For more than half a century the physical features of St. Louis remained untouched by the hand of improvement. No public system of grading was undertaken prior to 1823. No changes materially altering the general surface of the ground were made before the incorporation of St. Louis as a city. Accordingly, the following facts observed in 1818, must present a substantially correct view of the site of St. Louis in its primitive condition. To avoid repetition and the employment of terms long since obsolete, the present names of streets and numbers of blocks are used in the description. A glance at Chouteau's map will show that some of the streets mentioned in this account were not in existence at that day, and are merely employed as a present means of identifying localities.

"In 1764 a steep limestone bluff occupied the place of the present Levee. It extended from the foot of Ashley to the foot of Poplar. Its height above the ordinary stage of the Mississippi was thirty-five or forty feet. From the Public Square between Market and Walnut there was a gradual descent to the

[2] Derived from Mr. F. L. Billon.

which the old town is situate, and presenting a full view of the Mississippi River for five or six miles down, and from several parts as far up, offering a horizon near as vast as on the ocean, and only limited at distant points for enhancement of its charms. Col. Chouteau and the subscriber have agreed to offer gratuitously to the county of St. Louis a whole square in the most central and best situation for a court-house and a suitable public area, exclusive of a lot intended for the use of a jail. The whole town, including the new part laid out and represented in the connected plat of Col. Chouteau and the subscriber (which will be deposited in the recorder's office in a few days), form an oblong, the breadth of which is equal to one-third on the whole length. By the present addition all goes to the breadth and nothing to the length. Thus the addition is doubly beneficial, as it tends also to render in future the town more compact.—JOHN B. C. LUCAS."

[1] An ordinance naming the streets of St. Louis.

WHEREAS, It is a desideratum with the citizens of this city to remove the difficulties and inconveniences which are daily experienced from the present names by which the streets of the city of St. Louis are designated; therefore,

Be it ordained by the Mayor and Board of Aldermen of the City of St. Louis, That all the streets running westward from the Mississippi River shall be called and known by the following names, to wit: The street known by the name of Market Street shall retain its present name, the first parallel or cross street north of said street shall be called Chestnut Street, the second shall be called Pine Street, the third shall be called Olive Street, the fourth shall be called Locust Street, the fifth shall be called Vine Street, the sixth shall be called Laurel Street, the seventh shall be called Prune Street, the eighth shall be called Oak Street, the ninth shall be called Cherry Street, the tenth shall be called Hickory Street, the eleventh shall be called Pear Street, the twelfth shall be called Willow Street.

SEC. 1. *And be it further ordained by the authority aforesaid*, That the first parallel or cross street south of said Market Street shall be called Walnut Street, the second shall be called Elm Street, the third shall be called Myrtle Street, the fourth shall be called Spruce Street, the fifth shall be called Almond Street, the sixth shall be called Poplar Street, the seventh shall be called Plum Street, the eighth shall be called Cedar Street, the ninth shall be called Mulberry Street, the tenth shall be called Lombard Street, the eleventh shall be called Hazel Street, the twelfth shall be called Sycamore Street.

SEC. 3. *And be it further ordained*, That the streets running parallel or nearly parallel to the river Mississippi shall be called and known by the following names, viz.: The street nearest the river shall be called Front Street; the remaining parallel streets shall be named in numerical order, viz., First, Second, Third, etc.

SEC. 4. *Be it ordained*, That the register cause immediately to be put, at the expense of the city, index-boards at the intersection of the cross streets with the first street.

alluvial bottom, which began in the vicinity of Poplar Street and extended down the river nearly two miles. It was through this valley that the waters of 'La Petite Rivière' flowed to the Mississippi. The mouth of the Little River was a short distance below our present gas-works. Owing to a slight convexity of the river-front, the distance of Main Street from the edge of the bluff varied from one hundred and fifty to two hundred feet.

"The highest ground on Main Street was in the rear of the Public Square, now block seven. From this central elevation there was a descent of about five feet to Market Street. From this point to the northern limits of Main Street the ground was level, or slightly rising. From the Public Square south there was a gradual slope to the foot of Plum Street, where, in consequence of a slight westward curvature in the river, Main Street terminated.

"With one important exception, Second Street had the same general outlines as Main Street, but from Chestnut Street to Vine Street there was a shallow depression, which after rains was muddy and almost impassable. In the street and in the lots on the east side the depth of the water was often over shoes. In 1778 this tract was drained into the gully which obliquely crossed Chestnut Street in its way to the river.

"On Third Street, from the centre of the village to Washington Avenue, there was a rise of twenty-five or thirty feet. From Washington Avenue to its northern extremity, Third Street was comparatively level. From the centre southward, Third Street followed the general slope of Main and Second Streets.

"In 1818, Fourth Street was not in existence. The line on which this street was subsequently laid out ran beyond the western limits of the village. Until about the time St. Louis assumed municipal honors Fourth Street terminated at Elm Street. About 1823, Col. Easton's land, situated at the intersection of these streets, was sold, the paling-fence which obstructed travel was removed, and Fourth Street was extended southward. The highest ground on this street was between Elm and Chestnut Streets; it was called 'the hill.' It was the water-shed between Ninth Street and the river. It was the most elevated land inclosed within the first limits of the city. From Chestnut Street there was a rapid descent to Pine Street. At this point a deep gully, which drained a large area lying northwest of the village, crossed Fourth Street in a southeasterly direction. North of Pine Street the surface of Fourth Street rose with a very slow and slight ascent. South of Elm Street the ground on Fourth Street gently declined to the valley of Mill Creek.

"The ground swell on Fourth Street was thirty-five or forty feet higher than the bluff, and consequently seventy or eighty feet higher than the river itself. In 1764, from Market Street down through the valley of Mill Creek, there was a heavy growth of forest-trees.[1]

"In 1818 a low sand-bank, from four hundred to six hundred feet wide, extended from the foot of Market Street to the southern extremity of the village. At the lower end of this bank there was a slight elevation, covered with groups of bushes. In after-years this knoll, insulated by the action of the river and enlarged by alluvial deposits, became Duncan's Island. At the base of the bluff there was a flat rock about one hundred feet wide. In high stages of the river this rock was always submerged, but in low water it afforded a dry and unobstructed foot-path from Market Street to Morgan Street. During high water the boatmen were compelled to land on the bottoms, and to make a long détour to reach the village.

"The original bounds of St. Louis were narrow. According to the plat of 1764, the trading-post stretched from Chouteau Avenue to Cherry Street, and from the river to near Fourth Street.

"At that time there was no street fronting on the Mississippi, the rear yards of the first line of buildings extended to the edge of the bluffs. Three streets ran parallel with the river. They were named Main (or Royal), Church, and Barn Streets.[2]

"The width of these streets was thirty-six French feet.[3]

"Eighteen cross streets ran west from the river. Their width was thirty French feet.[4] Walnut was then called La Rue de la Tour, because it led up to the tower on the hill, and Market was named La Rue de la Place,[5] because it formed the northern border of the Public Square. Only two or three of the other streets running west had distinctive names. They were merely lanes, on which there were no houses. In 1818 the village was divided into forty-nine blocks. Block 7, in the centre of the river-front, was called La Place, or the Public Square.[6] On this vacant space, after the cession to the United States, the

[1] In front of the whole land on the south of the town, where Mr. Soulard now lives, there was a bottom covered with heavy timber, which ended at the creek, just adjoining Judge Bent's place.—*Auguste Chouteau*, June 1, 1825: *Hunt's Minutes*, vol. ii. page 4.

The spot immediately where the town stands was very heavily timbered, but back of the town it was generally prairie, with some timber growing, but where the timber did not grow it was entirely free from undergrowth, and the grass grew in great abundance everywhere, and of the best quality; but where the inhabitants used to cut their hay was where Judge Lucas now lives, and between his house and the cottonwood-trees, it being all prairie.—*Baptiste Rivière*, July 29, 1825: *Hunt's Minutes*, vol. ii. p. 109.

[2] La Rue Principale (or Royale), La Rue de l'Eglise, and La Rue des Granges. In the early grants, Second Street was at first designated Une Autre Rue Principale. Second Street was sometimes called La Rue Barrère, from the name of a baker who for many years lived at the southwest corner of Third and Chestnut.

[3] A French foot was nearly thirteen English inches. In other villages the streets were sometimes still narrower. The streets of Robertsville were at first only twenty-four feet wide. —*Hunt's Minutes*, vol. ii. p. 15.

[4] The main streets were all of them laid out to be thirty-six feet (French measure) wide, and all the cross streets were laid out to be thirty feet (French measure) wide. The blocks were generally laid out to be two hundred and forty feet, fronting on the main streets, and running back three hundred feet to the other main street.—*Auguste Chouteau*, Sept. 8, 1825: *Hunt's Minutes*, vol. ii. p. 178.

The first settlers, not distinctly foreseeing the future greatness of St. Louis, laid out the streets to meet the needs of a small village. The probable reason for narrow streets was the greater ease of defense. Compactness permitted a shorter line of palisades and a greater concentration of forces.

[5] Market Street was also called La Rue Bonhomme.

[6] The northern part of Block 7 was then (1799) a public place of meeting for the inhabitants, and was called "La Place."—*Marie P. Leduc*, Nov. 7, 1825: *Hunt's Minutes*, vol. iii. p. 58.

It was used as a place of arms (Place d'Armes), for the use of the inhabitants.—*Charles Dehault Delassus*, Nov. 9, 1825: *ibid.*, p. 160.

The words "Place Publique," in the French language, mean an open space free of access in every direction.—*René Paul*, Nov. 16, 1825: *ibid.*, p. 73.

first public market-house was built.[1] Block 34, directly west of the Public Square, was selected by Laclede for his own residence. It was on this site that the spacious stone house called the Chouteau mansion was subsequently erected. Block 59, between Second and Third Streets, was reserved for the Catholic Church and cemetery. The blocks between Walnut and Market Streets were three hundred French feet square; all the rest of the blocks had a frontage of two hundred and forty by a depth of three hundred French feet. Within the limits of the village the original grants to settlers were commonly restricted to a quarter of a block; a few favored individuals obtained half-blocks, and in three or four instances official distinction, meritorious service, or social dignity secured the concession of a whole block. In 1818 there were only two approaches from the river to the town. These led up Market and Morgan Streets. The ascent was steep, rocky, and difficult. Under the town organization no steps were taken to provide additional means of access, but soon after the adoption of a municipal government other streets were cut down through the bluff to the river."

The boundaries of St. Louis County, as officially laid down in connection with the general land-office system of the United States, give the following limits: Beginning in the middle of the main channel of the Mississippi River, due east of the mouth of the river Maramec; thence due west to the middle of the main channel of the Maramec River, at the mouth thereof; thence up the Maramec River, and with the middle of the main channel thereof, to a point where the township line between T. 43 and 44 N. of the base-line crosses the same; thence west with said line to the main channel of the Maramec River, where the said channel again crosses the same; thence up the Maramec River, and with the middle of the main channel thereof, to a point where the range-line between R. 2 and 3 E. of the fifth principal meridian crosses the same; thence north with said line to the middle of the main channel of the Missouri River; thence down the Missouri River, and with the middle of the main channel of the said river, to the mouth thereof; thence due east to the middle of the main channel of the Mississippi River; thence down the Mississippi River, and with the middle of the main channel thereof, to the place of beginning.

The county of St. Louis is subdivided into five municipal townships, namely: Carondelet, St. Louis, St. Ferdinand, Bonhomme, and Maramec.

The township of St. Louis begins at a point in the main channel of the Mississippi River due east of the junction of Morin's Creek and river Gingras; thence due west across the river Gingras to the mouth of Morin's Creek; thence southwardly with said creek to where it crosses for the first time the northeast line of a New Madrid location, by virtue of certificate No. 94, in T. 45 N. R. 7 E.; thence northwestwardly with said line to the northwest corner of said claim; thence southwestwardly with the northwestern line of said claim to where it intersects the township line, between T. 45 and 46 N. of the base-line; thence west with said township line to where it crosses the range-line, between R. 5 and 6 E. of the fifth principal meridian; thence south with said range-line to the corner of T. 44 and 45 N., R. 5 and 6 E.; thence eastwardly with the boundary line of Carondelet township to the main channel of the Mississippi River; and in the main channel thereof to the place of beginning.

The township of Carondelet, which has been in part incorporated with St. Louis, begins at a point in the main channel of the Mississippi River due east of the southeast corner of the commons of the city of St. Louis; thence due west to the said southeast corner; thence westwardly with the southern boundary line of said commons to the southwest corner thereof; thence northwardly with the western line of said commons to where the same intersects the line dividing T. 44 and 45 N. of the base-line; thence west with said dividing line to the line dividing R. 5 and 6 E. of the fifth principal meridian; thence south with said range-line to its intersection with the southeast boundary line of survey No. 1933, in T. 44 N., R. 5 and 6 E.; thence southwestwardly with said southeast line, and following the course of said line, to the middle of the main channel of the Maramec River; thence down said Maramec River, in the middle of the main channel thereof, to its mouth; thence due east to the middle of the main channel of the Mississippi River; thence up said Mississippi River, in the middle of the main channel thereof, to the beginning.

The village or hamlet of St. Louis, as laid out by Laclede and Auguste Chouteau in 1764, and as mapped by the latter in 1780, was bounded by Third Street on the West and the Mississippi River on the east; by Cherry Street (now Franklin Avenue) on the north, and what is now Poplar Street on the south. It contained forty-nine blocks,—fifteen between the river bluffs and the first or principal street, extending from the present Poplar Street on the south to Cherry Street on the north; nineteen between the first and second streets, from our Lombard Street south to Cherry Street north; and fifteen between the second and third streets, from Lombard Street south to Vine Street north. Fourth Street almost exactly marked the line of fortifications drawn and began by Chouteau in 1780, and completed in 1794.

In 1804, and at the time of the town's incorporation in 1809, its boundaries were the following: The

[1] "The market was built on it about A.D. 1811."—*Mackay Wherry*, Nov. 9, 1825: *Hunt's Minutes*, vol. iii. p. 61.

north line was about one hundred and forty feet north of Franklin Avenue (formerly Cherry Street), between the river and Broadway. The west line was along the present west side of Broadway from Franklin to Washington Avenues; thence diagonally from the southwest corner of Third Street and Washington Avenue to the southwest corner of Fourth and Market Streets; thence to the southeast corner of Fifth and Gratiot Streets; thence diagonally to the east side of Fourth Street, between Papin (formerly called Lombard) Street and Chouteau Avenue; and thence diagonally to the north side of Rutger Street, between Main and Second Streets. The south line was diagonally northeast from Rutger Street, near Main Street, to the then river at Papin (formerly called Lombard) Street, at about Main Street.

After the incorporation of the "town of St. Louis" by the Court of Common Pleas for the district of St. Louis, on the 9th of November, 1809, the board of trustees of the town, by an ordinance dated Feb. 25, 1811, established the following as the boundaries of the place for municipal purposes:

"Commence at the river Mississippi at low-water mark, at or near the windmill of Antoine Roy; then due west to the east line of the forty arpent lots on the hill back of St. Louis; thence along the line of said lots to Mill Creek; then down said creek to its mouth; thence up the river Mississippi along low-water mark to the place of beginning.

"WILLIAM CLARK, *Chairman pro tem.*
"CLEMENT B. PENROSE.
"BERNARD PRATTE."[1]

[1] The word *arpent* and its plural, *arpens*, occur constantly in the old French and Spanish records of Upper and Lower Louisiana and Canada, and it must be clearly understood, or these records can only produce confusion. Arpent, the French for an acre, is a measure of length, and of surface likewise. The French used to say "an acre long," just as we say "a mile long." They say "an arpent of land," or "ten arpens of land," just as we say "an acre of land." Singularly enough, there is no precise measurement for the arpent; its length and its superficial quantity varied greatly according to the different provinces of France. In one place it meant five-sixths, in another it meant seven-eighths of an acre. Consequently, when our American surveyors began to verify the French and Spanish surveys, it became necessary to establish an arbitrary value for the French measures in order to have a common and unvarying standard. This was done very early, and a table was prepared and printed for the guidance and government of surveyors. A copy of this table, as originally printed, in old type upon a broadside of coarse paper, lies before us now. It is as follows:

This town incorporation of St. Louis was granted upon the petition of two-thirds of the taxable inhabitants to the court, which, by act of the Territorial Legislature, had discretionary power in the premises. The petition was presented Nov. 9, 1809, and on the same day the judges (Silas Bent, president, Bernard Pratte and Louis Labeaume, associates) granted the charter and franchises, and provided for five trustees, to be elected by the vote of the tax-payers, to act as town commissioners. The boundaries of St. Louis, as expressed in the charter, were as follows:

"Beginning at Antoine Roy's mill on the bank of the Mississippi, thence running sixty arpens west, thence south on said line of sixty arpens in the rear until the same crosses to the Barrière Denoyer; thence due south until it comes to the Sugar-Loaf; thence due east to the Mississippi; from thence by the Mississippi to the place mentioned."

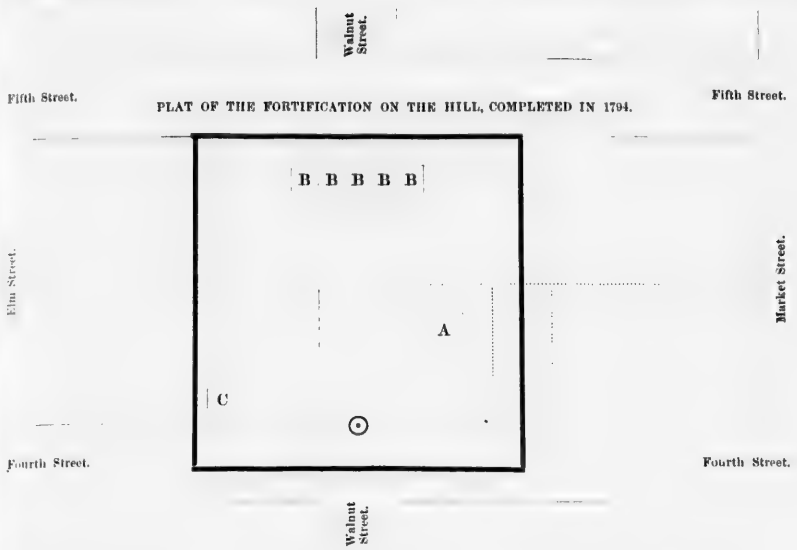
A further incorporation of the town as a city occurred Dec. 9, 1822. The extended boundaries were described as beginning at a point in the middle of the main channel of the Mississippi River, due east of the southern end of a bridge across Mill Creek, at the lower portion of the town of St. Louis; thence due west to a point at which the western line of Seventh Street extended southwardly and intersected the same; thence northwardly along the western side of Seventh Street, and continuing in that course to a point due west to the northern side of Roy's tower; thence due east to the middle of the main channel of the river Mississippi; thence with the middle of the main channel of the said river to the beginning.

This boundary, in brief, was: On the north, Ashley Street to Broadway, thence west along Biddle Street to Seventh Street; the west line, Seventh Street, from Biddle Street to Labadie Street; and the south line, Labadie Street to Fourth Street, and Convent Street from Fourth Street to river.

Within these limits the town contained an area of 385 acres, on which there were 232 brick and 419 frame dwellings, containing a population of 5000. The taxable property was increased from $424,560 to $810,064, and the tax increased from $3763 to $3823.80 annually.

Besides extending the limits of the town this year, the rate of taxes was increased from one-third to one-half of one per cent.

Réné Paul, who was the first city engineer of St. Louis, surveyed and mapped out the city as it was in 1823. The original map, made by Mr. Paul, was lost ten or twelve years ago, but an authenticated copy has been preserved in the present street commissioners' office.



In 1851, to show the rapid growth the city had made in the interval of less than thirty years, its boundaries were as follows:

"All that district of country contained within the following limits, to wit: Beginning at a point in the middle of the main channel of the Mississippi River due east to the southeast corner of St. George, in St. Louis County; thence due west to the west line of Second Carondelet Avenue; thence north with the said west line of said avenue to the north line of Chouteau Avenue; thence northwardly in a direct line to the mouth of Stony Creek; thence due east to the middle of the main channel of the Mississippi River; thence southwardly with the middle of the main channel of the Mississippi River to the place of beginning,"

which district was divided into six wards. The city was then allowed to maintain for its protection and clearance a hospital, poor-house, and work-house. The City Council, now increased to twenty-four members, with two boards, with officers as we now find them, the stated sessions, and all the powers were set down, their right to appropriate was limited, and they were generally held to check in their doings. In like manner, the particular duties of the mayor and the ministerial officers heretofore or now created were laid down, and the election of the lot provided for. So additional powers were granted as to the improvement of streets, the maintenance of a police force, and so on generally to the last chapter.

The first survey of the town was made in accordance with the direction of Laclede, the founder, by Auguste Chouteau, under the Spanish government, and in 1781, the year succeeding *l'année de grand coup*, or the Indians' attack, a full account of which will be found in a succeeding chapter. The object of the map was to show the original grants of land by the French and Spanish governments, and also to illustrate the plan of fortification proposed by Chouteau, but never completed. The original map and field-notes are still preserved, and in the possession of Theophil Papin, of St. Louis, whose grandfather assisted in making the surveys. The map, which is inscribed in French, "St. Louis of the Illinois, fortified by Don Francisco de Cruzat, Lieutenant-Colonel and Lieutenant-Governor of the western part of the Illinois in 1780," presents and locates the town, the demilunes, the bastions, the gates, the government house, the church, the Public Square, Mill Creek, and the several lots and blocks occupied by individuals and their residences. Chouteau himself said of this plat in a memorandum over his own signature, dated in 1825, "In regard to the line of fortification, I only *traced* it in 1780, by order of the government." He also says that this plat made by him in 1764 was not by order of the government, but to commemorate his services as one of the founders of St. Louis. F. L. Billon furnishes the accompanying satisfactory diagram and description of the original fortifications of St. Louis:

The "Fort on the Hill" (so called by the old inhabitants of the village) was completed and occupied by the one company of Spanish soldiers usually kept at this post in the year 1794. It was a square inclosure of three hundred French feet on each of its four sides, inclosed with palisades firmly set in the ground. Its eastern front line was about in the centre of our present Fourth Street, extending west to about the east line of Fifth Street, and from the centre of the present Block No. 104 on the south to near the centre of Block No. 103 on the north, and embraced the ground covered by our present Walnut Street, from Fourth to Fifth, sixty feet wide, the north half of our present Block No. 104, on which

PLAT OF THE FORTIFICATION ON THE HILL, COMPLETED IN 1794.

The square in the centre of the plat represents the fortification as inclosed within the palisades, with the buildings therein, viz.:

A—Commandant's House.
B—Barracks for the Soldiers.
C—Powder Magazine.
⊙—Central Tower, used as the Guard-House.

stood the original Southern Hotel, one hundred and twenty feet, and the same quantity, one hundred and twenty feet, of Block 103, north of Walnut, to within about twenty-four feet from the south line of the "Tyler Granite Buildings." This point was selected for it by the then Spanish Governor, for the reason that the road leading up to it from the main street of the village (our present Walnut Street) was at that day, and for long years thereafter, the principal cross street of the village, the so-called "Governor's house" being at the southeast corner of our present Main and Walnut Streets, and from which point there was an unobstructed view of the main entrance to the fortification, in a direct line with the centre of Walnut Street.

The east line of the fortification was about forty feet from the brow of the hill, along which ran a road north and south, and in laying out Fourth Street, by Chouteau and Lucas, in 1816, it took these forty feet and about forty feet more from the east line of the fortification grounds for that purpose, and in extending Walnut Street west it took a piece sixty feet wide through the precise centre of the old fortification ground, leaving the stone tower in the centre of the street, with a roadway on each side. The buildings within the fortification were those designated on the plat. There were some eight or ten small cannon, principally field-pieces, kept, mounted, in the fort during the Spanish occupation of it, some ten years, which were removed by the Spanish commandant on the evacuation of the country.

After the transfer to the United States in 1804, the barracks were occupied by the United States soldiers for a couple of years, when, the cantonment at Bellefontaine having been established by Gen. James Wilkinson, in 1806, the troops were removed to that point, and these works were abandoned for military purposes. The commandant's house and the stone tower were subsequently made use of, for a time, for a very different purpose than that for which they were originally designed, as appears from the following extract from the records of the Court of Oyer and Terminer of the Territory, March term, 1806.

April 4th, "on application to Governor Wilkinson, he granted to the authorities of the village to make use of the military guard-house [the tower] in the fort on the hills as a jail until one could be built."

Dec. 19, 1806, "the court ordered the house in the garrison to be repaired for the use of the courts, and a stove and wood to be furnished for the jail."

This building was occupied by the Territorial Courts of Common Pleas and Oyer and Terminer

for some ten years until 1816, in which year, Lucas and Chouteau having laid out their first addition to the town, when the ground of the old fort, being Chouteau's private property, as part of his large mill tract, was cut in two by the extension of our present Walnut Street through it, and lot No. 5, on which this house stood, was purchased by M. McGirk, a lawyer, who occupied it a few years until his removal to Montgomery County, subsequently by John B. Smith and others. McGirk sold it to N. Paschal, and Paschal to Mrs. Samuel Perry in 1836, who removed it to make way for a modern brick dwelling.

The old round tower was the town jail until the county court built the jail, in 1817–19, on the southeast corner of Chestnut and Sixth Streets. William Sullivan, who purchased from Chouteau in 1816 the half-block upon which the Southern Hotel was subsequently erected, and had built a small frame and log house at the northeast corner of his lot, where he lived for a number of years, was the jailer at the old tower.[1]

[1] In regard to these works of defense, the government house, prison, and other points indicated on Chouteau's map, we have the following additional interesting particulars, gathered through the indefatigable industry of Mr. Billon, who never leaves a subject until he has exhausted all the information attainable in regard to it. Governor De Leyba's successor, Cruzat, he says, immediately on his arrival, sought to make provision for the protection of the village from further inroads of savages like that of 1780.

In pursuance of this purpose, he authorized Mr. Auguste Chouteau, who had drawn for Mr. Laclede, in 1764, the original plat of the village, to sketch off a line of defenses outside of and to include the village as then laid off. (See plat 1780.)

Mr. Chouteau, although a well-educated man, was not as yet a military man, and in drawing out his line of fortifications, which look very well and regular on paper, perhaps did not take into consideration the necessity of firm and solid ground upon which to erect the stone portions of the defenses, viz., the bastion and the towers; so that when, in after-years, these works were actually erected, they were compelled, from the nature of the ground on the spot assigned them in the plat, to deviate therefrom in some of them, and place them at other points, where no doubt the ground was more suitable, as subsequent events conclusively proved.

By the original plat these defensive works were to have been a stone bastion at both the northwest and southwest corners of the then village, a central round tower of stone on the west line of the village inclosure, and four stone demi-lunes (half-moons) at the northeast and southeast corners of the village on the river-bank, and the other two on the west line of the village, equidistant between the central tower and the bastion, and a stockade of strong posts firmly planted in the ground, and fastened to each other near the top.

This stockade was put up immediately, and the northwest bastion and northeast two demi-lunes commenced the same year, 1780. The work was then suspended, the panic having passed over in consequence of the peace of 1783.

In 1797, fearing another attack from Canada, the works were resumed, and four circular towers of stone were substituted in place of the half-moons, more solid and less expensive to erect. In lieu of the southwest stone bastion a large block-house of strong timbers was erected.

These works were never completed, and after the transfer to the United States gradually fell into decay and eventually disappeared.

The tower, which if erected on the spot designated for it in 1780 would have been found a little east of Fourth Street, just below Locust (in Block 88), was erected on Block 90, on the west side of Third, a little north of the centre of the block, between St. Charles and Washington Avenue, and fully two hundred yards northeast of the spot assigned for it on the plat. The foundations of this tower, projecting partly into Third Street, remained there until 1825, when they were removed to make way for the Union engine-house. The ground here, originally some five or six feet higher, was cut down to conform to the established grade.

The wooden block-house in lieu of the southwest stone bastion was situated near the bank of Mill Creek, about on the north line of our present Chouteau Avenue, about midway between Third and Fourth, in Block 74. It was used for some years before its removal by butchers in that vicinity as a slaughter-house, being convenient to the creek in which to throw their offal, and was finally removed after the incorporation of the city.

The southeast tower of stone, built near the spot designed for it on the plat, was found to be on Block No. 46, near its northwest corner, a little east of Second Street, and just south of Sycamore, a new street, laid out and added to the city plat by Col. René Paul, the first "city" engineer.

The stone tower on the west line, between the central tower and the block-house, was located near the line of Fifth, a little south of Poplar, where the high ridge began to slope west to the creek.

The northeast tower stood on the limestone bluff on the river-bank, a little north of the foot of Cherry Street.

I have but a vague recollection of its remains, it being in a locality not much frequented in my day. These so-called half-moons on the plat were, when erected, all circular towers of about twenty-five feet in diameter, and about the same in height. These towers were never completed; that at the junction of Fourth and Walnut Streets, being used for a number of years after our acquisition of the country for the town prison, had a temporary roof; the others were uncovered.

The spaces from tower to tower, as laid down on the plat with projections and recesses, would seem to indicate that they were to have been built of stone. If so, the idea was quickly abandoned, as the stockade put up the same year, 1780, was simply a straight line of pickets, firmly set in the ground, and bound together near the top by sapling withes.

The northwest bastion was built of stone, just within the line of the present Block No. 68, at the southeast corner of what are now Cherry Street and Broadway, 1880.

The central tower of stone was placed in the centre of our present Walnut Street, on the west line of Fourth Street; built in 1797.

Col. René Paul, surveyor for the city at the time of its incorporation, who had been in St. Louis since October, 1808, and was surveyor from 1815, and the city's official surveyor from 1823 to 1838, testified as follows in regard to the site of the

In a very complete and accurate digest by the *St. Louis Globe-Democrat* (April 2, 1882) of the real estate history of the city, it is said that, in 1765, M. Aubri, the Governor at that time of the French prov-

fince of Louisiana, gave to M. St. Ange de Bellerive, commandant at the post of St. Louis, authority to grant the royal domain, and that

"When the territory came in possession of the Spanish government, Piernas, the Lieutenant-Governor, confirmed all of the

old fort in the case of Baldwin *et al vs.* Board of Public Schools:

"I surveyed the extension of Walnut Street through the fort, which was in part north and south of Walnut Street. The round tower on Walnut was in the fort; the Block 103 was entirely on Chouteau's land, with the exception of the southeast corner, McClirk's lot; the common line cut off about six feet on Walnut, making a very acute angle on Fourth; north, the fort was partly on the Fourth Street and on the two Blocks 103 and 104; the powder magazine, at the south end of the fort, on Sullivan lot, the southeast corner of the Southern Hotel; part of the remains were removed in excavating for the hotel. Fourth Street had been cut down at that point in grading it some six feet or so, which exposed them for many years. The old fort was removed by Paul in extending Walnut Street through Chouteau's addition."

About the supposed graveyard, near the fort, Mr. Billon adds:

"Mr. Gabriel S. Chouteau informs me that 'after the possession of the place by Capt. Amos Stoddard, of the United States army, in 1804, the few American soldiers who accompanied him were quartered in the barracks on the hill, which had been previously occupied by the Spanish troops at this post, generally a single company of some forty men; that naturally a death would occasionally occur among them, and not being Catholics and entitled to interment in the cemetery, the only burial-place in the village, they were buried just back of the barracks buildings, between it and where is now Market Street, the ground around the barracks being at that time all open. Besides the soldiers, other persons, residents of the village not Catholics, were occasionally buried there.

"'After the establishment by the United States of the military post at Bellefontaine, on the Missouri, which became the headquarters of the United States military in the West, these troops were removed to that point, and the old barracks were abandoned.

"'Col. Chouteau, who had long been the owner of this ground, then gave notice that he would no longer permit any interments on his land. The interments on this ground ceased from that time, and in a very few years after their discontinuance, there being no headstones to mark the graves, and the grass and bushes growing up around the place, there was nothing left to indicate that the ground had ever been used for such a purpose, and it was only in later years that, in excavating for cellars, the remains of human beings were thrown up, which gave rise to the conjecture that a graveyard had once existed on the spot. Mr. Chouteau supposes that during the years it was so used the interments on this ground might have numbered some fifty or more.'

"It was owing to the circumstances above detailed that Chouteau and Lucas, in disposing of lots in the first addition to the town of St. Louis, made by them in May, 1816, inserted a special stipulation in each deed that the ground should never be used for burial purposes.

"Since the foregoing was written I have obtained the following:

"Oct. 28, 1815, Col. Chouteau gives notice in the *Missouri Gazette* of this date, 'That he will not permit his land on the block adjoining the court-house, in the town of St. Louis, to be made use of as a place of burial, and cautions the public against trespassing in future, as he will institute suits against all so trespassing.

"'Oct. 12, 1815. AUGUSTE CHOUTEAU.'

"June 1, 1816, James Sawyer gives notice in the *Missouri Gazette* that 'he has purchased from Col. A. Chouteau lot No. 6, in his new addition on the hill, adjoining the court-house, on which lot are some graves, and being about to build, he gives this notice to the friends of those there buried, so that they may remove their remains if they think fit to do so.

"'JAMES SAWYER.'

"From these notices it appears that the stone house in the fort ground was still used for a court-house until the lot was purchased by McClirk from Chouteau, in May, 1816, when it became the property of McClirk with the ground, who took possession of it."

"The first house built in St. Louis," continues Mr. Billon, "was the large stone in Block 34, which was always the central point of the village and subsequent 'town.' This house, built by Laclede in 1764 for Maxent, Laclede & Co., of New Orleans, and designed by him at the day for his business and residence, was a very large house for the time and place, being sixty feet front on the street by twenty-four deep, and divided off on the principal floor in five rooms,—a large central room twenty-four feet square, and four smaller ones at the corners.

"This centre room was for nearly twenty years the government hall. The basement, about ten feet high from the level of the ground, divided as above stairs into several compartments, was also for about the same length of time as quarters for the troops, and while so occupied was usually styled the garrison.

"The ascent to the main floor was by outside steps to a gallery in front and rear, and there were narrow stairs to a high garret under the steep roof at two of the corners inside.

"This house was occupied by Governors St. Ange, Piernas, Cruzat, and De Leyba during their respective administrations, and by Cruzat a second time until 1783, when he bought the Martigny house at the corner diagonally opposite and removed there. After St. Ange was succeeded in the government by Piernas, having no family, he had his room and board in the house of Mrs. Chouteau, Main and Chestnut, until his death, Dec. 26, 1774.

"The wife of De Leyba died in this house in 1779, and he himself June 28, 1780, one short year thereafter.

"After the hall of government had been removed by Cruzat across the street, Laclede being dead and the house unoccupied for a number of years, it went rapidly to ruin, and the property was sold by Maxent (the owner), of New Orleans, at public sale, Jan. 6, 1789, to Auguste Chouteau, who almost rebuilt it anew, and occupied it for forty years, until his death, in 1829, and his widow for some years thereafter. Chouteau inclosed the whole block, three hundred feet square, with a high stone wall, the original fence of stakes having completely decayed away during its occupation by the Spanish government.

"In the year 1774, there being no village prison, Governor Piernas had Laclede construct a small one of fifteen by twenty feet against one of the gable ends of this stone house, where it might at all times be under the supervision of the

ince. The provincial capital at that time was at New Orleans, and but a few St. Louis titles were fully confirmed, as the expense and time required to go to New Orleans was more than the majority of the inhabitants of the village of St. Louis could give. At that period in the history of St. Louis it took between five and six months to go to and return from New Orleans. The St. Louisans subsequently, in buying and selling land, waived the objection to a complete title. Subsequent proceedings in the United States courts confirmed many of these grants. Under the Spanish and French governments in St. Louis lands were granted upon personal petitions, and occupied similarly to the present homestead grants of the United States, except that no money payments were required, and it was necessary for the petitioner to be a member of the Roman Catholic Church.

"When the province in which St. Louis was situated was conveyed by the French to the United States, land speculators created a panic and 'beared' real estate by claiming that the local grants of land not confirmed in title by the Governor-General of the province would not be considered valid by the United States. The holders of such real estate immediately sold to the agents of the speculators at very low rates. Many alleged fraudulent land claims were created during this land panic, and those claims for over seventy years afterwards caused property litigation in the courts, but at present all of them have been finally settled, except in two or three instances."

orderly sergeant and soldier or two who had charge of the government chamber, and were constantly in attendance on the Governor."

And finally, in respect to the residence which the several Spanish Governors occupied, Mr. Billon says, "There never was in St. Louis a house built expressly for the occupation of the Spanish Governors. On the original plat of the village, the north half of Block No. 6, at the southeast corner of Main and Walnut Streets, is marked as the government lot, because during the last twenty years or so of the French and Spanish combinations this house was occupied by the four last Spanish Governors successively from Cruzat's second term, viz.: Cruzat, Perez, Trudeau, and De Lassus, the government being simply tenants, and paying rent for it to the original owners of the property.

"The original owner of this lot was John B. Martigny, one of those who came over with Laclede from the other side in 1764-65, and obtained a verbal grant for the same. He was a noted man in the village for a number of years, and a captain in the militia of the post.

"On this lot Martigny built in 1766 a stone house of forty feet front by twenty-five deep, divided into several rooms. He lived in it for a number of years, and sold the property to Governor Cruzat on July 10, 1783, during Cruzat's second term as Governor. Cruzat removed the government chamber from the large house on the opposite side of the street, built by Laclede in 1764, to this house, which he occupied with his family some four years; and when about to leave the country at the expiration of his term of office, he sold it to Auguste Chouteau, Aug. 23, 1787, whose property it remained until after his death, Feb. 25, 1829, a period of over forty years, and to his estate subsequently. After it became the property of Chouteau it continued to be occupied by each successive Spanish Governor, and it was in this house that the documents relating to the transfer of this Upper Louisiana to the United States were executed and the transfer consummated. Hence it might appropriately be called the 'Government House,' and was doubtless so marked down on the old plat in subsequent years.

"This old house had a history for over thirty years after the transfer to the United States. From its central location, Main and Walnut Streets, which for many years before and after was the principal cross street of the village, leading up from the Governor's house to the 'Fort' on the hill, it was the most noted house in the village previous to and after the change of government.

"It continued to be occupied as the government house by Capt. Stoddard during his brief sojourn here as Governor until Sept. 30, 1804.

"1805 and 1806, Maj. William Christy occupied it as a public-house until he built for himself a frame house on the land he had purchased, just northwest and adjoining the village, on the hill, where he opened a farm in 1807, and resided for a few years, upon which land he subsequently laid out 'Christy's first addition to St. Louis.'

"1807, it was occupied by Gen. Wm. Clark, the first superintendent of Indian affairs at St. Louis.

"1808, November, by Maj. Rezin Webster as the 'Eagle Tavern.'

"1810, June 27th, reopened by Maj. Christy as the 'Missouri Hotel.'

"1814-15, Mr. Horace Austin succeeded Maj. Christy, [illegible]

"1816, January 27th, Thomas Peebles, the '[illegible]' last public-house. 'Washington Hall,' at M[illegible] and [illegible] the 'Green-tree Tavern,' on Second [illegible] ing been open as public-houses, this old house [illegible] used as [illegible]

"1817, December, Stephen [illegible], 'broker's and [illegible] office.'

"1818, January 29th, store in part of the [illegible]. During its occupancy as a public-house it had been [illegible] enlarged the addition of several rooms on the ground floor.

"1821, May, John J. Lacroze, confectioner, in the north part; Asa Wheeler and Daniel D. Page, bakers and [illegible] south part.

"This house, but a one story, originally forty feet front, has been extended south some twenty feet. After we became a city, in 1823, they were Nos. 27, 29, and 31."

This is a fair general statement of the subject, but still some qualifications and explanations are necessary in the premises. St. Ange probably had no authority of a definite character. He was acceptable to the French; his presence was necessary to the preservation of order, and he was willing to act, in connection with the notaries named in Chapter IV., as *locum tenens* until the Spanish authority should be established. His grants, with the sanction of the notaries as a proof of their regularity, thus became the acts of a *de facto* government, which it was good policy on every hand to recognize and uphold. But there would probably have been many difficulties, had it not been for the fact that real estate had little practical value and could be obtained by every one in the greatest abundance, and without any material outlay. Many of the first concessions of lots are very obscure and vague in the description of the location and the metes and bounds. There was no particular landmark for a starting-point, no base-line for surveys. French immigrants from Kaskaskia, Cahokia, Prairie du Rocher, Fort Chartres, and other settlements on the east bank

of the river, not choosing to live under the British authorities, came over to St. Louis and took up their abode there, some occupying lots simply upon the basis of the Governor's verbal assent, and building on lands to which they had none but a title of courtesy. It was this which led to the employment of the "Livres Terriens," or land-record books, the first entry in which was made under date of April 27, 1766. But, in fact, to quote the words of Mr. Billon, who has most thoroughly investigated the original land titles of primitive St. Louis,—

"Lands and lots originally were of little or no value in themselves, as they were freely bestowed upon any person on the sole condition that he would improve them for his own habitation within a year and a day from the date of his grant. If within that time he bestowed the least labor possible on the land, no matter how trivial, grubbing a small portion, cutting down a tree, or anything else, he had virtually complied with the conditions of the grant, and could dispose of it as he pleased; otherwise he had forfeited it, and it reverted to the domain, to be regranted to any other who might apply for it. Consequently lots had no other value for many years after the birth of the village than that of the improvements put upon them. When a sale of a house took place it was for the house only, the lot, no matter if large or small, even to the extent of a block, going with the house. There are several instances on record where a lot has been sold for ten or twelve dollars merely to repay the seller for the labor he might have bestowed on it.

"There were also not a few instances where houses and lots were sold verbally, without written deed, a verbal sale being good when the consideration had been paid. If sold on time it was considered mortgaged for the payment, if not paid for when due it was considered forfeited, and the first owner had a right to sell it again to a new party, and the title good. If it had been sold on time, and a third party had gone security for the payment, the party paying the money when due became the legal owner, and could sell it and make a valid title to the same. For these reasons the chain of title is broken in a number of cases."

Mr. Billon adds that after the affair of 1780 the village made so little progress

"For the next twenty years, and so few lots were applied for, that there was but little necessity for extending the village limits. Three blocks were added to the south end, with but one house on each; fourteen on the west side of the Third Street, with as many new houses on the ascent to the high land back of the village; and the four already mentioned in the northwest corner, without any improvements thereon, so that in 1804 the village plat stood thus:

		Added.	Total.	With Houses.	Vacant Block.
1st row of blocks.....	15	1	16	15	1
2d " " "	19	2	21	21	..
3d " " "	15	5	20	17	3
4th " " "	...	14	14	11	3
	49	22	71	64	7

A few years before the purchase by the United States, and when it was becoming daily more evident that before long the country would pass from the possession of Spain, many grants of lands were made by the Spanish officials throughout the country. There were no vacant lots left to concede in the village, all having been granted or in the possession of individuals. South of the village to Carondelet, and west, there were no more lots nor lands to grant; there remained contiguous to St. Louis but the piece of land north of the village above mentioned. This was conceded by Governor Delassus, in the years 1799–1800, to various individuals, viz.: Clamorgan, Soulard, Yosti, Egliz, and others, in pieces of from five to ten arpens fronting east on the river, and running back up the hill to the east line of the forty-arpent lots. These several pieces of land adjoined each other consecutively, there being no roads left between or through them, the northernmost cross-road from the river west then being our present Morgan Street. There was then no Cherry Street, it being but a narrow lane between what are now Blocks Nos. 24 and 25, the only road at that period through these lands being a continuation of the main street northwardly, and was called the road to Roy's mill.

The article in the *Globe-Democrat* proceeds to give a list of "the original property-owners in the old town and village of St. Louis prior to and at 1809, according to the survey of Auguste Chouteau, made in 1781 or 1782, and afterwards confirmed by surveys made in 1823 by René Paul for the city, and made in 1838 by Joseph C. Brown for the United States government." We owe it to Mr. Billon that we are here able to present, in a compact form and regular order, a full list of the lots, owners, and improvements in St. Louis during the whole period from 1764 to 1823, inclusive, with all the dates and every other circumstance requisite to perfect intelligibility and accuracy. The collection and arrangement of such a mass of material was a most laborious task, but to Mr. Billon it has been a labor of love. The lists may be trusted as giving an exhaustive history of real estate transactions in St. Louis during the first fifty-seven years of its existence, and we owe it to Mr. Billon to present his lists as he prepared them, without omitting any particular or neglecting any detail.

I.—LOTS DESIGNATED IN CHOUTEAU'S MAP.

In 1764, when Chouteau traced out the original plat of the embryo village of St. Louis, under the direction and instruction of Laclede, his stepfather, the following were the only lots designated thereon as being then in possession of individuals:

In block now

No. 2, the north one-half.

No. 8, the south one-half, Jean de Lage.

No. 16, the block, Louis Honore Tesson, concession Feb. 6, 1770, to Louis Honore Tesson.

No. 25, the block east half, John B. Cardinal.

No. 31, southwest one-fourth, John B. Provenchere, concession Feb. 15, 1768, to J. B. Provenchere.

No. 34, block, Laclede Liguest, concession Aug. 11, 1766, to Laclede.

No. 44, block, Gabriel Descary.

No. 50, north one-half, concession Aug. 6, 1767, to René Buet.

No. 54, northwest one-fourth.

No. 58, northwest one-fourth, Michel Rollet.

No. 60, southwest one-fourth, concession Jan. 3, 1770, to Eugene Pouré.

No. 64, northwest one-fourth, Deshetres.

II.—THE CONCESSIONS OF LANDS AND VILLAGE LOTS.

During the temporary French government eighty-one grants of lots in the village of St. Louis had been made by St. Ange and his associates, from No. 1, April 27, 1766, to No. 81, Feb. 7, 1770.

Upon the largest portion of these lots the grantees had built their residences. A few of these parties having neglected to comply with the conditions of the grant, viz., to commence some improvement on it within a year and a day, had forfeited it, and it reverted to the domain, to be granted to a second party. These eighty-one recorded grants added to those that had been previously verbally granted by St. Ange and his associates, about absorbed all the lots of the village.

As soon as the Spanish authority was established at New Orleans by Don O'Reilly in 1769, orders were sent up to St. Louis to stop the concession of lots and lands until the Spanish authority should be established in this upper region, accordingly the last French concession was made on Feb. 7, 1770.

On the arrival of Piernas, and his assumption of the government on May 20, 1770, his first step was to select a surveyor, which he did by appointing M. Martin Duralde to the office, with instructions to proceed at once to the survey of the lots which had been granted by the temporary French government. This duty he performed, and made report of his registry and plat on the 23d of May, 1772.

The first recorded concession of a village lot is by,—

	Lots.
Governor Piernas, July 13, 1771; last, April 24, 1775.....	14
Governor Cruzat, Feb. 29, 1776; last, Sept. 4, 1777.....	6
Governor De Leyba, July 23, 1778; last, Jan. 20, 1780.....	7
Governor Silvio de Cartabons, Sept. 7, 1780.....	1
Governor Cruzat, May 30, 1783; last, Oct. 5, 1787.....	3
Governor Perez, June 25, 1788; last, Sept. 22, 1791.....	7
Governor Trudeau, July 20, 1793; last, May 16, 1799.....	12
Governor De Lassus, Sept. 2, 1799; last, Nov. 21, 1803–5..	55
Add those previously granted by French government..	75
Whole number of lots conceded in the village from 1766 to 1803.....	130

And a few concessions north of and adjoining the village.

III.—REGISTER OF CONCESSIONS OF LOTS IN THE VILLAGE OF ST. LOUIS, FROM THE FIRST ONE, GRANTED APRIL 27, 1766, TO THE CHANGE OF GOVERNMENT. TAKEN FROM THE ORIGINAL "LIVRES TERRIENS."

1766.

1. April 27, B. 13. To Joseph Labuscière, procureur du Roi, 150 by 300 feet, from the principal street to the river, on one side Chancellier's lot, the other a street.

2. April 30, E. ½ of 61. To Joseph Calvé, 240 by 150, on the second grande rue, on each side a cross street. (Reverted to the crown.)

3. May, N. W. ¼ of 27. To Jean Marie Thoulouse, 120 by 150, front on a street passing in rear of Laclede's lot, running to the lot of Bequette, on one side Honore Sans Souci, on the other the royal domain.

4. May 3, N. ½ of 8. François Bissonnet, 120 by 150, on the first main street to the Mississippi, on one side Rondeau, the other a cross-road.

5. June 2, E. ½ of 58. André Auguste Condé, Surgeon, 240 by 150, on west side of Second, on each side a cross street, running back to royal domain.

6. June 10, N. E. ¼ of 29. François Eloy, 120 by 150, on Main, on one side Jean Baptiste Jacquemin, the other a cross street in rear royal domain.

7. June 30, S. E. ¼ of 66. Louis Deshetres and Nicholas Leconte, 120 by 150, on Second opposite Sans Souci, one side a cross street, the other royal domain.

8. July 4, N. W. ¼ of 37. Jean Prevot, 120 by 150, front on Bourbon Street, rear Du Breuil, one side Baccannet, the other a cross street.

9. July 20, N. E. ¼ of 37. Louis Du Breuil, merchant, 120 by 150, on Royal Street, in rear Jean Prevost, on one side Jacques Labé, on the other side a cross street, going to the river. He also received a concession at same time for the north half of Block 4, which he had previously purchased from Jos. Marchetand.

10. Aug. 5, N. E. ¼ of 43. Thomas Blondeau, 120 by 150, front on Royal Street, on one side M. De Volsay, on the other and the rear royal domain.

11. Aug. 5, S. E. ¼ of 41. Jacques Lacroix, 120 by 150, front on Royal Street, rear royal domain, on one side Martigny the other a cross street from De Volsay.

12. Aug. 10, B. 13. Jos. Labuscière, an additional 60 by 150, added to and in continuation of the first concession made him.

13. Aug. 11, B. 34. Laclede Liguest, 300 feet square, from Royal Street to Second, to the square reserved for the church on one side, on one side a cross street from Marcereau and Hubert the other from Taillon.

14. Aug. 12, N. E. ¼ of 33. Laclede Liguest, 120 by 150, front on Royal Street in rear Roger Taillon, on one side lot of Joseph Taillon, on the other a cross street separating it from Veuve Marechal.

15. Aug. 15, B. 42. Pierre François de Volsay, officer of marines, 240 by 300, from the river to the second grande rue, one side a cross street from the lot of Blondeau and Lamy on the north another cross street.

16. Aug. 15, N. W. ¼ of 43. Michel Lamy, 120 by 150, on second grande rue, east by Blondeau, one side the cross street from De Volsay, south the royal domain.

17. Aug. 20, W. ½ of 29. Jean Bap. Butand, 240 by 150, on one front Cotin and F. Eloy, on the other a grande rue, on each side a cross street.

18. Aug. 21, N. E. ¼ of 30. Alexis Marie, 120 by 150, on grande rue, on rear lot of l'Arche, one side Langoumois, the other a cross street.

19. Aug. 23, N. E. ¼ of 60. Louis Desloriers, a lot on a grande rue, on one side Jos. Calvé, on the other Francis Delin, in rear the royal domain.

20. Aug. 27, S. E. ¼ of 28. To François La Chapelle, 120 by 150, on la grande rue, opposite Labuscière, on one side cross street from F. Eloy, the other side lot of Laurent, near royal domain.

21. Aug. 27, N. E. ¼ of 28. To Philibert Gagnon, dit Laurent, soldier, 180 by 150, on grande rue from Labuscière, near royal domain, one side a cross street, the other La Chapelle.

22. Aug. 28, S. ½ of 5. Julien La Roy, 120 by 150, on Royal Street, east Mississippi, on one side a cross street from Du Breuil, the other lot of Guyon.

23. Oct. 1, centre of B. 41, on Second. Pierre Lacroix, a lot on grande rue, in rear Sans Quartier, one side Berger, the other royal domain.

24. Oct. 30, S. ½ of 12. Jean Bap. Hervieux, royal armorer, 120 by 150, on Main, to the Mississippi, one side Louis Chancellier, the other a street from Dechene.

25. Nov. 15, N. ½ of 12. Louis Chancellier, 120 by 150, on

Main, opposite F. Eloy, to the river, one side Hervieux, the other a cross street from Labuscière.

1767.

26. May 10, S. E. ¼ of 27. Roger Taillon, 120 by 150, on Main, rear royal domain, one side cross street from Philibert Gaignon, the other Sieur Devin (Alexis Marie).

27. May 18, reverted S. ½ of 43. Jos. Labuscière, 180 by 300, on the river street, rear royal domain, on one side Blondeau and Lamy, the other a cross street.

28. June 12, B. 15, reverted. Belestre, 240 by 150, on the river street, one side a cross street, the other Lefebvre Desbruisseau.

29. June 12, N. E. ¼ of 27 and S. E. ¼ of 26. Alexis Marie (Devin), 240 by 150, on the river street, rear royal domain, one side Roger Taillon, the other a cross street.

30. June 30, S. ½ of 14. Lefebvre Desbruisseau, 120 by 150, Main Street to river, one side lot of Belestre, the other a cross street from Labuscière.

31. July 1, Block 50. Louis Lambert, dit Lafleur, 240 by 300, on one grande rue to another, on each side a cross street.

32. July 2. Pierre Fanché, merchant, 240 by 150, on the street west of Montardy, running back to hill, cross street each side. This grant reverted, and was granted to Dagobert, Feb. 2, 1769, and again to A. Marie, Sept. 7, 1769.

33. July 10, N. ½ of 56. Jean Ortes and Jean Cambas, 120 by 300, one side a cross street between Legrain, on the other Baccannet.

34. Aug. 6, N. E. ¼ of 50. Réné Buet, 120 by 150, on Second, opposite Lamy, one side cross street from Lambert, the other and rear the royal domain.

35. Aug. 8, S. W. ¼ of 57. Jean de Lage, 120 by 150, on Third, in rear Legrain, one side Beauvalet, the other a cross street.

36. Aug. 9, N. ½ of 14. Jean M. Tonouze, a lot ordinary size, on Main to the river, one side the cross street from Belestre, the other royal domain.

37. Aug. 10, S. W. ¼ of 30. Claude Tinon, 120 by 150, on Second, rear Langoumois, on one side F. l'Arche, the other a cross street.

38. Aug. 10, N. W. ¼ of 57. Lambert Beauvalet, 120 by 150, on Third Street, rear Jeannette, free negress, on one side Jean De Lage, the other a cross street from Placy.

39. Aug. 12, S. E. ½ of 52, reverted. Antoine Donnay St. Vincent, 120 by 150, on Second, one side Tinon's lot, the other cross street from Lambert, rear royal domain.

40. Sept. 15, N. E. ¼ of 38. Jean Comparios, ou La Pierre, 120 by 150, Main, one side la Veuve Hebert, the other a cross street.

41. Sept. 20, N. W. ¼ of 50. Réné Buet, 120 by 150, on a grande rue, one side Barsalou, the other a cross street, rear royal domain.

42. Sept. 20, S. ½ of 50. Nicholas Barsalou, 120 by 300, fronts on a grande rue, one side Réné Buet, the other a cross street.

1768.

43. Jan. 2, N. E. ¼ of 61. Jean B. Valleau, surgeon in Spanish service, 120 by 150, on the street to the chapel, back to the hill, same lot to Calvé.

44. Feb. 15, S. W. ¼ of 31. Jean B. Provenchere, 120 by 150, on Second, rear Gamache, one side the cross street from Paul Kiercereau, the other Thibault.

45. April 30, N. W. ¼ of 40. Jean Salé Lajoie, 120 by 150, on Second, rear of Carrier, one side Petit, the other the lot of ——. This concession was first to Martin Duraldé, and then to Salé, July 3, 1769.

80. Feb. 6, B. 16. Louis Honore Tesson, 240 by 150, from Main to river, one side a cross street from Guyon, the other a cross street from Beor.

81. Feb. 7, N. E. ¼ of 31. John B. Bequet, le meunier, 120 by 150, on Main rear Thibault, one side Gamache, cross street from Langoumois.

The foregoing eighty-one concessions are recorded in "Livre Terrien" (land-book) No. 1, the first fourteen of which were granted by St. Ange, the military commandant, and Lefebvre, judge, and the remaining portion by St. Ange and Labuscière. At the foot of the last page is written: "Arrêté le sept Fevrier, mil-sept-cent-soixante-dit [stopped Feb. 7, 1770].

(Signed) "LABUSCIÈRE."

The second book, Livre Terrien No. 2, contains no concessions of lots in the village as then called, but is made up of the notes of Martin Duralde, the king's surveyor, of his conveys of tracts of land in the surrounding country outside of the village.

Land Book No. 3 (Livre Terrien).

1771.

1. July 13. To Amable Guyon, a lot 60 feet square for a barn, back of the village.

2. Jan. 20. Gillaume Bizet, a lot 60 feet square for a barn, back of the village.

1772.

3. April 25. Rivière, dit Baccannet, a lot 60 feet square for a barn, back of the village.

4. June 10. Philibert Gagnon, a lot 60 feet square for a barn, back of the village.

1773.

5. June 21, S. E. ¼ of 54. Chas. Bizet, 120 by 150, one side Roubidou, the other Durand.

6. Jan. 16. Jno. B. Hervieux, 60 feet square, adjoining Calvé and Chancellier, on two sides the royal domain.

7. Sept. 3, S. part of Block 7. Benito Basquex, 60 by 150 on Rue Principale, one side a cross street from Martigny, the other sides royal domain.

1774.

8. June 4, N. E. ¼ of 52. Joseph l'Ardoise, 60 by 150.

1775.

9. April 11, S. W. ¼ of 55. Gregoire Kiercereau, 150 by 150.

10. April 11, Block 61. Louis Bissonnet, 60 feet square for barn, back of village.

11. April 11, N. E. ¼ of 52, on Second and Third. Nicholas Beaugenou, a lot for a house.

12. April 16, S. W. 40. Pedro Caillon, 120 by 150. I think the lot first conceded to Pierre Lacroix.

25. Aug. 10, S. W. ¼ of 52. Pierre Montardy, 180 by 150, one end himself, the other royal domain, one side Nicholas Beaugenou, the other cross street from De Volsay.

26. Sept. 15, S. E. ¼ of 24. Jean Bapt. Brugierre, 120 by 150, north end village, one end Main Street, opposite Guil. Lecompte, one side cross street from Desloriers, the others the royal domain.

Of the 26 concessions of village lots in St. Louis recorded in Livre Terrien No. 3,—

Nos. 1 to 14, from July 13, 1771, to April 24, 1775, were granted to Don Pedro Piernas.

Nos. 15 to 20, from Feb. 29, 1776, to Sept. 4, 1777, were granted to Don Francisco Cruzat.

Nos. 21 to 26, from July 23, 1778, to Sept. 15, 1779, were granted to Don Fernando de Leyba.

Livre Terrien (Land Book) No. 4.

1780.

1. Jan. 20, S. ½ of 45. Alexis Cotté, 120 by 150, at south end on road to the bridge, east Mississippi, one side lot of St. François, deceased, the other the creek.

2. Sept. 7, N. E. ¼ of 46. Auguste Amiot, 120 by 150, adjoining the above on the south to the creek.

1783.

3. May 30, N. W. of 54. Elizabeth Vijet Vachard, 120 by 150, one side cross street from Greg. Kiercereau, the other from Laurent and Taillon.

1786.

4. Aug. 11, N. E. ¼ of 54. Francisco Flory, 60 by 150, one Carlos Tayon, the other l'Ardoise.

1787.

5. Oct. H. Saucier, 180 feet square, near the gate and Sans Souci, Block 66.

1788.

6. June 25, N. E. ¼ of 81. Regis Vasseur, 120 by 150, on grande rue (Third), a cross street from Botelar, other side royal domain.

7. March 1, N. W. ¼ of 44. Carlos Leveille (colored), 60 by 150, near Louis Ride, the Mississippi, and royal domain.

8. Sept. 2. Augustin Amiot (colored), 120 by 150, adjoining the lot, in Block 45, of the negro Carlos above, on the road to Catalan.

1789.

9. Aug. 21. J. B. Martigny, 180 by 150, Rue Principal, for Baptiste Petit.

10. Aug. 27. Genevieve Rouzier, veuve Louis Bissonnet, 120 by 150, in Block 89, west of the village, near the barn of Cerré and Chouteau.

1790.

11. May 5. Pedro Troye, 120 by 150, near Fostin and Gabri l Melody and royal domain.

12. May 16. Jacinto San Cir, 180 by 150, adjoining Martigny on Main.

1791.

13. May 12, N. W. ¼ of 79. Ann. Camp, veuve, 120 by 150, on a cross street, west royal domain.

14. Sept. 22, N. W. ¼ of 85. Antoine Reynal, 80 feet square, on the hill.

1793.

15. July 20, Block 67. Ester, mulattress, 240 by 300, west side of Second, rear of Clamorgan, one side cross street from Veuve Dupuy, the other from Jas. Brazeau.

The concessions of village St. Louis lots in Book 4 are: No. 1, from Fernando de Leyba; No. 2, from Silvio Francisco de Cartabona; 3, 4, 5, from Francisco Cruzat; 6 to 14, Manuel Perez; and 15, Don Zeñon Trudeau.

"I, Don Zeñon Trudeau, captain in the regiment of Louisiana, Lieutenant-Governor and commander-in-chief of the western part of the Illinois, certify the present register of concessions, containing 76 pages of writing.

"St. Louis, Sept. 20, 1793. ZEÑON TRUDEAU."

In Book No. 5 of concessions I find but four of the lots in the village of St. Louis, as follows, viz.:

1793.

No. 1. Sept. 27, N. W. ¼ of 28. To Ester, 120 by 150, on second main street, back of the residence of Clamorgan and opposite her first grant.

1794.

2. Oct. 20, N. E. part Block 65. Pierre Baribeau, 164 on Second by 220 deep west up the hill, and running south to St. André.

1795.

3. June 29, S. ½ of 85. Antoine Reynal, 150 feet on Third by 300 deep to the line of the "Rue du Fort," south Market St.

1796.

4. July 20, S. W. ¼ of 79. Antonio Reihl, 120 by 150, one side lot of Pedro Labbadie, on another the Widow Camp.

These concessions were from Don Z. Trudeau.

Book No. 6 relates exclusively to concessions in the villages of San Fernando (St. Ferdinand) and à Robert (now Bridgton).

NOTE.—The concessions of St. Ange and Lefebvre and Labuscière are in the French language, being made prior to the assumption of the Spanish authority; those of the Spanish Governors, Piernas, Cruzat, De Leyba, Peres, and Trudeau, are chiefly in Spanish. In a few instances the same lot has been granted a second and a third time to different parties, the first perhaps not complying with the conditions of the grant, which in every case gave the party one year in which to enter into possession, by either inclosing it or improving it in some manner to indicate his intention of occupying it.

"*General Notice* to Frederick Bates, Esq., Recorder of Land Titles in and for the Territory of Missouri: Sir,—For the benefit of all parties interested, please to record the registered concessions of Livres Terriens Nos. 1, 2, 3, 4, 5, and 6, on file in your office. St. Louis, Nov. 28, 1812. Thomas F. Riddick, Pierre Chouteau, Gregoire Sarpy, Julius de Mun, Charles Gratiot, Bernard Pratte, B. G. Farrar, John McKnight, Alexander McNair, Wm. C. Carr, John P. Cabanné, Auguste Chouteau, M. P. Leduc."

posts, 28 by 14, and other small one by Louis Desnoyers, 1766.

Block 36, southeast quarter, Joseph A. Hortiz, house of posts, 20 by 16, and a smith's shop, same size, by J. B. Becquet, Sr.

Block 36, northwest quarter, Gregoire Sarpy, house of posts, 25 by 20, built by Ga. Dodier, Jr., about 1770.

Block 36, southwest quarter, Gregoire Sarpy, house of posts, 25 by 20, by Veuve Dodier, Sr., 1766.

Block 37, northwest quarter, Patrick Lee, house of posts, 40 by 25, Louis Dubreuil, 1766.

Block 37, northwest quarter, Patrick Lee, house of posts, 30 by 25, Provost or Leroy, 1766–70.

Block 37, southeast quarter, Philip Fine, house of posts, 22 by 30, Jacques Labbe Noise, first owner.

Block 37, southwest quarter, Louis Bonpart, Sr., stone house, 30 by 25, built by Antoine Rivière, 1774.

Block 38, northeast quarter, north 60, Michel Rollet, small house of posts, built by Pierre Perq; same quarter south 60, Alexis Marie, Jr., vacant lot, no house.

Block 38, northwest quarter, Ann Camp, house of posts, 25 by 18, by Martin Barum, blacksmith, 1768.

Block 38, southeast quarter, Francis M. Benoit, stone house, 30 by 22, and stone kitchen, 20 by 25, 1768.

Block 38, southwest quarter, Veuve François Broz Charleville, stone house, 30 by 25, by Eugene Alvarez, 1780.

Block 39, north half, Antoine Flandrin, house of posts, 35 by 25, Nicholas Beaugeno, 1765.

Block 39, southeast quarter, Veuve Noise, dit Labbe, house of posts, by Joseph Hebert, 1765–66.

Block 39, southwest quarter, François Caillou, old house of posts, 27 by 16, by J. B. Petit, first owner.

Block 40, northeast quarter, Charles Vachard, house of posts, 25 by 20, by Chas. Carrier, prior to 1766.

Block 40, northwest quarter, Louis Beaudoin, house of posts, 18 by 15, barn, 20 by 30.

Block 40, southeast quarter, Calvin Adams, house of posts, 15 by 18, by François Marcheteau, 1766.

Block 40, southwest quarter, Louis Caillou, small house of posts.

Block 41, northeast sixth, Alexandre Grimeau, house of posts, 25 by 20, barn, 20 by 20, by T. Hunand, 1766.

Block 41, centre sixth, Joseph Guittare, house of posts, 20 by 18, by Joseph L. Martigny, first owner.

Block 41, southeast sixth, Antoine Smith, house of posts, 25 by 20, by Jacques Lacroix, first, 1766.

Block 41, 2d northwest sixth, John Bap. Marli, house of posts, 25 by 20, Pierre Berger, first owner, 1766.

Block 41, 2d centre sixth, Joseph Roy, house of posts, 14 feet square, Gilles Chemin, first, 1766.

Block 41, 2d southwest sixth, Flora (free mulattress), house of posts, 12 by 15, Gilles Cheman, first, 1766.

Block 52, Gabriel Cerré, house of posts, 30 by 20, Pierre François De Volsay, 1766.

Block 43, northeast quarter, John B. Latresse, house of posts, 30 by 20, Thomas Blondeau, first, 1766.

Block 43, northwest quarter, Louis Charbonneau, house of posts, 25 by 20, Michel Lami, first, 1766.

Block 43, south half, Eustache Caillou, house of posts.

Block 44, north half, Francis Tayon, house of posts, 23 by 20, by Gabriel Descary, first, 1766.

Block 44, south half, north 60, Charles Laveille (colored) small house of posts, built by himself in 1788.

Block 44, south half, south 60, vacant land, no house.

Block 45, north half, Andre Roy, house of posts, 20 by 20, by St. François, first owner, 1769.

Block 45, south half, A. Cotté, or Eus. Caillou, no house on it then.

Block 46, north half, Jno. B. Petit, no house had been built on it.

Blocks 47 and 48, Francis Tayon, owner, vacant ground, no house until 1812.

Block 49, south half, François Ride.

Block 49, north half, Antoine Morin, house of posts.

Block 50, Antoine F. Saugrain, stone house, 40 by 30, two or three other small buildings, by René Buet, 1767.

Block 51, south half, Pierre Duchouquette, house of posts, 20 by 25, built by Picoté Belestre, 1768.

Block 51, north half, Antoine Morin, house of posts built by himself, 1789–90.

Block 52, south half, 180 feet, Auguste Chouteau, to third.

Block 52, centre, 120 feet, François Liberge, to third, house of posts and an old barn, by Claude Tinon, 1766.

Block 52, north 60, François Duchouquette, to third, house of posts, 25 by 20, by Valets, 1778.

Block 53, southeast quarter, Antoine Flandrin, house of posts, 30 by 20, built by Simon Coussot, 1789.

Block 53, southwest quarter, Veuve P. Rigauche, house of posts, by Gabriel Becquet, about 1790.

Block 53, northeast quarter, Philip Rivière, house of posts, 20 by 18, by Joseph Bouchard, 1769.

Block 53, northwest quarter, Philip Rivière, no house on the lot.

Block 54, south half and northwest quarter, Peter Didier, stone house, 40 by 20, built by Charles Dissette, 1773–74.

Block 54, northwest quarter, south 60 feet, Hyacinthe Amelin, small house of posts.

Block 54, northwest quarter, north 60 feet, John Bap. Domine, house of posts, 15 feet square, built by Fleury, dit Grenier, 1786.

Block 55, southeast quarter, Pierre Quenel's heirs, house of posts, 20 by 20.

Block 55, southwest quarter, Nicholas Beaugenou, house of posts.

Block 55, north half, Manuel Lisa, house of posts on a wall, 25 by 20, barn, etc., built by John B. Lorain.

Block 56, south, 50 by 175, John B. Girard, small house of posts, built by Antoine Baccanet, 1770.

Block 56, 50 by 125, Manuel Lisa, no house.

Block 56, 70 by 300, Joseph Descary, house of posts, 15 square, built by Dufaut about 1790.

Block 56, northeast quarter, Charles Gratiot, old house of posts, 22 by 18, built by Ortes about 1768.

Block 56, northwest quarter, Vincent Guitard, house of posts, 24 by 20, by Planche in 1771.

Block 57, southeast quarter, Alexis Lalande, house of posts, 20 by 17, built by Antoine Oliviere, 1782.

Block 57, northeast quarter, Marie Jeannette, free colored woman, a house of posts, 25 by 20, built by herself in 1766.

Block 57, west half, Marie Rose Sallé Dite Lajoye, house of posts on stone wall, 25 by 20, by Juan Sallé, 1770.

Block 58, east half, Charles Sanguinet, house of posts, 30 by 20, by Auguste Condé, 1766.

Block 58, northwest quarter, Charles Sanguinet, house of wood, 25 by 20, built by M. Rollet, Sr., about 1770.

Block 58, southwest quarter, Paul Guittard, Sr., shoemaker, small house of posts, 20 by 18, built by Joseph Rivard about 1774.

Block 60, southeast quarter, Joseph Robidou (2d), an old horse-mill of posts and a house, Reynal, 1794.

Block 60, northeast quarter, John B. Dumoulin, stone-mason, small house of posts, a small store, 20 by 30, 1794.

Block 60, west half, Eugene Alvarez, house of posts on wall, 25 by 35, large barn, by Eug. Pouré, 1770.

Block 61, east half, Veuve Susan Dubreuil, stone house, 52 by 26, frame 20 feet, 1772.

Block 61, northwest quarter, Veuve Susan Dubreuil, barn, 30 feet.

Block 61, southwest quarter, Veuve Therese Chouteau, vacant lot, no house.

Block 62, south half, Arend Rutgers, house of posts, 31 by 23, built by Antoine Reilte, about 1790.

Block 62, northeast quarter, Francis Derouin, stone house and posts, built by Lacroix about 1800.

Block 62, northwest quarter, Joseph Lacroix, no house on the lot, being the orchard, etc., on the above.

Block 63, southeast quarter, Veuve François Bissonnet, stone house about twenty feet square, by Gingembre about 1793.

Block 63, southwest quarter, Antoine Reynal (St. Charles), vacant lot, no house.

Block 63, northeast quarter, Madame Margaret Laquaisse, small house of posts, 18 by 25, by Laroche, first owner, 1766.

Block 63, northwest quarter, Antoine V. Bouis, vacant lot, no house, an old barn.

Block 64, south half, Veuve Desantels (Louis Lemonde), small house of posts, by Julien Leroy, 1767.

Block 64, north half, François Jourdan Labrasse, log house, 15 by 18.

Block 65, south, 120 by 250, Joseph Laprise, log house, 20 by 18, built by Juan St. André, first owner.

Block 65, north, 164 by 220, Pierre Barribeau, house of posts, built by himself, 1795.

Block 66, Auguste Chouteau, vacant ground, no house.

Block 75, northeast quarter, John B. Duplesq, from E. Caillou, small log house by E. Caillou.

Block 75, claimed by James Mackay, vacant land.

Block 75, south half, claimed by Joseph Labrosse, vacant, no house.

Block 76, north half, Joseph Fayon (St. Charles).

Block 77, south third, Veuve F. B. Charleville, small house of posts.

Block 77, centre third, M. P. Leduc, vacant ground, no house.

Block 77, north third, Paschall Leon Cerré, house of posts, 45 by 33, barn, cabin, etc., built by Caillou about 1794.

Block 78, south half, Louis Delisle Bienvenue, house of posts, 25 by 20, built by Delisle, 1786.

Block 78, northeast quarter, Joseph Charleville, house of posts, 25 by 18.

Block 78, northwest quarter, Joseph A. Hortiz, house of posts, built by Louis Dumot, 1795.

Block 79, southeast quarter, Joseph Labbadie St. Pierre (colored), house of posts, 18 by 20, by Louis Vachard, 1797.

Block 79, southwest quarter, Joseph Labbadie St. Pierre (colored), vacant lot.

Block 79, northeast quarter, Esther Lorgan (free colored), small house of posts, built by herself, 1798.

Block 79, northwest quarter, Anna Camps' heirs, vacant lot.

Block 80, south half, Samuel Solomon, house of posts, 25 by 18, built by Réné Dodier, 1796.

Block 80, northeast quarter, Louis Bourq, vacant lot.

Block 80, northwest quarter, Cath. Crepeau Tougat Laviolette, vacant ground.

Block 81, south half, Gregoire Sarpy, vacant ground.

Block 81, northeast quarter, Regis Vasseur, house of posts.

Block 81, northwest quarter, Greg. Sarpy under Rivière, vacant, no house.

Block 82, southeast quarter, Louis Bourq, house of posts, 22 by 20, built by Moulardq, first owner, 1770.

Block 82, southwest quarter, Louis Bourq, vacant lot.

Block 82, northeast quarter, Manuel Lisa, house of posts on a wall, 40 by 24, by Moulardq, 1766.

Block 82, northwest quarter, Gabriel Dodier (St. Charles), vacant lot.

Block 83, southeast quarter, David Rohrer, house of posts, 25 by 20.

Block 83, northeast quarter, Jean Derouine, house of posts, built by himself, 1795.

Block 83, west half, vacant land.

Block 84, southeast quarter, Marie La Bastille (free colored), small house of posts, built by Denaux, blacksmith, 1771.

Block 84, northeast quarter, Catharine Crepeau Tougard, small house of posts, very old.

Block 84, west half, public land, vacant.

Block 85, south half, Eugene Alvarez, his barn lot, no house.

Block 85, north half, Antoine Reynal, of St. Charles, eighty feet square at northwest corner, no house.

Block 85, balance of one-half, public land, no house.

Block 86, southeast quarter, Veuve Chouteau's barn, no house.

Block 86, northeast quarter, Veuve L. Chevallier's barn, no house.

Block 87, south half, Sanguinet and Vasquez, barn, no house.

Block 87, northeast quarter, Alexis Pecard, Sr., barn, no house.

Block 87, northwest quarter, Louis Brazeau, Sr., barn, no house.

Block 88, southeast quarter, Joseph Lacroix, small house of posts, built by himself about 1797.

Block 88, northeast quarter, Louis Buor, small house of posts, by Louis Buor, 1797.

Blocks 89 and 90 were barn lots of various persons, without houses.

Blocks 106 and 109, Alvarez and Marli, were vacant lots, no houses.

Houses in the village in 1804	182

This agrees substantially with Stoddard, who, in his "Louisiana," says that "when he received possession, March 10, 1804, St. Louis contained about 180 houses in all." He must have counted them.

Such was St. Louis of 1804, when it passed to the possession of the United States.

[The term "house of posts," which is so often used above, illustrates the French mode of building log houses as contradistinguished from the English. The latter lay the logs horizontally, joining them at the corners; but the French used the logs vertically, planting the bottom of the post in the ground like a palisade, and joining them by weatherboard ties, just as described by Dr. Simpson in another page in this chapter.]

V.—STONE BUILDINGS PUT UP IN ST. LOUIS FROM THE YEAR 1804 TO MAY, 1821.

When built.	No.	Owners.	Description.	Location.	Blocks.	Occupants May, 1821.

"	200	Fran's Bompart.	Small log, for blacksmith-shop.	North side Spruce, east of 2d.	37	Bompart's shop.
1817	201	John B. Hortis.	Small dwelling.	S. 2d, east side, below Mulberry.	43	Hortiz's residence.

The first addition made to the town of St. Louis after its incorporation by the Court of Common Pleas was that of Chouteau and Lucas, referred to above. With the record of the sale of these lots we complete Mr. Billon's exhaustive catalogue of early real estate transactions in the city. His materials come down much later, and in the same complete shape as regards each lot, but there is not space in which to give them without injustice to other branches of the subject.

VIII.—THE PLAT OF THE FIRST ADDITION TO THE TOWN OF ST. LOUIS, MADE BY CHOUTEAU AND LUCAS IN MAY, 1816, IS RECORDED IN BOOK F, PAGES 2 AND 3, IN THE RECORDER'S OFFICE. LOTS SOLD BY THEM FROM THAT DATE TO THE YEAR 1818, AS FOUND OF RECORD.

By Chouteau.

				Lots.	Feet.	Price.	Book and Page.	Present Location.
1	Alexander Stuart.	May	22, 1816	33, 34, 51, 52	288 by 270	$1200	E 486	The block from Market to Walnut, and 5th to 6th.

Jacob Fry to David Shirtle, Oct. 5, 1820, 120 by 59, J 473, same lot, $1000.
Geo. C. Sibley to Eulalie Guitard, Jan. 13, 1825, 114 by 135, lot 72, M 224, S. W. cor. 6th and Olive, $500.
Same to Francis Giroux, June 20, 1826, 57 by 135, south ½ of 72, N 69, west side 6th between Pine and Olive.
John B. C. Lucas to Dr. Thos. Hougham, April 14, 1828, 114 by 135, lot 71, O 165, N. W. cor. 6th and Pine.
Dr. Hougham to Chas. R. Hall, Aug. 20, 1830, 114 by 135, lot 71, Q 174, same above, $1000.

Auguste Chouteau sold to Wm. Deakers, Sr., prior to 1820, the two lots Nos. 54 and 55, S. E. and N. E. corn. of 6th and Elm, deed not record- Deakers built a stone house on the N. E. cor. lot, and on the other had his brick-yard.

Deakers and Dorothy, his wife, mortgaged this property Feb. 22, 1820, to Matthew Maloney for $305, Book S, page 214. Deakers died that same year, 1820; the mortgage was foreclosed and the property sold by Sheriff Jos. C. Brown to Maloney, March 13, 1822, for $161 45.

These lots were sold for taxes, and purchased by John Shackford, his deed for same, April 18, 1825, recorded in Book M, page 289. Shackford relinquished it to the sons of Deakers for $50, Dec. 2, 1825, Book O, 518. These parties divided lot 54 March 17, 1827, as follows:

George, having purchased William's fourth, got the west half, 67½ feet on Elm by 115 north on 6th Street; Lambert, 33.9 feet next east Elm; and Richard, 33.9 feet next east to alley by 115 deep, Book O 546.

Maloney having also died, David Shepard and Jonas Moore paid the mortgage debt to Keinlen, administrator, Feb. 17, 1835, and received a deed for the lot from Keinlen, Book U 203.

NOTE.—The eastern portion of this lot on Locust Street was Rector's property as late as Oct. 25, 1823, and had thereon at that date a frame stable of David Massie, who then kept Rector's City Hotel, Vine and Third. This hotel property, 80 by 150 feet, and the stable lot above, were mortgaged by Rector on that date for a loan of $14,000 for five years. The mortgage also included the east part of two lots Rector had acquired from Guibor and Godair in 1819, which lay across Third Street.

On Oct. 19, 1877, Mr. Richard Dowling read a very interesting paper before the Missouri Historical Society, in which he took occasion to speak from memory and personal recollection in regard to some of the real estate transactions so carefully catalogued above. The vein of his reminiscence ran back as far as 1817, at which time he claims that there were but two houses north of Franklin Avenue. Some of these reminiscences do not accord with other contemporary traditions, and we will not attempt to harmonize them. They stood near the four mounds there, which have since disappeared. There were but fifteen brick houses in the town, the largest being Kibbey's Hotel, built by Knight & Brady.

There were at that time two ferry-boats making regular trips, one at the foot of Market Street, and one near Morgan Street. In front of the city was a sand-bar, which in 1819 reached from Market to Morgan Streets, and extending two-thirds the way across the river.

The ferries were owned by Mr. Nash and E. M. Van Arsdel. One of the boats crossed above Bloody Island, and the other below. Skiffs and keel-boats were also much used in the transfer of freight and passengers.

Mr. Day started the first horse ferry-boat about 1824, which was also the first one that had any cover or protection from the weather. In 1827, Mr. Wiggins, of Cincinnati, came to St. Louis, and about a year afterwards brought here from that place the first steam ferry-boat ever run here.

The old jail, a very primitive structure, stood in the centre of the crossing of Fourth and Walnut Streets. The jailer was William Sullivan, a large and powerful man, weighing over three hundred pounds. In 1818, this jail being found inadequate, a new one was built on the southeast corner of Sixth and Chestnut Streets. It was of undressed stone, and consisted of a main story and basement, the latter being a sort of dungeon in which to confine dangerous or refractory prisoners. The stone-work was done by Thomas Reynolds, and the wood-work by Beriah Clelland. In after years, and until recently, this structure was known as the "Old Jail," a larger and more imposing building having been built in the rear and adjoining it.

The first building used as a court-house was James Beardly's blacksmith-shop, altered for the purpose. It was situated on the west side of Third Street, between Almond and Spruce. It was about forty feet front by about seventy feet deep. When the court was not in session it was used as a place of amusement, and the first theatrical performance in St. Louis was given there in October, 1817, by Mr. Vos. He brought his company from Nashville, Tenn. It was the largest room in the city, and was therefore in demand for balls, Fourth of July dinners, etc.

About the year 1820 the court was moved to an old frame building on the southwest corner of Second and Walnut Streets, and some years afterwards to the Baptist Church, southwest corner of Market and Third Streets. The first court-house built by St. Louis County stood on Fourth Street, occupying a portion of the ground now covered by the east wing of the present structure. It was built by Morton & Lavenlie, and was commenced in 1826 and finished in 1828.

The principal part of the land surrounding St. Louis in the early days belonged to a half dozen persons, viz.: Col. Auguste Chouteau, Judge John B. C. Lucas, Jeremiah Connor, William Christy, William C. Carr, and Robert Wash. They owned all the land west of Fourth Street, running forty arpens in length to near where Grand Avenue now is, which joined the prairie common fields. The land west of Eleventh Street was all timbered. West of Chouteau's pond were dense thickets of hazel bushes, oaks, and persimmons, reaching out to the prairie

North of Franklin Avenue and west of Broadway all the land was timbered, as was all that north of Ashley Street. All the land south of Chouteau Avenue, taking in the Sacred Heart Convent, was timbered down to the Widow Chouteau's tract, which south of Lafayette Street was cultivated. From the Arsenal walls to Carondelet the land was all timbered except on the east side of the Carondelet road, which was cultivated by Antoine Soulard, Joseph Brazeau, Governor Delassus, and Judge Bent, whose place joined the arsenal.

There were three principal county roads. The road going south passed over Mill Creek bridge close by the present gas-works. About three hundred feet south of where Park A enue is now there was another road leading southwest to Gravois.

The road north was a continuation of Main Street, running through what is now Bellefontaine Cemetery to Bellefontaine, which was then a military post. There was a beautiful spring there then which no longer exists, and which gave the title to the place.

The road west ran out St. Charles Street for about fifteen blocks, when it bore north until it came in a line with Franklin Avenue at what is now Twenty-second Street. Starting from St. Charles Street and running south of Lucas Place, there was a road leading to Manchester and other points.

Returning now to the article of the *Globe-Democrat*, we find that

"The principal additions of real estate blocked out with street and alley dedications by the owners during the first seventeen years of the existence of St. Louis as a city were as follows, as seen by the plat books in the office of the recorder of deeds. The locations are given according to the present designations of streets:

"John B. C. Lucas' addition of Sept. 6, 1833, was from Seventh to Ninth Street, between Market and St. Charles Streets.

"Julia C. Soulard's addition of May 18, 1836, was from the river to Carondelet Avenue, between Park and Geyer Avenues.

"J. J. O'Fallon, Feb. 1, 1836, the block between Seventh, Eighth, and Wash Streets and Franklin Avenue.

"E. T. Langham, September, 1836, from the present La Salle Street to Rutger Street, between Second and Fifth Streets.

"E. T. Christy's addition of 1836 was from Ninth to Twelfth Street, between Franklin and Lucas Avenues.

"J. J. O'Fallon's addition of July 17, 1837, between Seventh and Fourteenth Streets, from Franklin Avenue to Biddle Street.

"Julia C. Soulard's second addition, June 21, 1838. It included the area from Carondelet Avenue to Decatur Street, between Park and Geyer Avenues. The square where Soulard Market is was in this addition, dedicated to market purposes.

"Blow and Le Beaume's addition, Dec. 20, 1838, between the river and Carondelet Avenue, with a width of one hundred and forty-one feet north at Carondelet Avenue, and six hundred and sixty-three feet north at the river, from the north side of Victor Street.

"Feb. 8, 1839, the city limits were extended northwardly and described as follows: Beginning at a point in the middle of the main channel of the Mississippi River due east of the mouth of Mill Creek, so called; thence due west to the mouth of said creek; thence up the centre of the main channel of said creek to a point where the southern side of Rutger Street produced intersected the same; thence westwardly along the southern side of said street to the intersection of the same with the western line of Seventh Street, produced; thence northwardly along the western line of Seventh Street to the northern line of Biddle Street; thence eastwardly with the northern line of Biddle Street to the western line of Broadway; thence northwardly with the western line of Broadway to a point where the southern boundary of survey No. 671, produced, shall intersect the same; thence eastwardly along the southern boundary of said survey to the Mississippi River; thence due east to the middle of the main channel of the Mississippi River; thence down with the middle of the main channel of said river to the place of beginning.

"This change of boundary did not enlarge the area of the city more than five or six blocks; but the lines were made more definite and straighter. The southern side of survey No. 671 was afterwards Ashley Street, extended to Broadway. The city at this time had a population of about sixteen thousand, and the taxable property was assessed at $8,682,506, and the taxes paid amounted to $43,291.

"The property-owners who during the succeeding years made the principal additions to the city were as follows:

"Edmund T. Christy's addition of March 18, 1839, was from Twelfth to Thirteenth Streets, between Franklin and Lucas Avenues.

"T. B. Lesperance's addition, May 15, 1839, from the river to Carondelet Avenue, between Allen and Russell Avenues, formerly Lesperance and Picotte Streets.

"The Duchouquette addition, Dec. 4, 1839, was made by Jean Baptiste Duchouquette, Theodore Papin, John B. Lesperance, and Brazil M. Alexander. The area was from the river to Carondelet Avenue, between Allen Avenue and Lami Street.

"Ann Biddle's addition, April 16, 1840, from Broadway to Thirteenth Street, between Biddle and O'Fallon Streets.

"John Stacker and Martin Thomas' addition, May 21, 1840, contained ten arpens of land, and was from O'Fallon to Howard Streets, between Broadway and East Seventeenth Street.

"Feb. 15, 1841, the city limits were extended southwardly, westwardly, and northwardly, and were described as beginning at a point in the middle of the main channel of the Mississippi River, thence due east to the southeast corner of St. George, in St. Louis County; thence due west to the west line of Second Carondelet Avenue; thence north with the said west line of said Avenue to the north line of Chouteau Avenue; thence northwardly in a direct line to the mouth of Stony Creek, above the present north line of the city of St. Louis; thence due east to the middle of the main channel of the Mississippi River; thence southwardly with the middle of the main channel of the Mississippi River to the place of beginning.

"The limits for 1841, and which continued for fourteen years, were briefly as follows: North line, from a point on Main Street, between Dock and Buchanan Streets, to the river, along the recent Rocky Branch; west line, a straight southwardly projected line from Main Street, near Dock, to Chouteau Avenue, one hundred feet west of Second Carondelet Avenue; thence south along Second Carondelet Avenue to Wyoming Street; south line, Wyoming Street, from Second Carondelet Avenue to First Carondelet Avenue, thence eastwardly to an intersection with the river at the foot of Anna Street.

"The area of the city within these limits was two thousand six hundred and thirty acres, or nearly four and one-ninth square miles. The assessment of property increased from $8,682,506 to $12,101,028, and taxes were increased from $43,291 to $45,088.

"This extension of the city took in the following additions:

"The incorporated town of North St. Louis, dedicated by William Chambers, W. T. Christy, and Thomas Wright, on June 29, 1816. This town was from the river to Twelfth Street, between Madison and Montgomery Streets. In the dedication by Messrs. Chambers, Christy, and Wright, they gave a market square and school park and church sites. These special gifts are now known as Exchange Square, at the foot of North Market Street, and the Webster School, Jackson Park, and Grace Epis-

copal Church site, between Eleventh and Twelfth Streets, from Madison to Montgomery Street.

"The town of St. George, with streets and blocks, was dedicated Nov. 15, 1836, by Wm. Carr Lane. This town was located from the river to Carondelet Avenue, between Victor Street and the rear of lots on the north side of Lynch Street, formerly Harper. One of the conditions of St. George addition was that William Carr Lane's heirs and assigns should have the right to locate and maintain forever, free of charge or cost whatever, a railroad, with one or more tracks, through any street in said addition which they might select for that purpose. The dedicator also reserved the right of ownership in the ferry privileges, and in the addition of land deposited by the river.

"A village then known as Central St. Louis, located from the river to Eleventh Street, between O'Fallon and Tyler, formerly Webster Street, was also taken into the city by the extension of 1841. The dedicated additions in Central St. Louis were as follows:

"Thomas J. Payne's addition of Jan. 8, 1841, to Central St. Louis, was from the river to Broadway, between Mound and Bogy (formerly Brooklyn) Street. The dedicator reserved to himself the right of wharfage, ferriage, and Levee grading.

"Robert Moore's addition of June 6, 1840, was about seventy-five feet each side of Mound Street, from Broadway to the west end of the present street.

"Charles Collins' northern addition, July 1, 1839, was from the river to the rear of lots on the west side of Second Street, between Mound and Chambers Streets. This addition contained ten blocks or forty arpens of land.

"Charles Collins' western addition, Nov. 22, 1845, was both sides of Bogy (formerly Brooklyn) Street, from Broadway to Ninth Street.

"The other principal additions to St. Louis during the fourteen years preceding the next extension of the city boundary were as follows:

"H. M. Shreve's addition of July 8, 1840, was from Twelfth to Fourteenth Street, between Franklin Avenue and Biddle Street.

"Benjamin A. Soulard's addition of November, 1841, was from Buel to Morton Street, between Park Avenue and Marion Street, and from State to Morton, between Marion and Carroll Streets.

"Julia C. Soulard's third addition, Sept. 28, 1840, was from Decatur to Rosatti Streets, between Marion Street and Allen Avenue.

"Julia C. Soulard's fourth addition, Oct. 7, 1840, was from Rosatti to the rear of the lots on the west side of Closey Street, between Carroll and Soulard Streets.

"Louis A. Benoist's addition of Aug. 9, 1842, was from Laclede Avenue to lots on the north side of Locust Street, between Beaumont Street and Leffingwell Avenue.

"Julia C. Soulard's fifth addition, Sept. 15, 1841, was from Rosatti to Morton Streets, between Soulard Street and Geyer Avenue, and from Rosatti Street to rear of lots on the west side of Closey Street, between Geyer and Russell Avenues.

"William C. Carr, on Aug. 1, 1842, added the area from Fourteenth to Seventeenth Streets, between Franklin Avenue and Biddle Streets, and dedicated Carr Park, 'to remain vacant and to serve forever for a pleasure-ground and public square, and for no other purpose whatever.' In dedicating this addition factories, nine-pin alleys, or other then offensive institutions were prohibited within the limits of the addition.

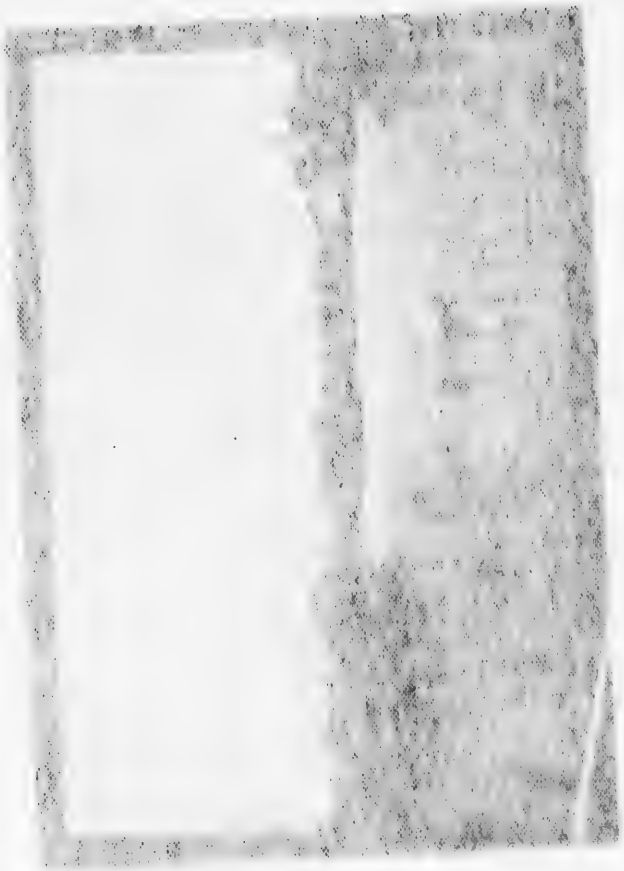
"Gabriel Paul's addition of Sept. 6, 1842, was on the East side of Adolphe Street, from Market to Spruce Street, and in the rear of these lots was the western limit of Chouteau's pond.

"René Paul, Oct. 7, 1844, added the blocks between Market Street and Clark Avenue, from Seventeenth to Eighteenth Streets. At that time most of this area was represented as being in Chouteau's pond.[1]

[1] Concerning Chouteau's pond something has already been said. Its history will be found complete in the following note from the pen of Professor Waterhouse:

"Joseph Miguel Taillon was one of the early pioneers. He came to St. Louis from the settlements on the east side of the Mississippi in 1765. He was then about forty-eight years old. The wise forecast of Laclede attracted settlers by concessions of land. A grant of half a block on the north side of Market, between Main and Second, was made to Mr. Taillon. On this lot he built a stone house forty-eight by thirty feet. This building was for years one of the largest dwellings in the village. Here Mr. Taillon lived for more than forty years, and died at the beginning of the present century at the advanced age of about ninety. Though so illiterate that he could not write his name, he was by no means deficient in talent. His native aptitude for business led to his appointment as one of the trustees of the village. To Taillon belongs the credit of creating an artificial pond in the valley of the 'Cul de Sac.' Three miles from the Mississippi, near the west end of Laclede Avenue, there is a large spring, whose copious waters formed the rivulet which the French called 'La Petite Rivière.' The little stream wound through the valley in a southwesterly direction, and emptied into the river a short distance below the foot of Convent Street. The progress of improvement long since obliterated the old channel of the brook, and now the crystal waters of Rock Spring flow to the river through the massive arches of the Mill Creek sewer. In 1765 only one or two small grist mills, impelled by horse or ox-power, existed in St. Louis. Soon after his arrival, Taillon conceived the idea of erecting a water mill, and at once proceeded to carry his plan into execution. Having obtained the requisite authority, he dammed the Rock Spring rivulet, and built, near the intersection of Ninth and Poplar Streets, a frame mill with one set of stones. He operated the mill about two years, and then sold it to Pierre Laclede Liguest for four hundred livres. The date of the sale was Dec. 2, 1767, but possession was not given until March 22, 1768. Laclede enlarged the capacity of the mill. He put in two sets of stones, and secured the necessary increase on water-power by raising the height of the dam. The mill remained in the possession of Laclede till his death in June, 1778.

"July 4, 1779, the mill, together with two hundred and forty arpens of land, was sold at public auction to Auguste Chouteau for two thousand livres. Col. Chouteau retained this property till his death, in 1829. During the half-century of his ownership he made many improvements. The wooden mill of Taillon was torn down, and on its site a larger mill, built of stone, was erected. When in the course of time the growth of the village required greater facilities for the manufacture of flour, the second mill was removed and replaced by a still larger stone mill. It is not probable that they were built on exactly the same site. In order to avoid any interruption of supplies it is likely that the second mill was allowed to remain until the completion of the third. But all three of the mills stood in the immediate neighborhood of Ninth and Poplar.* The area of



* "The old stone mill was torn down since 1863, and its site is now (1878) nearly covered by a substantial building of brick partly sheathed with iron, and used for an ice-house and a store for the sale of agricultural machinery and tools. It is about three hundred feet westwardly from the southern half of the Central Market. The railroad grounds, tracks, and sheds adjoin it, and the Union Depot is located partly on the old shore and partly on the bed of the pond."—*Switzler's Hist. of Missouri*

CHOUTEAU'S POND.

"Theodore Papin and Honoré Picotté's addition, Sept. 9, 1849, was from De Kalb Street to Carondelet Avenue, between

"René Paul's addition, Dec. 24, 1845, was from Gratiot Street to Chouteau Avenue, between Beckwith and Barlow Streets.

"Theodore Papin and Honoré Picotté's addition, Sept. 9, 1842, was from De Kalb Street to Carondelet Avenue, between Russell Avenue and Shenandoah Street.

"John B. C. Lucas' addition of Feb. 7, 1843, was from Ninth to Eleventh Streets, between Market and St. Charles Streets.

"René Paul's addition, Dec. 24, 1845, was from Gratiot Street to Chouteau Avenue, between Beckwith and Barlow Streets.

"Dr. Hardage Lane's second addition, April 13, 1846, was from First Carondelet to Second Carondelet Avenue, between Wyoming and Arsenal Streets, containing about two arpens. At

---

the pond was largely extended by repeated elevations of the dam. By a gradual acquisition of the adjoining property, Col. Chouteau added eleven hundred and twenty arpens to his original purchase, and became sole proprietor of all the land upon the borders of the pond. This mill-tract was nearly three miles long and about three-quarters of a mile wide. It stretched from the neighborhood of Rock Spring to the front line of the field-lots on Fourth Street, and from Chouteau Avenue to Market Street. The board of land commissioners confirmed Col. Chouteau's title to this land June 7, 1810. According to the United States survey, the tract embraced eleven hundred and fifty-five and one-quarter acres. The descendants of Chouteau still retain a part of the Mill Creek estate.

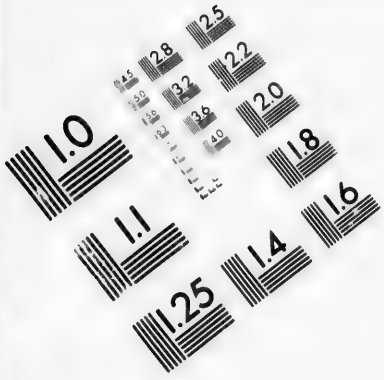
"Col. Chouteau survived most of the original settlers of St. Louis. During the fifty years of his occupancy of the mill-site, thousands came to the village, to whom tradition even had never mentioned the prior ownership of Taillon. The talk was given upon the false assumption that this body of water owed its existence to Col. Chouteau. But the title which popular error conferred is essentially just. Auguste Chouteau expanded the little mill-pond of Taillon to the dimensions of a small lake, and was virtually the creator of 'Chouteau's Pond.'

"The pond was a type of French life. It combined pleasure with utility. Apart from its industrial services, it contributed largely to the fund of social enjoyment; picnics gathered upon its banks; pleasure parties sailed over its limpid depths; its moonlit shores were the trysting-places of young love; there boatmen sought healthful recreation or tested their strength in competition of speed; sportsmen went there to catch fish or shoot aquatic game; bathers sought relief from the sultry heats of summer in the coolness of its retired waters.

"But in the course of time a sad change came over the scene; the romance vanished; the city extended along the banks; the pond itself became the receptacle of impure drainage; the unwholesome accumulations began to awaken a solicitude for the public health. The removal of the pond and the construction of a sewer seemed to be the only effectual means of improving the hygienic condition of Mill Creek. But the change which sanitary considerations had first suggested was ultimately effected by the demands for public improvements. The Missouri Pacific Railroad needed an outlet to the Mississippi. Its central position, easy grade, public accessibility, and freedom from costly improvements unmistakably indicated the valley of Mill Creek as the location of the railway approach to the river, and it was appropriated to this use. The valley is now the site of the Great Central Station, and the convenient avenue of railroad passage through the city. Research has failed to find in the municipal records any mention of the date of drainage. The water was not all let out at one time; the great body was drawn off probably in 1852 or 1853, but the deepest parts of the pond were not fully drained till several years later."

The general topography of the mill-dam and its drainage is thus described by Mr. Billon:

"The main body of the pond near the mill was about a half-mile long, extending from its northernmost point at Market Street, between Ninth and Tenth, in a southwesterly direction to about where is now Papin Street, at its junction with Twelfth Street, at the present Shickle & Harrison Iron-Works; its widest point was about three hundred yards across, from Eighth Street, its easternmost line, to Eleventh, its western line, at about Spruce Street.



"Starting from the dam at the intersection of Ninth and Poplar, its eastern shore curved around along Eighth to Clark Avenue, and thence northwest to its northernmost point at Market Street, between Ninth and Tenth, where a gully brought the rain-water from as far north as Olive Street, and from a spring in the ground north of Market, between Eighth and Ninth, where one Thomas Maguire had put up a small brick residence in 1817, on a small lot he purchased from Chouteau; from this point the shore line curved in a southwest direction to about Clark and Eleventh Streets, thence a south course to about Cerré, where it was about one hundred yards wide, and made a turn to a westward direction. From the water-gate at Ninth and Poplar the shore meandered along the foot of high ground in a southwest direction to about Twelfth and Papin; from this point, in a general northwest direction, from one hundred to one hundred and fifty yards, until it reached to near Market Street again, from about Tayon, to Adolph or Twentieth Street; here it turned again to a southwest course to where it crossed Chouteau Avenue, at about Armstrong Avenue, the southwest point of the pond; from this point to its chief source, the Rock Spring, it was but the natural stream, at times higher or lower, according to the quantity of water in the main body of the pond and the state of the season.

"The main body of the pond at the mill was about one-half mile long by three hundred yards across at Spruce Street; from there it varied in width from one hundred to one hundred and fifty yards to the southwest point of the pond proper, at Chouteau Avenue and Twenty-second Street. The whole length of the pond with its curves and meanders was nearly two miles, but in a small boat we frequently ascended the branch to beyond the Pacific Railroad machine-shops.

"Besides its three principal sources of supply, the Rock Spring, Hammond's and McRee's Springs, several other fine springs came into it from various points. Lucas Spring, just north of Market Street, near Twentieth, was a fine large spring in a handsome grove of young sapling timber, and was much resorted to by picnic parties, Fourth of July celebrations, and for many years the Methodists of the day held their annual camp-meetings at the spot. Another fine spring in a small round cove, which we could just enter with our little craft, was on the south bank near Eleventh Street, in after-years Raberg & Shaffner's tannery.

"A deep gully, called by the early French the 'Racero,' or 'Hook,' ran along down the present Twelfth Street, draining the water across our present Washington Square from as far north as Locust at Thirteenth, where is now Missouri Park, then the residence of Judge John B. C. Lucas. The ground between Eleventh and Twelfth, now occupied by the Four Courts, was always high ground, for many years the residence property of Henry Chouteau, third son of the old original.

"When the Pacific Railroad commenced their work in 1853, before the pond was drained, they built their road some blocks west of Fourteenth, where they commenced work on piles. After the pond was drained, the present Ninth, Tenth, Eleventh, and other streets were opened and made across the land that had been covered by the pond, and in the course of years the lots were gradually filled up; the Collier White-Lead Works, the Harrison foundry, the gas-meters, baggage-factory, railroads

that time this addition formed the southwest corner of the city.

"Bernard G. Farrar's addition, Sept. 22, 1847, was from Eleventh to Eighteenth Street, between Hebert and Sullivan Streets.

and depot buildings, and many other establishments recently erected are all built on ground in or near the pond.

"After Chouteau had replaced the primitive old wooden mill-house of Tayon & Laclede with a stone building, and had raised the dam to supply more water for the same, to strengthen the dam he had placed a row of cottonwood-trees along on it, which in a few years furnished a fine shade, and was much resorted to in hot weather as a pleasant evening promenade, where the boys caught fine fish, with which the pond abounded."

Its further history, as a matter of land record, is given below:

Chouteau's mill tract was first surveyed by order of the board of land commissioners, by Silas Bent, the first United States deputy surveyor in St. Louis, in November, 1809. He gave it a front to the east of 43 chains, or 946 yards, equal to 144⅔ French linear arpens, by a depth westwardly on its north line of 233 chains (80 linear arpens), and on its south line of 223.16 chains (about 77 linear arpens), averaging through the centre, east, and west 78.42 arpens, containing about 1140 arpens. Add the outlet to the river, 2 by 9 arpens (18 arpens), and the small tract south of the mill-tract proper of 4 by 13½ arpens, or 54 arpens, made the whole tract, as confirmed by the board, June 7, 1810, survey No. 363, about 1212 arpens, or 1031 acres. (See State Papers, "Public Lands," vol. ii. page 476.)

Subsequently, when accurately measured by the city authorities, Chouteau's front on Fifth Street, from the north line of the mill-tract at Market Street south to Chouteau Avenue, was found to be about 1030 yards, or about 16 arpens front, which he had always claimed to hold under Liguest, Laclede, and others, exclusive of the Guion tract of 1 arpent front, north of him,—the south lot or No. 1 of the common fields. Including this 1 arpent, his east front was about 1100 yards, or 17 arpens,—1091 yards.

	Arpens.	Acres.		Arpens.	Acres.
Bent's survey of the mill-tract.....	1140	or $969\frac{72}{100}$	Add 106 arpents	1246	1060
Bent's survey of the south tract.....	54	or $45\frac{90}{100}$		54	$45\frac{90}{100}$
Bent's survey of the strip to river.....	18	or $15\frac{30}{100}$		18	$15\frac{30}{100}$
	1212	1031		1318	$1121\frac{02}{100}$
			Add the Guion tract	40	34
				1358	$1155\frac{02}{100}$

It appears that a more accurate survey and admeasurement made the tract 47 chains 11 wide, instead of 43 chains as by Bent's survey. This difference of 4 chains 11 in the width gave the tract 106 arpens more. To this add the Guion 40 arpens on the north, not included in the first survey, and we have the tract to contain 146 arpens, equal to 124.25 acres, more than in the first calculation.

After Chouteau and Lucas had laid off their first addition to St. Louis, in May, 1816, which they extended back west of the old town to Seventh Street, Chouteau inclosed the east and north line of his mill-tract by putting up a new inclosure of pickets along the south side of Market Street to the pond at Ninth Street, and the west side of Seventh to Chouteau Avenue.

When, in 1853, the pond was drained by the removal of the dam, and the lines of the streets were run through the land, the old stone mill built by him was found to be situated a little northwest of the present intersection of Poplar with Eighth Street, between it and the present entrance to the open cut of the tunnel, and the flood-gates for the overflow of the pond diagonally across, northeast to southwest, the intersection of Poplar and Ninth.

Auguste Chouteau's estate was divided in 1832,—the part west of Seventh Street was sold in small tracts, which were added from time to time to the city. The mill lot was bought by Henry, Edward, and Gabriel Chouteau for $11,000, and the mill was run by water or steam till it burnt down, some years back. In 1837 Edward Chouteau sold his third in the mill-tract to his brothers for $10,000, and they sold it to Pierre Chouteau for $13,000. In 1853 P. Chouteau sold his third to P. Dexter Tiffany for $65,000, and he and his partners sold a third of this to the Pacific Railroad for $120,000, in October, 1853. Some of the deeper hollows of the pond were not quite drained before 1870.

"Susan La Beaume and Charles Collins' addition, Jan. 21, 1847, from Ninth to Eleventh Street, between Rogy, formerly Brooklyn, and Tyler, formerly Webster Street.

"Louis A. La Beaume and Archibald Gamble's addition of Aug. 9, 1847, was from Mercer Street to Jefferson Avenue, between Clark Avenue and Walnut Street.

"William C. Carr's third addition, July 10, 1847, from Eighteenth Street to Jefferson Avenue, between Franklin Avenue and Biddle Street. The recorded conditions of the dedication of the streets in this addition were that 'there shall be no butchery, tallow chandlery, soap-factory, steam factory, tannery, nine-pin alley, or any other offensive business or occupation set up or carried on on any part of said addition, whereby the dwellings of any other lot-owners, proprietors, or occupants may be in any way annoyed or disturbed;' that there shall be no change in the streets or alleys as laid off in the plot, and that all the fences and timber on the streets and alleys shall be reserved for the use of Wm. C. Carr.

"Adolphe Paul's addition, Jan. 30, 1846, between Market and Walnut Streets, from Adolphe Street to Twentieth.

"Dr. Hardage Lane's addition of October, 1839, revised March, 1846. This addition was from Austin to Poplar Street, between Fourteenth and Sixteenth Streets.

"Solomon H. Robbin's addition of Sept. 3, 1847, was from Seventeenth to Eighteenth Streets, between St. Charles Street and Lucas Avenue.

"Richard W. Ulrici's addition of Oct. 26, 1847, was from Twenty-third Street to Jefferson Avenue, between Market and Eugenia Streets.

"Thomas Allen's first addition, April 12, 1848, was from Carondelet Avenue to Fulton Street, between Geyer and Allen Avenues. Among the conditions of this dedication is the following: 'There shall be no slaughter-house, bawdy-house, soap and candle factory, tannery, distillery, nine-pin alley, or any other offensive business or occupation set up or carried on upon any part of the addition.'

"The Fairview addition, made by Charles K. Dickson and John J. Murdoch, May 1, 1848, was between Sidney and Victor Streets, from Rosatti to Morton, formerly Summer Street.

"J. G. Shand's addition of June 12, 1848, was from Monroe to Montgomery Streets, between East Sixteenth and Seventeenth Streets.

"Ed. Haven's addition of May 10, 1848, was eight blocks within the area from Carondelet Avenue to Decatur Street, and between Victor and Shenandoah Streets.

"The Devoisy addition of June 9, 1848, was four blocks, two each side of Gravois Avenue, from Wisconsin, formerly McNair Avenue.

"The Labadie addition of June 28, 1848, was six blocks

within the area from Carondelet Avenue, two blocks west, between Sidney and Pestalozzi Streets.

"James H. Lucas and Ann L. Hunt's addition, Jan. 18, 1849, was from Twelfth to Seventeenth Street, between Market and Olive Streets.

"Isaac W. Taylor and E. R. Mason's addition of Oct. 6, 1848, was two and a half blocks, in the area from Carondelet Avenue west, between Barton and Sidney Streets.

"Thomas Allen's second addition of Dec. 13, 1848, was six blocks from Rosatti to Morton Street, between Victor and Shenandoah Streets.

"Among the conditions of this dedication were that there should not be any offensive business set up or carried on upon the addition, 'such as a slaughter-house, bawdy-house, soap and candle factory, tannery, or distillery.'

"Dec. 5, 1855, the limits of the city were farther extended southwardly, westwardly, and northwardly, and described as beginning at a point in the middle of the main channel of the Mississippi River, where the continuation of the south side of Keokuk Street eastwardly would intersect said main channel; thence westwardly by the said line of the south side of Keokuk Street to a point six hundred and sixty feet west of Grand Avenue; thence northwardly and parallel to said Grand or Lindell Avenue, at a distance of six hundred and sixty feet therefrom, until it intersects the Bellefontaine road; thence northeast to the line dividing townships 45 and 46, range 7 west; thence eastwardly with said line and in the same direction to the middle of the main channel of the Mississippi River; thence southwardly with the meanderings of the main channel of said river to the place of beginning.

"The new limits made Keokuk Street the southern boundary, and a line six hundred and sixty feet west and north of Grand Avenue as the west and north line. This made the area of the city about seventeen square miles. The assessment of property for taxation was increased from $42,991,812 to $59,609,289.

"This extension took in the town of Bremen. This town was incorporated April 6, 1845, under a dedication of blocks and streets made by George Buchanan, E. C. Angelrodt, N. N. Destrehan, and Mallinckrodt. It was located from the river to the Bellefontaine road, between Buchanan and Salisbury Streets.

"The village of Highland came in also under this extension. This village was dedicated by John R. Shepley, Aug. 1, 1848. It had an area of five blocks, extending from Jefferson to Leffingwell Avenues, between Laclede Avenue and Eugenia Street.

"James E. Yeatman and Robert S. Holmes' addition, dedicated March 28, 1851, five blocks, fronting on the south side of Angelica Street, from the river to the Bellefontaine road.

"Julie G. Cabanné's addition of ten blocks, dedicated April 24, 1849, between Decatur and Menard Streets, with Victor Street as the south line.

"William T. F. Wright's addition of four blocks, dedicated April 23, 1849, from Benton to Hebert Street, between Twelfth and Thirteenth Streets.

"Adam L. Mills' western addition of four blocks, dedicated July 10, 1869, from Laclede Avenue to the rear of the lots on the north side of Pine Street, between Jefferson Avenue and Beaumont Street.

"John J. Murdoch and Charles K. Dickson's addition of ten blocks, dedicated Jan. 19, 1850, between Randolph and Market Streets, with Adolphe Street as the eastern line.

"The Union addition, dedicated March 5, 1850, by John O'Fallon, Louis A. La Beaume, James Miller, Josiah Dunt, John R. Shepley, L. A. Benoist, Albert Todd, Samuel Knox, B. B. Clayton, and others. This addition contained fifty-four present city blocks, and was between North Market and Hebert Streets, from East Sixteenth Street to Jefferson Avenue. One of the conditions of the dedication of the Union addition was the reservation of the park now known as St. Louis Place 'for a public park or pleasure ground,' to be kept in good order and to be improved by the city as a private park, for the use of the residents of the area comprised within the district designated as Union addition.

"Fairmount addition, dedicated by Wm. R. Price and John Ivory, April 11, 1850. This addition included six blocks on both sides of Liberty Street, from Sidney to Lynch Street.

"Ann C. T. Farrar's addition, dedicated Oct. 26, 1850, included seventeen blocks between Buchanan Street and Bremen Avenue, from Tenth to Sixteenth Street.

"The Arsenal addition, dedicated by J. S. Dougherty, J. W. Taylor, and E. R. Mason, Dec. 18, 1850, included eight blocks west of Carondelet Avenue and opposite to the present Lyon Park.

"Adam L. Mills' addition of May 15, 1844, from Jefferson Avenue to Beaumont Street, between Lucas and Franklin Avenues.

"Lewis Bissell's addition of nine blocks, dedicated Jan. 8, 1852, from the river to Broadway, between Angelica and Bissell Streets.

"Stoddard addition, dedicated Sept. 9, 1851, by Henry Stoddard and John J. Murdock. This addition includes the area between Beaumont Street to Cardinal Avenue, from Laclede to Franklin Avenue, and from Jefferson to Compton Avenue, between Franklin Avenue and the rear of the lot on the north side of Thomas Street. It comprises about seventy-two present city blocks.

"Clement B. Penrose's addition of May 22, 1852, was between Eleventh and Sixteenth Streets, both sides of Penrose Street.

"William Glasgow, Jr.'s addition of March 28, 1853, was nine blocks, situated on both sides of Cass Avenue, from Garrison Avenue to Francis Street.

"Rock Point addition, made April 9, 1853, by Stephen D. Barlow as executor of the will of William C. Carr, extended from Main Street to Carondelet Avenue, between Dorcas and Lynch, formerly Harper.

"Florence village, dedicated by James S. Watson and Samuel D. South, April 20, 1853, on the west side of Garrison Avenue, between Thomas Street and Cass Avenue.

"Beaumont addition, made by Deborah and Israel G. Beaumont and Sarah Irwin, June 14, 1853, extended from Jefferson Avenue to Beaumont Street, from the rear of the lots on the south side of Olive Street to Lucas Avenue.

"West Bremen, an addition made by William C. and A. R. Taylor, Oct. 12, 1853, extending from West Sixteenth Street to Grand Avenue, on both sides of Bremen Avenue.

"George Mincke's addition, April 24, 1854, on the east side of Tayon Avenue, from Clark to Chouteau Avenue.

"Compton Hill addition, made by James S. Thomas, May 20, 1854, includes ten blocks from Park to Chouteau Avenue, between Compton and Grand Avenues.

"Mary L. Tyler's addition of July 10, 1854, from Eleventh to East Sixteenth Street, between Tyler, formerly Webster, and Clinton, formerly Exchange Street. One of the conditions of this dedication was a reservation of all surplus earth above established grades of streets for the purpose of filling up streets and lots below grade.

"South St. Louis, situated between the old Arsenal and the present Marine Hospital, dedicated by Samuel S. Rayburn, Wm. S. Stamps, John Withnell, and twenty others, May 11, 1836.

"Thomas F. Smith's first addition, Sept. 28, 1855, both sides of Ewing, formerly Summit Avenue, from Laclede Avenue to Randolph Street.

"North Stoddard addition, made by Thomas A. Buckland

and Robert M. Funkhouser, March 24, 1856, included thirteen blocks, north of Stoddard Street to Benton, between Beaumont Street, formerly Elliot Avenue, and Glasgow Avenue.

"South Stoddard addition, made by R. A. S. and F. John Alexander, March 31, 1856, was from Laclede Avenue to Randolph Street, between Ewing and Glasgow Avenues.

"J. H. Lucas and Anne L. Hunt's addition of June 8, 1859, was from Seventeenth Street to Jefferson Avenue, between Market Street and the rear of the lots on the north side of Olive Street.

"La Monte addition, made by Robert Mc. O'Blenis, June 22, 1858, was ten blocks, included in the area from Chouteau to Park Avenue, west of Jefferson Avenue.

"James B. Eads' addition of four blocks, June 14, 1859, was south of Chouteau Avenue, both sides of Josephine.

"Edward Delano's addition, May 17, 1859, was six blocks along the south side of Arsenal Street, between Jefferson and California Avenues.

"Peter Lindell's first addition, made May 26, 1864, comprised fifteen blocks, from Laclede to Lindell Avenues, between Garrison and Grand Avenues.

"Ann C. T. Farrar's addition, made Aug. 4, 1864, from Eleventh to Sixteenth Streets, between Mallinckrodt Street and Bremen Avenue, included four blocks dedicated for park purposes. This park is now known as Hyde Park.

"Bryan addition of fifty-seven blocks, between Grand and Prairie Avenues, formerly Bryan, from Hall, formerly Water Street, to Penrose, formerly Belle Street, was made by John Cano Bryan's heirs, March 15, 1861, and by Eveline Bryan, Oct. 3, 1865, of fifteen blocks, between Grand and Prairie Avenues, from Hall Street to the river.

"Ranken addition, made by Thomas Ranken, Jr., David Ranken, Hugh L. Ranken, Robert Ranken, and Thomas R. Patton, Nov. 30, 1868, was between Chouteau Avenue and Manchester road, from Compton to Channing (formerly Ranken) Avenue, and both sides of Grand Avenue.

"Thomas Allen's western addition, May 17, 1869, was from Jefferson to California Avenue, from Lafayette Avenue to the rear of lots on the south side of Ann Avenue, and contained twelve blocks.

"Thomas Allen's central addition, of June 21, 1869, was twenty-two blocks, between South Carondelet Avenue and Jefferson Avenue, from Geyer's Avenue to the rear of lots on the south side of Ann Avenue.

"Gabriel S. Chouteau's addition of twelve blocks, June 8, 1870, from Garrison (formerly Montrose) to Compton Avenue, between the Missouri Pacific Railroad and Clark Avenue.

"Tower Grove Park and Grand Avenue additions of thirty blocks, from Louisiana to Gustine Avenue, along the south side of Arsenal Street, was dedicated by the Connecticut Mutual Life Insurance Company, June 18, 1881.

"April 5, 1870, St. Louis was farther extended south so as to include the section south of Keokuk Street and east of line six hundred and sixty feet west of Grand Avenue. Under this extension the assessed value of the real estate in the city increased from $113,426,410 to $123,833,950.

"By this extension, through a legislative enabling act, the city of Carondelet was taken into St. Louis. Carondelet had an area of about three square miles. It was founded in 1767, first incorporated as a town Nov. 4, 1833, and March 1, 1851, was formed into a city. The Carondelet municipal government organization took place April 9, 1851, when the place had twelve hundred and sixty-five inhabitants, twenty-six of whom were slaves. Mr. James B. Walsh, now clerk in Comptroller Adreon's office, was the first mayor of Carondelet. The present Walsh Street was about the northern limit of Carondelet.

"Besides adding Carondelet by this extension, a section was taken in lying between Keokuk and Osceola Streets, known as South St. Louis, that had been blocked off and dedicated in 1866 by several parties.

"Also, South St. Louis, suburban addition, dedicated by John C. Ivory, July 14, 1858. This addition was from Eichelberger to Osceola Streets, between the Stringtown and Cabanné Avenues, formerly Stringtown road and Seventeenth Street. This addition comprised sixty-three blocks.

"March 30, 1872, the city limits were extended farther west and north, so as to include Tower Grove, Forest and O'Fallon Parks, and so as to make districts for assessment of taxes for park purposes. On Feb. 4, 1874, the Legislature repealed the act of 1872, and placed the limits back to a line six hundred and sixty feet west of Grand Avenue.

"Aug. 22, 1876, the present city charter was adopted, the city was made separate and independent from the county, and invested with certain legislative rights formerly belonging to the State Legislature. This action made St. Louis a free city in local government, being the only one in the great valley in that condition.

"Under this new charter the limits of the city were further extended, so as to include the Tower Grove, O'Fallon, and Forest Park districts, and increased the area of the city from nineteen and a half square miles to sixty-two and a quarter square miles.

"This last extension of the city limits increased the assessed value of the real estate from $166,009,660 to $181,345,560.

"Under this extension the following additions were made to the city:

"The town of Lowell, forty blocks, incorporated in 1849 by E. C. Hutchinson, Josephine Hall, Edward F. Pittman, Robert Hall, Wm. Garnett, and others. The town was between the river and Bellefontaine road, from Grand Avenue to Adelaide, formerly O'Fallon Avenue.

"Rock Springs, dedicated by John B. Sarpy, May 28, 1852.

"Cheltenham, dedicated by Derick A. January and others in 1852.

"Quinette, dedicated by Oliver Quinette, Feb. 17, 1859.

"Mount Olive, dedicated by M. F. Hanley, May 10, 1854.

"These last four-named villages were between Forest Park and Shaw's Garden.

"Côte Brilliante, four hundred arpens, or a little over one square mile, dedicated by Charles Gibson, James C. Page, and Felix Coste, Dec. 14, 1853.

"McRee City, being an addition of fifteen blocks, made by the Laclede Race-Track Association, James J. O'Fallon, president, and Charles L. Hunt, secretary, June 29, 1869; and fifteen blocks added by Mrs. Mary McRee, Oct. 4, 1869. This city was between Cabanné Avenue, Manchester road, McRee and Chouteau Avenues.

"Fairmount, twenty-five blocks, dedicated June 10, 1869, from King's highway to Macklind, formerly St. Louis Avenue, between Bischoff, formerly Bernard Avenue, and Northrup Avenues. This dedication was made by Mary C. Hereford, Elizabeth Pharo, Robert E. Pattison, Ashley R. Northrup, E. W. Pattison, Julia A. Letcher, Julia A. Ashbrook, and others.

"Rose Hill addition of thirty blocks, made by D. C. and Hamilton Gamble, June 8, 1871, between Union and Hodiamont Avenues, along the south side of Easton Avenue, formerly Charles rock road.

"Evans Place, twelve blocks along the north side of Page Avenue from Prairie to Taylor Avenues, dedicated in August, 1872, by B. D. Evans, Clara Evans, Lydia Evans (McCagg), Montgomery Blair, Walker Evans, and Amanda Evans.

"College Hill, a tract dedicated by the St. Louis University

at various times since 1857, and located along the south side of the present O'Fallon Park, between the Bellefontaine road and Penrose, formerly Belle Street, and Prairie, formerly Bryan, and Adelaide, formerly O'Fallon Avenue.

The history of the "commons" and "common fields" of St. Louis would of itself suffice to establish the Latin-race origin of the old town, so different in manners and customs from those which distinguish our communities of English foundation and descent. This history takes the close student into a region filled with the romance of litigation. The lawyers of the city have enriched themselves in the process of quieting the innumerable disputed titles of individuals to tracts which were once, by common consent and usage and the tacit approval of law, the common property of the entire community. These tracts and sections belonging to the commons and common fields of St. Louis furnished between eight and nine miles of the present area of the city.

The history of these common fields, according to a recognized authority, is as follows:

"They consisted of a tract of land comprising a quantity of acres, according to the wants of the inhabitants, in which each inhabitant possessed a portion for the purpose of cultivation. They were inclosed at the joint expense, or, rather, each one furnished his proportion of labor. These lots were obtained by petition and grant, and belonged to the inhabitants as fee-simple property.

"The French and Spanish founders of new settlements invariably adopted this system of common fields, which were at some little distance from the town, and which the inhabitants jointly cultivated. It was done for protection, as it was necessary that the inhabitants should all reside in the village, so as to be ready to support each other in case of an attack from the Indians, and when engaged in their agricultural occupations, being together, they could the more readily resist any invasion."

These common fields were designated with French personal and descriptive names and as prairies.

The use and origin of commons and common fields were explained fully and lucidly by Col. Auguste Chouteau, in his testimony before the board of land commissioners in 1808. That testimony is as follows:

"Of those who were the first to come over to this from the other side, far the largest portion were tillers of the soil, who by their labor in the field produced their own subsistence and that of their stock. Some of them, in seasons when not engaged in their agricultural avocations, exercised the calling of rough artisans, such as blacksmiths, carpenters, stone-masons, hewers, etc., employed in building; others, procuring small outfits of merchandise, spent the winter trading with Indians and trapping; consequently, it was a matter of prime necessity with them, so soon as they had erected their domiciles in the village, to proceed at once to the production of their breadstuffs. For the purpose the land immediately adjoining the village on the northwest, being the most suitable, was set aside for cultivation, and conceded in strips of one arpent front by forty in depth, and each applicant allotted one or more, according to his ability to cultivate it. This was called the common-field lots, and the tract extended from a little below Market Street on the south to opposite the big mound on the north, and from the Broadway to Jefferson Avenue, east to west. The land lying southwest of the village, being well watered with numerous springs and well covered with timber, was set aside for the village commons, in which the cattle and stock of the inhabitants were kept for safety and convenience. These two tracts of land were at once inclosed by the people in 1764–65, and their eastern fence formed the western boundary of the village for many years."

The "commons" were not inclosed; the "common fields" were, and were divided into what were called "forty-arpent lots." That is to say, the common field was inclosed in one common fence, and within this inclosure each head of a family had a lot to cultivate, which was one arpent wide and forty arpens long. The regulations for the management and care of the common fields were explicit and full. The people who settled St. Louis knew the entire unwritten law of the "prairie," and they put it in force forthwith. It was of course necessary to add continually to the common, and especially to the common field, by taking more land from the royal domain as the population increased, and this fact of itself restricted their communal privileges and customs to small towns and unprogressive villages. In St. Louis the common field was fenced in as early as 1764–65, and this fence was several times extended. The evidence that the common was property of the village is found in a decree of Lieutenant-Governor Cruzat, Sept. 22, 1782. When the American jurisdiction was established in St. Louis, the inhabitants wished to have their common land confirmed to them. They claimed at that time 4293 arpens under the decree of Don Francisco Cruzat. The commons were taken care of by a syndic, and eight umpires, nominated in general assembly of the people the first day of each year. Their duty was to "watch together" the repairs of streets, bridges, and drains, and enforce the regulations in regard to the lands of the commune. The syndic and umpires for 1782 were Perrault, Brazeau, Cerré, Réné Kiercereau, Joseph Taillon, Joseph Mainville, Chauvin, and Auguste Chouteau. Their chief work, after seeing that water-courses were kept clear, was to view and preserve the common-field fence. The fence was to be viewed on January 1st, and to be in full repair by April 15th at farthest. On the first Sunday after this date the umpires were to "receive" the fence. "The aforesaid umpires shall not receive the fences unless they are constructed in such a way that cattle shall not be able to get out of the common and go into the town fields of the inhabitants, to injure them." When the umpires had reported to the syndic, it was his duty to appoint eight other umpires to test and verify their action; neglect

or misrepresentation involved a penalty of ten livres fine, besides paying for all damages. Any one crossing or injuring the fence after it had been received was to be fined and cast into jail.

Messrs. Clement B. Penrose, John B. C. Lucas, and James L. Donaldson, trustees of St. Louis in 1806, heard the claim of the people to the 4293 arpens of commons. Auguste Chouteau, Gregoire Sarpy, W. H. Le Compte, and many other citizens testified to the fact of the common and its conduct. The trustees were in doubt. The claim lacked the quality of inhabitancy, and there was no registered warrant or survey, but still the claim originated under the French government; such grants were usual under both the French and Spanish *régimes;* they were in conformity with the laws of the respective countries, and they seemed equitable under Spanish law. However, Messrs. Lucas and Frederick Bates voted for rejecting the commons claim, only Mr. Penrose favoring its confirmation. By act of Congress, however, of June 13, 1812, the right of St. Louis to its common lands was fully confirmed.

In 1835 the Missouri Legislature authorized the St. Louis authorities to sell the "commons" east of the present Twelfth Street, provided the majority of the resident property-holders in the city consented. These inhabitants gave their consent on condition that one-tenth of the proceeds of the sales be used for public school purposes, and the balance for municipal improvements.

About 4293 arpens, or 3735 acres, were sold at that time for nearly $425,000. Subsequently the purchasers imagined that they had agreed to pay too much, and therefore failed to make the payments on time, and the sales in most instances were set aside.

In 1843 the city authorities began to resell the "common fields," and realized nearly fifty dollars per acre. Between 1843 and 1850 about 3615 arpens of these commons were sold, and the city treasurer received $163,680. The lowest price fixed by the city was twenty-five dollars per acre, or about $21.75 per arpent. In 1860 the part of the city commons sold was estimated to be worth about $25,000,000. The purchasers platted the commons into blocks and small additions, and subsequently made them a part of the city's improved area. In 1860 the city held five hundred and ninety-one acres of the commons unsold, and this property was assessed at $581,391. Since then the city has sold or leased out most of the "common fields," and held the rest for public parks, sites for public buildings and markets.

The city now owns of the unimproved commons fifty-seven pieces, valued at $143,025. The improved real estate belonging to the city government for parks, markets, engine-houses, police stations, hospitals, city hall, court-houses, penal institutions, and water-works is estimated this year (1882) to be worth about $5,709,370. The value of the buildings and improvements on the city real estate is estimated at $12,789,145.

The United States government now owns property in real estate and buildings in St. Louis to the value of $5,787,800, and the St. Louis school board owns property valued at $2,382,342. The valuation of property owned by private schools and convents is $1,418,465, and by church corporations, $3,610,586. The total amount of real estate exempt from taxation in the city is about $35,000,000.

The street nomenclature of St. Louis has undergone several radical changes since the formation of the place. At first French designations were given to the streets in the old village. When the town was incorporated the streets running east and west were named in English after various trees or plants, and the streets running north and south were designated by letters of the alphabet, Market Street being the only street to retain its original name, and that being its translation from the old French name.

Five years after the town became a city, or in 1827, the City Council changed the north and south streets east of Seventh, between Biddle and Rutger Streets, to their present names, and amended Hazel to Chouteau Avenue, and Laurel to Washington Avenue, as now designated.

Occasionally, during the subsequent fifty years, a few street names were changed, and some streets, like the present Clinton Street, Lucas Avenue, and Grand Avenue, were changed three or four times.

During the past twelve years there became incorporated with the city of St. Louis the cities, towns and villages of Carondelet, Rock Spring, Cheltenham, Elleardsville, Côte Brilliante, Rinkelville, Ashland, Lowell, and Baden. Before these additions were made their territory was mapped out in blocks, with the streets named similarly to the ones in St. Louis.

After the extension of the city limits in 1855, the farms between Jefferson and Grand Avenues were platted into blocks, and became additions. In mapping out these additions the owners of the lands named the streets to suit their fancy, regardless as to whether the street names were similar to those in other parts of the city, or whether the streets were lineal connections of other streets previously named.

In consequence of the above circumstances, out of the two thousand one hundred street names in the city in 1881, over two hundred were duplicates, nearly

one hundred were triplicates, fifty were divided among four names, thirty among five names, and five among six names. Besides this frequent repetition of names, two hundred and twenty streets that were about in a continuous line had from two to seven names, or a name for each addition of city blocks through which they passed.

The introduction of the present system of city delivery of post-office matter, and the establishment of the district system of registering voters and assessing public improvement taxes made it necessary for the street commissioner, under instruction of the Municipal Assembly and the Board of Public Improvements, to revise the street nomenclature. A revision was made, and it passed the Municipal Assembly. The ordinance was No. 11,693, approved March 31, 1881. After the approval of this ordinance the street commissioner found it necessary to make another revision, to correct omissions in naming continuous street lines, and therefore he postponed enforcing the ordinance. In October, 1881, the additional revision of street names was presented in the City Council, and went to the House of Delegates Nov. 29, 1881, and passed both houses March 21, 1882. The ordinance was approved March 22d, and is known as ordinance No. 11,966.

The names of streets is a sore subject to the genuine antiquarian, who cannot avoid a pang when he sees an old historical landmark in the way of a name ruthlessly wiped out by the carelessness, ignorance, or opinionativeness of a city alderman or a municipal clerk. Names mean something; when nothing else, they serve at least to fix dates in the public memory and revive or keep alive patriotic and national events and occurrences. The old Indian, French, and Spanish names of St. Louis and Missouri ought to be reverently treated as a venerable and valuable inheritance. To an outsider the idea of sinking such a name as "Carondelet" in the commonplace "Broadway" is almost inconceivable, yet it has been done.

There is a great deal of history in the Missouri names which have come down from the past. Even the nicknames won by the towns, such as "Pain Court," "Vide-poche," "Misère," etc., have much of by no means unpleasant significance. In this view of the case the Missouri Historical Society is doing an excellent work in its efforts to preserve the orthography and keep on record the meaning of its geographical names. In many cases the French foible for abbreviation, followed by the English propensity to corrupt and misspell French words, has destroyed the intelligibility of names. Thus, the Des Moins River is spelt Des Moines, as if it were the Monks' River, whereas it is really la rivière de Moingona, an Indian tribe of that name frequenting its banks. Maramec, the river forming the southern boundary of St. Louis County, is really Maniameek, "Catfish River." Gasconade, according to the late James A. Lucas, should really be "Gassonade," meaning raw sugar, a favorite article with the Delaware Indians once settled on the banks of that stream. "Pain Court," meaning a deficient loaf, is said to be the reminiscence of an ancient parish in France, and not simply an epithet originating in Kaskaskia. "Vide-poche," it has been suggested by Hon. Wilson Primm, referred to the skill of the Carondeletians at games of chance, and the fact that they were usually able to send their St. Louis visitors home with empty pockets.

As to names of streets and localities in connection with topography, a writer in a St. Louis journal of May 28, 1870, says,—

"In our own city we have mixed up several systems of naming our streets. The stereotype 'principal street' of all towns of French or Spanish origin on this continent is preserved in our Main Street, and Market Street still indicates the locality of the sole market-place of the French village of St. Louis. But in the village itself, the first American settlers having been to a considerable extent from Pennsylvania, and the overland trade of Missouri with the Atlantic States having been mainly with Philadelphia, the system of that city was adopted. Accordingly the Chestnut, Walnut, Spruce, and Pine Streets of the Quaker City have their namesakes here, and, with the exception of Market Street and Washington Avenue, all the old streets of French St. Louis running westwardly from the Mississippi River are named after trees; one, indeed, Olive, bears the scarcely appropriate designation of a stranger to our climate. With the extension of the city, the list of trees being soon exhausted, new streets were usually given the names of the owners of the various additions through which they were laid out. Occasionally the memory of some original settler, whose name had become too closely connected with the locality to be readily got rid of, has been preserved in the designation of a street, and more frequently some distinguished public man, as Benton, Geyer, etc., has received a like tribute of respect. In naming our streets parallel to the Mississippi River, we have followed, except in regard to some few great avenues, the sensible practical plan, general in American cities, of merely numbering them.

"But we have wholly neglected in naming our streets to preserve any remembrance of the old landmarks and lines of division which are of interest in the history of our city, and sometimes of importance for the understanding of its annals. The next generation will find no names, and, indeed, even few streets or avenues, to point out the boundaries of the common and the common fields which figured so largely in the public as well as in the private history of old St. Louis. Grand Avenue very nearly but not exactly marks the eastern boundary of the Grand Prairie, and 'The King's Highway' is still the designation of the old colonial main road. This is one of the very few instances in which historical reminiscences have been respected in the naming of streets or avenues. As the subject of our street names was before our last City Council, with a view to simplifying them, which is not unlikely to be revived, we wish to put in a plea for regard to the historical reminiscences

of St. Louis in giving a general designation to the most important of our great avenues of communication which run parallel to the Mississippi River."

Among the oddities and curiosities in old local names we find "Kerry Patch," once used to designate a district between Seventeenth Street on the east and Twentieth west, between Mullanphy and Biddle Streets. It was settled by Irish immigrants about 1842, and being then commons, without street lines, the shanties were sprinkled in a very promiscuous fashion about the "Patch," all the occupants being alike squatters. "Duncan Island" in 1817 was nothing more than a common "towhead" in the river. The name was derived from "old Bob Duncan," who came from Pittsylvania County, Va., and planted a cabin on the island in order to insure a pre-emption claim. The sand-bar extended from the foot of Market Street to the south of Mill Creek, or La Petite Rivière, as it was called by the French inhabitants, and kept on increasing by accretions until about the year 1829 or 1830. The old channel of the Mississippi River previous to about 1817 ran along the front of the city; above St. Louis the main channel ran on the east side of Gaberet Island. Then the channel changed, and it ran on the west side, scooping out hundreds of acres, and forming a chute since then called "Sawyer's Bend," on account of the numerous "sawyers" or snags that planted themselves there. The river then followed in its course to near where the old dry-docks were located at the foot of Ashley Street, and then the current shot across from the Point of Rocks, at the foot of Ashley Street, towards the Illinois shore, causing a bar to form along the whole front of the city, so that no boat could land south of what is known as the foot of Morgan Street. The channel then ran at the foot of Bloody Island, and hugging the Illinois shore kept that direction as far as Cahokia Bend, and then crossed over to the Missouri shore about a mile above Carondelet. The sand-bar at the foot of Market Street extended two-thirds the way across the river as far back as about 1828. About the year 1830 a member of the board of aldermen named Cotton M. Tabor had a contract with the city to build log cribs on the west side of Bloody Island in order to throw the channel again over to the Missouri side. The cribs were built of cottonwood logs, which he had cut off Gaberet Island and floated down to Bloody Island. He filled the interior of the cribs with sand instead of rock, and the first high water that came washed all the cribs down the river, not leaving a remnant behind.

The channel was first improved by Maj. Robert E. Lee, of the Engineer Department, in conjunction with Henry Kayser, the then city engineer. They constructed heavy dams of stone, and filling up the channel between the Illinois shore and Bloody Island had a tendency to throw the channel on this side, and dikes were thrown from this side out to straighten the line of the wharf, which is now the present line.

"Happy Hollow" was a name given in primitive times to the ravine commencing south of Spruce Street and west of Fifth. Chouteau's Mill Creek traversed it, and the banks were shaded by tall sycamore-trees, under which the colored "aunties," who were the precursors of "Ah Sin," did their washing and stretched their clothes-lines. On Sunday they used to have their "bush meetings" in the glade, at which they often got "happy." The "old race-track," a name which is still sometimes applied to the locality, long since built up, was on the Grand Prairie, on the Gallatin farm, afterwards known as Capt. Shreeve's place, three-fourths of a mile above Franklin Avenue. It was the earliest race-course near St. Louis, and some of the most famous thoroughbreds of Kentucky and Tennessee have tested their speed upon it.

"Vinegar Hill" was years ago given to an elevation near the then head of Morgan Street and Franklin Avenue, at Eighteenth Street. The name was derived from the well-known battle-field in Ireland, where the United Irishmen fell to pieces. "Clabber Alley" is a familiar name, but the spot is not so well known. It runs north and south from Franklin Avenue to Biddle Street, between Sixth and Seventh, has many tenement-houses, and a dense population of divers colors and nationalities. Years ago, when there were many dairies in the vicinity, the negroes and low whites in the alley used to subsist in a measure upon buttermilk and "clabber," and the police gave the name to the place from seeing the gutters generally half-full of sour milk. "Battle Row," notorious in old steamboating flush times, was on the Levee, between Morgan and Washington Streets. It comprised several low two-story stone houses, owned by the John Mullanphy estate, and was noted for scenes of turbulence and disorder, and for being the most dangerous locality in the city. Many a bloody fight came off there, and scarcely a day elapsed without a row, it needing generally a squad of policemen to make an arrest in the vicinity.

"Wild-Cat Chute" is the euphonious cognomen of an alley running north and south between Carr and Biddle and Seventh and Eighth Streets, filled with tenements, and peopled by a low class of negroes. The name originated about thirty years ago, when a large amount of what has been known as "wild-cat money" was in circulation, especially among steam-

boat deck hands and roustabouts, the lower classes of whom frequented the locality named. The wild-cat money was easily passed on the ignorant negroes, and the word "chute" was applied by the river men, because the alley was a by-way or short cut to another notorious locality. The two facts originated the name of "Wild-Cat Chute," which was for a long time used only by river men. The name seems generally and permanently established now.

"Castle Thunder" has long been applied to a large tenement-house in "Wild-Cat Chute." During the early part of the war the colored people, who came to the city in droves, generally settled in communities in the large tenement-houses, and were fond of calling their domiciles by the name of some fort, generally southern. Thus one such tenement-house was called "Fort Sumter," and another "Fort Pinckney," but the names did not stick. "Castle Thunder" received its name from the negroes in the same way, and is still known by it.

"Pond Fort" was a dance-house, so called because it was the nearest place of the kind to Chouteau's Pond. It was a two-story brick building, located on the northeast corner of Sixth and Spruce Streets, and was kept by a woman known as "Capt. Jack." The building is still standing, about opposite the Italian Church. It was a gathering-place for the fast people of that day as long as the "Fort" was held by Capt. Jack.

"Robber's Roost." This was an infamous resort on the river-bank, where Filley's foundry now stands. It was a roost for gamblers and other disreputable people of the worst description. The scenes enacted there gave it its name. In June, 1831, the citizens became incensed, and one night assembled together and burned it down, with all the furniture and other contents. Some of the inmates at the same time received a pretty severe handling, one feature of which consisted of tarring and feathering.

"Shakerag." Some years ago a locality in the upper end of the city obtained the nickname of "Shakerag," and it is sometimes so called at the present time. There was a slang meaning to the word at that day, which is now obsolete, and the name was fixed to the locality indicated when there were but few houses there, and the inmates of most of them were in the habit of shaking a rag held out of the window as a signal in certain cases.

"Vauxhall Gardens." There have been two places in St. Louis which at different times obtained some local celebrity as the Vauxhall Gardens, the first so called after the famous London resort of that name. It surrounded one of the oldest brick residences in the city, and which was built by Thomas C. Riddick, on the west side of Fourth Street, between Plum and Poplar. It was after Riddick's occupancy that it was turned into a public garden. In 1823, and for a number of years afterwards, it was a place of great public resort, and was famous for its Fourth of July celebrations.

The second "Vauxhall Gardens" was established at the old Soulard residence, on the east side of Carondelet Avenue, south of Miller Street. It was surrounded by a large orchard, bearing excellent fruit, and, like its predecessor, became a great public resort and place for political meetings. The garden has long ceased to exist, but the building still remains, although it has lost its name.

CHAPTER VIII.

THE EARLIEST SETTLERS IN ST. LOUIS.

In the well-known fragment of Auguste Chouteau's Journal, in which he begins the narrative of the founding of St. Louis,[1] he records some names which have a peculiar value for every one interested in the early settlement and the earlier settlers of that city. In addition to his own name and that of Laclede Liguest, his employer, he mentions the fact that he set out to plant the new post with a boat containing thirty men, "nearly all mechanics." There were also on the site, after the building of the first house began, some people who had come from "Caos" (Cahokia), but had fled when the Missouri Indians put in their appearance. Laclede was sent for,—he was at Fort Chartres,—and on his arrival found means to send the Indians away without any likelihood of their return. Thereupon "those persons who had fled to Caos on the coming of the savages," says Chouteau, "returned as soon as they knew that they had gone away, and commenced building their houses, or, to speak more correctly, their cabins, and entered their lands agreeably to the lines of the lots which I had drawn, following the plan which Monsieur Laclede had left with me."

The names of these persons of "Caos" are given in a note to the Journal as follows: Joseph Tayon, Roger Tayon, Dechene, Beauchamps, Morcerau (Marcheteau), Joseph Bequet (Becquet), André Becquet, Gabriel Dodier, Baptiste Martigny, Lemoine Martigny, Beaugenou, Cotté, Picket, Hervieux, Bac-

[1] It is now in the Mercantile Library of St. Louis, and was translated in 1858.

cané, François Delin, La Garrosse, Paul Kierseraux, Gregoire Kierseraux, Alexis Picard, Antoine Pothier, Th. Labrosse, Labrosse, Louis Chancelier, Joseph Chancelier, Gamache, Ride, Roi, Lajoie, Le Grain,—thirty-one in all. These, with the thirty from Fort Chartres, in the words of Chouteau, "commenced to give some permanence to St. Louis." The names of these thirty it does not now seem possible to ascertain, but the greater part of them are undoubtedly among those obtaining the first concessions of lots, given in the chapter preceding this.[1] In Hunt's Minutes Joseph Boury, a rope-maker, Baptiste Rivière, Antoine Rivière (*dit* Baccanet), Sr., and his wife, Barbara Eloi, are mentioned as having come at the same time with Chouteau and Laclede.

Louis Ride, Sr., who came to St. Louis in 1764 with the Cahokians, was born in Canada. His first wife was Veronique, daughter of Louis Marcheteau, by whom he had four sons, Louis, Laurent, Francis, and Claude, all born before he moved to St. Louis. His wife died in 1772–73, and he married Cartella Jacinthe (Youassen), widow of Louis Lunant, of Ste. Genevieve. She had three sons and two daughters. She died in 1784, and Ride in 1787. Gabriel Dodier was a blacksmith of Fort Chartres; one of his sisters married J. B. Becquet, another Alexis Cotté, the third Simon Coussot.

Among the first who came over from the east side to settle in St. Louis was the very numerous family of the Marcheteaus, *alias* Denoyers (correct orthography, Marcheteau). The three older Marcheteaus were brothers, Louis, Sr., Joseph, and Francis. These elder Marcheteaus were originally from Canada. Louis Marcheteau's, Sr. (*dit* Denoyers), first wife was Françoise Leduc. Their children were Basile, Louis (2d), *alias* Kierq, a married daughter of Veronique, first wife of Louis Ride, with several children, and two others, names not given. Louis married a second wife, a widow, Quirigaut Felip, July 3, 1772, then quite an old man, and died early in 1774. Joseph Marcheteau had been twice married before coming over to St. Louis, and three married daughters with their husbands and children came with him, viz.: Jeanne, the wife of Charles Routier, daughter of his first wife, Madeline Robert; Elizabeth, wife of John Bap. Becquet, and Catharine, wife of François Bissonnet, his daughters by his second wife, Elizabeth Leduc, and perhaps others whose names are not on record. Marcheteau, Francis, the third brother, was a carpenter. His wife was Marie Josephe Noiselle (a daughter, Marie Josette, became the wife of John B. Durand in 1768; she died in 1769 or 1770, leaving an infant daughter, Theotiste; and Durand died in 1773, at the age of thirty-one. This orphan child, then but four years old, in after-years became the wife of Emilien Yosti, and died in the year 1826, in her residence at the southwest corner of Main and Locust; one of her sons, Francis Yosti, now over eighty years of age, is still living in St. Charles, 1878). A son of the above Marcheteau, Joseph Marcheteau, Jr., married Ursula or Charlotte Cardinal in 1779.

Michael Lami came over in 1765–66, built a house of posts in Block 43 in 1766, married the widow of François Lefebvre Duchouquette in Ste. Genevieve in 1776. Hyacinthe St. Cir, Sr., was one of the few prominent men of the early times in St. Louis, and one of the most enterprising, having built several stone houses, etc., in different parts of the village. He received from the government several grants of land in the country not far north of the village. This couple had fifteen children, through whom they left a numerous posterity: 1, Hyacinthe, Jr., born in 1784. 2, Marie Constance, born in 1785; Mrs. William Christy. 3, Leon Narcisse, born in 1787; disappeared; supposed drowned. 4, Marie Helene, born in 1789; died 1820. 5, Françoise Agnes, born in 1792; Mrs. Llewelyn Hickman. 6, Melanie, born in 1793; Mrs. Auguste Brazeau. 7, Therésè, born in 1795; died 1806. 8, François, born in 1797; married Mary Ann Bellew, 1835; died 1839. 9, Brigette, born in 1799; died 1800. 10, Brigette P., born in 1801; Mrs. Samuel Abbott. 11, Pascal Hebert, born in 1803; married Maria Taylor. 12, Helene, Mrs. Nicholas Bailvin. 13, Emilie; 14, Benjamin C.; 15, Stephen; left no issue.

The Brazeaus, Joseph and Louis, were married to two sisters, Delisle. They were all born in Kaskaskia; at least they came from there to St. Louis prior to 1782, as Joseph, Sr., was one of the syndics of the village in that year.

Joseph Brazeau, Sr., born in 1742; died Nov. 23, 1816, aged seventy-four years. Marie Therésè Delisle Brazeau, born in 1749; died February, 1834, aged eighty-five years; monument at Calvary Cemetery.

Louis Brazeau, Sr. ("Old Cayewa"), and wife, Marie Françoise Delisle, brother and sister of above, came from Kaskaskia about the same time. They had a numerous family of sons and daughters; the sons,—Louis, Jr., Joseph, Jr., and Auguste; the daughters,—Marie (Mrs. John B. Duchouquette), Julie (Mrs. Alexander Papin), Therésè (Mrs. Charles Bosseron), Cecile (Mrs. Charles Sanguinette), and

[1] Billon's List, No. III.

Aurore (Mrs. Louis Bompart), were all married previous to 1818. Mrs. Louis Brazeau, Sr., died Nov. 1, 1810, and "Old Cayewa," Dec. 5, 1828.

Their sister, Françoise Brazeau, veuve John B. Charleville, was in St. Louis prior to 1793.

Lupien, Pierre I., *dit* Baron, was married to Louise Margaret Gondeau, in Kaskaskia, Feb. 3, 1759, in presence of Labuscière, then royal notary at the other side. Baron died Oct. 12, 1775; inventory same day, lot one hundred and twenty by one hundred and fifty, north half Block 4; two houses of wood, twenty-four by eighteen and twenty by eighteen.

Another one of the Cahokians mentioned by Chouteau, Beaugenou, Nicholas, Sr., and wife, *née* Marianne Henrion, came over from the Fort Chartres settlement among the first, in 1764–65, with two sons —Nicholas and Charles—and four daughters,—Marie Josephe, Helène, Thérèse, and Agnes, all minors, and perhaps others. He built a house at the southwest corner of our present Main and Almond Streets, in 1765, where he lived a few years. In this house his oldest daughter, Marie Josephe, then near eighteen, was married on the 20th of April, 1766, the first recorded marriage in St. Louis. His wife died in this house, early in the year 1769. It was then sold to William Bissette. Beaugenou himself died prior to May 4, 1771, date of the marriage of his daughter Helène.

Bissette, Guillaume (William), was born in Montreal, Canada. He had been living at Fort Chartres before the establishment of the "post" of St. Louis, and was among the first to come over to St. Louis after the cession of the east side to England became known there. He was a single man when he came here, and had never been married. His will is dated May 30, 1772. He died six days afterwards, June 5, 1772, and the inventory of his property was taken June 15, 1772. He was a merchant, and left a considerable estate for that early period in our history. His heirs here were two brothers—Charles and John B.—and two sisters,—Isabelle, wife of Louis Vachard, and Marianne, wife of Claude Marechal. He had also five married sisters living in their native place, Montreal, Canada.

Vachard, Louis, and wife, Isabelle Bissette, sister of the above Guillaume, came married from Montreal. After the death of Guillaume Bissette they purchased the house in which he died, the same built by Beaugenou above. Here they lived the balance of their lives, Vachard dying about 1787, and his widow, Isabelle, early in August, 1797. They left four sons—Louis, Joseph, Charles, and Antoine, all born in Montreal, Canada—and some daughters.

Buet, Réné, came here from Cahokia, on the other side, in 1766–67. He had a concession of a half block, one hundred and twenty by three hundred (north one-half of the present Block 50), upon which he had built the same year, 1767, a large stone house, forty by thirty feet, one of the earliest stone houses in the village. He died, unmarried, Nov. 30, 1773. In his will, dated Nov. 28, 1773, he leaves his property to his niece, daughter of his brother in Cahokia, and a bequest of two hundred livres to assist in the erection of the village church, then in contemplation.

This house, then called "south of the village," was on the block between Second and Third and Mulberry and Lombard, for many years the Saugrain property.

Langlois. There were three Langlois here in the infancy of the village. Two of them, Alexander (*dit* Rondeau) and Noel, were brothers, and came over from Cahokia. The third, Joseph Langlois, might have been a brother also. They were all three Indian traders. Alexander Langlois received an outfit of goods for the Indian trade from M. Duralde, Aug. 6, 1777, which debt was paid by his widow July 10, 1778, he having died in the interval.

Josepha Lacroix, widow first of Champagne, and second of Alexander Langlois, first will July 21, 1778, names her cousin and brother-in-law, Noel Langlois, her executor and heir of her property, first paying a few bequests. She makes one of six hundred livres (one hundred and twenty dollars) to the church. Her second will, Dec. 2, 1778, six months after the first, names her nephew, Joseph Tayon, Sr., and Angelique Chauvin, wife of Beaulieu, of Cahokia, her heirs; same bequests as in the first will, Tayon named as executor. Her third and last will, dated Feb. 22, 1779, names Louis Robert, Sr., of Cahokia, her sole heir and executor. In this the bequest to the church is cut down from six hundred livres (one hundred and twenty dollars) to one-half, three hundred livres (sixty dollars).

Veuve Langlois' sale of her property between her second and third wills is thus described, Marie Josette Lacroix, veuve Alexandre Langlois, to Louis Robert, of Cahokia, Dec. 31, 1778, for two thousand livres (four hundred dollars), all her property, real and personal, which she may have in the Post of St. Louis, and wherever else they may be found,—a lot and house of posts on a wall, with the furniture, useful and ornamental, all the animals, horses, cattle, and hogs, fowls, lands, dwellings, carts, plows, negroes, negresses, male and female Indians, the whole as it is at this day, or in such quantity as may be found, wheat, flour, grain, corn, barns, outhouses, and generally everything which the said Widow Josette La-

croix possesses at this time, to whom the whole belongs, having acquired and settled it for cash with the deceased Alexander Langlois, her husband.

On the 27th of August, 1770, Lieutenant-Governor Don Pedro Piernas, the first Spanish Governor in St. Louis, banished for ten years from the Spanish settlements, on attaint and conviction of using seditious language, disturbing the peace, and acting in contempt and derision of the ordinances of the king, a certain Aimable Letourneau, a Canadian. The offense, according to the record, was very trivial, and did not merit such a heavy penalty. Letourneau had simply talked at the church porch, derisively commenting on an ordinance laying an excise-tax on provisions. He declared that he said no more than that, if all the young men were like him, "they would not work for forty sous a day in peltries." However, his banishment did not need to drive him any farther than Cahokia or Kaskaskia, so it did not amount to much. Letourneau's name is introduced here because he was a Canadian *voyageur* in St. Louis in 1764, and most probably one of Chouteau's boatmen.

Paul Kiergereau was a resident of Fort Chartres in January, 1764, at which time he took an inventory of the effects of Alexander Thomas Laville, shoemaker, lately deceased, whose widow, Josepha Quevado, was about to contract a second marriage with Claude Tinon. The Tinons moved to St. Louis, as also did another of the appraisers, Pierre Montardy, whose wife (Marie Duchamin) was some years later (in 1779) a party to a suit for slander. A sister of Paul Kiergereau's married Pierre Chouteau, younger brother of Auguste, and some of their descendants are still living in St. Louis.

The following are some memoranda from the marriage contracts in the Archives: *Kiercereau, Paul*, of age, born in New Orleans, son of Gregoire Kiercereau, deceased, and of Gillette Le Bourse, father and mother, and Marie Josephe Michel (*dit* Tayon), aged eighteen years, daughter of Joseph Michel and Marie Louise Bosset, his wife, her father and mother, here present, at the house of the said Joseph Michel, *dit* Tayon, post St. Louis, May 10, 1766.

Kiercereau, Gregoire, aged twenty-two years, born at Fort Chartres, Ill., son of Reynaldo Kiercereau and Marie Magdaline Robillard, father and mother, and Magdalina St. François, aged eighteen, daughter of Antoine St. François and Carlotta Larche, all here present, Aug. 26, 1774.

St. François, Antoine, son of Joseph St. François and Charlotte Lemaistre, of St. Joseph, Canada, and Charlotte Larchveque, daughter of Augustin Larchveque and Marie Madeline Reaume, Quebec, Canada, were married at the post of Rivière St. Joseph, Canada, Aug. 19, 1754. These were the parents of the young lady married to Kiercereau above.

Jean Baptiste Becquet, the blacksmith, mentioned above as having married Dodier's daughter, was the first owner of the southeast quarter of Block 36, upon which he had built a small house of posts for his residence and a blacksmith-shop, immediately after he came over, in 1764. In this house he died in 1797, October, leaving three children,—Margaret Marianne, then the wife of Joseph Alvarez Hortiz; Marie wife of Louis Barada; and Gabriel Becquet, his only son, married to Louise St. Françcis. These relinquished to their uncle, Pierre Becquet, brother of their father, in conformity to his desire, the property at the northwest corner of Main and Myrtle Streets, Nov. 18, 1796. Pierre Recquet, their uncle, sold it to Joseph A. Hortiz, Dec. 28, 1799, and Hortiz and wife to William Hebert Lecompte, June 9, 1807, who bought it for a gift to his niece, Rosalie, wife of John B. D. Belcour, Nov. 11, 1807. (Of course Hortiz was not living in this house at the period of death, in 1808).

Joseph Alvarez Hortiz was the son of François Alvarez and Bernarda Hortiz, born in the town of Lienira, province of Estremadura, Spain, in 1753. He was married to Marguerite Marianne Becquet, born at Fort Chartres, Ill., daughter of John B. Becquet and wife, Marie Françoise Dodier, Jan. 27, 1780, he twenty-seven and she seventeen years of age (was but fifty-five when he died, in 1808). He was a private in the Spanish service when he came up to St. Louis, after the Spanish authority had been established here in 1770. He afterwards rose to the rank of sergeant (which in subsequent years in some of the translations was corrupted into "surgeon," which he never was nor claimed to be). Having had some education in his youth, and been long a military attaché at the Government House, he eventually became the secretary of the two last Spanish Governors, Trudeau and Delassus, and had charge of the public archives for a number of years down to the date of the transfer in 1804. Two months after his marriage he purchased from Jacques Noisé Labbé the lot at the northwest corner of Main and Spruce, March 13, 1780. Here he lived for about six years, and sold it to Silvestre Labbadie, Sr., Jan. 15, 1786. He then bought the south half of Block 2, with an old house. On this lot he built a new house of upright posts, kitchen, stable, etc., and lived here until March, 1802, when he sold it to John Baptiste Lebeau, one of his sons-in-law, whose widow was afterwards the wife of André Landreville.

Joseph M. Tayon, who came from Cahokia in 1764, was still living in 1806. Antoine Hubert had a house in St. Louis in 1766, the timber for which was furnished and hewed by John B. Langevin and Joseph Deschenes. Jacques Denis did the carpenter's work. Joseph Chancellier was born in Illinois, came to St. Louis in 1764, was married to Elizabeth Becquet in June, 1773, and died in December, 1784. Two years later his widow married Antoine Gauthier. Louis Chancellier, Joseph's brother, who came to St. Louis with [illegible]n, married Marie Louise Deschamps in 1782, and died in 1785. His widow married Joseph Beauchamps, one of the settlers of 1764, but who was living in St. Charles at the date of his marriage.

There are several sources from which the names of the first inhabitants of St. Louis can be derived besides those already given. The cathedral records is one, the "Archives" is another, and the chief source. A third source is the minute-books of the various land commissions and the register's office. The Archives are the books in which legal documents and many other curious matters were registered. Mr. Billon, in his prefatory note to his very extensive search among these records, says that,—

"The documents deposited in the archives of the French and Spanish days of St. Louis comprised concessions or grants, deeds, leases, marriage contracts, wills, inventories, powers of attorney, agreements, and many miscellaneous documents pertaining to individuals. These papers were always executed in the presence of the Governor, or, in his absence, in the presence of his official representative, and were left for safety in the custody of the government authorities; and as at least nineteen-twentieths of the inhabitants of that day could not read, much less write their names, but made their signatures with a cross, as is evidenced by an examination of them, they were deemed safer in the keeping of the government than in the possession of the individuals to whom they mostly belonged. At the date of the execution of each of these papers no other record was made of it than to register it alphabetically under its proper head on a few sheets of foolscap paper loosely sticking together for the purpose, and at the close of the administration of each successive Governor this alphabetical list of his official acts was certified to by himself in person, and together with the documents themselves handed over into the possession of his successor in the government; and it was not until after the country had passed into the possession of the United States that these loose sheets were stitched together in the order of their dates, the last of the series being that of Capt. Amos Stoddard, who acted in the capacity of the civil Governor for the United States until Sept. 30, 1804, and who, perhaps, not being authorized or not deeming it advisable to make any change in the *modus operandi* in regard to these matters, pursued the same course as his predecessors under the former dominations.

"Of these documents there were over three thousand, many of which still remain in the recorder's office in St. Louis to the present day. When at the change of the government, March 10, 1804, these documents, together with such books and papers of the old French and Spanish authorities as related to concessions of lands and lots, came into the possession of the authority of the United States, they consisted of six small books of ordinary foolscap size, containing about three quires each, called the 'Livres Terriens' (land books), in which were entered the concessions or grants of lands and lots, and four smaller books in size, with leather covers, in which were recorded about one hundred and thirty of the above three thousand documents, between the years 1797 and 1799."

(From these it would appear that during the first thirty-five years of the village it was deemed unnecessary to record these papers in books, and that the last were so recorded at the instance, perhaps, of the owners, who may have looked to the future.)

"What are now designated as the 'archives' comprise six large volumes, in which are copied the most important of the foregoing three thousand documents, particularly all those relating to real property, lands, lots, and houses, and of a personal nature. These record-books were commenced in November, 1816, twelve years after the change of government, when the country began to increase in population from abroad, and a consequent increase in the value of lands and lots pointed out to individuals the safety of having their titles recorded, and for some years thereafter only those were put on record whose owners were willing to pay the recording fees for recording the same.

"The first of these old deeds put on record in vol. i. of the so-called archives was by Marie P. Leduc, on Nov. 18, 1816." (Mr. Leduc was a native of France, and had come to the country about the close of the last century, and was a notary and scrivener by profession, and after the acquisition by the United States and the organization of the new Territory, was appointed the first recorder of St. Louis, and opened the record-books in the English language.)

The cathedral records, and the records of births, marriages, and deaths, are also preserved in the Archives, and are very interesting. They show a very healthy population, one at the same time very nomadic, and great prolificacy in the inhabitants. The baptismal registry is not precisely one of births, especially as regards Indians and negroes; but even when due allowance has been made for that fact, the figures are remarkable. The record from the foundation to the year 1818, from the cathedral books, is as follows:

	Whites.	Negroes.	Indians.	Mixed.	Total.
Baptisms	1702	582	236	...	2520
Marriages	336	1	4	5	346
Interments	987	362	130	...	1479

The first child born in St. Louis, according to Judge Primm, was John B. Guion, September, 1765, son of Amable Guion, Sr., and Margaret Blondeau, who, after Amable's death, married William Hebert, a native of Canada. The first death in St. Louis is not recorded, but the first interment in the Cathedral Cemetery of which we have a record is that of John B. Oliver, buried Jan. 7, 1771, Réné Kiercereau officiating. The first marriage is said to have been celebrated on April 20, 1766.[1]

[1] Of this we present the reader an account from a newspaper, which he may take for what it is worth. The authenticity of the narrative is made questionable by the amount of detail:

"There was as yet no church in the new post, but there was

The complete list of the interments is as follows, taken, of course, from Mr. Billon's manuscripts:

1771.—Jan. 7, Jno. B. Olivier; Réné Kiercereau.
March 14, Gabriel Descari, 70; Réné Kiercereau.
March 17, Charles Paran, 55; Réné Kiercereau.
March 17, Jno. B. Brindamour, 45; Réné Kiercereau.
Sept. 13, Jos. Robidou (No. 1); Réné Kiercereau.
Oct. 30, Jno. B. St. François; Réné Kiercereau.
Dec. 16, Jno. B. Pelletier; Réné Kiercereau.
Dec. 25, Louis Pouillotte; Réné Kiercereau.

1772.—June 6, Wm. Bissette; Père Valentin.

1773.—July 29, Jacques La Marche; Père Valentin.
Nov. 10, Jno. B. Durand; Père Valentin.
Nov., —— Larsche; Père Valentin.
Nov. 15, Nich. Vincent, sergeant; Père Valentin.
Nov. 19, Jean Denoyer Marchetand; Père Valentin.
Nov. 22, Jacques Bon Varlet; Père Valentin.
Nov. 24, Jean Vaudry; Père Valentin.
Nov. 30, Jno. B. Buet; Père Valentin.
Dec. 5, —— Turgeon; Père Valentin.

1774.—March 20, young son of Governor Piernas; Père Valentin.
March 25, Jacques Lacroix; Père Valentin.
Oct. 14, Nich. Briesbach, Lucerne; Père Valentin.
Nov. 20, François Le Page; Père Valentin.
Dec. 27, Louis St. Ange, capt. regiment Louisiana; Père Valentin.

1775.—Jan. 9, young girl of Governor Piernas; Père Valentin.
June 7, Joseph Dubreuil; Père Valentin.
July 30, —— Lachapelle; Kiercereau.
Sept. 15, Pierre Lapointe, 100 years; Kiercereau.

a priest. The bridegroom, Toussaint Hunant, was a hunter and trapper, and tradition says that he was married in a new buck-skin suit, with handsomely embroidered moccasins and other half-Indian finery. The bride, Marie Beaugenou, was decked out in such trinkets as a frontier post would afford. Her wedding dress was of homespun material, set off by a gay-colored handkerchief fastened around her throat. Whatever was wanting in the toilet of the bride was made up and compensated for in vigorous, robust beauty. There was no ringing of church bells, but there was a discharge of firearms that served to express the joy of the little community quite as well.

"After the ceremony was over, and the priest had declared them man and wife forever, another roar of firearms sped across the broad river and down into the depths of the forest. A moment or two later the old monarchs of the forest, the waters of the great river, united with the hillsides on the other hand, sent back their echoing congratulations. So there was general joy and satisfaction over this first wedding of a future great city.

"There was dancing all night, with good cheer, and it was daylight before the tired fiddlers found a rest. There were no cards, because the nearest printing-press was twelve hundred miles away; but every inhabitant of the settlement saw and kissed the bride. What more could they wish?"

This marriage, in fact (as the contract in the Archives shows), was between Toussaint Hunant, of Canada, and Marie Josepha Beaugenou, eldest daughter of Nicholas Beaugenou (whose name is on Chouteau's list of first comers) and his wife, Marianne Henrion. Beaugenou had seven or eight children. He built his house on the north half of Block 39, Second Street and Almond, and here the first wedding in St. Louis was celebrated.

Sept. 22, Fran's X. Cruzat, son of the Governor; Kiercereau.
Oct. 18, Pierre Baron; Kiercereau.
Nov. 6, Jno. B. Hervieux; Kiercereau.
Nov. 15, Rollet Laderoute; Kiercereau.

1776.—Feb. 11, Chas. La Pierre; Kiercereau.
Feb. 14, Antoine Berard; Kiercereau.
Nov. 29, Auguste Conde; Père Bernard.
Dec. 16, Nicholas Barsalou; Père Bernard.

1777.—March 10, Charles Routier, 74; Père Bernard.
Dec. 7, —— Ange, huissier; Père Bernard.
Dec. 16, —— St. François, 40; Père Bernard.

1778.—March 2, Mr. Blondeau, 78; Père Bernard.
March 4, Pierre Parans, 70; Père Bernard.
April 28, —— d'Avignon, 60; Père Bernard.
July 27, Comparios, dit Gascon; Père Bernard.
Nov 3, B. Damvier, soldier; Père Bernard.

1779.—March 20, Mme. Rondeau, 67; Père Bernard.
June 28, Benoit de Meru, soldier; Père Bernard.
July 20, Domingo Bargas, 38; Father Bernard.
Nov. 15, —— Marin, 60; Father Bernard.

1780.—April 26, Veuve Parent, 55; Father Bernard.
May 26, Chas. Bissette, murdered by the Indians; Father Bernard.
May 26, Amable Guion, murdered by the Indians; Father Bernard.
May 26, —— Calvet, Jr., murdered by the Indians; Father Bernard.
May 26, Chancellier's negro, murdered by the Indians; Father Bernard.
June 28, Fernando de Leyba, Governor; Father Bernard.
July 24, Pekard, or Picard (Pierre Massé); Father Bernard.
Aug. 9, Picoté Belestres' two children; Father Bernard.
Sept. 10, Mme. Tremblée, 70; Father Bernard.
Dec. 10, —— Dernige, 68; Father Bernard.

1781.—Jan. 3, Alexis Picard, 70; Father Bernard.
April 3, Lalande, 66; Father Bernard.
April 30, Veuve Blondeau, 70; Father Bernard.

1783.—April 30, Eug. Pouré, capt. militia; Father Bernard.
May 10, Louis Perraute, 58; Father Bernard.
Sept., Chas. Henrion; Father Bernard.

1784.—Jan. 3, M. Lami; Father Bernard.
March 13, Nich's Sans Quartier; Father Bernard.
March 15, —— Pepin; Father Bernard.
July 9, Pierre Martin Ladoucour, 64; Father Bernard.
Sept. 25, Jno. B. Rivet; Father Bernard.
Oct. 12, Josette, daughter of Governor Cruzat, 4; Father Bernard.
Nov. 11, —— Duchemin, 70; Father Bernard.
Dec. 2, —— Rivière; Father Bernard.
Dec. 5, Veuve Marechal; Father Bernard.
Dec. 9, Fran's Marmillon, 50; Father Bernard.
Dec. 21, Joseph Chancellier; Father Bernard.

1785.—Jan. 13, Joseph Belile; Father Bernard.
Feb. 17, Jno. B. Deschamps, 61; Father Bernard.
April 9, Louis Chancellier, lieut. of militia; Father Bernard.

1786.—Jan. 28, Joseph Crepo, soldier, 68; Father Bernard.
Feb. 1, daughter of Governor Cruzat; Father Bernard.
March 13, Louis Vachard, Ardoise; Father Bernard.
April 15, under the first bench of the main aisle, against the balustrade alongside of the evangile, the body of Mme. Nicainora Ramos, consort of Don Fran-

cisco Cruzat, lieutenant-colonel, captain of grenadiers, and commandant of the Illinois, with the sacraments of our Holy Mother Church.
April 20, Louis Bissonnet, 60; Father Bernard.
April 25, —— St. Jean, 73; Father Bernard.
July 17, —— Demers, 74; Father Bernard.
Aug. 11, Françoise Barrè, soldier; Father Bernard.
Oct. 5, —— Oliver, dit Bellpeche; Father Bernard.
1787.—Jan. 13, Francis Bissonnet, 46; Father Bernard.
May, —— St. Pierre, 70; Father Bernard.
May 20, Claude Mercier, surgeon, 61; Father Bernard.
Jan. 21, Pierre Berger; Father Bernard.
Nov. 6, Louis Ride, Sr.; Father Bernard.
1788.—Jan. 9, Louis Robert, 70; Father Bernard.
1787.—March 11, Widow Picard, 66; Father Bernard.
September, Claude Duffoc, Parisien, 56; Father Bernard.
Oct. 8, Pierre Sarpy, Berald, 33.
Dec. 23, Amiot, 40.
1789.—April 17, Joseph Rivet.
May 19, Pedro Ruiz, soldier.
June 27, John B. Chauvin, 86.
July 5, Louis Dufresne.
July 19, J. B. Hebert, Leconte.
Oct. 15, John P. Pourcelli, Provençal.
Nov. 1, Joseph Aubuchon, 70; Ledra Cieré.
Dec. 24, Noel L. Anglois, 67; Ledra Cieré.
1790.—Jan. 12, John B. Tardif, 64; Ledra Cieré.
1792.—Sept. 22, J. B. Martigny, 80; Ledra Cieré.
1793.—Feb. 9, Pel K. Chouteau, 26; Ledra Cieré.
1794.—March 17, Francisco Ventura, soldier; Ledra Cieré.
March 25, Joseph Fallardo; Père Dodier.
June 19, Silves. Labbadie; Père Dodier.
John B. Cadien, Savoie; Père Dodier.
Louis Dubreuil, 58; Père Dodier.
Aug. 4, Antoine Sans Souci, 60; Père Dodier.
Mme. Cath. Beaugenou; Père Dodier.
1795.—Joseph Mainville; Père Dodier.
1784.—June 10, Louis Blanchet; Père Dodier.
1795.—Sept. 28, P. Fran's de Volsay; Père Dodier.
1796.—Thérèse Chouteau, 10; Père Dodier.
1797.—Alexis Marie, 60; Père Dodier.
John B. Marley, Sr., age 61; Père Dodier.
July 30, Veuve Vachard, l'Ardoise; Père Dodier.
Daniel Appleby, soldier; Père Dodier.
1798.—Oct. 6, Pierre Quenel; Père Dodier.
Joseph Labrosse, Sr.; Père Dodier.
1797.—John B. Morin, 60; Père Dodier.
1798.—January, Pierre Peri, old French soldier, 80; Père Dodier.
Louis Barois, 60; Père Dodier.
Sept. 19, Antoine Morin, Sr., 60; Père Dodier.
1799.—A. Morin, Jr.; Père Dodier.
A. Roussell, Sans Souci; Père Dodier.
Réné Brian, 79; Père Dodier.
1800.—Feb. 20, Veuve Routier, 72; Père Janin.
July 21, Cath. Giard Cerré, 50; P. Janin.
Dec. 1, Veuve Labrosse, 65; P. Janin.
1801.—Jan. 28, Jos. Hebert, 60; P. Janin.
April 12, Joseph Neptune, sailor, 92; P. Janin.
May 24, Pierre Picoté de Belestre, 25; P. Janin.
June, Louis Chevallier, 47; P. Janin.
June 25, Joachim Roy, 55; P. Janin.
June 29, Joseph Loisel, 80; P. Janin.
July 14, Louis Bompart, 45; P. Janin.
Oct. 24, wife of Bollay, German, 58; P. Janin.
Dec. 30, Louis Dubois, soldier, 60; P. Janin.

BURIALS FROM THE OLD CATHEDRAL REGISTER.

1802.—Jan. 8, John B. Duffau, vestryman of this church, age 45; F. Janin.
Feb. 14, Pierre Coudaire, Provençal, age 80; F. Janin.
Feb. 22, Louis Ambroise, age 70; F. Janin.
Feb. 23, H. Hebert Martigny, age 70; F. Janin.
Mar. 3, Ante Reithe, age 67; F. Janin.
November, Fran'co Lorenzo, soldat, age 44; F. Janin.
Dec. 29, John A. E. Motard, age 80; F. Janin.
1803.—March 12, Jos. Moquet, age 78.
Sept. 24, Fran's Barrère, soldier, Bayonne, France, age 56.
Nov. 22, Chas. Bienvenue Delisle, age 80.
1820.—Oct. 17, wife of Liguest Chouteau, age 40.
1821.—Oct. 12, Thomas Brady.
1822.—March 8, T. A. Flandrin, age 71.
March 22, Paul Guitard, 97.
1823.—Sept. 16, Edward Knapp, 45.
Sept. 20, Jeremiah Connor.

Some more important persons were buried under the floor of the cathedral itself, as the following records attest:

"In the year one thousand seven hundred and seventy-nine, the sixth September, I, Capuchin, priest, apostolic missionary, curate of St. Louis, have inhumed in this church, in front of the right-hand balustrade, the body of Madame Mary of the Conception and Zezar, consort of Don Fernando de Leyba, commandant of this post, captain of infantry, invested with all the sacraments of Penitence and Extreme Unction. In testimony whereof I have signed this the day and year as above.

"FATHER BERNARD, *Missionary.*"

"In the year one thousand seven hundred and eighty, the twenty-eighth of June, I, Capuchin, priest, apostolic missionary, curate of St. Louis of Illinois, province of Louisiana, diocese of Cuba, have inhumed in this church, in front of the balustrade on the right, the body of Don Fernando de Leyba, captain of infantry of the battalion of Louisiana, commandant of this post, with all the sacraments of our Holy Mother Church administered to him. In faith whereof I have signed the present, the day and year above stated.

"FATHER BERNARD, *Missionary.*"

Every one who died in St. Louis made his or her will, no matter whether there was property or not to leave. The will was executed and put away among the Archives. If one was sick to death, or thought himself so, or going upon a distant or perilous journey, his first impulse was to make a will; and some of these testaments, as will be seen in the chapter on manners and customs, were very curious and original. The witnesses were many, the bequests specific, and thus we get a great many names, and sometimes a good deal of family history. François Vallé, of Ste. Genevieve, ancestor of the present generation of Vallés in St. Louis and Ste. Genevieve, and always styled "the commandant," drew up and executed five wills (which are recorded) before he could get one to suit him. To be sure, he had a great deal of

property to leave, and was a person of consequence, "captain of militia and lieutenant of the post." He had slaves, silver-ware, land, and money. When a will was executed, and also, as a rule, when a widow with children married a second husband, an inventory was duly drawn up and made part of the record. Thus we learn that Vallé had seventy-two slaves, several houses and lots, thirty head of horses,—the *names* of which are given in the inventory,—thirty-two work-oxen, eighteen cows, twelve heifers, nine cows, etc. The appraised value of Vallé's estate was 193,063 livres, or about $38,600, "a very large fortune in those primitive days of our early settlements, constituting him the wealthiest man in the country."

It is from an inventory accompanying one of these wills that we get one of the most complete lists extant of the early inhabitants of St. Louis. This is the inventory of the estate of the gentleman who seems to have been the earliest and the leading physician of St. Louis, Dr. Auguste A. Condé, who died in November, 1776. He was a man of consequence in the community, a witness to wills, etc. He was married, and had a daughter who married a man named Bonaventure Collett, from whom she got a divorce afterwards, it being proved he had a wife already in Barcelona, Spain. At one time we find him subscribing for the building of the new cathedral, at another buying six packs of playing-cards at auction. When he died his books showed that nearly all the people in St. Louis owed him for professional services, and their names, consequently, went down in the inventory of assets,—bills receivable to the amount of five thousand one hundred and fifty-six livres three sols ($1031), not a small sum for a country doctor to "book" in those times. There are two hundred and thirty-three names,—a very good directory of St. Louis at that time, for the first directory of the city, that of 1821 by Paxton, only contains seven hundred and forty-nine names. The list begins with the name of St. Ange de Bellerive, who owes forty-five livres,—a bad debt, for St. Ange had died on Dec. 26, 1774, leaving a will in which he directed the payment of what he owed, and Condé's bill is not included in the schedule. The other names are, in alphabetical order:[1]

Anson, of Caho.
Accadien.
Auguste Hebert.
Antoine, merchant.
Alexandre.
Amiot (paid).
Alexis, Jaques.
Aler, Madame.
André, soldier.
Alonzo, soldier.
Baré, nephew.
Bequet, blacksmith.
Bequet, miller.
Bagette.
Berger.

Trudel (dead).
Tubeau.
Tassey, corporal.
Volsay, Mme. de.
Vallé, Jr.
Venau, carpenter.
Villedieu (dead).
Verdon.
Vancourt.

St. Ange, as has already been stated, came over to St. Louis from Fort Chartres in 1765, and in January, 1766, assumed, by general consent, the position of acting Lieutenant-Governor. The infant settlement owed as much to him, probably, and to the notary Labuscière, as it did to Laclede and Chouteau. Without any commission, he was a man used to command and accustomed to be obeyed. He had been in position before at Fort Chartres and Post Vincennes; he knew military matters well, had a hearty hatred of the English, and understood the Indian character thoroughly. Pontiac was his friend, and Laclede, whom he made his executor, seems to have had perfect confidence in him, while Capt. Rios, the Spanish commandant, who established Fort Charles the Prince, in 1768, felt safe in leaving St. Louis under his magistracy. This St. Ange did not surrender until 1770, when Don Pedro Piernas, Lieutenant-Governor under the authority of Captain-General O'Reilly, came up the river and took command of the post. St. Ange did not leave St. Louis after being superseded. His health was probably already broken, and, as we have said, he died in 1774. His kinsfolk were in St. Louis also. He seems to have been related to Labuscière, the notary (he sometimes signed his name St. Ange Labuxiere, though in the will it is St. Ange de Bellerive), and Madame de Volsay was his niece. He boarded in St. Louis with Madame Chouteau, mother of Auguste, and wife of Laclede Liguest, and owed her fifteen months' board, less three hundred livres paid on account. He owed Deschene (an immigrant from Cahokia in 1764) for twenty-five loads of wood. He owed Laville, the tailor, the cost of making a riding-coat, waistcoat, and two pairs of breeches, less forty livres paid in peltry, an old velvet waistcoat, and a pair of breeches, paid on account. François de Lui owed the testator seventy livres, borrowed money. St. Ange left to the church five hundred livres for funeral service and masses; three hundred livres to Antoine Bareda (a Spanish cadet of the fort, who had sued Lieut. Gomez for calling him "an ass," but who married very well in St. Louis) "for the good services he has received from him," and "gives and bequeaths to his niece, Madame de Volsay, the sum of three hundred dollars."[1] St. Ange owned three slaves,—

[1] Madame de Volsay was by no means an estimable person, as the following memorandum of Mr. Billon's proves:

"De Volsay, Pierre François, was a native of France, born, I think, in or near Paris, about the year 1730. He was a Knight of the Royal Order of St. Louis, and a captain in the French service. He married his wife, Elizabeth Coulon de Villiers, daughter of Neyon de Villiers, the last French Governor in the east side, at Fort Chartres, in the year 1758, and at the date of the transfer to England, in 1765, was the French commandant at Cahokia, and crossed to this side at the time St. Ange came over, and for a number of years was captain of the French Company at St. Louis.

"Some time in the year 1772 his wife, under the pretext of visiting her father, in New Orleans, went only as far as Ste. Genevieve, where she remained about nine months, leading a dissolute life, which so scandalized the good people of Ste. Genevieve, that Mr. Carpentier, a prominent man in the place, brought her up to St. Louis, where De Volsay for a long time refused to receive her. Finally, through the persuasion of Governor and Madame Piernas and Father Valentin, the Catholic curate, a reconciliation was effected, and he consented to take her back, being a kind-hearted man. For a time she conducted herself in a proper manner. In 1774, De Volsay had a furlough, and went to France. He was absent about two years on business matters. He left her in his house on Main Street (present Block 42), well provided with everything in abundance sufficient for a number of years. He had been gone but a short time when she broke out again in her evil course, receiving at her house daily and nightly the visits of one Réné Kiercereau, to the disgust and scandal of all her near neighbors, and in a short time ran through all her husband had left her through her dissipa-

Angelique, an Indian woman, Charlotte, aged nine years, and Antoine, aged sixteen months, children of the said Angelique, whom he bequeathed to his niece, Madame Belestre, the mother for life, the children till the age of twenty years, when they are to be free. Madame Belestre and François de Villiers, his niece and nephew in New Orleans, are left the entire estate, which he beseeches his friend, Pierre Laclede Liguest, as the "last proof of his friendship," to settle up. The witnesses to this will were Labuscière, Benito Basquez (father of the late Madame Eulalie Martin), Joseph Labrosse (immigrant of 1764), Antoine Berard (merchant), and Jean B. Martigny, captain of militia (another immigrant of 1764).

When Capt. Rios came up to the mouth of the Missouri in 1768, he brought with him as surgeon, Dr. Jean B. Valleau, a Frenchman by birth. Valleau got a lot in the village (a concession from St. Ange), and contracted with Peter Tousignan to build him a house of posts upon it eighteen feet long by fourteen wide, shingle roof, stone chimney, partition in centre, door in partition, and door on the outside, two windows with shutters, well floored and ceiled with well-jointed cottonwood plank, the pay to be sixty silver dollars, and Valleau to provide the iron and nails. In addition to this house, Valleau bought an adjoining lot for six hundred livres, on which Calvé, an absconding debtor, had built a house of posts sixteen by sixteen feet. In November Valleau fell sick, and died on the 24th, having made his will the previous day. He had not occupied either of his new houses, dying in that of Desnoyers. He appointed Duralde, a Spanish officer, as his executor, and directed all his property to be made available for the benefit of Madame Valleau, his wife, and children, residing in La Rochelle, France. The witnesses were Francisco de Rive (Rios), and Joseph Papin, trader.

De Volsay's will, no less than his wife's character, reveals a not very excellent state of society in early St. Louis. He leaves the best part of his property to Françoise, a mulatto girl, his natural daughter, the wife of François Dupuy; sets free his colored man, Jean Louis, to whom he leaves $100; bequeaths his cross of the Order of St. Louis to Baron Carondelet, and his sword also, for his son, Don Renato Tudeau, and names Silvestre Sarpy and Charles Sanguinet as his executors. Wm. Hebert, *dit* Lecompte, left a will much more pleasant to read. Having no children by his wife, Blondeau, widow of Amable Guion, he leaves her all his estate. When they married, he records in the will, she brought in $900, of which her mother gave her $400, and $500 was the product of her own industry. He had $4000. Since then they had gained $600, and he left the whole $5500 to his wife; Auguste Chouteau and Charles Sanguinet, executors. Still, Madame Margaret Hebert-Lecompté, *veuve* Guion, *née* Blondeau, may not have been a very pleasant person to live with. Indeed, there is testamentary evidence that she was not, for her own father and mother went to die among strangers rather than live with her.[1]

When Don Fernando de Leyba, "Captain of the regiment of Infantry of Louisiana, Commander-in-Chief and Lieutenant-Governor of the Western Part of Illinois," was on his death-bed, June 9, 1780, he sent for his lieutenant, Don Francisco Cartabona, and executed his will. He named as executor François Vigo, merchant, and as his substitute Benito Vasquez, lieutenant of militia. (Vasquez had come to St. Louis in 1774, and married Julia Papin, then only ten years old, who bore him twelve children.)[2]

tion and debauchery, and finally, previous to De Volsay's return in 1776, the guilty parties fled to the other side, the United States, taking with them what little was left of the large provision De Volsay had left her, and leaving nothing but the vacant house.

"So soon as De Volsay returned from France, he commenced proceedings before Governor Cruzat, who had succeeded De Piernas as Governor, for a dissolution of his marriage contract, which was only concluded under the administration of Governor De Leyba, Aug. 21, 1779.

"This Kiercereau, *dit* Renand, had come over to this side from Fort Chartres in 1765. St. Ange was the uncle by marriage of Mrs. De Volsay.

"Picoté de Belestre was a lieutenant in the regular French service, and a brother-in-law of De Volsay, their wives being sisters.

"De Volsay made three wills, and in a codicil to the last one, with a touch of genuine satire, he left to his wife three coats, an embroidered waistcoat, and *five paire of breeches*."

[1] The will of Thomas Blondeau and Marie Josephe de Selle, his wife, executed before Governor Cruzat, Oct. 15, 1777, Labuscière and Noel Langlois, witnesses, is to the effect that they were living comfortably with Lamy and his wife, because their daughter, Madame Guion, "had manifested such ill treatment towards them at the time they lived in her house that they were obliged to leave; and desiring to acknowledge the goodness and services the said Lamy has rendered them in their old age, and to reward him for his assistance, they have said and declared that they wish that there be paid for their board, to the said Lamy and wife, for every month, the sum of sixty livres ($12) in peltry at the current price of this post," to be taken out of any property they may have at their demise.

[2] Felicité, born 1775, married to Antoine Roy in 1792, died 1803; Julie, 1777, wife of Louis Coignard; Benito, 1780, married Clarissa Lefebvre (daughter of the notary of 1765); François Xavier, 1781; A. T. Baronet, 1783, married Emilie Faustine Parent; Joseph Pepe, 1786, married Marie L. Hebert Lecompte; Victorie, 1787, married Isaac Septivres; Marie Anne, 1790; Hypolyte Guillory, 1793, married Marie Lajeunesse and H. L. Tison; Celeste, 1794, married Vincent Bouis; Eufalie, 1795, married John Stolls, and afterwards Jacques Martin; Pierre Louis, 1798.

De Leyba left $1000 in hard money to his mother; the rest of his property to his two daughters, Pepita and Rita. The witnesses to his will were, besides officials, Diego Blanco, sergeant in the garrison, Jean Pousada, another sergeant, and Louis Richard, soldier.

Among other names and incidents to be gleaned from the record of wills may be mentioned Pierre Alexis Marie and his wife, Reine Gilgaud, first comers. Marie bought and improved several lots. In the winter of 1796–97, when he died, the house in which he resided, northeast corner of Main and Market Streets, was sold to Bernard Pratte, Sr., in whose family the property is still held. Joseph Verden, a cabinet-maker and turner, and a first comer, had married Victorie Richelet, widow of Jean Soyé, she having one child, Henriotta. Joseph and his wife lived together for twelve years, quarreling incessantly, but still having five children. At last they agreed to separate, Verden giving up children, house, and all, and taking with him nothing but his bed, his clothes, his gun, axe, and the tools of his trade.[1]

[1] Second marriages do not always seem to have been happy in old St. Louis. Dr. Condé's widow, not deterred by the bad match her daughter had made with Correll, married a second time herself, to a man named Gaspard Roubieu, who, as she charged, got drunk, beat her, and forced her to take refuge at the Government House, with De Leyba. This quarrel, however, was patched up, but it led to Lorinne, Roubieu's negro slave, giving a hearty drubbing to Marianne, who was De Leyba's mulatto servant. The most comical domestic quarrel in the Archives, however, is that of the baker, François Barrière (who gave his name to one of the streets of old St. Louis), and his wife, Genevieve Catoise. Barrière lived in St. Louis for twenty-eight years, and accumulated much property by his thrift and industry. He and his Genevieve were married in New Orleans in 1775, coming up to St. Louis directly afterwards. There was an ante-nuptial contract of the gushing sort, Barrière and La Catoise (who was the widow of Guillerno Paille) binding themselves up with all sorts of "sacred solemnities" for the consecration of an "indissoluble union." They said in this paper that "we declare of our own free will, without force or compulsion, but from mutual good wishes, so that at no future time shall we contradict this deed, nor make any allegation against its contents, for which purpose we add strength to strength, contract to contract, so that it should not be carried into execution for want of any requisite circumstance or solemnity, for we consider everything inserted therein as if we had expressly declared it; and we swear by God our Lord, and by the sign of the cross, according to law, that we will not contradict nor recall the promise mutually made: and we declare that we have made no protestation nor reclamation against this oath; and should it otherwise appear, we revoke the same. And I, the said Maria Genoveva Catoise, declare that I was married according to the rites of our Holy Mother the Church to the said Guillermo Paille, of which marriage, at the time of his death, there remained one child, our daughter, who may be now three years old, and a small quantity of personal property, which was all sold for its just value and produced the sum of four hundred and fifty-one dollars, which we acquired during our marriage; and as neither the one nor the other brought anything thereto, being purely profits, I declare that the two hundred and twenty-five dollars four reals is the property of my daughter, and the remaining two hundred and twenty-five dollars four reals I bring to this marriage as my dower. And I, the said Barrière, acknowledge the receipt of the four hundred and fifty-one dollars, and give a formal receipt therefor, and the delivery not being yet made I renounce the law of cash payment, the whole of which I shall hold, and out of the most available property, as the dower of my said future wife and guardian of her said daughter, to return the same in the case prescribed by laws; and I also declare that I bring to the marriage that I am about to contract with the said Maria Genoveva, as my own property, the sum of one hundred and sixty dollars, of which I form a capital, so that all the time the trust of this may appear, and to the validity of this contract we bind ourselves with our persons and goods, actual and future. We authorize His Majesty's justices to urge us thereto as with the rigor of a final sentence consented to by us, renouncing all laws, rights, and privileges in our favor, with the general law prohibiting the same." Fourteen years later came this denouement: "In the year one thousand and seven hundred and eighty-nine, the thirty-first of the month of July, A.M., before me, Don Manuel Perez, captain of the regiment of Louisiana, Lieutenant-Governor, and commander-in-chief of the western part of Illinois and its districts (in default of a notary), personally appeared François Barrière, a resident of the post, and Genevieve Catoise, his wife, who by these presents and of common accord, and of their own free will, and in virtue of the proceedings commenced on the ninth of this present month, have voluntarily consented and do consent to a separation to the end of their lives, and to remain separated, one from the other, being absolutely unable to reside together nor remain united on account of the difference of their dispositions, and reciprocally desirous of avoiding daily quarrels, and to spend the remainder of their days in peace, and to procure the salvation of their souls, which they cannot do peaceably living together, in consequence of their continual disputes and no longer being able to bear them; and in consequence of the deed of partition dated the 30th inst., not wishing to have any recourse on each other's property, now being individual, as well actual as future, regarding each other as real strangers, as if no alliance had ever taken place. The said Madame Genevieve Catoise acknowledging and confessing that she has received by the aforesaid act her dower, and the property belonging to her daughter, as also half the goods of the community with the said François Barrière, which community the parties declare broken and dissolved; therefore the said Genevieve grants a full and entire release and discharge to the said Barrière without any expectation of return."

The industry of Mr. Billon enables us to supply the following complete and satisfactory index to marriage contracts in the Archives:

Alvarez, Eugene, to Josephine Crepeau.
Barada, Antoine, to Eliza Tesson Honore.
Barada, Louis, to Marie Becquet Laroche.
Barrère, Fran's, to Marie Gene, *née* Catoise, widow of Wm. Paille.
Barsalou, Nich's, to Magdalen Le Page.
Baudoin, Louis, to Marie Tes. Honore.
Becquet, Gabriel (2), to Marie Louise St. Françoise.
Belland, Jno. B., to Cath. Lalande, veuve Pierre Petteliar.
Bellisème, Alex'r, to Marie Josepha, veuve P. Morriseau.

Benoit, Fran's M., to Mar. Cath. Sanguinet.
Berger, Pierre, to Josette Mayer (Maillet).
Berger, Rougeau Pierre, to Therese Hebert.
Bienvenu, Louis Delisle, to Cath. Nic Les Bois.
Bissette, Louis, to Euphrosine Truteau.
Bissette, Charles, to Marie Pepin.
Bissonnet, Louis, to Genevieve Routier.
Blanchet, Louis, to Angelique (Indian).
Boissy, Louis, to Marie Bissette.
Bompart, Louis, to Celeste Duchouquette.
Bordeau, Pierre, to Therese Petit.
Bourg, Pierre, to Marie Dunegaut.
Bravier, *dit* Ciril, to Elizabeth Rice.
Bricant, Lamarche J. B., to Mar. Lou. Courtois.
Buron, Aug't, to Mme. M. Louise Boudon.
Cabanné, Jno. Pierre, to Julie Gratiot.
Caillol, Francis, to Magdalen de Lor.
Caillon, Eustache, to Felicite Hortiz.
Cerré, Paschal, to Therese Lamy.
Chalifour, Pierre, to Victoire Coussot.
Chancellier, Joseph, to Elizabeth Becquet.
Chancellier, Louis, to Marie Louise Deschamps.
Charleville, Jac. Chauvin, to Victoire Verdon.
Choret, Pierre, to Marie Jose Kiercereau.
Chouteau, Aug'te, to Marie Therese Cerré.
Chouteau, Pierre, to Pelagie Kiercereau.
Chouteau, Pierre, widower, to Brigitte Saucier.
Coignard, Louis, to Julia Vasquez.
Collell, Bonaventura, to Constance Condé.
Cotté, or Coté, Alexis, to Elizabeth Dodier.
Couder (Couderre), Jos., to Angelique Roque.
Courtois, Louis, to Marie L. Menard.
Delor (De Freget), Clem., to Angelique Martin.
Desautels, Joseph, to Therese Mainville.
Deshetres, Hyacinthe, to Fran's Normand Deslauriers.
Deslauriers, Henry, to Magd. Bissonnet.
Dodge, Israel, to Cath. Camp, veuve Guion.
Dorlac, Fran's, to Amable Lalande.
Dorsieres, Euge. Dorys, to Marie Anne Nicole Les Bois.
Doyon (Dayon), Fran's, to Pelagie Laplante.
Drouin (Dercin), Fran's, to Cath. Tougard Laviolette.
Duchouquette, Jno. B., to Marie Brazeau.
Duchouquette, Hen. Lafleur, to Félice Quior San Filip.
Dubreuil, L. Chauvet, to Susanne Saintous.
Dubreuil, Louis, to Marianne Laroche.
Dufant, Jno. Bap. Benoni, to Marianne, widow of Louis B. Laroche.
Dunnegant, Francis, to Eugenie Jarret.
Dunnegant, Fran's, to Cath. Labbe Noise, widow of Jno. B. Bidet, Langoumois.
Duralde, Martin, to Marie Josepha Perraute.
Durand, Jno. B., to Marie Jos. Marcheteau.
Faustin (Fortin), Fran's, to Rosalie Kiersereau.
Fayet, Joseph, to Felicité Marechal.
Fine, Philip, to Marie Newby, veuve Phil. Gagnon.
Fine, Phil, to Widower Celeste Boly.
Flandrin, Ante, to Marg't Baroda, widow Jno. Pourcelly.
Fournier, Fran's, to Jos. Renard, widow Jos. le May.
Fremon (Delaurier), Chas. Aug., to Josephine Celeste Dubreuil.
Gagnon, Philibert, to Marie Newby, widow John Cleborn.
Gagnon, Pierre, to Helen Mainville Deschenes.
Gamache, Jno. B., to Charlotte Damours de Louvieres.
Gates, Juan, to Genevieve Morin.
Gauthier, Ante, to Isabel Becquet, widow of Joseph Chancellier.
Giard, Jno. B., to Marie Josepha Rivet.
Gratiot, Charles, to Victoire Chouteau.
Guion (Dion?), Nich's Franc's, to Therese Hervieux.
Guion, Amable (No. 2), to Reine Felicité Robert.
Hebert, Franc's, to Magdalena le Roy.
Hebert, Wm., to Marie Blondeau, veuve A. Guion.
Hebert, Joseph, to Vic. Alvarez Hortiz.
Honoré, Louis, to Catherine Rivet.
Hortiz, Jos. A., to Mar. Marianne Becquet.
Hubert, Michel, to Marie Ursule Rapideux.
Hugé, Dominique, to Marie Rose Pourcelly.
Hunaud, Toussaint, to Marie J. Beaugenou.
Ignace, Valentin Pierre, to Marie Juannette (blacks).
Jourdain (Labrosse), Fran's, to Sally Russell.
Kiersereau, Paul, to Marie J. Michel Tayon.
Kiersereau, Greg'y, to Marie St. François.
Labbadie, Silvestre, to Pelagie Chouteau.
Labbadie, Joseph, to Therese Damours de Lou, veuve Louis Deshetres.
Lacroix, Pierre, to Helene Laroche.
Lafernai, Joseph, to Margaret Pourcelly.
Lajeunesse, Jacques, to Hel. Vachard l'Ardoise.
Lapierre, Joseph, to Rosalie Olivier.
Laroche, Ignace, to Marie Becquet.
Lasablonière, Jacques Brunel, to Helene Beaugenou.
Lebeau, Jean Jacques, to Marie Lafernai.
Lebeau, Jno. B., to Marie Alva Hortiz.
Le Duc, Marie Philip, to Marie M. Papin.
Lee, Patrick, to Constance Condé.
Lefebvre, Augustin, to Felicite Bayancourt.
Lefebvre, P. F. B. Jos. D'Inglebert, to Marg. Laferne.
Lerige, Laplante Franc's, to Marie Loat.
Le Roy, Charles, to Susanne Dodier.
Le Roy, Julien, widower, to Reine Gilgant, veuve Marie.
Letourneau (Lafleur), Louis, to Maria Bissonnet.
Lorens (Lorin), Jos., to Marg't, veuve Ante Barada.
Mainville (Deschenes), Jos., to Ann Chancellier.
Marchetand, Louis (1), to Marie Angelique Metivier, veuve Dequirigon Felix.
Marchetand, Louis (2) Kierq Denoyers, to Veronique Panisse la Girofice, veuve Jno. Prunel.
Marie, Alexis M., to Marie Rose Delord Treget.
Martin (Ladouceur), Ante, to Maria E. Marechal.
Martin (Ladouceur), Pierre, to Angelique Bissonnet.
Mercier, Julien, to Marie Hunaud.
Monier, Jno. B., to Marie Louise Lalande.
Moreau, François, to Catherine Marechal.
Noise (Labbè), Jacques, Therese Beaugenou.
Ortes, Jno. Bap., to Elizabeth Barada.
Panet, Pierre, to Marie Anne Cerré.
Papin Jos. M., to Marie Louise Chouteau.
Payant (St. Onge), to Elizabeth Crely.
Petteliar, Andre, to Euphrasine Gagné, veuve François Bo langer.
Petit, Jno. B., to Therese Charron.
Pratte, Bernard, to Eulalie Sauveur Labbadie.
Prevot, Jno. B., to Angelique (an Indian).
Provenchere, N. Pierre, to Marie J. Rutgers.
Provenché, Jno. B., to Marie Pepin, veuve S. Bisset.
Quenel, Michel, to veuve Marie L. Jourdain, veuve Fra Lebeau.
Recontre, Alex. A., to Marie J. Roy.
Rivet, Jos., widower, to Marianne Olivier.
Rivière (Baccanné) Ante, to Charlotte Rogue.
Rivière (Baccanné), Philip, to Marie Liberge, veuve Lo Guerel Dumont.

Robert, Charles, to Jeannotte Courtois.
Robidou, Joseph (2), to Cath. Rotel Laderoute.
Rolet (Laderoute), Michel, to José Morrisseau.
Roubieu, Gaspard, to Marie de la Ferne, veuve Condé.
Rousseau, François Jos., to Marg't A. Hortiz.
Roussell (Sans Souci) Ante, to Fran'se Vifvarenne.
Roussell, Pierre, to Françoise Gagné.
Salle, Jean, to Marie Rose Vidalpane, veuve John Joseph Jacques.
Sanguinet, Charles, to Marie Anne Condé.
Sarpy, Gregoire, to Pelagie Labbadie.
Saugrain, Ant. F., to Genevieve R. Michau.
Savoie, John B. Cadien, to Louise Ladurantaie, veuve Antoine Donys.
Schuttz, George, to Victoire Tesson Honorè.
Schuttz, Christopher, to Eliz. Tesson Honorè.
Schuttz, Peter, to Marie R. Chouquet.
Simoneau, Charles, to Marie Picard.
Sincenne, Amable, to Marie Baudoin.
Soulard, Ante P., to Julie Cerré.
St. Cyr, Hyacinthe, to Helene Hebert.
St. François, Ante, to Charlotte Larcheveque.
St. Vrain, Jac. Marcellin Ceran Dehaute Delassus, to Marie F. C. Dubreuil.
Tayon, François, to Pelagie Chauvin Charleville.
Tayon, Joseph, to Marie Berger.
Thibeau, Joseph, to Marie Louise Vincennes.
Vachard, Joseph Lardoise, to Marie Mondion, widow of John B. Vien.
Vallé, Michel, to Françoise Suejuese (Indian).
Valois, Francis X., to Julie Beaugenou.
Vasseur, Regis, to Fran. Guitard Lagrandeur.
Vien, John Baptiste, to Euphrosine Hunaud.
Vifvarenne, John B., to Genevieve Cardinal.
Vincennes, Louis J., to Elizabeth Deves.
Yosti, Emilien, to Theotiste Durande.
One hundred and sixty-three marriage contracts recorded in the Archives.

The first and most striking thing to notice in connection with the marriage records of St. Louis is the great number of intermarriages among a few leading families of the early inhabitants. In 1804, when the United States took possession of the government of Upper Louisiana, these marriage connections were so extensive that at least two-thirds of the people were cousins of one another. This sort of connection began with the founding of the city, and when old Grandma Chouteau died in 1814, all the first families of the place could legitimately put on mourning for her. This venerable lady probably had more to do with the founding of St. Louis than she seems to get credit for. She was a native of New Orleans, by name Therese Bourgeois, and in 1749 had married Auguste Réné Chouteau, of that city, bearing him one child, Auguste Chouteau, the "colonel," as he was called, and head of the house, who was born in September, 1750. Madame Therese Chouteau left her husband after the birth of her son, on account of ill treatment, returning to her family. After this she met Pierre Laclede Liguest and a mutual attachment sprang up between them. The rules of the Catholic Church forbade a divorce except under such special circumstances as could not be established in this case, and Madame Chouteau, with the advice and consent of her friends, contracted a civil marriage with Laclede and went to live with him. By him she had four children,—Jean Pierre, Pelagie, Marie Louise, and Victoire,—all of whom bore the name of Chouteau, in obedience to French law. In 1763, when Auguste was thirteen years old and Jean Pierre six, she went up the river to Fort Chartres, reaching St. Louis *via* Cahokia in the spring of 1764. A house was built for her, and she always resided in the village, looking after the business affairs of her husband and children, and her own likewise, with masculine energy and sagacity. Laclede was nearly all the time away, extending his trading operations in every direction, and Auguste Chouteau was frequently journeying from post to post in the Indian country, collecting furs and superintending trappers. In one of his trips to New Orleans, Laclede died, in July, 1778, at the mouth of the Arkansas River, where he was buried. Chouteau had at this time become a man of twenty-eight years, grown up with the village, known to all the inhabitants of this upper country; at the head of large business affairs, was acquiring property; prominent in the affairs of the village, a man of education, had drawn up the first plat of the village, etc. All this combined soon made him the most prominent man perhaps in the place, and in a very few years after the death of Laclede, when the memory of the man was almost forgotten, Chouteau grew to be considered the founder of the place. Such was the general belief of the inhabitants of the village at the period of Mr. Billon's advent here in 1818, and it was not until Mr. Billon had resided a number of years in the place that the existence of such an individual as Laclede was gradually brought out by researches into the early history of St. Louis.

The old lady probably knew that her eldest son could take care of his own interests sufficiently well. At any rate she made it her chief concern to look after her own affairs, add to her own fortune, and provide for and marry off her younger children. She was a thorough business woman, and drove a hard bargain now and then. We have seen that she took St. Ange de Bellerive to board with her, and it is on record that, when one of her negro men, Baptiste, was shot and accidentally killed in December, 1785, in an attempt to capture some runaway slaves, she sued her son-in-law, Joseph M. Papin, for damages, and finally compelled all the parties interested in the matter to pay *pro rata* an assessment of one thousand

dollars, the full value of the slave. She acquired a great deal of property, and exercised a great deal of influence in the community, being herself a trader in goods and furs as well as in real estate.

Madame Therese Chouteau's children married as follows: Auguste Chouteau, son of Auguste Réné Chouteau and Marie Therese Bourgeois, married, Sept. 21, 1786, being then thirty-six years old, Marie Therese Cerré, daughter of Gabriel Cerré and Catharine Geard. Gabriel Cerré was the leading merchant of Kaskaskia, and bitterly hostile to the American cause in the Revolution until Gen. George Rogers Clark procured an interview with him, and not only secured his friendship and sympathy, but obtained also the aid of his great influence with the Indians of Illinois. Auguste Chouteau died in St. Louis, Feb. 24, 1829, leaving seven children.

Jean Pierre Chouteau married Pelagie Kiercereau, daughter of Paul Kiercereau and Marie Taillon (daughter of Joseph M. Taillon), on July 26, 1783. Pelagie died in 1793, leaving four children,—Auguste P., Pierre, Jr., Paul Liguest, and Pelagie. This last, in 1811, married Barthelemi Berthold, who built the first brick house in St. Louis, to which to bring home his bride. Jean Pierre Chouteau married a second time on Feb. 14, 1794, to Brigitte Saucier, daughter of François Saucier and Marguerite Cardon, of St. Philippe.

Pelagie Chouteau, July 27, 1776, married Sylvestre Labbadie, a native of Tarbes, in Bearn, France, whose parents were Domingo Labbadie and Anne Béclac.

Marie Louis Chouteau, June 25, 1781, married Joseph Marie Papin, merchant, of Canada, son of Joseph Papin and Marguerite Laferne (or Laforce). Their children were

1. Joseph Papin, 1780, married Veuve Bradshaw, 1820.
2. Marguerite, 1781, to M. P. Leduc, 1802.
3. Alexander (Laforce), 1782, to Julie Brazeau, 1814.
4. Marie Therese, 1784, to Antoine Chenie, 1805 or 1806.
5. Marie Louis, 1785, to Ante Roy, 1812, and H. Renard, 1818.
6. Hypolite, 1787, Josephine Loisel, 1815.
7. Pelagie, 1789.
8. Sophie, 1791, died 1808.
9. P. Millecour, 1793.
10. Silvestre V., 1794, Clementine Loisel, 1817.
11. Emilie, 1796, François Chauvin, 1816.
12. Pierre Didier, 1798; Catharine L. Cerré, 1826.
13. Theodore (Dartine) 1799; Marie Celeste Duchouquet, 1820.
14. Joseph, died an infant in 1802.

Joseph M. Papin, Sr., died 1811, the widow in 1817.

Victoire Chouteau, June 25, 1781 (same day as that of her sister Pelagie's marriage), was married to Charles Gratiot, Sr., the founder of that family in the United States, born in 1753, in Lausanne, Pays de Vaud, Switzerland, his parents being Henry Gratiot and Marie Bernard. They had thirteen children, of whom nine—four sons and five daughters—grew to maturity, all marrying.

It will thus be seen that the blood of Veuve Chouteau and Pierre Laclede Liguest flows in the veins of the Labbadies, Papins, and Gratiots, as well as Chouteaus, and they are related by marriage, in the first generation, with the Cerrés, Kiercereaus, Taillons, Sauciers, etc. In the second and third generations these alliances were very widely extended,—Leduc, Brazeau, Chenie, Roy, Renard, Loisel, Didier, Cerré, Berthold, Pratte, Sarpy, Cabanné, Dorsière, Lamq, Barrois, Duchoquet, Marchtand, Kierq, Denoyers, Sanguinet, Marcheteau, Chancellier, Tassier, Gauthier, Roasillar, Choret, Provencher, Dubreuil, etc.[1]

Paul L. Chouteau, in 1813, married a daughter of Louis Dubreuil and Susanne Saintous, thus allying himself with Ceran de St. Vrain, and the Hempsteads, De la Beaumes, and Fremons de Launier at once. Antoine Soulard married a Mademoiselle Julie Cerré, sister of Auguste Chouteau's wife. Antoine Roy's first wife was a daughter of Benito Basquez; his second, a daughter of Pierre Chouteau. And all the other resident families in St. Louis were connected with one another in pretty much the same way.

The following biographical memoir of Charles P. Chouteau and his immediate ancestors has been furnished us by Frederick L. Billon:

His "great grandmother (*née* Marie Thérèse Bourgeois) was born in New Orleans, then a village of but

[1] The following, from the Archives, is a fair example of one of these old marriages, and the area of relationship covered by it:

"*Dorsière*, Eugene Jorys, Knight of St. Cinatus (Society of the Cincinnati), formerly an officer of the United States of America, being now present at this post of St. Louis, and now residing at it, son of Etienne Antoine Jorys Dorsière, deceased, and in his lifetime major of the troops of his Majesty the King of Sardinia, and of Marie Josepha Jorys, his father and mother born at Dorsières, in the county of Valois, Swiss republic, age twenty-eight years, and Marie and Nicole Le Bois, daughter of St. Etienne Nicole Les Bois, deceased, and of Marie Angelique Geard, deceased, her father and mother, aged about twenty-three, born in the parish of the 'Holy Family des Cahos,' in the Illinois, Northern America, with the assistance of Gabriel Cerré, merchant, residing in the aforesaid town of St. Louis, her maternal uncle and guardian, in whose house she is living, the come the item of the agreement in presence of Charles Gratiot, merchant, at St. Louis, formerly of Lausanne, in Switzerland, and of Jean Emanuel Dumoulin, of Vevay, Switzerland, friends and witnesses of said Dorsière, and Gabriel Cerré, her guardian, Auguste Chouteau, her cousin, and others, her friends and relatives. Feb. 23, 1789."

thirteen years, in the year 1733, and was married to Auguste Réné Chouteau in the year 1749.

"This lady came over to Laclede's newly-established 'trading-post' of St. Louis from Cahokia, on the Illinois side, where she had sojourned for some months, in the month of September, 1764, with her five children,—two sons (Auguste and Pierre) and three daughters (Pelagie, Marie Louise, and Victoire), —she being the first female that became a resident of this newly-established post.

"After a residence of half a century in our then little village, which had slowly increased to the number of fifteen hundred souls, with the proud satisfaction of having seen it and its surroundings emerge from a wilderness inhabited alone by Indian tribes and the wild animals of the forest to become a flourishing settlement around her, and leaving a numerous progeny of descendants, this old lady departed this life in her stone residence, in which she had resided during all these long years, at the southwest corner of our present Chestnut and Main Streets, on the 14th day of August, 1814, having attained the mature age of eighty-one years, universally esteemed and respected by the entire community, in the midst of whom she had passed far the largest portion of her protracted life.

"Her remains were consigned to the earth in the cemetery of the Catholic Church, then occupying the block on which the present cathedral now stands."

John Pierre Chouteau, Sr., "the second son of the above lady, and the paternal grandfather of our subject, was born in New Orleans, Oct. 10, 1758, and died in St. Louis, July 10, 1849, having attained the age of ninety years and nine months. He was twice married,—first on July 26, 1783, when a young man of twenty-five years, to Pelagie Kiersereau, a native of St. Louis, an orphan and an only child, whose parents had died in St. Louis, she being raised in the family of her maternal grandparents, Joseph Gaillon, Sr.

"This first wife of John Pierre Chouteau, Sr., died after ten years of married life, a young woman of twenty-six years, on Feb. 9, 1793, leaving three sons, Auguste P., Pierre, Jr., and Paul Liguest, and one daughter, Pelagie, in after-years the wife of Bart. Berthold, from the Italian Tyrol, who died here in April, 1831, and his widow, Mrs. Berthold, who survived him a number of years, dying but a very few years since.

"After a year of widowhood, Jean Pierre Chouteau, Sr., married a second wife, Miss Brigitte Saucier, born in the village of St. Phillippe (now extinct), on the Illinois side, in the southwest corner of the present Monroe County, daughter of a retired officer formerly in the service of France.

"This lady died May 18, 1829, leaving five sons, who, with those by his first wife, left Mr. Chouteau, Sr., with eight, all of whom lived to attain the age of manhood, and most of them leaving families of children. Mr. Pierre Chouteau, Sr., survived his second wife about twenty years, dying, as before stated, in 1849, at the residence of his only daughter, Mrs. Berthold, northwest corner of Fifth and Pine Streets.

"Pierre Chouteau, Sr., became of age, under the Spanish laws of that day, at twenty-five years, in 1783, after which we find him engaged in the Indian trade, almost the only business then pursued in the country, outside of agricultural and mechanical labor, by those who possessed or could obtain the little capital or credit requisite to embark in the business.

"His early trade at first was with the Osages, then inhabiting the country contiguous to where Fort Osage was subsequently built, on the south bank of the Missouri River, in Jackson County, Mo. With this tribe he traded for a number of years, under a special license granted him for that purpose, during which time he made himself familiar with their language and customs, and acquired very great influence over them, as also in after-years with all the various tribes inhabiting the Upper Missouri, the tribes of the Platte, Omahas, Sioux, Arickarees, Mandans, and others inhabiting the upper regions of the Missouri to the Great Falls, and likewise the tribes of the Mississippi.

"After being engaged in this Indian trade with varied success for some twenty years or more, until the transfer of the country to the United States in 1804 and the advent of the Americans, he gradually withdrew from this trade, and turned his attention to real estate, purchasing and selling extensively of lots in and near the town, and large tracts of land throughout the country, by which transactions he realized a handsome estate. Being a man of considerable attainments for that early period of our history, and withal a man of liberal and expanded views, he soon made himself popular with the new owners of the soil, and served in various capacities, civil and military, in the early Territorial days.

"After the organization of our State government in the year 1820, and our admission into the Union, having arrived at the age of sixty-two years, and in affluent circumstances, he abandoned active business altogether, and spent the balance of his days in ease and affluence, alternately at his city residence and at his well-improved country place in our near vicinity,

dying at fourscore and ten, having attained the greatest age of any one of the family before or since.

"In the prime of his early manhood Mr. Chouteau, when actively engaged in the fur trade, was at times associated with his elder brother, Auguste Chouteau, his brother-in-law, Charles Gratiot, with Robert Thabaud and others. In the active pursuit of this business he was frequently called from his home; he made several voyages below to New Orleans and up the Mississippi to Mackinac, for long years the northern central mart of the fur trade of Canada, and was much of his time at his trading-post with the Osages on the Missouri.

"Mr. P. Chouteau, Sr., for a few years after his first marriage, continued to live at his mother's house, southwest corner of Main and Chestnut. In the year 1788 he purchased the northern portion of a block of ground in the northern part of the village, now City Block No. 28, with a stone house, one of the two largest in the place (the other being that of his brother), built by James Clamorgan in 1785. Subsequently he acquired the south part of the block, and on this he resided for over sixty years. During this period he had inclosed the whole block with a high stone wall on all sides,—his house was near the centre of the east front on Main Street,—and had added several buildings within his inclosure, for his own use and convenience,—a warehouse for his fur business, stables, barn, quarters for his numerous slaves, etc. This house and grounds of Mr. Chouteau was for many years one of the most noted in the place. His long intercourse and traffic with the tribes of the lower Missouri had given him great influence over them, and they held him in high respect. In their frequent visits to our village he kindly allowed them the use of his large grounds for their temporary abiding-place. Their visits to the place, particularly of the upper tribes, the Mandans, Arickarees, and others, were always in the summer season, coming down in their canoes in May and June, in company with the boats of the traders, who had spent the winter with them.

"The writer of this has frequently seen as many as a hundred and more in his grounds. They would at times promenade down our Main Street in Indian file to his brother, Col. A. Chouteau's residence, at Market Street, in parties of ten or twelve, rigged out in all their toggery, one or two of the principal chiefs in a United States uniform coat, with golden epaulettes, and military hat and plume, with bare legs, and the privates or braves following their head men, each one sweltering under his Mackinaw blankets in a scorching July sun, armed with a flaming scarlet umbrella, their fancy color, in one hand, and brandishing a palm-leaf fan in the other.

"Pierre Chouteau, Sr., was never called by his first name of Jean, which after he engaged in business appears to have been dropped, and was always thereafter called only 'Pierre, Sr.,' and his second son 'Pierre, Jr.'

"A few notices of him from the *Missouri Gazette*, etc.:

"'May, 1807.—As Indian agent for the nation, he held a council with the Osages at his house in St. Louis, his large ground, inclosed with a high wall, being their usual resort when in St. Louis for many a year.

"'1807, Sept. 1.—Appointed a justice of the peace for St. Louis by acting Governor Frederick Bates, one of the first official acts of that functionary after his arrival here in July preceding.

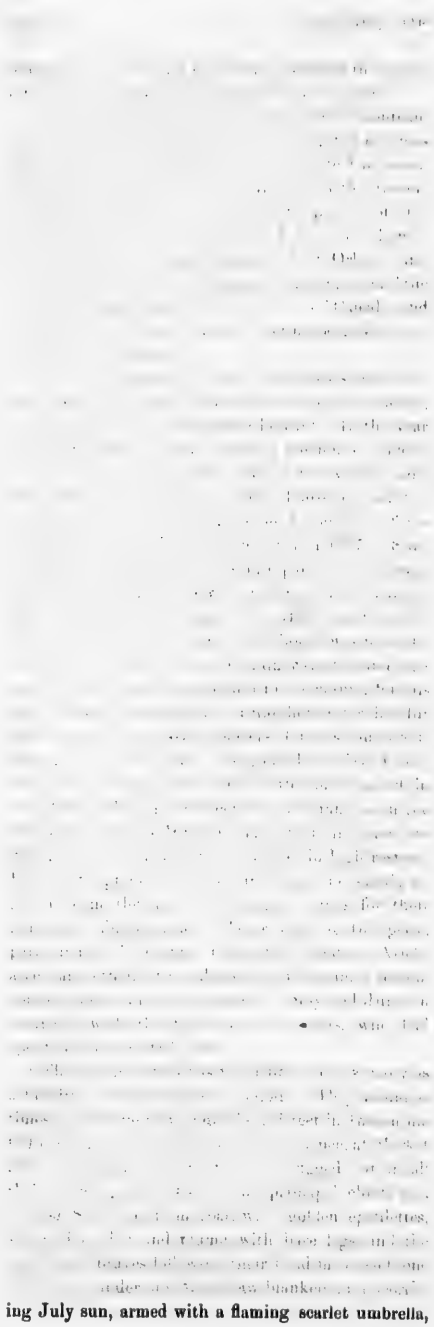
"'1808.—Elected one of the trustees of the town of St. Louis at the first election held in the place, and again in

"'1809.—Re-elected to the same position, and again in 1811.

"'1809.—In organizing the militia of the Territory in this year he raised the first troop of horse in St. Louis, and was appointed its captain by Governor M. Lewis.

"'In this year Pierre Chouteau, Sr., and his two sons, Auguste P. and Pierre, Jr., with A. A. Chouteau, the eldest son of his brother Auguste, ascended the Missouri to some of the upper nations of Indians. Returning, they reached home in St. Louis, Monday, Nov. 20, 1809.

"'For a few years after the transfer of the country to the United States our relations with the Indians of the West and North had been on an amicable footing, with the exception of an occasional murder of a white person by strolling Indians; but as these occurrences became more frequent, it became a necessity to organize the male population into militia for the better protection of our frontier settlers. This was accordingly done, and Auguste Chouteau, Sr., was appointed by Governor M. Lewis, Nov. 28, 1808, colonel of the St. Louis militia, and about the same time his brother, Pierre, Sr., was commissioned to raise and command the first St. Louis troop of horse. This was the first of the military titles of these two gentlemen.



"'In 1812.—At the breaking out of the war with England, Capt. Pierre Chouteau was promoted by Governor Benj. Howard to the rank of major in the St. Louis battalion of militia.

"'In the years 1820 and 1821, Maj. Chouteau served his fellow-citizens of St. Louis for two years in the office of chairman of the board of town trustees, at the expiration of which he declined further civic honors and retired to private life to enjoy his well-earned "*otium cum dignitate.*"

"'In person, Maj. Chouteau was somewhat under medium height, but of a robust frame and iron constitution, evidenced by the length of years he attained, and withal an excellent horseman, the only mode of locomotion in the country at that day, and which was a chief recommendation to his appointment by Governor Lewis to the command of the St. Louis troop in 1808.

"'On the occasion of the visit of Gen. Lafayette to our then embryo city on April 29, 1825, spending but a single day with us (an important event in our early annals), he was entertained in a suitable manner at the hospitable mansion of the major in the northern part of our city, who had politely placed it at the disposition of the committee of arrangements for his reception, of whom the major was one who had the honor of riding with him in the carriage.

ing July sun, armed with a flaming scarlet umbrella,

him in the carriage.

P. Chouteau Jr

"'Charles P. Chouteau, then in his sixth year, living at his father's on the opposite side of the street, crossed over to his grandfather to see the reception. He tells me that he was struck with surprise to see, for the first time in his life, the old gentleman in full military array, which he had long before laid away, as he supposed, for all time, but which he had donned once again to do honor to the nation's illustrious guest.'

"Pierre Chouteau, Jr., the second son of the foregoing Pierre, Sr., named after his father, and who was the father of Charles P., was born Jan. 19, 1789, and was married to Miss Emilie Anne Gratiot, a daughter of Charles Gratiot, Sr. (who came to the county from his native place, Lausanne, Switzerland, in 1777) on June 15, 1813.

"These were the parents of our subject.

"The children of Pierre Chouteau, Jr., were:

"1st. Emilie, born Feb. 13, 1814; was married to John F. A. Sanford, of Baltimore, in the year 1832; both now deceased.

"2d. Julia, born Feb. 28, 1816, widow of the late Dr. William Maffitt, deceased.

"3d. Pierre Charles, born Dec. 1, 1817, died an infant in 1818.

"4th. Charles Pierre, born Dec. 2, 1819, married to Julia Anne, daughter of Gen. Charles Gratiot, Nov. 27, 1845.

"5th. Benjamin Wilson, born Aug. 17, 1822, died an infant; Charles P. and sister, Julia Maffitt, being the only survivors. In the year 1804, after receiving the best instruction the place could furnish, Pierre Chouteau, Jr., then a youth of fifteen years, became a clerk of his uncle, Auguste Chouteau, Sr.

"In the year 1806 he accompanied Julien Dubuque up the Mississippi River to the present site of Dubuque, Iowa, where the well-known Dubuque Lead-Mines were located, in the capacity of clerk, with the promise of being made his sole heir to the same in the event of his death. He remained here two years, returning to St. Louis in 1808 at the age of nineteen years. In 1809, Pierre Chouteau accompanied his father and elder brother, Auguste P., on a voyage to some of the Indian tribes of the upper Missouri, reaching home on their return in November of that year.

"In 1813, Pierre Chouteau, Jr., entered into a co-partnership with his brother-in-law, Bart. Berthold, under the style of 'Berthold & Chouteau,' merchants, and opened 'their fresh stock of merchandise just from Philadelphia' on May 1st, in Berthold's new brick house on Main Street, the first brick house built west of the Mississippi River. In the prosecution of their business one or the other of the firm made occasional trips to Philadelphia to replenish their stock. This business connection only ceased with the death of Mr. Berthold in April, 1831.

"In 1820, Pierre Chouteau was elected from the county of St. Louis a member of the convention that framed the Constitution of the State of Missouri, and took his seat in that body.

"About this period 'Berthold & Chouteau' relinquished their mercantile business and embarked extensively in the fur trade of the Missouri. Subsequently Messrs. Bernard Pratte, Sr., and John P. Cabanné became associated with them, forming the firm of 'Berthold, Chouteau & Co., fur merchants,' and for a number of years prosecuted an extensive and profitable trade in that line.

"Mr. Berthold died in April, 1831, and the style of the firm was changed to 'Pratte, Chouteau & Co.'

"In 1837, Bernard Pratte departed this life, followed June 27, 1841, by the decease of Mr. John P. Cabanné, and leaving Pierre Chouteau, Jr., the sole survivor of the original company. In this trade he continued for many years thereafter with new associates until his own death, Oct. 6, 1865, having successfully prosecuted the business for almost half a century, and leaving a large estate to his surviving children.

"In the year 1838, P. Chouteau, Jr., associated with Kenneth Mackenzie, established the wholesale 'grocery commission' house of 'Chouteau & Mackenzie,' his interest in which he disposed of to Mackenzie in the year 1841, and in the same year established a branch of his fur house in the city of New York.

"In the year 1842, Pierre Chouteau, Jr., associated with him in his fur company in St. Louis, Messrs. John B. Sarpy, Joseph A. Sire, and his son-in-law, John F. A. Sanford, theretofore three of his principal clerks.

"In this same year (1842) Mr. Chouteau established in the city of New York the commission house of Chouteau, Merle & Sanford.

"In the year 1849, Pierre Chouteau and James Harrison, of St. Louis, with Felix Vallé, of Ste. Genevieve, became by purchase the sole owners of the 'Iron Mountain' in St. François County, and associated themselves together as the 'American Iron Mountain Company,' embarked extensively in the manufacture of iron, and from this originated in 1851–52 the establishment by the same parties of the 'Chouteau, Harrison & Vallé' rolling-mill in North St. Louis, in successful operation at the present day.

"In 1853, Pierre Chouteau established in New York the railroad iron house of 'Pierre Chouteau, Jr., Sanford & Co.' This was the last enterprise he set on foot.

"All the gentlemen so long associated with Pierre Chouteau in the prosecution of his fur trade were his kinsmen and near relatives by blood or marriage, and are all now dead,—Joseph A. Sire died in 1854; John B. Sarpy, April 1, 1857; and John F. A. Sanford in May, 1857, but a short month after Sarpy,—and a

remarkable circumstance in his life is the fact that he survived not only his three original partners of the first house, but also those junior partners he had after the death of the three first associated with him in the continuation of the original house.

"Pierre Chouteau, Jr., died on October the 6th, 1865, in his seventy-seventh year, now some seventeen years since, leaving a large estate, the fruits of a long and very successful business life, pursued unremittingly through a period of exceeding fifty years. His wife had preceded him to the grave some two years previously.

"Charles P. Chouteau, born Dec. 2, 1819. In 1825, at the age of six years, he was placed at school with Mr. Savaré, in this place. In 1827, in his eighth year, his parents gave him in charge of the Jesuit Fathers at their newly-established seminary at St. Ferdinand.

"In 1833 he was sent to the civil and military institution of the Messrs. Peugnet Brothers in New York, with whom he remained about four years, completing his education and graduating in August, 1837, then in his eighteenth year.

"In 1838 to 1841 he assisted in the business house of Chouteau & Mackenzie, representing his father.

"1841–42 assisted in the business of his father's several houses in St. Louis and New York, then engaged largely in the fur trade throughout the Northwest, spending much of his time in the latter city.

"In the year 1843, his father's business relations with houses in London requiring the presence of some one to attend to his interests in that city, Charles P. embarked for Europe, where he spent some two or three years, a large portion of the time devoted to travel in the various countries of the Continent, returning home in 1845.

"Shortly after his return from Europe, Charles P. Chouteau was married, on Nov. 27, 1845, to Miss Julia Anne Gratiot, the youngest of the two daughters of Gen. Charles Gratiot, formerly of the United States Engineer Corps.[1]

"During the latter part of the long period, running through so many years, in which Mr. Pierre Chouteau, Jr., connected with others, was so extensively engaged in the various enterprises already enumerated, requiring a large amount of capital and unceasing personal attention, Charles P. had personal charge of much of the operations of these multifarious enterprises, and since the death of his father, as the executor of the estate, he has devoted a large portion of his time and attention in bringing to a close this large estate and the various enterprises with which he had been identified during his long and active business life.

"Since the period that Charles P. Chouteau entered upon his business life as the representative of his father in his declining years, his transactions in that field have been so intimately interwoven with those of the latter down to the death of that gentleman, that but little more need be said of him in that connection, but simply to add that

"Charles P. Chouteau, having just completed his sixty-third year, is in the enjoyment of an ample fortune, inherited in part from the large acquisitions of his father, realized in his long and prosperous business life, but largely augmented by his own operations and speculations, in which he has invested from time to time more or less of his surplus capital. Charles P. and Mrs. Chouteau have a family of two sons and three daughters, of whom the eldest son and daughter are married."

The first street commissioners of St. Louis, so to speak, were a committee appointed, after mass, on Sunday, March 15, 1778, to provide for the drainage of the back lots, where the rain-water settled. The plan was to dig a ditch down the street or road between the lots of Bissonet and Conard to the river. The committee consisted of Lapierre, Taillon, Deschenes, Lachaise, and Baccané. Those sanctioning the plan were Lachaise, Baccané, Deschenes, Taillon, Bissonet, Conard, Dubreuil, A. Chouteau, Labuscière, Barada, Ferrante, Benito, Joseph Labrosse, Ortes (Hortiz), Roubieu, Bargas, all good and leading citizens. Bargas died suddenly, so that there was a sort of inquest held, but nothing appeared to cause a doubt of his death being from natural causes. Deschenes, who came over in 1764, appears to have been the first man in St. Louis to burn lime for building purposes.[2]

[1] "This gentleman, the eldest son of Charles Gratiot, Sr., was born in St. Louis, Aug. 27, 1786, and in 1804, at the age of eighteen years, entered the United States Military Academy at West Point, being the twenty-third on the list of admissions into that institution, then but four years established. He graduated with distinction in 1808, and was assigned to the corps of engineers, in which arm of the service he served for exceeding thirty years, having passed through all the grades of rank to the highest in the service, that of chief of the corps."

[2] The evidence is contained in a memorandum in the Archives in the handwriting of Auguste Chouteau.

In the year 1774, Governor Pedro Piernas had a small prison constructed in St. Louis, built as an appendage, with a shed roof, against a gable end of Martigny's house, a part of which he then occupied as the government office. It was twenty feet long by ten and a half wide, the end wall of the house sufficing

the corps."

long by ten and a half wide, the end wall of the house sufficing

Thos. J. Thornburgh

In 1771, Dr. Valleau, one of the first physicians in St. Louis, died, and his effects were sold, including a case of playing-cards, at auction. Governor Piernas directed the vendue, assisted by Louis Dubreuil, Joseph Labuscière, and Auguste Chouteau, whom the record calls "all traders in the village of St. Louis, in the Spanish part of Illinois," Martin Milong Duralde, "merchant of St. Louis," executor of Valleau's will, authorizing the sale. The cards were sold at auction because damaged by water. The average price paid for them was two packs for a livre, payable in deer skins. The bidders were "La Giroflée," a woman then in St. Louis, Dubreuil, Cottin, Vildieu, Vallière, Matard, Madame Piernas, Lapierre, Motard, Paul Gregoire, Alvarez, Valdy, Labuscière, Condé, Hortez, Taillon, Jacques Labbé, Laville, and Vincent.

In 1768 the garrison at Fort Charles the Prince consisted of Capt. Rios, Lieut. Gomez, Ensign Barela (or Bareda), Surgeon Valleau, Corp. Michel Piguere, Manuel Martine, and Benito Moreau; soldiers, Jean M. Hoaline, François Tienda, Jean Mignon, Gaspard de Marque, Dominic Auterre, Alexandre Pegnolles, and Joseph Nicolas Navarré; Antonio Victorine, blacksmith; Guillaume Boyer, caulker; Joseph Maxon, Francisco Poteau, François Suspedes, and Manuel Augustin Abriòn, carpenters; Antonio Tagonais, mason; Joseph Seguin, stone-cutter; and Jourdan, baker.

April 19, 1775, "the third festival of Easter," the Cathedral at St. Louis was begun, an agreement having then been signed by sundry of the inhabitants to build a church, and a contract having been drawn up with the proper specifications. St. Louis parish had already been established, with Father Valentin, Capuchin missionary, for curé, and Messrs. Sarpy and Benito Basquez wardens of the parish.

In the earlier days of St. Louis, so far as the records go, surprisingly few names will be found indicating the presence of persons of other nationalities than those of France and Spain and Indians. Indeed, there are few but French names. As the list quoted last above shows, even half or more than half the garrison in the Spanish fort were French. So with the marriage records and the wills. English and American immigration had not set in yet, and did not begin at all, in fact, until after the close of the Revolutionary war. There were some few English and Americans at Kaskaskia, but not many,[1]—Eulalie Basquez married a John Stotts (1795); Madeline Peterson married Tesson Honoré; J. B. Lachasse changed his name to Hunt; Antoine Honoré married Margaret Wells; Pierre Berger married Josette Mayer (but she was an Indian of the Omaha tribe); George Schultz, of Georgia, married Victoire Tesson Honoré; J. B. Bravier married Elizabeth Rice; Pierre Payant, blacksmith, married Elizabeth Creely; Peter Schultz married Marie Rose Chouquet; Christopher Schultz married Elizabeth Tesson Honoré (an illegitimate child); Francis Doyon Emmons married Pelagie Laplante; François Jourdain, *dit* Labrosse, married Sally Russell, daughter of John Russell and Polly Briggs; Peter Primm, of Stafford County, Va., married Marie Angelique Salié (Leroix); Edward Hempstead, of New London, married Clarisse Dubreuil; Richard Dillon married Marie Therese Bouis; Israel Dodge, of Connecticut, married Madeline Camp; Patrick Lee married Constance Condé,—and that is about all; but Mr. Billon has dug out from the Archives the following formidable list of the American, English, and Irish names found there up to 1804:

Abbott, Daniel.	Bryan, David.
Adams, Calvin.	Buchanan, Robert.
Allen, Deodat.	Caldwell, Kincaid.

Young, John.
Zumwalt, Andrew.

The name of John Lewis is found in the above list,—a pioneer in the great American immigration, a native of Virginia, who came to Missouri by way of Kentucky, where he sojourned for a period, reaching St. Louis in January, 1797, with his wife and six children. He settled near St. Louis on a farm. His eldest daughter became the wife of Col. Daniel M. Boone, son of the Kentucky pioneer; his second daughter, Mrs. Corbin, lived until 1868. At one time she owned the "Stoddard addition" to St. Louis, a tract of land famous in the legal annals of the city.

Daniel Boone's name is not in the above list. The celebrated hunter and pioneer—the man who really opened the canebrakes of Kentucky to civilization and expelled the Shawanese and Miamis from their hunting-grounds—became very sore in his old age at the injustice of the law which expelled him from the land he had settled and cultivated, because he had not complied with every technicality as regards title. All his life he had been working to acquire land,—a homestead. His wanderings are typical of the impulses which have driven the American people to settle this continent in so brief a space of time. George Boone, his grandfather, had emigrated from Brandwich, near Exeter, England, in 1717, and settled in Bucks County, Pa., with his wife and eleven children. Squire Boone, Daniel's father, with wife and eleven children, removed to Berks County, on the frontier and in the Indian paths. Daniel was born in 1734, in Bucks, and got a few weeks' schooling in Berks, terminating his scholastic career abruptly by drubbing the teacher. In 1752–53, Squire Boone and family went South to North Carolina and settled on the Yadkin. Daniel married, and in time his wife brought him nine children. In 1769, Boone headed an exploring party into Kentucky, and from that time until 1790 his life was a battle, wonderful in every detail. He lost the land he had bought and suffered so much to secure, removed to the Kanawha Valley, near the old battle-field of Point Pleasant, and in 1795, irritated

like a great many Kentuckians, against the general government for divers reasons, and particularly angry at being ousted from his lands, he went to Upper Louisiana and became a Spanish subject, forfeiting his allegiance to the United States. He did not do this as a Tory, but as a Kentuckian and a Daniel Boone, used to follow his own judgment independent of all considerations. He had been invited especially to Missouri by Lieutenant-Governor Zeñon Trudeau, who offered him a grant of one thousand arpens of land, and made him "commandant" of the district or county of St. Charles. So he shouldered "Old Checlicker," his rifle, embarked his family and goods on a flatboat, and made his way to Missouri, settling in Femme Osage. When Louisiana became part of the United States, Boone's titles were again found to be defective, and he had to petition Congress and suffer long delays before he could be safe in his second conquest of territory. Boone was a man of singular and very attractive character. His biography has often been written, but the work has not been well done. His energy, reserved force, humor, integrity, composure, and foresight, and, above all, his placid endurance, that was neither stoicism nor indifference, have never been brought out as they should be. Boone led a great many Kentuckians into Missouri in person, his indirect influence attracting many more.

Among these was the family of Col. Linn, who had often fought with the Shawanese in defense of the fort at Bryan's Station, and whose grandson, Dr. Linn, became United States senator. Capt. Joseph Conway was another. A native of Virginia, a Kentucky Indian-fighter and pioneer, a captive like Boone and Kenton among the savages, often tomahawked, once left for dead on the field, twice scalped, he came to Missouri in 1796, settling in Bonhomme township, St. Louis Co., where he died in 1831, aged sixty-nine years.

But it is impossible to follow up this immigration, so full of striking characters and pronounced individuality, filled with men like Merriwether Lewis and Thomas Hart Benton, each worth a portrait by himself, few traits distinguishable when we try to take them in the mass. Brackenridge, in his "Recollections," has singled out two or three types of the people then pouring into Missouri and St. Louis, and his limning has the sharpness and distinctness of copperplate. There is the old "cracker" of the canebrakes, who, in 1812, after feeding his guests on hog and hominy and giving them a bear-skin to rest on, told of Braddock's defeat and the Presidency of John Adams, who never "fout," as the latest news that he had heard of. There is the famous Col. Smith (John Smith T.), the precursor of Bowie and the whole race of desperadoes of the Southwest, who made Brackenridge his guest, introduced him to his armory, and told him tales of his encounters with wild beasts and brave men.[1] There was nothing in his ap-

[1] Gen. F. A. Rozier, in one of his lectures, has given Smith's history, describing him as "judge and desperado, a native of Georgia, and emigrant from Tennessee. The addition of the letter T to his name was to indicate that he came from that State, and to distinguish himself from others of that numerous tribe, the Smiths. He came to Upper Louisiana prior to 1800, and settled in the Ste. Genevieve district, his home being at Shiboleth. Col. Smith was tall, slight of stature, wiry in person, rather mild and courteous in his manners, but terrible when his passions were aroused by some imagined insult. He had many personal encounters of the most serious and bloody character, and stood unrivaled for skill, undaunted courage, and great coolness in those terrible conflicts with his enemies. He kept at his home an armory stocked with arms and weapons of every kind. He was a skilled mechanic, and owned two slaves who were good gunsmiths. He manufactured the best and truest pistols and rifles in the Western country. Col. Smith speculated in lands extensively, but his principal occupation was that of mining. In the early settlement of the Ste. Genevieve district, in its mining localities, it was inhabited by pioneers, explorers, and miners of a bold and adventurous character. Many were the encounters and feuds that occurred as to mining rights. From the times of Lamotte, Renault, Breton and Moses Austin, a spirit of venture and gambling took possession of its inhabitants, which aroused passions that caused serious disturbances and bloodshed. These bold miners and explorers in early times often visited the attractive town of Ste. Genevieve, to participate in sports of all kinds, and it was the nucleus for the desperate keel-boat men and voyageurs. Col. John Smith T. was of that number. He entered town well equipped and armed, followed by his abettors, rifle in hand. When Aaron Burr contemplated invading Mexico in 1806, Smith and Governor Henry Dodge went to New Madrid to join the expedition, which was to descend the Mississippi River, under the impression it was a legitimate war; but when at New Madrid they read President Jefferson's proclamation condemning it, they then returned to Ste. Genevieve and were both arrested, but released from custody owing to their mistake in the character of the expedition.

"The inhabitants of Upper Louisiana selected Smith to attend to their interest with Congress. For that purpose he visited Washington City. Col. Smith was of a roving disposition. He went to Chihuahua to aid to revolutionize Mexico, traversing a vast wild country in order to reach that land. He thence returned to his home. Col. Smith in the year 1806 was appointed one of the Territorial judges of the Court of General Quarter Sessions. This court was held in the town of Ste. Genevieve. He occupied this position for some time. He attempted, in early times, with a company of men, to take possession of the Dubuque and Galena lead-mines, which at the time were reported to be of a fabulous wealth; but he was driven off with his men by tribes of Indians. In September, 1830, Smith came to Ste. Genevieve and stopped at an inn kept by William McArthur. Whilst indulging in liquor with one Samuel Ball a difficulty sprang up between them which proved fatal to Ball. They were at the time the only persons in the bar-room. Mrs. McArthur, hostess, a brave woman, hearing the report of the pistols, came in, and seeing Ball lying dead on the floor repri-

pearance, says Brackenridge, to denote the fierce belligerent. "He was a small man of a delicate frame, even somewhat effeminate in his appearance, mild blue eyes, fair hair, fair complexion, his face smooth and youthful, although he was not less than forty years old. His manners in his family were mild and gentle; kindness and benevolence appeared to be the natural growth of his heart." While Brackenridge was with him, this mild-mannered gentleman invaded a bear's den in a cave in the rocks; crawling in on his belly, torch in hand, he shot the beast, lying down so that it would rush out over his body, and then coming out coolly as if he had done nothing very extraordinary. When Brackenridge took his leave his kind host forced him to accept a pair of pistols, which he could warrant would never miss fire, and would stand his friend in the hour of need.

In St. Louis Brackenridge met Dr. Saugrain, a former preceptor of his at Gallipolis, the abortive French settlement on the Ohio, and now a prominent physician of St. Louis, and Herr Doctor and Professor Frederick Shewe, an erratic Prussian with a dozen diplomas, who was keeping a corner grocery-shop, selling soap and onions over the counter and talking high philosophy in his sitting-room. He also met the elder Chouteau, of whom he gives a pleasing description, Joseph Charless, founder of the *Missouri Gazette*, the elder Bates, Gen. Clark, companion of Merriwether Lewis, and John Mullanphy, "the St. Louis millionaire." Of Mullanphy his account is very graphic. He had speculated largely in cotton; it was his bales which Jackson had taken for the defense of New Orleans. When he went to complain about it, "This is your cotton?" said the general, "then no one has a better right to defend it. Take a musket and stand in the ranks." After the peace Mullanphy dug out his cotton, shipped it to Liverpool, and cleared a million dollars on the venture. He made great sums by speculating in town lots and lands in and around St. Louis. "One day he called to see me after my arrival," writes Brackenridge, "and invited me to dine with him. He was about sixty-five years of age, a large, coarse-looking man, with a rough, red face, a carbuncled nose, showing his habits of life to incline more to the liquids than the solids. I found him in a large brick house, perhaps the largest in the town, unfurnished and untenanted with the exception of a back room, of which he was the sole occupant. Here I found him seated before a wood-fire (coal was not in use at that time), while two catfish heads were broiling on two chips of wood. 'There,' said he, 'you see your dinner; that head is yours and this is mine; we must each do the cooking.' It was a Barmecide feast, and I determined to humor it. We had some excellent bread and butter, and to make amends for the dishes drank exquisite Madeira out of dirty tumblers. . . . The dessert, I must add, was the most substantial part of the entertainment; going to his safe he brought forth a bag of dollars and placing it on the table, 'There,' said he, 'is a retaining fee if I should want your professional services.'" A society in which characters like these were not rare exceptions, but commonly to be met, must have been very different and far more stimulating and enjoyable than the impassive, effete society of to-day.

The expedition of Lewis and Clark in 1804 secured a very important contribution of men, resources, and tributary territory to St. Louis. It was the first complete attempt at exploration made by our government, and it gave a great stimulus to such enterprises. Not that the French traders of St. Louis and their *voyageurs*, *coureurs des bois*, trappers, and half-breeds were deficient in the qualities which are needed for such work. Indeed, they were the pioneers in the fur trade, and just as the Hudson's Bay and Northwestern Fur Companies had to employ Canadians to push their enterprises, so the American and Missouri Fur Companies and the different undertakings of John Jacob Astor in that line had to secure the Chouteaus, Robidous, and other St. Louis traders for partners before they could send out their "brigades" with any success. Auguste Chouteau very early established a

manded Col. Smith and demanded of him his pistols. He delivered them, and said, 'Take them, my daughter.' He was immediately arrested and confined in jail. Had his trial at Ste. Genevieve before Circuit Court, and was acquitted, after an able defense by Hon. John Scott. A juryman named Carron being asked how he could acquit Smith, replied, 'Did not Scott tell them that they must bring a verdict of not guilty?'

"Col. Smith had some difficulty with the Perry family, then living at Mine à Burton, about some mining claims. Whilst Samuel Perry was on his way to Ste. Genevieve he was overtaken by Smith. When Smith remarked to him that he regretted any difficulty with him, that they were now alone and could settle the matter, remarking that he had a couple of friends (meaning his pistols), 'There, take your choice;' Mr. Perry politely thanked him and declined the offer, as he had business of importance at Ste. Genevieve which could not be transacted by any other person. Smith remarked that he regretted it could not be settled in this rational way. After which they proceeded to Ste. Genevieve together, conversing on different subjects without reference to their difficulties.

"Col. Smith fought several duels, and participated in other desperate encounters, which would be too tedious to relate here. It is said he killed fourteen men, and was always fortunate in these terrible struggles. He left Missouri owing to his numerous difficulties, accompanied by a faithful slave. He subsequently died on the banks of the Mississippi, in the State of Tennessee. Col. Smith left numerous descendants, many of them among the prominent and respected citizens of this State."

trading-post at Fort Osage, and at the time of Lewis and Clark he was trapping very high up the Missouri. In 1794, Joseph Robidou, the founder of St. Joseph's (in 1843), was encouraged by Governor Zeñon Trudeau to consolidate the St. Louis fur-traders with the Missouri Fur Company, the objects of which were exploration as much as trade, the objects of quest being the sources of the Missouri and the route to the Pacific and the Gulf of California. Trudeau's instructions, in fact, in 1794 were very similar to those given to Lewis and Clark ten years later. The Chouteaus, Robidou, Cerré, Sublette, Loramier, Fontenelle, Foy, Matthieu, Pierre, Godin, Clamorgan, Manuel Lisa, Blanchette, St. Vrian, La Harpe, Duquette, Gerneau, Lattraile, Cardinal, Tayon, Coté, Beauchemin, Roaque, Audrain, Guion, Percau, Sarpie, Dodier, Savoie, Chauvin, Gamache, Pallardie, Reynal, Cornoyer, Yosti, Benoit, Berthold, Bissonet, Bouche, Bouis, Brazeau, Crevier, Derouin, Durochet, Duchoquet, Garnieu, Godair, Labuche, l'Atrisse, Le Gris, Louis, Malard, Mathurin, Morin, Papin, Parizien, Peltier, Regis, Tesson, Thibeau, Tholozan, Vachard, De Tergette, Demegaut, Rocheblave, Beauvais, etc., were the predecessors, precursors, and instructors of such men as Mackay, Henry, Lewis, the Clarks, Campbell, Ashley, O'Fallon, Catherwood, Fitzpatrick, the Bakers, Pike, Long, Day, the Bents, Ogden, Mackenzie, Smith, Bridger, Crooks, Walker, Coulter, and others, trappers, traders, and explorers in the far West. Scarcely a headland, hill, mountain, valley, creek, or river in the far West from the lakes to the Pacific, and west of the Mississippi from the Sabine to the Lake of the Woods, but bears a name which testifies to the zeal, industry, and perseverance with which the French trappers and hunters pushed their explorations in every part of the great western wilderness long before the feet of any other white men trod it.

James Mackay, of Scotland, came to America in 1776, aged seventeen, supposed to be the first English-speaking man not of French or Spanish blood who settled west of the Mississippi. He made St. Louis his home,—an educated man, a skillful surveyor, and immediately employed by the Spanish authorities on exploring and surveying expeditions. He embarked also in the fur trade, and acquired a great landed estate. But it was Lewis and Clark who opened the way for Americans to Missouri. Merriwether Lewis was a well-born Virginian, a kinsman of Washington, a captain in the army at the time of the Whiskey Insurrection. Jefferson, during his residence in Paris, realized the importance of a thorough exploration of the Northwest, and employed John Ledyard to make it, passing through Siberia to Behring's Straits, and thence to Russian America. Ledyard, while *en route* and near Kamschatka, was suddenly arrested, hurried backward with inconceivable and cruel speed, and dismissed beyond the Polish frontier. In 1792, Jefferson made another attempt at this exploration, *via* the Upper Missouri and the Rocky Mountains, and engaged Lewis and the botanist Michaux to undertake it. They had got as far as Kentucky, when Michaux was recalled by an order of the French government.

In 1803, the act of Congress establishing trading-houses with the Indians being about to expire, President Jefferson, in a confidential message to Congress, recommended some modifications of the law and its extension to the Indian tribes on the Missouri. The message recommended that an exploring party be sent out to trace the Missouri River to its source; to cross the highlands and follow the best water communication to be found thence to the Pacific Ocean. The proposition met the approval of Congress, and a sum of money was voted to put it into execution. Capt. Lewis had been serving for two years previous to the passage of this act as private secretary to President Jefferson, and immediately on its passage he applied to the President for the appointment of director to the expedition. "Knowing him from long and intimate association" (we quote the language of Mr. Jefferson) "to have courage undaunted, possessing a firmness and perseverance of purpose which nothing but impossibilities could divert from its direction, careful as a father of those committed to his charge, yet steady in the maintenance of order and discipline, intimate with the Indian character, customs, and principles, ... I could have no hesitation in confiding the enterprise to him." Mr. Jefferson, thinking it necessary that Capt. Lewis should have associated with him some person of known competence, and to whom, in the event of any accident to him, the direction of the enterprise might be confided, William Clark, brother of Gen. George Rogers Clark, was appointed, and received the commission of a captain.

The draught of instructions for that expedition gave full details of the instruments to be carried for measurement and observation, etc. It recited that the object of the mission had been communicated to the ministers in Washington of France, Spain, and Great Britain; and that the country of Louisiana having been ceded by Spain to France, a passport from the minister from France had been obtained. It further stated that the object of the mission was to explore the Missouri River and such principal streams of it as, by its course and communication with the

waters of the Pacific Ocean, whether the Columbia, Oregon, Colorado, or any other river, might offer the most direct and practicable water communication across the continent, for the purpose of commerce. It was directed that operations should be begun at the mouth of the Missouri River; that observations of latitude and longitude should be taken at all remarkable points on the river; that the course of the river between points of observation should be supplied by the compass, the log-line, and by time corrected by the observations themselves. The interesting points of the portage between the heads of the Missouri and of the water offering the best communication with the Pacific Ocean were directed to be fixed by observation, and the course of that water to the ocean, in the same manner as that of the Missouri.

Special instructions were given to the director of the expedition to make himself acquainted with the names of the nations of Indians he should encounter and their numbers. He was also to inquire and ascertain the extent of their possessions; their relations with other tribes or nations; their language, traditions, monuments; their ordinary occupations in agriculture, fishing, hunting, war, arts, and the implements for these; their food, clothing, and domestic accommodations; the diseases prevalent among them, and the remedies they use; the moral and physical circumstances which distinguished them from known tribes; peculiarities in their laws, customs, and dispositions; articles of commerce they had or lacked, and the state of morality and religion among them. Should any of the influential chiefs or any of the tribes desire to visit the United States, they were to be brought at the public expense, and promised instruction, if they desired it, in such arts as might be useful to them. It was directed that some matter of the kine-pox be carried, and that the Indians be informed of its use and efficacy. Instructions were given to gather information of the character and extent of the country watered by the branches of the Missouri, and especially on its southern side; and that if the expedition succeeded in reaching the Pacific Ocean, information should be sought as to whether the furs of those parts might not be collected as advantageously at the head of the Missouri as at Nootka Sound or any other point on that coast. It was also suggested that as far up the Missouri as the white settlements extended it would probably be found that some sort of intercourse existed between them and the Spanish posts of St. Louis, opposite Cahokia, or Ste. Genevieve, opposite Kaskaskia.

Capt. Wm. Clark, second in the expedition, was born in Virginia, Aug. 1, 1770. In 1784 his father removed to Kentucky, and settled on the present site of the city of Louisville. Having become acquainted with the modes of Indian warfare at an early age, he was appointed when eighteen years old an ensign, and at once entered on active duty. In March, 1792, he was appointed a lieutenant of infantry, and was promoted in the following year to the place of adjutant and quartermaster, but resigned in July, 1796, on account of his health. He soon afterwards moved to St. Louis, and in 1803 was appointed by President Jefferson a lieutenant of artillery, with orders to join Capt. Lewis in his Western expedition. We may here sum up briefly the remainder of his life. In 1806 he was promoted to first lieutenant of artillery. President Jefferson subsequently appointed him a lieutenant-colonel, but the appointment was negatived by the Senate. He resigned in 1807, and was appointed brigadier-general of the militia for the Territory of Upper Louisiana. In 1813 President Madison appointed him Governor of Missouri Territory, which position he held and filled with great credit until the organization of Missouri as a State in 1821. He was then nominated for Governor against his consent, and was defeated in the election. In May, 1822, President Madison appointed him superintendent of Indian affairs, which he held until the time of his death, which occurred in St. Louis, Sept. 1, 1838.

Owing to casualties and unexpected delays, the expedition was not ready to start from its rendezvous at Cahokia until the spring of 1804. The party comprised Lewis, Clark, nine young men from Kentucky, fourteen United States soldiers, two Canadian *voyageurs*, and a negro servant. They ascended the Missouri River to the country of the Mandans, sixteen hundred miles above St. Louis, where they wintered. In June, 1805, they reached the Falls of the Missouri, and in November were at the mouth of the Columbia River, wintering on the south bank. On Sept. 23, 1806, they arrived at St. Louis on their return, having been absent two years and four months. Their return caused a flutter of excitement, and their narrative and journals were eagerly welcomed. The travels of Lewis and Clark is still ranked as a classic among books of that description.

Capt. Lewis was appointed by Jefferson Governor of Missouri Territory, Clark, as general of the militia, acting as a sort of Lieutenant-Governor. There was great disorder in the city at the time of Lewis' arrival, many feuds and factions and quarrels, and interminable litigation in connection with land titles, in consequence of frauds of every sort. Lewis was not in good health; he was broken down with malarial fever, in the fit of which it is said he always be-

came flighty and delirious, and he had inherited a constitutional melancholy from his father. Business called him to Washington in 1809, and on his way thither, at a lone cabin in the wilds of East Tennessee, with none by him, Merriwether Lewis put a pistol underneath his chin and blew his brains out. He was only thirty-three years of age, and all who knew him expected him to become prominent in the councils of the nation.

His companion, Clark, succeeded him. Clark is a name which the people of the entire West should venerate. They call George Rogers Clark, the head of the family, Hannibal, but he was Scipio likewise. He saved the West to the United States. He prevented Spain and Great Britain from making a partition between them of all the country west of the Alleghanies. He rescued Kentucky from the Indians. He took Kaskaskia, Cahokia, and Vincennes, forcing the British frontier back to Mackinac, Detroit, and the lakes. He planted the first American fort on the Mississippi, founded Louisville, and by the sheer force of the terror his prowess, military genius, and stern character inspired among them, compelled the Indians of Ohio, Indiana, and Illinois to withdraw from their alliance with the English in Canada. In some respects he was the greatest general produced during the Revolutionary war, achieving the most positive results with the slenderest means, and always able to invent and apply new and original methods to novel and unexpected contingencies. His marches have never been excelled, either by Frederick the Great, Napoleon, or "Stonewall" Jackson, and no man ever had so much power over the Indians,—a power due chiefly to personal presence and knowledge of Indian character, and one which, on these great and critical occasions, enabled him to save armies and prevent wars and massacres.

Gen. Clark's reputation and influence aided his brothers and sister in securing high social position in St. Louis, and in becoming the focus of American aims and aspirations there. Governor William Clark during all his long life was respected and looked up to by the French habitant and the Indians of Missouri. Christopher Clark, the other brother, as Indian agent at Fort Osage, became very prominent and distinguished. Fanny Clark, the sister, married for her first husband Dr. O'Fallon, an Irish gentleman of rank and influence, who, after service as surgeon from South Carolina in the Revolutionary army, went West and was mixed up in the Spanish and French intrigues of Wilkinson, Miro, Carondelet, and others; after which he removed to St. Louis and married Fanny Clark, who bore him two sons, Col. John O'Fallon and Maj. Ben. O'Fallon, leaders among the early citizens of Missouri. After Dr. O'Fallon's death his widow married Charles Thurston, of Kentucky. Three children were the fruit of this union, —Anna Clark Thurston, second wife of Dr. Bernard G. Farrar, and Charles H. and Lucius Thurston. Mrs. Thurston married a third time to Dennis Fitzhugh, by whom she had a daughter, who became the wife of Henry S. Coxe, of Philadelphia. Dr. Farrar's first wife was a daughter of Maj. William Christy.

It was under George Rogers Clark that Charles Gratiot the elder first saw service under the American flag. His marriage with Victoria Chouteau at once allied that family with the Clarks, and introduced the Gratiots to the fur trade. Henry Gratiot, son of Charles, died Indian agent to the Winnebagoes; his brother Charles was a general in the United States army, ranking officer of the engineer corps, and the man who built Fortress Monroe. Judge Gratiot, of St. Louis County, was a third brother, while one sister married J. P. Cabanné, a second Pierre Chouteau, Jr., head of the Rocky Mountain Fur Company, and still another became the wife of Jules de Mun. Gen. Charles Gratiot's daughter married the distinguished Marquis de Montholon, French minister at Washington and senator under the Second Empire. Thus a descendant of old Veuve Chouteau and of Laclede Liguest became one of the most brilliant ornaments of the court of the Empress Eugenie. Henry and John P. B. Gratiot were foremost in developing the Galena lead-mines, where old Dubuque had been content to make his own fortune without concerning himself about the improvement and extension of a great industry. The Gratiots, on the contrary, erected large smelting-works at several places, and gave employment to thousands of men. The Gratiot family were Huguenots, originally of La Rochelle, but fleeing to Switzerland after the revocation of the Edict of Nantes.

At Post Vincennes, Gen. G. R. Clark, and after him Gen. William Henry Harrison, received very important and material encouragement and aid from Francis Vigo, a St. Louis merchant of Italian origin. Vigo was a patriotic and intelligent supporter of the American cause, and rendered able services as interpreter. In St. Louis the firm was Vigo & Yosti. The latter, Emilien, was Italian also, and Vigo's kinsman. He was the son of Pedro Yosti and Magdalena Riguna, came to St. Louis in 1777. They bought a lot (half a block, west side of Main Street, in Block 27), with a house of posts on it twenty by forty feet, and here they had their store, the property costing

them two hundred dollars. Yosti married Theotiste Durand (daughter of John B. Durand and Marie Josepha Marcheteau, a native of Fort Chartres, who with her husband had come to St. Louis in 1764). Durand's marriage was the tenth marriage celebrated since the founding of the village. He and his wife died when their child was but four years old, and she was brought up by the Marcheteaus and the Bissonnets, Louis Bissonnet, her uncle, being her guardian. She was married to Yosti in July, 1783, and lived for thirty-five years in their house, southwest corner of Locust and Main Streets, raising five children. Francis Yosti, one of their sons, with his friend, Luis Basquez (son of Benito Basquez), joined Henry and Ashley's trading expedition to the upper Missouri in 1822, and were in the fight with the Arickaree Indians in 1823.

Of the public officers of St. Louis immediately after the cession of Louisiana, we have the following particulars by Mr. Billon, embodied in some memoranda of St. Louis between 1804 and 1821, from some of the first American record-books. Book A was commenced by Marie P. Leduc, the first recorder under the United States, Nov. 29, 1804. This book lasted until Feb. 23, 1808 (three years and three months):

"Charles Gratiot was first presiding judge Court of Common Pleas, and justice of the peace; Augustus Chouteau and David Delaunay, associates, etc., 1804; then Jacques Clamorgan and John Mullanphy in 1805; then James Mackey for district of St. Andrew, residing at St. Charles (St. André), which was the bottom along the Missouri from opposite St. Charles, extending to Point Labbadie, at the mouth of Labbadie Creek, now in Franklin County, then St. Louis District.

"James Rankin was first treasurer and sheriff of St. Louis, appointed Nov. 3, 1804; A. Chouteau and A. Soulard securities on his bond.

"Jeremiah Conner was sheriff in May, 1807.

"John B. C. Lucas was a judge of the General Court of the Territory, March, 1807.

"Bernard Pratte was a judge of the Common Pleas, March 30, 1807.

"Joseph V. Garnier was appointed clerk of the General Court of the Territory Oct. 28, 1806, by Joseph Brown, secretary of the Territory, acting Governor.

"Otto Shrader was one of the judges of the same, Sept. 28, 1806.

"Frederick Bates, Secretary of the Treasury, exercised the power of Governor, July, 1807.

"Pierre Leduc was appointed notary public by Bates, July 18, 1807.

"Pierre Chouteau was appointed justice of the peace by Bates, Sept. 1, 1807.

"Edward Hempstead was appointed attorney-general of the Territory of Louisiana by Governor Merriwether Lewis, March 24, 1808.

"Pierre Provenchere was appointed deputy recorder by M. P. Leduc, recorder, May 26, 1808."

Book B, from Feb. 23, 1808, to Nov. 27, 1809, inclusive, Leduc, recorder:

"Silas Bent was appointed by Frederick Bates, secretary and acting Governor of the Territory, the presiding judge of the Court of Common Pleas and Quarter Sessions for the District of St. Louis, Aug. 20, 1807, for four years from September 1st.

"Same was appointed by Governor Lewis auditor of public accounts for the district, Nov. 26, 1808.

"Robert Frazier, Baptiste Lepage, William Warner, of Vermont; Silas Goodrich, Thomas Proctor Howard, of Massachusetts; Joseph White, Fairfax, Va.; John Collins, of Frederick, Md.; Pierre Cruzat, Hugh McNeal, Pennsylvania; and George Drouillard, ten of Lewis and Clark's men, sold their claims for bounty-lands from the United States."

A short time since there were discovered among records of St. Louis some old books in manuscript, containing the tax-lists of the town. The names are more valuable than the amounts of property assessed, though these are suggestive too. The following is the ancient tax-list of 1811; the name and total valuation of property are given in each case, with the original spelling:

"Wm. O. Allen, $25; Eugene Alvarez, $333; Andrew Andreville, $1421; Horace Austin, $2533; Louis Boissy, $75; Louis Brazeau, $958; Antoine V. Bouis, $1998; Andrew Bouis, $200; Hipolite Boton, $100; N. Beaujyneau, Jr., $825; Louis Boury, $1166; N. The total number of tax-payers is but 176. It appears that at that date there were owned in St. Louis but 19 carriages,—"carriages of pleasure," as they are called on the list,—and of these 19 Auguste Chouteau, Pierre Chouteau, William Carr, Manuel Lisa, and Clement B. Penrose are credited with 2 each. The remaining 9 are distributed among Pierre Cabanné, William Clark, Rufus Easton, Edward Hempstead, M. Leduc, J. B. C. Lucas, Alexander McNair, Bernard Pratte, and Antoine Saugrain.

There are given but 9 stores in the town. Of slaves put down as among the items of personal property, 82 appear to have been owned in the city in the year named. The person owning the greatest number was Auguste Chouteau, who is credited with 8. These 8 slaves are assessed at $2400, or $300 apiece. Mr. Auguste Chouteau was in 1811 the rich man of the town, his property being assessed at over $15,000, and his total taxes amounting to $87.42½. No other citizen of that time could make such a tremendous showing of wealth. The rate of assessment seems to have been one-half cent on the dollar, and the total valuation of all the property in the city amounted to $134,516. At the end of the list appears a postscript, neatly written, but with the letters now yellow with age. The signatures were written with an appended flourish, as was once so much the rule. The postscript, or rather certificate, is as follows:

"The foregoing eight folios contain the whole amount of property contained or included within the limits of the town of St. Louis, as assessed by us conformably to an ordinance of the board of trustees for said town, passed the 2d March, 1811.

"St. Louis, June 27, 1811.

"Wm. C. Carr,
"Aug. Chouteau,
"*Assessors for the town of St. Louis.*

"I certify the above and foregoing to be a true list of the real and personal property taxable in the limits of the corporation of the town of St. Louis, together with the assessment valuation of the said property, as taken by Wm. G. Carr and Auguste Chouteau, Esquires, by virtue of an ordinance of the said corporation, entitled an ordinance for laying and collecting a tax in the town of St. Louis, with the per centum declared by the board of trustees of the said town, amounting together to the sum of six hundred and seventy-two dollars and fifty-eight cents.

"Given under my hand at St. Louis, this twenty-seventh day of July, 1811.

"Ch. Gratiot."

For the year 1812 the list of names has a few additions, but the value of the property shows rather a depression than an increase, possibly through a more lenient assessment. The total valuation is given at $134,313, and the tax levied is but one-third of one per cent., the total tax for the year amounting to the imposing figures of $447.71. The assessors this year are Charles Sanguinet and Robert Simpson, and Charles Gratiot still remains chairman of the board of trustees. It should be stated that the book used for taxes of these two years is blank, and that all the lines necessary are drawn by pen. Neater work is not done, however, to-day by any of the expert clerks of the assessor's office. It is a curious task to go over the names of the tax-payers given and note the subsequent histories of the families. Some have totally disappeared, and are remembered by few St. Louisians; some are but lately extinct, and others are still represented in their descendants among the wealthiest and most prominent families of the present day.

It will be noticed that Maj. William Christy is already assessed for a considerable sum. He was one of the most honored citizens of the early town, and contributed largely to its growth. Maj. William Christy was born in Carlisle, Pa., Jan. 10, 1764. His ancestors emigrated from Dundee, Scotland, to County Down, Ireland, and he was a descendant of the well-known Moyallan family. His father, Thomas Christy, was a captain in the British army, and was wounded at the battle of the Monongahela, in 1755, under the unfortunate Braddock, but succeeded in effecting his retreat with the remainder of the army, under the young Col. George Washington. Capt. Christy settled at Carlisle, Pa., subsequently went to Fort Pitt, and eventually located on a farm in

Kentucky, where he and his wife died, leaving William, a boy of but fifteen, and two younger sisters under his care. The children were amply provided for by inheritance.

Young Christy felt the responsibility of his new position, which speedily developed his manly qualities. He showed his courage and energy by escorting his two sisters from Kentucky to their aunt at Pittsburgh, performing most of the journey by river, unaided, and in almost constant danger from the Indians. This task safely accomplished, he returned to Kentucky and became a surveyor, and passed several years in the practice of his profession in Kentucky and Indiana.

In 1788, Governor Randolph, of Virginia, appointed him lieutenant of a troop of cavalry in Jefferson County, Ky. (not yet a State); and in the campaign against the Northwestern Indians, in 1791, Christy was an adjutant in St. Clair's army. In 1792 he was adjutant in the First Regiment (militia), of Kentucky. In 1794 he served under Gen. Wayne, and when peace was declared, in 1795, he returned home with a shattered constitution, and never after recovered his former health.

In 1792 he married Martha Thompson Taylor, daughter of Edward and Sally Taylor, of Jefferson County, Ky. Miss Taylor was a native of Frederick County, Va., and was a relative of President Madison and President Taylor. Thenceforward Maj. Christy devoted himself to his farm, with only such interruptions as the border troubles necessitated; and in 1799 was appointed major in the Thirty-third Regiment of the Kentucky militia.

In 1804, acting on the advice of his physicians, he abandoned farming, sold his lands in Kentucky, and moved to St. Louis, then a village in the Territory of Louisiana, and recently transferred to the United States. Here he was at once received as became a brave and honorable man, and soon enjoyed the friendship and confidence of all. Both the Territorial and Federal governments conferred upon him important trusts, which may be briefly enumerated as follows: 1806, judge of the Court of Common Pleas and justice of the General Quarter Sessions of the Peace for the district of St. Louis; 1809, trustee for the town and precincts of St. Louis, honorary aide-de-camp to the Governor, and commander-in-chief of the Territory of Louisiana, and major-commandant of the Louisiana Rangers for the protection of the frontier settlements, on which occasion Governor Lewis said, "I know Maj. Christy to be wise in council and swift in action;" 1812, judge of the Court of Common Pleas and Courts of Quarter Sessions; in 1814, auditor of public accounts for the Territory, and in 1820, for the State of Missouri; finally, during thirteen years, under Presidents Monroe, Adams, and Jackson, Maj. Christy was register of the land-office of St. Louis, and resigned in 1833, when age and poor health had unfitted him for the public service.

While thus employed in the service of the State and the country, Maj. Christy, who was one of the large land-owning pioneers, did his full share towards advancing the progress of St. Louis. Very few contributed more to the extension of the city. He laid out upwards of fifty whole blocks on Broadway, from Broadway westward, between Franklin Avenue, Morgan Street, and Green Street, with some fractional blocks on the south side of Green Street. He also projected what is now known as North St. Louis, buying the land and laying it out. He was a man of strong patriotic impulses, which here found very appropriate expression in his giving the streets such names as Jefferson, Madison, Monroe, Warren, Montgomery, Clay, Jackson, etc. Associated with him in this enterprise were Col. William Chambers, of Kentucky, and Maj. Thomas Wright (Mr. Christy's son-in-law), who, with Maj. Christy, gave to the city three public places, or "circles," for churches, parks, and schools, and also ground for a public promenade on the river-shore in front of the major's residence,—the old Christy mansion,—at the corner of Second and Monroe Streets, where he used to dispense his hospitality in the large and warm-hearted style of the genuine Southern gentleman. Here he passed his remaining days, and up to the last year of his life was able to visit the city frequently and mingle with his friends. He was a well-formed, stately man, six feet in height, and retained his erect and soldierly bearing almost to the last. Finally a pulmonary affection prostrated him, and in April, 1837, he died, and was mourned by all his fellow-citizens as an honest, patriotic, and public-spirited man, and by his family and intimate friends as a kind-hearted and amiable Christian gentleman. His wife, a lady abounding in womanly graces, survived him until 1849. Some years ago their bodies were removed to Bellefontaine Cemetery, where they lie in one grave.

Maj. Christy was a Democrat and usually voted with that party, yet he was a warm personal friend of Henry Clay, and in 1824 voted for him for the Presidency in preference to Adams or Jackson.

Maj. and Mrs. Christy were parents of a numerous family, only two of whom now (1882) are living.—Virginia, who married Dr. E. Bathurst Smith in 1838, and has resided in St. Louis almost continu-

ously ever since, and Harriet, who married Capt. James S. Dean, U.S.A. Of the dead, Edmond Christy died unmarried; Howard married Miss Susan Preston, of Kentucky; Sarah married Dr. Bernard G. Farrar, of St. Louis; Mary Ann married Maj. Thomas Wright, U.S.A.; Matilda married Dr. Walker, and her second husband was Col. N. P. Taylor, of Kentucky; Frances married Maj. Taylor Berry, U.S.A., and subsequently Judge Robert Wash, of the Supreme Court of the State of Missouri; Eliza married Gen. William H. Ashley, member of Congress from Missouri.

The *Missouri Gazette* of Feb. 11, 1816, complains that

"Our town at this time presents to the stranger a despicable portrait of police management. Several streets are rendered impassable by the want of a common footway or drains to carry off the rain-water. Nuisances are to be met with in every shape from one end of the town to the other. A most unwarrantable and criminal avidity to acquire property has induced several to take, without the shadow of a claim, the property designated by Congress for the use and benefit of the whole town."

But the place had begun to grow, as Mr. Richard Dowling's recollections of 1817 show very plainly. He says,—

"There were then but fifteen brick houses in the town, the first of which was built by Bartholomew Berthold, in 1811. The remainder of the buildings were of stone or logs.

"The following is a list of the brick houses alluded to:

"Two-story building, southeast corner of Main and Spruce Streets. It still stands, the oldest brick house in the city.

"Two-story building, erected in 1818, by Thomas Riddick, on the west side of Fourth, near Plum. It is the second oldest brick house now standing.

"Two-story building, on the west side of Main, between Myrtle and Elm, occupied by Drs. Simpson and Quarl as a drug-store.

"Four two-story buildings, on the east side of Main Street, between Market and Chestnut, occupied by Gen. Bernard Pratte, William Smith, B. Berthold, and Manuel Lisa.

"Two-story building, on the west side of Main Street, between Chestnut and Pine, occupied by Papin & Brother.

"Double two-story building, southwest corner of Main and Pine, built by Knight & Brady, and in 1817 kept as a hotel by Kibney. It was the largest brick building in the city.

"Two-story building, southeast side of Main, between Pine and Olive, owned by Governor William Clark.

"Two-story building, southeast corner of Main and Locust, owned and occupied by Christian Wilt.

"Two-story building, west side of Third, south of Market, built and occupied by Kidd Price.

"One-story building, west side of Broadway, about Carr Street, built by William C. Carr, and occupied by him for a time as an office.

"One-story brick, southwest corner of Fourth and Elm Streets, occupied by Judge Bent as an office when he was county clerk.

"Two-story building, northeast corner of Third and Vine Streets, occupied by Gen. William Rector, as surveyor-general.

"The merchants and traders of St. Louis doing business at that time were Gen. Bernard Pratte, Peter and Jesse Lindell, Michel Tesson & Bro., Thomas Hanley, Alexander McNair, Sanguinette & Bright, James & George Kennerly, Matthew Kerr, Sarpy & De Mun, Moses Scott, Catherwood & Rankin, Robert Collet, McKnight & Brady, William Smith, Mr. Donohue, James Clemens, Jr., Christian Wilt, Sylvestre Labbadie, Henry von Phul, John P. Cabanné, and Andrew Elliot. Merchants in those days were not confined to any particular branch of business, as at present, but carried on general supply stores. The first regular hardware-store in St. Louis was opened by Henry Shaw, about 1819 or 1820.

"The principal builders in the town in those early days were Philip and Henry Rocheblave, James Irwin, Phineas Bartlett, Robert Patton, and Hill & Keys.

"The brick-makers were Paul Anderson, John Robb, and James Loper.

"Bricklayers, William Jones, James Loper, Jones & Baily, and John Jones.

"Lime-burners, Paul Primeau and Joseph Lacroix.

"Plasterer, Peter Ferguson, afterwards and for many years judge of the Probate Court.

"Painters, John Latrasse and William H. Pocock.

"Stone-cutters, Joseph Klunk and Charles Goddard.

"Merchant tailors, Peter Primm, Michael Dolan, and ——— Burns.

"Boot and shoemakers, Michael Roberts, J. Cabeau, and ——— Rollins.

"Lumber and mills. The first lumber-yard was started by Morton & Rocheblave, afterwards Morton & Laveille; the second by Capt. James McGunnigle.

"The first saw-mill was built by Mr. Sylvestre Labbadie, in 1819. It was situated east of Main Street, south of what is now Ashley Street. The builders of the mill were Stewart, McKee, and Mr. Osborn. Mr. McKee superintended the running of the mill for several years. There was a flour-mill attached to it. Previous to the erection of this mill, nearly all the lumber to be obtained here had to be cut by a whip-saw. Mr. Nicholas Jarrot had a water-mill on Cahokia Creek, Ill., which yielded a small supply of lumber. The most important grist-mill was that of Col. Auguste Chouteau, run by water-power obtained from Chouteau's Pond. It furnished most of the inhabitants with their supplies of flour and meal. Other mills were run by Charles Sanguinette, Joseph Brazeau, and others.

"The first brewery was owned by Joseph Philipson. It was situated on the west side of Main Street, about where Carr Street now is. It was in a two-story frame building, the last house in the north part of the town. Mr. Philipson's brewer was Victor Hab, who died in 1850, near Rocky Branch. The first beer was brewed in the fall of 1817, and was cooled in a pirogue, or 'dug-out,' which lay outside on the north side of the building. About two years afterwards Mr. John Mullanphy took possession of the brewery, and ran it for several years. In 1821 it burned down, and was rebuilt by Mr. Mullanphy. His brewer was Matthew Murphy."[1]

[1] Respecting some of the persons named by Mr. Dowling, we have the following details, in one shape or another:

Jean Pierre Cabanné was a native of the city of Pau, in the south of France. Mr. Cabanné came to this country about the year 1804, and first settled in New Orleans, and while there was engaged in a duel, as was then the prevailing custom, and which made it expedient for him to leave that place. He came to St. Louis about the year 1806. He was a gentleman of fine education. He early engaged in the Indian fur trade, which was then the great business of this city; and in this branch of business he continued for many years, the partner at times of the late Bernard Pratte, Pierre Chouteau, Jr., Mr.

There is a fuller and more circumstantial account of St. Louis as it was in 1818 than can be got from Mr. Dowling's recollections, interesting as they are.

Antoine Chenie, Bartholomew Berthold, Manuel Lisa, and others, and was for many years a member of the firm of Pratte, Chouteau & Co. During his connection with this firm he spent most of his time in the Indian country. In this business he amassed a fortune, and his house in this city was for many years the home of broad and generous hospitality, where strangers and officers of the army, then very numerous in this then most western outpost, were elegantly and most generously entertained. Hon. Bernard Pratte was the first American citizen born in the Territory of Louisiana. The purchase of the province of Louisiana from France was effected on the 3d of May, 1803, but it was not until about the 15th of December of that year that the province and its dependencies were delivered by the French commissioner to the commissioners of the United States.

Bernard Pratte was born in St. Louis on the 17th of December, 1803. St. Louis at that time occupied rather circumscribed limits. Where the Planters' House now stands was an inclosed common or pasture; there was not even a post-office in the town. Bernard Pratte's father, Gen. Pratte, and his father's mother were both born in Ste. Genevieve, and his grandmother and her mother were born in St. Louis. Bernard Pratte was a pioneer in the navigation of the Missouri River, he having, in connection with Pierre Chouteau, successfully attempted the passage of that stream as far as the Yellowstone, in 1832, contrary to the predictions of the oldest navigators. After a profitable business career, in which he held a prominent connection with the American Fur Company, he served as mayor of St. Louis during two terms, from 1844 to 1846. He had previously been a member of the General Assembly. He was a faithful public servant, and his views of public matters always commanded high respect. He was also at one time president of the Bank of Missouri. In all positions, as well as in his social intercourse, he was universally esteemed as a genial and upright gentleman, realizing the forcible in execution with the suavity in manner. As mayor, he was probably one of the most popular executives who has ever administered our municipal affairs. Having tired of the turmoil of political pursuits, he retired many years ago to the seclusion of private life, where he has devoted his time to literature and the comforts of home. In 1824, Mr. Pratte married Louisa Chenie, daughter of Antoine Chenie, she being a native of St. Louis likewise, and the parents of the young couple living within a block of one another.

Madame Berthold was the only daughter of Maj. Pierre Chouteau, deceased, and because she was an only daughter the Indians called her "the lone woman" in their native tongue, which being translated into French was "la femme tout seule," and was born in St. Louis the 7th day of October, 1790. Her mother, whose maiden name was Kiercereau, died when she was a child. Maj. Chouteau had been the Indian agent under the French and Spanish governments at St. Louis, and in that capacity exercised more authority over the numerous Indian tribes then west of the Mississippi River than any man in the whole valley of the Mississippi. Maj. Chouteau had, besides this one and only daughter, three sons, viz.: Auguste P. Chouteau, Pierre Chouteau, Jr., and Liguest Chouteau, all of whom have died many years ago. He married a second time, and had children by the second marriage, five sons, of whom only three are living.

Pelagie Chouteau was married to Bartholomew Berthold in St. Louis, on the 12th of January, 1811. Mr. Berthold was a Tyrolese by birth, and came to the United States in 1798, and was naturalized in Philadelphia in the same year, and afterwards lived in Baltimore till 1809, when he came to St. Louis. He lived for a short time in Ste. Genevieve. Mr. Berthold came to the United States in company with Gen. Willot, who had fled from France in consequence of his opposition to Napoleon, and who returned to that country after the fall of that great man. Young Berthold, then only eighteen years old, was secretary to Gen. Willot. When Napoleon invaded Italy, young Berthold became a soldier, and joined those who opposed him. He was in the battle of Marengo, where he received a cut from a sabre across the forehead, the honorable and visible scar from which he carried to his grave. He was, moreover, a fine scholar, and spoke the French, Italian, Spanish, German, and Latin languages with ease and fluency. He was the only gentleman at the dinner-table, when Gen. Lafayette visited here, who could speak with ease and elegance the language suited to the different members of Gen. Lafayette's suite. Mr. Berthold, it was said, was the most finished and accomplished merchant of his day in the city of St. Louis. He had formed a copartnership with his brother-in-law, Pierre Chouteau, Jr., which was a most successful and money-making concern, in the fur business.

Afterwards, Bartholomew Berthold, Pierre Chouteau, Jr., John Pierre Cabanné, and Bernard Pratte became connected with John Jacob Astor as partners in trade, under the name of the "American Fur Company," and made an immense sum of money. All the members became rich and wealthy. The immense and unbounded wealth of Mr. Astor, who furnished the larger part of the capital, gave double assurance to the undertaking and the enterprise. It was afterwards said that it was under the efficient and successful training of Bartholomew Berthold that Pierre Chouteau, Jr., and John B. Sarpy became the great, successful, prosperous, and prominent business men that they were, whereby millions were accumulated. Bartholomew Berthold, after a life of active business pursuits, died here in the year 1831.

Of Gen. Ashley, we have the following notes by Mr. Billon, from his personal recollections:

"Of Gen. Ashley's early life, I have simply learned that he was born in Virginia in the year 1785; that he came to Ste. Genevieve in the year 1803, then about eighteen years of age; that he was engaged in various pursuits in that vicinity for some years, as merchant, saltpetre manufacturer, etc., in Washington County, and finally as surveyor about 1816–17, having received a contract from Gen. Wm. Rector, the first United States surveyor-general of Missouri.

"Gen. Ashley's name is first found of record in the recorder's office of St. Louis County, in Book F, p. 350, in the following entry:

"'Jedathan Kendal and Margaret, his wife, to Wm. H. Ashley, July 23, 1817, for $400, six hundred and forty acres of land in the Richwoods settlement, on the waters of the Maramec, in Washington County, being the land settled and claimed by John Jones, as recorded in the United States recorder's office of land claims of Missouri Territory in the office at St. Louis.'

"Gen. Ashley fixed his permanent residence in St. Louis in the year 1819. 'Thompson Douglass sold to Wm. H. Ashley and Lionell Brown, April 15, 1819, a lot of sixty-two feet on Second Street by one hundred and thirty-two feet east on the cross street (afterwards Elm) (southwest quarter of Block 36), on which was a two and a half story brick house (built by Doug-

At that time the court-house was a one-story frame building on Third Street, between Almond and Spruce Streets, now occupied by the Sisters' Hos-

pital. The post-office was on Main Street, near the southwest corner of Elm Street, a one-story stone building; Dr. Robert Simpson, postmaster.

lass in 1816–17), for the sum of $8000.' This property being then under mortgage by Douglass to the Bank of Missouri, from which Douglass had obtained a loan to build this house, Ashley and Brown gave a bond to pay Douglass the consideration money which he would have paid off the mortgage, so that he could give them a good and sufficient title for the same within twelve months. (Book I, p. 7.) This mortgage Douglass paid off, and he and wife executed to Ashley and Brown a warranted deed for the above Dec. 2, 1819.

"After the above, Gen. Ashley's name is found of record in various real estate transactions.

"Gen. Ashley occupied this house in May, 1821 (date of Paxton's first St. Louis directory). His wife was sick in this house in the summer of 1824, and, I think, died therein shortly after.

"Gen. Ashton married his second wife, Eliza B. Christy, late in the fall of 1825. On Dec. 1, 1825, William Christy and Martha T., his wife, gave their daughter, Mrs. Eliza B. Ashley, a lot on the west side of Fifth Street, three hundred and forty feet front, from our present Morgan Street to Franklin Avenue, by two hundred and ninety feet deep.

"In the year 1819 there came to St. Louis from England Mr. William Stokes, bringing with him the then, in St. Louis, almost fabulous sum of $100,000 in cash, which he invested, in a brief period after his arrival, in real estate, placing in the hands of Gen. Ashley $60,000 for the above purpose, Ashley in his surveying having acquired personal knowledge of localities where the same might be judiciously invested. These facts are found on record.

"The first election under our State Constitution took place on the fourth Monday of August, 1820, although we were not yet officially recognized as a State. At this election Gen. Ashley was elected our first Lieutenant-Governor and president of the State Senate, which office he filled for the term of four years, until the second State election in 1824.

"My first personal acquaintanceship with Gen. Ashley was at this period of our first election in 1820.

"During his four years' term as Lieutenant-Governor he was extensively engaged in the fur trade with the Indians on the upper Missouri, in which trade he sent up several expeditions, some of the first resulting disastrously, by which he became deeply involved in debt; but by his indomitable energy and perseverance he was finally successful, and having acquired a competency in his last adventure, he retired from active business pursuits.

"Spencer Pettis, who had been elected to Congress a second time in 1830, having lost his life in the memorable duel with Biddle in August, 1831, Gen. Ashley was elected to serve out the balance of the term, at the expiration of which he was re-elected for the full term in 1832, and again in 1834, serving as our representative a period of five consecutive years; he was then succeeded by John Miller.

"Gen. Ashley, after retiring from active business pursuits, purchased a very handsome property, in the year 1826–27, of about eight acres, on what is now Broadway (then Federal Avenue), lying between what are now Biddle and Bates Streets, where he built for his residence a very fine house, on one of the lower Indian mounds, which he occupied for a number of years. The grounds were beautifully laid out and improved, with a fine fountain in front, the first thing of the kind we had in St. Louis.

"Gen. Ashley was three times married. After the death of his second wife, the Miss Christy previously mentioned, he married his third, the widow of Dr. Wilcox, of Howard County, a daughter of Dr. Mass. He had no children by either wife. After his death this last lady became the wife of Senator John J. Crittenden, of Kentucky, and died not very long since.

"Gen. Ashley's personal appearance: A man of medium height, say about five feet nine inches, of light frame, his weight might have been from one hundred and thirty-five to one hundred and forty pounds; thin face, prominent nose, not Roman, but aquiline or Grecian, so that a profile view of his face presented a projecting nose and chin with the mouth drawn in. Had Gen. Ashley been an indolent man, he doubtless would have been a dyspeptic, but from his restless and active disposition, constantly on the move, and from the various suits he was engaged in from his youth upwards, he found no time to be sick, and his active life tended to preserve his health, but slightly impaired until his death in 1838–39, at the age of about fifty-three."

"Of the business places on Main Street, the first one established was on the south side of that thoroughfare, south of Washington Avenue. The building was owned by Peter Chouteau, Sr. It was of stone, two stories in height, and had a porch all around it. The store was kept by Mr. Daniels, a furrier.

"The other business places are given in the order of their situation, as follows:

"On the east side of Main Street, between Vine and Locust, a grocery-store, kept by J. Vickers, who made himself notorious by issuing shin-plasters of denominations from twelve and a half cents upward to one dollar each, and leaving unexpectedly before he redeemed them.

"Next, on the same side, below, Solomon Megreaun, gunsmith.

"On the northwest corner of Main and Locust, Joseph Bouju, watchmaker.

"Southeast corner of Main and Locust, Christian Wilt, merchant, who had a lead-factory on the river-bank, in the rear of his store.

"Same street, south of Wilt, J. B. Grant, jeweler and silversmith.

"Adjoining, a one-story log house, occupied as a school. The same was kept by Messrs. Lee & Leet, and subsequently by Mr. Rochford.

"South of the school, Michael Dolan, merchant tailor.

"Southward again, Gabriel and Réné Paul, merchants.

"On the north side of Main Street, just above the corner of Olive, were Drs. Farrar and Walker.

"On the east side of Main Street, south of Olive, a porter-cellar, kept by Mr. Brazeau.

"Same side of Main, between Olive and Pine, James and Geo. Kennerly, merchants.

"Northwest corner of Main and Pine, Charles Bosseron, blacksmith.

"Southwest corner of Main and Pine, Kibbey's hotel.

"South of Kibbey, Thomas McGuire, merchant.

"South, Thomas Hanley, merchant.

"South, Mr. Gratiot, merchant.

"East side of Main, south of Pine, Mr. Donahue, merchant.

"South, Mr. Jacoby, saddle- and harness-maker.

"South, Moses Scott, merchant.

"Northeast corner of Main and Chestnut, Sylvestre Labbadie, merchant.

"Southeast corner of same, Peter and Jesse G. Lindell, merchants.

"South, on Main, Henry Von Phul, merchant.

"South, same, James Clement, Jr., merchant.

"South again, Wm. Smith, merchant; P. A. Chouteau, J. Demund, and John B. Sarpy, merchants; Gen. Bernard Pratt, merchant, and Matthew Carr, merchant.

"Opposite, same street, Ephraim Town, hatter.

"Then came the market-house, a one-story building, running east and west, with the ground attached; it occupied a whole square. The east end of the premises rested on the river-bank. There were eight or ten butchers.

"On the west side of Main Street, south of the market, stood the mansion of Col. Augustus Chouteau. The building and grounds occupied a whole square. The property was inclosed with a stone wall. The Bank of Missouri was located on the first floor of the building. Col. Chouteau and family resided on the floor above.

"On the east side of Main Street, south of Walnut, was Mr. Hull, the baker.

"South, Michael Tesson, merchant; Peter Primm, merchant tailor, and Messrs. Sanguinette and Bright, merchants.

"Same street, opposite, Mrs. Pesky, merchant.

"On the northeast corner of Main and Elm, Mr. Vallois, locksmith.

"Southward, same street, Neal Deggitt, tinsmith; Richards & Quarls, tobacco manufacturers; Drs. Simpson and Quarls, druggists; J. Reed, merchant, and Andrew Elliott, merchant.

"Southwest corner of Main and Elm, Mr. Dangen, silversmith, and manufacturer of Indian trinkets.

"South, on Main, the Bank of St. Louis. This bank, too, was kept in the lower part of the building in which it was located, while a family occupied the second floor.

"On the west side of Main, south of Myrtle, Robert Collett, merchant.

"Southward, Mr. Estes', and two other establishments.

"Gen. Bernard Pratt built the first business house on the Levee. It was located on the corner of Market and Front Streets. At this time there were only two warehouses in the city, one built by McKnight & Brady, and situated on the river-bank, north of Cherry Street, and the other, built by Manuel Lisa, on the south side of Chestnut and the Levee. The latter is still standing.

"All the lumber used had to be cut with a whip-saw. There was not one saw-mill in the city. The first of these establishments, which were subsequently put up, was built by Sylvestre Labbadie. The millwright was Mr. Osborn. Several years afterward the mill was run by Stuart McKee.

"There was only one water-power flour-mill, which was owned by Col. Auguste Chouteau. The building stood till burned down west of Centre Market.

"There was a horse-mill, owned by Mr. de Chouquette. It was situated just north of the present site of the Lami Railroad Street depot.

"There were two hotels on Main Street, one on the southwest corner of Main and Green Streets, the other on the southwest corner of Main and Pine Streets. Another hotel, situated on Second Street, was known as the Green Street Tavern. Opposite to it Daniel Shope kept another public-house. These comprised all of the hotels in the city.

"The first brewery was owned by Joseph Phillipson, and located on the west side of Main Street, between Biddle and Carr Streets. Victor Hab was the brewer, and the first beer was brewed in the fall of 1817, and cooled in a pirogue.

"On Market Street, west of Fourth Street, Rev. Samuel Giddings, a Presbyterian, kept a school in a two-story frame building. It was well attended.

"The first brick-maker was John Lee. His bricklayer was William Jones, the father of William Jones, Jr., who is now residing at Cheltenham.

"John L. Sutton, George Casuer, Papin & Brother, and Charles Bosseron and Montangue were among the principal blacksmiths.

"The principal boss carpenters were Philip and Henry Rochsblave, Hill & Kees, Phineas Bartlett, Robert Paxton, and James Irvin. The only survivor of these is Capt. David B. Hill.

"Of the merchants, Henry Von Phul, James Clement Andrew Elliott, and Robert Simpson are the only ones now living [at the date of these memoranda].

"Thomas McGuire was the first man who built a house on the Hill. The building was at about that point where Ninth Street intersects Market Street. [But J. B. C. Lucas had built there earlier.]

"At the time of the date of this article there was only Main Street, George Street, now known as Second Street, and Barns Street, which is Third Street. The latter took its name from the barns which were located on the line of it. Market Street, from Main to the Levee, was the first thoroughfare paved.

"There were three roads which were principal ones, namely, the Bellefontaine, St. Charles, and Carondelet. A short distance south of what is known as Park Avenue, the Gravois road forked to the right of the Carondelet road. The St. Charles road forked west of Judge Lucas' field, which was situated just west of Lucas Place. At that time a branch of Chouteau Pond came up to Chestnut Street.

"A fire company was established about 1819. Every man who had a two-story house was required to furnish and keep two leather buckets; every man who had only a one-story house furnished and kept only one bucket. When a fire occurred a line was formed, and the buckets were passed up and down the line in the manner usual at that time.

"The first police force was organized on the 1st of January, 1818. Mr. Mackey Wherry was captain, and was also captain of the watch, market-master, and city register. There was but one constable in the city, a one-armed man, Gabes Warner, who did all the business. The police force consisted of about six men, including the captain."

The adult male population of that day (1817–20), says Mr. Billon, in one of his interesting reminiscences,—

"Was, in round numbers, about 700, divided about as follows: Of American birth, say 400; original French and Spanish, 150; and of foreign birth, 150. Of these last fully two-thirds, or about 100, were Irishmen, some 15 to 20 European Frenchmen, about the same number of English and Scotchmen, and some 10 or 12 Germans, etc.

"Our Irish citizens of that day in St. Louis included in their number a very liberal proportion of gentlemen of education and acquirements, some of whom held important positions in our then recently acquired territory. I instance James Rankin, our first, and Jeremiah Connor, our second sheriff, Thomas McGuire, Moses Scott, William Sullivan, Patrick Walsh, justices of the peace; Luke E. Lawless, attorney, afterwards judge; Joseph Charless and James C. Cummins, first and second proprietors of the *Missouri Gazette*; John and Thomas McKnight, John and Thomas Brady, John Mullanphy, Thomas Hanly, Patrick M. Dillon, James Arnold, John Crawford, Hugh Rankin, Andrew Elliott, Robert H. Catherwood, James Timon, Sr. (father of the late Rev. Bishop Timon, of Buffalo), Michael Daly, etc., all merchants: Maj. Thomas Forsythe, United States Indian agent; Maj. James McGunnegle, quartermaster United States army; James Nagle, Arthur L. Magenis, lawyers; Patrick Sullivan, pro-

fessor at the college; Francis Rochford, teacher; Matthew Murphy, and others whose names do not recur to me,—all these were here in the Territorial days of St. Louis.

"At that period there were but three houses on the west side of Second Street from Pine to Olive, now Block 62. At the northwest corner of Pine and Second, now No. 200, stood the two-story frame dwelling of Capt. Risdon H. Price, son-in-law of Gen. Daniel Bissel, United States army, built by Judge Clement B. Penrose, one of the United States land commissioners, in 1815, on the spot on which had stood in the early days an old house of posts, built by Francis Moreau in 1766, and occupied successively by him, Antoine Reithe, John P. Cabanné, Arend Rutger, John Mullanphy, Jacques de St. Vrain, and Clement B. Penrose. This was the only house on the south half of the block. On the north half, at the southwest corner of Second and Olive (Maguire's drug-store), there was a one-story stone house of the old French days, with a gallery in front and rear, and then occupied by Paul L. Chouteau, the third son of Pierre Chouteau, Sr.; and on the south part of this lot, near the centre line of the block, now occupied by house No. 213, there was another one-story stone house of the French days, of two rooms, with gallery in front. The rear part of this block on Third Street was Price's orchard. This last-described house was the residence of Mr. Connor, who, being a single man (never married), kept his business office in the front room, and occupied the back room as his chamber.

"Mr. Connor had become the possessor of two of the forty-arpens lots on the 'Hill,' as we then termed it, separated from Judge Lucas' by the 'king's St. Charles road' on the south, and adjoining on the north the four forty-arpens lots of Maj. Christy. After Chouteau and Lucas laid off their first addition to the town of St. Louis in 1816,—followed by Maj. Christy with his addition in 1817,—Mr. Connor concluded to lay off his land, between these two, also into lots; his front to the east was three hundred and eighty feet, extending westwardly about one and a half miles to the present Jefferson Avenue, the western boundary of these forty-arpens lots. He laid off in the centre of his plat Washington Avenue, eighty feet wide, leaving him one hundred and fifty feet on each side south to St. Charles Street, and north to the division line between him and Christy seventy-five feet south of Green Street. Consequently the people of St. Louis are indebted to the enterprise and public spirit of one of her earliest Irish citizens for the finest avenue they at present possess.

"Mr. Conner died in the house mentioned above late in the summer of 1823, and Col. John O'Fallon administered upon his estate."

One more contemporary glance at the St. Louis of the past and we have done. It is a sketch of the city as it was in 1837, from the recollections and memoranda of F. W. Southack, written in 1871. We can only give the skeleton and framework of this interesting paper, seeking to collect names in this chapter much more than to present facts. Mr. Southack says,—

"The boundaries of the city at this period were very limited, extending from the river west to Seventh Street, while to the north it went in a semicircular direction to a Spanish tower named Roy, on the river-bank, and to the south it extended to Mill Creek, on Second Street.

"The principal business then was transacted on the Levee and Main Street. Here were the large wholesale grocery and commission houses, and the Levee was the grand landing-place of everything that came in and went out of the city. Transportation was chiefly confined to steamboats, but occasionally a long line of wagons, commonly called 'prairie schooners,' could be seen on Main and the Levee, loading up for the great interior, several hundred miles distant.

"The following is a list of some of the steamers, with the names of their commanders, which were engaged in navigating the river during the year:

"'Prairie,' Capt. Sellers; 'Dubuque,' Capt. Atchison; 'Ark,' Capt. Dewitt; 'Pawnee,' Capt. Dunnica; 'Olive Branch,' Capt. Holcomb; 'Quincy,' Capt. Cameron; 'St. Louis,' Capt. Swan; 'Selma,' Capt. Blood; 'Belle,' Capt. Shallcross; 'Burlington,' Capt. Throckmorton; 'Chariton,' Capt. Dougherty; 'Ceylon,' Capt. Ranney; 'Vandalia,' Capt. Small; 'United States,' Capt. Hill; 'Palmyra,' Capt. Eaton; 'Oceana,' Capt. Beltzhoover; 'Boonslick,' Capt. Jones; 'American,' Capt. Lusk; 'Tempest,' Capt. Carroll; 'Adventure,' Capt. Van Houten; 'Dart,' Capt. Cleveland; 'Majestic,' Capt. Johnson; 'Howard,' Capt. Newman; 'Gypsy,' Capt. Gray; 'Pavilion,' Capt. Lafferty.

"At the foot of Market Street was the chief market square, occupying the whole space of ground between Main and the Levee, Walnut and Market Streets, where is now located the Exchange and other buildings.

"On the east side, fronting the river, stood the market-house, the butchers' stalls being in the lower part on a level with the square in front, while the upper story was used by the city officers.

"In the basement of the market-house on the Levee were several stores, and in the centre a room was used for the city calaboose.

"In the centre and around the side of the market square were located the vegetable stands and wagons of the farmers from Cahokia and Vide-Poche, offering for sale what few vegetables they were able to raise.

"A little above Main Street on Market Street were the stands for the wood-carts; these were very small and peculiarly constructed of willows, and called 'charettes,' the wheels being without iron tires. The usual price for a load was six 'bits,' or seventy-five cents; but if sometimes the honest old Frenchman was offered a dollar for a load, he would instantly reject the temptation with scorn, and cry out louder than ever, 'Seex beets! seex beets! no more, no less!' What a commentary is this on the present degenerate times.

"Around the sides of the market square were wholesale and retail stores, mostly for the country trade, among which were the old houses of Stanford & Davis, J. & W. McDowell, Chouteau & Barlow, Christy & Wiggins, Silas Drake, and David Coons, the former of which is still in existence, under the name of Samuel C. Davis & Co.

"Fronting the market on Main Street was the venerable mansion of Madame Auguste Chouteau, constructed in the French style, surrounded by gardens, embracing the whole ground between Main and Second and Market and Walnut Streets, excepting a narrow strip on Market Street and immediately on the corner of Main Street, where was a large brick building, constructed by Samuel Perry in 1829, the lower portion of which was used as a store by Hunt & Paddock. St. Louis at this period had a class of merchants who for character and sound commercial integrity were not excelled by any city in the Union.

"Among the business firms on the Levee engaged in wholesale groceries and commission and forwarding business were the following: E. & A. Tracy, McGunnigle & Way, Hempstead, Beebe & Co., J. & E. Walsh, Von Phul & McGill, Hunt, Ridgley & Co., L. & A. G. Farwell & Co., Christopher Rhodes & Co., Glasgow, Shaw & Tattum, George Collier & Co., Sanford

& Berthold, Reel, Barnes & Co., Theo. Labeaume & Co., Sproul & Buchanan, Pettes & Morrison, Risley & Martin, January Stettinius & Bro., Pope & West, P. A. Berthold & Co., T. W. Larkin & Co., Randolph, Buckley & Co., Reilly & Chouteau, Jamison, Samuel & Co., John Lee & Co., H. N. Davis & Co., Taylor & Holmes, Mulliken & Pratte, Stone, Field & Mark, Amelung & Layet, Elder & Jenkins, Powell, Lamont & Co., Alex. Hallam & Co.

"Main Street, however, was the chief business thoroughfare and the headquarters for all wholesale, retail, and miscellaneous business, but this street was not wholly filled up with stores. There were many citizens residing on it. Business was confined chiefly to the squares between Market and Vine Streets, although there were a few both north and south of these streets. Among the residents on Main Street were the following: North of Market Street, Widow Berthold, Madame Bosseron, Alfred Tracy, R. Rapier, Lobert Papin, Adolphus Meier, Gabriel Paul, Judge Mary P. Leduc, Madame Dumont, Dr. N. B. Atwood, Madame Serard, Hypolite and Theodore Papin, John J. Anderson, Eugene Jaccard, Monsieur Voizot, A. H. Cohen, John McNeil, Charles D. Sullivan, Frederick Billon, Madame G. Chouteau, Alexander Papin, John B. Sarpy, Mrs. Ingram, Monsieur Bouju, Renshaw, Henry Shurrd (cashier of the Bank of Missouri, above Vine Street), Pierre Chouteau.

"South of Market Street, on Main Street, were the residences of the following citizens: Madame Auguste Chouteau (before mentioned), Daniel D. Page, Thompson Douglas, R. B. Dallam, J. B. Daggett, John G. Barry, Joseph Robidou, Elliott Lee, Mr. Menard, Thomas Cohen (a noted and favorite fisherman), Mr. Lockwood, and others.

"Among the merchants doing business on Main Street were the following, extending from Market Street north: A. & G. W. Kerr & Co., Sublette & Campbell, H. L. Hoffman & Co., Warburton & King, Andrew Elliott & Co., James Clemens, Jr., Peter Powell & Co., J. S. Pease & Co., Edward Brooks, Adolphus Meier, N. E. Janney & Co., McKee, Stewart & Lind, J. B. & M. Camden & Co., John J. Anderson, J. F. Comstock & Co., Eugene Jaccard, John J. Martin, Robert Rankin, C. D. Sullivan, Taylor & Marshall, Meed & Adriance, Peter E. Blow, Joseph Charless, A. & L. Forbes, Burd, Tilden & Co., Edgar & Forsyth, Allen & Dougherty, T. S. Rutherford, Davis & Trowbridge, Hood & Abbott, Savage & Austin, J. C. Dinnies & Co., Crow & Tevis, Ricketson & Holt, Walker & Kennett, Henry Shaw, John Riggin & Co., Burrows & Jennings, Boggs & Stuart, J. Sylvester, R. D. Watson, J. & W. Smith, A. G. Switzer & Brother, R. Simpson & Son, Lynch & Trask, Settle & Bacon, Charles P. Billon, Sweringen & Bedell, Charles R. Hall, Larkin Deaver, George K. Budd & Co., F. W. Southack, O. D. Filley, Hudson E. Bridge, James Beakey, Powers & Randall, Salisbury & Collins, Hugh Boyle & Co., Nourse, Hyde & Co., J. & T. J. Homer, Edwin Chaffin, J. & W. Vandeventer & Co., J. H. Barnard & Brother, Jones & Bacon, Alonzo Child, Ira Todd & Son, Isaac Burnett & Co., Conn, Sprigg & Green, Watson & Austin, Grass & Robbins, Smith & Young, W. W. Amos, Hood & Abbott, Dinnies, Van Pelt & Co., M. Tesson & Son, Sinclair, Taylor & Co., Shipp & Woodbridge, C. Ulrici & Co., Jones & Corthron, H. Kortley, Corse & Anderson.

"On Second Street there were no large stores, the street being filled up with dwelling-houses, small shops, blacksmith-shops, one of which was owned by the noted favorite, Tom Gray.

"On the corner of Chestnut and Second Streets stood the post-office, a very small wooden building, which had been previously used for church purposes. On the opposite side, fronting Chestnut Street, was a row of two-story brick buildings, familiarly known then as 'Quality Row,' and occupied by the following distinguished families: Wilson P. Hunt (who was postmaster), Henry Von Phul, Henry L. Cox (cashier of the old United States Bank), J. W. Reel (of the firm of Vairin & Reel), and Thornton Grimsley.

"Next east, and on the present site of the *Republican* office, was the stately residence of Gen. Bernard Pratte, now living. Opposite his mansion were two fine large houses, with stone steps and iron railings, occupied by Joseph Powell and Duncan Lamont, built by the late K. Mackenzie. This immediate neighborhood was considered the fashionable part of the city.

"On the south side of Chestnut Street, and opposite 'Quality Row,' were several one-story wooden buildings, one of which was used as a tinner-shop by James Spencer.

"On Second Street, between Market and Vine, going north, were the residences of Antoine Chenie, J. Laveille, John H. Gay, Josiah Spalding, Stephen Gore, Rob[illegible]t. P. D. Papin, Pascal Cerré, M. E. Janney, William [illegible], Asa Wilgus, Henry Hough, B. W. Alexander, Dr. Hardage Bane, Larkin Denver, H. Reynard, Monsieur Laguerrière, Robert Moore.

"On the corner of Vine and Second Streets stood a large building, known as the Arcade Baths, which was the only establishment of the kind in the city. To the north of Vine Street there were a few other dwelling-houses, and all beyond was unimproved.

"South of Market Street, on Second Street, more citizens resided, among whom were the following: Mrs. Samuel Perry, David Coons, B. Mulliken, E. A. Johnson, Joseph Phillipson, Widow Speck, Madame Dowling, Wilson Primm, George Maguire, Elkanor English, Matthias Steitz, Madame Provenchere, Gen. Wilkinson, Madame Saugrain, and a few others.

"On this street, below Mulberry Street, was a bridge across Mill Creek, which was the outlet of the water from Chouteau Pond into the river. Near this bridge stood the original brewery of McHose, and also the residence of Mr. Clark, Mr. Studley, and Mr. Adams.

"Beyond this creek, to the south, was th[illegible]n and residence of the Soulards, and also Mr. Labarge, [illegible]ween this point and the Arsenal there were no improvem[illegible]nsequence excepting the farm and dwelling of I. C. Ly[illegible]n, a little to the north and west of the Arsenal.

"The father of Mr. Lynch was among the first persons who made beer for sale in the city. His brewery was a frame building on Second Street below Plum.

"Third Street was almost exclusively used for dwellings, and the following persons resided on this street: To the north of Market Street were the following: Charles Klunk, Jacob Baum, James Lane, Thomas Andrews, Mrs. John Mullanphy, John Thornton, Walton family, Madame Bouis, R. D. White, Dr. Trudeau, and W. A. Lynch (the oldest undertaker now living). North of the Denver House (then known as the City Hotel) were the fine residences and extensive grounds of Col. Strother and Col. Benton. The former included all the ground north of the hotel to Washington Avenue, and extended east to Second Street, while the latter occupied the south half of the next square, and running east to Second Street. These grounds were beautifully improved, and were covered with magnificent forest-trees.

"Just north of these residences commenced Broadway, which was opened as a street not much farther north than Carr Street. At the head of Green Street was the North Market-House, which had just been completed, but as the larger number of the citizens visited the Centre Market on Main Street, it was several years before this market became much patronized.

"All above this market-house as far north as the mound, and even beyond there to what is now called Bremen and Lowell, was comparatively desert waste, with the exception of the residences of Gen. Ashley on the east, and Mrs. Ann Biddle on the

west, directly opposite to each other. These residences were surrounded by beautiful grounds, and adorned by native forest-trees. Gen. Ashley's house was built on a small mound which overlooked the river and the Illinois country beyond as far as the bluffs.

"Returning now to the southerly portion of the city, on Third Street, south of Market Street, we find the following families residing: Bernardino Flores (just deceased), Samuel Wills, John Shade, David B. Hill, Dr. R. Simpson, Mrs. Hamilton, Joseph Wherry, Sullivan Blood, Madame Primm, Madame Larue, Madame Lafferty, Mrs. Hempstead, Matthew Rippey, Henry Duhring, Dr. Nicholas, Paul Berger, Michael S. Cerré.

"On the northwest corner of Plum and Third Streets resided Madame La Lumière, in a log building constructed in the old French style, and one of the first built in the city, which house is now standing in a very dilapidated condition, and is quite an object of curiosity to the antiquarian.

"On Fourth Street, between Market and Chestnut Streets, stood the court-house, in the centre of the square. It was a very plain brick building, two stories in height, and contained only two court-rooms and some small adjoining rooms for the juries and clerks. The sheriff's office was in a small brick building on the southwestern corner of the square.

"In the Circuit Court Judge Lawless presided, and in the Supreme Court were Judges McClirk, Tompkins, and Wash. Judge Peck presided over the United States District Court. The bar, which was celebrated for its talent and respectability, included the following well-known attorneys, viz.: Edward Bates, H. R. Gamble, H. S. Geyer, L. V. Bogy, Trusten Polk, J. F. Darby, Alexander Hamilton, Josiah Spalding, A. T. Bird, Wilson Primm, P. B. Hurdson, Beverly Allen, John Bent, C. D. Drake, Myron Leslie, A. W. Manning, and a few others.

"South of Market Street on Fourth Street there were but few residences. Among the citizens who lived there were the following: J. S. Pease, John McCausland, Edward Charless, Mrs. McCartan, W. K. Rule, J. J. Purdy, Mrs. McKinney, and Mons. S. Pierre. Below the hospital of the Sisters of Charity, the only one then in the city, there were no dwellings until near Plum Street. Here were located the beautiful residence and gardens of Dr. H. D. Hoffman, on the east side, while on the opposite side was that of Judge Lawless. A narrow lane divided these two estates, for at that time neither Fourth nor Fifth Street was opened any farther beyond, all below being unimproved as far as the Convent of the Sacred Heart, just below Chouteau Avenue, which was then considered quite out of town.

"The Lawless house was the first brick house built on what is now Fourth Street, and owned by Col. Riddick. The grounds surrounding it extended from the present Fifth Street nearly to Third, and afterwards known as Vauxhall Garden.

"To the north of Market Street resided the following citizens: Col. Shepard, opposite the court-house, who was then the chief schoolmaster in the city. On this block also lived William Tighe and W. Pocock. The block opposite the Planters' House was vacant, excepting on the corner of Chestnut Street, where stood the blacksmith-shop of Mr. Wimer. On the corner of Olive and Fourth Streets was a one-story stone dwelling-house, occupied by Nathan Patterson, who was connected with the house of J. & E. Walsh. His garden extended to Pine Street, and it was no uncommon thing to see corn growing in it to fully fifteen feet high.

"On the east side of Fourth Street, on the next square, Dr. Barcher, a cupper and leecher, had his shop and dwelling-house, on the spot where now stands the Everett House. Mr. William Hempstead resided on the opposite side of the street. The block of ground bounded by Locust and St. Charles and Fourth and Fifth Streets was a flat and vacant lot, subject to be overflowed after a heavy shower. This lot was owned by Judge J. B. C. Lucas (father of our fellow-citizen, J. H. Lucas), who sold it to George Collier for the extravagant sum of eight thousand dollars.

"On the ground where now (in 1871) stands the store of William Barr & Co. were two brick houses, owned by George Collier, in one of which he resided. Farther north were the dwellings of Charles Collins and Abel R. Corbin. Col. Brant had a large residence on Fourth Street, fronting Washington Avenue. North of this there were very few and indifferent dwelling-houses.

"On Fifth Street, south of Market Street, the dwelling-houses were fewer than on Fifth Street. The first house on the west side was the residence of Mr. Edward Tracy, an extensive commission merchant. On the second square below Boby Evans lived, and on the next square farther south the Widow Spencer lived.

"Below Elm Street lived the following citizens: Gen. Ranney, Lucien Dumaine, Capt. Gildersleeve, Dr. Call, George Wilson and mother, and Gabriel Chouteau. Below Spruce Street there were no buildings of any consequence as far south as the convent. The great space of ground between Fifth and Seventh Streets was a deep ravine, through which passed the waters of Chouteau Pond on their way to the river.

"North of Market Street, on Fifth, the houses were few and far between. A few prominent citizens lived on this street. Among them were Dr. W. Carr Lane, George A. Underhill, Madame Berthold, Mr. Orme, Capt. Shallcross, M. L. Clark, Capt. Atchison, Dr. McCabe, George R. Clark, Edward Bredell, G. W. Kerr, Judge Farrar, and Matthew Kerr.

"Sixth and Seventh Streets were considered too far out for dwellings, and being on the western limits of the city, there were few citizens residing on those streets. On Sixth Street stood the old county jail, and just east of it, fronting Fifth Street, the foundations of a new Episcopal Church were laid. This was Christ Church, and was consecrated in the year 1840 by the late venerable Bishop Kemper, who at that time was the first missionary bishop, and whose jurisdiction extended north to Wisconsin and west to the Rocky Mountains. Among the citizens residing on this street were the following: Madison T. Johnson, James Armen, Jr., Luther Farwell, Charles R. Hall, Julius de Mun, Enoch Price, Mrs. John Perry, Lieut. Kingsbury, U.S.A., Mrs. Cabanné, Dr. Scudder, and Alexander Selkirk. Seventh Street was still less occupied, it being the outer western limits of the city. Mr. Joseph V. Garnier resided a little south of Market Street, and Mr. Charles Bobbs between Market and Walnut Streets. Where the Polytechnic and Masonic buildings now stand was formerly the residence of Judge J. B. C. Lucas. Nearly all west of his dwelling was unimproved.

"All that vast extent of ground lying west of Seventh Street, and extending to the present limits of the city on Grand Avenue, was then unoccupied, excepting a very few locations. A heavy growth of forest-trees extended from Tenth to Twentieth Street, and from Market Street to St. Charles, and this was called Lucas Grove, in the midst of which Judge Lucas had a dwelling-house, which fronted on Washington Avenue, near the site of the First Presbyterian Church on Fourteenth Street. After his death, his son, James H. Lucas, resided there until he built the mansion on Olive near Ninth Street.

"On Market Street, west of Fourth, a few scattering houses were built, in which lived the following citizens: Wm. Tighe, Hez. King, John Kerr; Mrs. Charless, corner of Fifth Street; Philip Maure, opposite corner of Fifth Street; Mr. McGill, where the Varieties Theatre now stands; T. O. Duncan, J.

Parker Doan, Edward Brooks, George K. McGunnigle, Pierre Chouteau, Jr., Isaac Letcher, James S. Thomas, Beverly Allen, Adam L. Mills, George L. Callender, Col. Johnson, Christopher Rhodes. Beyond Seventh Street was quite unoccupied, and beyond this the great road leading westwardly out of the city commenced. There were but few main roads leading out of the city at that time,—Bellefontaine road, Franklin Avenue, Market Street, Seventh Street, extending to the Gravois road, and Second Street, over the bridge to Carondelet Avenue, which led to the Arsenal and Jefferson Barracks.

"The hotels in St. Louis were the following:

"1. City Hotel (now named Denver House), on the corner of Third and Vine Streets, was kept by Mr. King in the true Virginia style, and was considered a first-class house. This house has been subsequently enlarged, and under the management of Messrs. Barnum & Moreland it maintained its former reputation.

"2. Missouri Hotel, on the corner of Main and Oak (now called Morgan), which was also considered a first-class house, and kept by Mr. Conger. It still stands, and any one fond of the antique can gratify his taste by a look at this ruined old house.

"3. The Union Hotel, corner of Main and Green Streets, was a good house, well kept by Mr. Farish, and afterwards by Mr. Sparr, who was subsequently one of the lessees of the Lindell. This hotel was built in 1830 by Messrs. Scott & Rule, then prominent merchants of the city.

"4. Old Virginia, on the north side of Vine Street, between Main and Second Streets; kept by a Mr. King.

"5. Jefferson House, a small and more private hotel, corner of Main and Pine Streets, kept by Mr. Curtis.

"6. The National (now named St. Clair), corner of Third and Market Streets. This house was rebuilt and refurnished in 1837, and kept by Messrs. Stickney & Knight, who subsequently leased the Planters' House on its completion in 1841.

"7. The Green-Tree Tavern, on Second Street between Myrtle and Spruce. This tavern was the Bull's-Head of St. Louis, a noted resort for farmers and drovers, conducted by Warren Ayres, a great favorite both as a boniface and municipal politician. This house was destroyed by the great fire of 1849, but has been subsequently rebuilt, and still exists under the same name. The visitor of the present day to the public room of this tavern no longer hears the friendly chat of the children of La Belle France, for it is succeeded by those of the Teuton.

"The church buildings in St. Louis were the following:

"1. The Roman Catholic Cathedral, on Walnut Street between Second and Third, the largest church building in the city.

"2. The First Presbyterian Church, on the corner of Fourth and St. Charles, fronting the latter, and occupying the site of the present Philharmonic Building.

"3. Christ Church (Episcopal), on Chestnut Street, corner of Third, a small brick edifice with a cupola in the centre, and looking more like an academy than a church building.

"4. The First Methodist, on the corner of Fourth Street and Washington Avenue, was a very plain brick building, built in the style common to that denomination in their earlier days.

"5. African Baptist, on Almond Street between Fourth and Fifth Streets. The present building is the second built on the same ground.

"Besides the above, there were several other church congregations worshiping in halls, who had no buildings erected, viz.: Unitarian, or First Congregational, and Baptists."

CHAPTER IX.[1]

SPANISH DOMINION, AND "THE AFFAIR OF 1770."

"In the latter part of 1769, Louisiana was startled by a report that Spain was fitting out a large expedition for the forcible occupation of the province. The rumor was well founded. Spain, exasperated by the insurgent spirit which had so long prevented the exercise of its rights of sovereignty, determined to suppress resistance by force of arms. Again the inhabitants resolved to repel the establishment of Spanish power. But when Don Alexander O'Reilly, the newly-appointed commandant of Louisiana, appeared at New Orleans with three thousand troops, the magnitude of his force disheartened opposition. The hopelessness of the attempt alone prevented a recourse to violence. Submitting to a force which they could not resist, the people of Louisiana saw with feelings of unavailing indignation the landing of foreign troops and the establishment of Spanish supremacy. Irritated by an unfriendliness that had so long deferred the assertion of Spanish ascendency, and fully aware of the popular desire to subvert the newly-instituted government, O'Reilly determined to teach by an impressive example the dangers of disobedience to imperial authority. The foremost leaders of the opposition were arrested and tried by the summary process of a court-martial. Convicted of treason, some were immediately shot, and others were condemned to a life-long imprisonment in the dungeons of Cuba. This severity produced the expected result. The rigor of the new commandant awed the people into submission.

"Shortly after the occupation of New Orleans, Don Pedro Piernas was dispatched with a body of Spanish troops to take possession of Upper Louisiana.

"The time of his arrival in St. Louis is not definitely known, but it was probably early in the spring of 1770.[2] The colonists, intimidated by the stern discipline of O'Reilly, received the Lieutenant-Governor without any demonstrations of resistance. Piernas managed his delicate mission with rare tact. He did not at once enter upon the discharge of his official duties, but, living quietly in the hospitable home of Laclede, spent several months in cultivating friendly relations with the people, and familiarizing himself

[1] This chapter was prepared by Professor S. Waterhouse.

[2] "Mr. Chouteau states that Piernas came to St. Louis Nov. 29, 1770.—*Hunt's Minutes*, vol. i. p. 107. But Mr. Chouteau, too confidently relying upon his unaided memory, made a number of misstatements; this is one of them.

"The date of the first official act of Governor Piernas, recorded in the Archives, is May 20, 1770."

with the resources of his department. The result of his observations was highly gratifying to the Spanish magistrate. He found his province blessed with every bounty of nature. The surpassing beauty of scenery, richness of soil, and facilities for the transactions of commerce awakened well-grounded expectations of rapid development. St. Louis, enriched with the wealth of an extensive Indian trade, was actively prosperous. It had already grown from an insignificant trading-post to a village of about seven hundred inhabitants. At length, having obtained the objects of his delay, Piernas, on the 20th of May, 1770, took possession of Upper Louisiana, and assumed the functions of his magistracy.

"In laying out the village, with a wise provision for the spiritual needs of the colony, Liguest had reserved a block for religious use. On this site the first Catholic Church was erected in 1770. It stood on the west side of Second Street, between Market and Walnut. It was built of upright logs, and the crevices were plastered with clay. The completion of this rude edifice was celebrated with popular rejoicing. On the 24th of June, 1770, the church was dedicated by Father Gibault,[1] of Kaskeskia, with ceremonies of joyous solemnity.

"The new administration was a happy disappointment. The disaffection with which the French colonists had first regarded the Spanish Governor was soon converted into friendship. His kindly courtesy and wise regard for the interests of the settlements quickly won the confidence of the people. Availing himself of the fortunate similarity of French and Spanish laws, Governor Piernas instituted no radical innovations. The slight changes in legal requirements and methods of civil procedure scarcely reminded the colonists that they were under the sway of a foreign power. The Governor resorted to every honorable means of conciliation. He filled the minor offices of his government with Frenchmen. He conferred upon St. Ange the rank of captain of infantry in the Spanish service. The French tenure of lands was based upon an illegal grant. The insecurity of their property filled the colonists with alarm. They feared that they might be dispossessed of grounds to which they had no lawful claim. But Governor Piernas allayed their apprehensions by a public confirmation of all the land titles which St. Ange had granted. To define the bounds of real property and avoid litigation, the settlers solicited an official survey of land grants. The Governor promptly complied with the request of the petitioners, and appointed Martin M. Duralde, a Frenchman, to the surveyorship which he had created. The honors bestowed upon their countrymen and the practical benefits of the government fully reconciled the French settlers to their new allegiance.

"The Spanish force which then protected the post and upheld the majesty of the law numbered six officers and twenty men.

"On the 27th of December, 1774, St. Ange de Bellerive died at the house of Madame Chouteau. St. Ange had been successful in all the trusts confided to his charge. His direction of colonial affairs, though unwarranted by the forms of law, gave universal satisfaction. The voice of complaint, which is always prone to censure an authority exercised without legal right, never ventured to assail his administration of the public interests. His skill in business enabled St. Ange to amass an ample fortune. The influence of his genial character, passing beyond the bounds of his own race, conciliated alike the taciturn Indian and the haughty Englishman. A pleasant proof of his personal popularity is recorded in the early annals.

"When Capt. Sterling died at Fort de Chartres in January, 1766, the residents of the place invited St. Ange to come over and take charge of the post until Capt. Sterling's successor should arrive. In compliance with a request so fraught with confidence, St. Ange went to Fort de Chartres, and held command until relieved by the arrival of Maj. Frazer from Fort Pitt.[2] In 1775, St. Ange died at the ripe age of seventy-six years, and was buried with public honors in the graveyard adjoining the Catholic Church.

"The wife of Governor Piernas was a Frenchwoman. This alliance greatly strengthened the friendship which his liberal policy had first inspired. His dignity of manner was agreeable to the French, but distasteful to the Indians. An Osage chief, mistaking his reserve, so different from the affability of the French, as an evidence of personal dislike, resolved to kill him in revenge for the fancied insult; but while intoxicated he betrayed his murderous secret to a Shawnee Indian, who prevented the assassination by slaying the intended assassin.

"It was during the term of Governor Piernas that some of the traders of St. Louis began to derive large profits from dishonorable sources. The Floridas had been ceded to England by the treaty of 1763. The loss of its fair provinces filled Spain with humiliation and resentment. In retaliation for what was deemed an act of rapacity, the Spanish government adopted

[1] "Pierre Gibault, 'Vicar-General of the Bishop of Quebec in Illinois and the adjacent countries.'"

[2] "Monette's Hist. Mississippi Valley, vol. i. p. 411. Reynolds' My Own Times, p. 50."

a policy hostile to the commercial interests of Great Britain. The duties which it levied on English imports were almost prohibitive. Some of the St. Louis dealers evaded the oppressive imposts by systematic smuggling. The transactions of this clandestine trade enriched many of the colonial merchants. In May, 1775, Piernas was superseded by Don Francisco Cruzat. The impulses of a kindly nature, not less than the dictates of political discretion, induced Cruzat to follow the liberal policy of his predecessor. His genial fellowship endeared him to a people fond of social enjoyment. The French could not help liking a magistrate so friendly to their pleasures and interests. At this time the Atlantic colonies were agitated by the commotions that attended the outbreak of the American Revolution. But the turbulence of the sea-board did not disturb the little village on the bank of the Mississippi. Careless of ambitious achievement and happy in its exemption from scenes of strife, the hamlet pursued its round of humble toil and simple pleasure. But the revolt of the American colonies, while it did not disquiet the tranquil life of St. Louis, involved the nations of Europe in fresh dissensions. After the outbreak of hostilities it was rumored that England, in retaliation for the unfriendliness of Spain, was secretly instigating the Canadian Indians to an assault upon the Spanish settlements in America. Alarmed for the safety of St. Louis, which, in the event of an invasion from the north, would be the first point of attack, Cruzat began to mature a system of fortification, but before he attempted to carry his plans into effect he was removed from office.

The popular regret at the departure of Governor Cruzat was deepened by the character of his successor. Don Fernando de Leyba came into power in 1778. He was singularly deficient in the qualities which command political success. Devoid of tact and discretion, reputedly penurious and intemperate, he was subjected to an ordeal which conspicuously exposed his weaknesses. The difficulties which beset his administration were such as none of his predecessors had ever encountered. Doubtless his personal unpopularity led the people to magnify his faults. Public suspicion seems to be the only ground for many of the charges against De Leyba. But, in the absence of proof, the repetitions of tradition cannot invest these apparent fictions with a title to a place in authentic history.

"Shortly after De Leyba's accession to office the father of the colony died.

"Pierre Laclede Liguest came to New Orleans from Bion, in Southern France. His personal appearance was striking. An erect figure, somewhat above the ordinary stature of Frenchmen, a dark, olive complexion, a broad forehead, a prominent nose, and penetrating black eyes were the physical traits of the founder of St. Louis. Endowed with a restless nature, Laclede could not be content with the uneventful life of an obscure French province. A longing for a career of adventure and an ambition to found a French colony in the domain of Louisiana were the supreme motives that impelled Liguest to seek his fortunes in the New World. At his solicitation, a number of his countrymen accompanied him to America for the express purpose of establishing a new settlement. History records few examples of a more complete realization of ambitious hopes. From the very nature of the case, but few men through the lapse of centuries have enjoyed an exclusive privilege of founding great cities. Laclede must have derived an incidental advantage from the place of his birth. Reared at the foot of the Pyrenees, he could scarcely have grown to manhood on the very borders of Spain without acquiring a familiarity with the language of Castile. In Louisiana, under the Spanish rule, this accomplishment was doubtless of practical service to Laclede in the conduct of his business. Liguest occupies but little space in the political history of the colony which he founded, for the reason that he devoted himself exclusively to commercial pursuits. His charter guaranteed to him a monopoly of the Indian trade for eight years. The ample fortune which Laclede left seems to warrant the inference that he exercised his exclusive rights for the full term of the royal privilege.

"After the death of Liguest it was found that his estate was somewhat encumbered with debt. The largest claims were preferred by his partner, Maxent, to satisfy the rights of creditors. The estate was in 1779 sold at auction. The sum realized from the public sale was far less than the value of the property. The whole block which in later years became successively the site of the Chouteau mansion and of Barnum's Hotel was sold to Auguste Chouteau for three thousand dollars. As the limited wealth of the colony did not permit an active competition, the greater part of the estate passed into the hands of Antoine Maxent for a fraction of its real worth.[1]

"Smitten with the fatal illness while coming up from New Orleans, he was carried to the military post near the mouth of the Arkansas, where he died

[1] "This statement is confirmed by the personal assurance of Gabriel S. Chouteau. Auguste Chouteau got the 'saw-mills,' and Madame Chouteau the 'farm' of Laclede.—*Archives*, 1779."

June 20, 1778,[1] at the age of fifty-four. His remains were buried in the wilderness on the south bank of the Arkansas River. In a few years every vestige of the grave was obliterated, and now the city which would gratefully erect a monument in honor of its founder will search in vain for the place of his burial.

"There is a tradition that in 1779 the colony was disquieted by rumors of a contemplated attack by the Indians. The report, which is unsustained by any documentary evidence, contradicts every probability. It is not likely that the Indians, without the instigation of the English, would plan an incursion against a village with which they had always been on friendly terms. But the Canadian English had then no motive for an expedition against St. Louis. Ignorant of the outbreak of hostilities between Spain and England, they would never have ventured to incite the savages to assail the subjects of a power which they still believed to be friendly. The intelligence that Spain had resorted to arms was communicated by George III. to the British Parliament, June 16, 1779. But in those days of slow transmission the news could not have crossed the Atlantic and reached the far distant frontier posts of the Northwest in season for the organization of an expedition before the close of 1779. After the tidings of the war with Spain had arrived, months must have elapsed before the Indian tribes could have been mustered and tardy rumor could carry to remote St. Louis the news of the intended irruption. Besides, so long a march in the depth of winter could never have been contemplated. In 1781, Charles Gratiot, who had recently removed from Cahokia to St. Louis, testified that in the month of March, 1780, he was absolutely ignorant of the declaration of war between Spain and England.[2] If a man of intelligence and inquiry had not heard of so important an event, it is fair to assume that the news of the rupture had not then reached the settlements of Upper Louisiana. Therefore, the inhabitants of St. Louis, ignorant of any cause for hostility, could have entertained no apprehensions of an inroad by a power with which they supposed their sovereign was still at peace.

"Consequently, the tradition which describes the alarm of 1779 may be discarded as destitute of authentic foundation.

"But in the spring of 1780 the people of Cahokia were startled by the intelligence—seemingly well founded—that the English at the North were fitting out an Indian expedition for the recapture of their village. The prospect of an incursion of savages excited profound alarm. The danger appeared imminent.[3] In this instance—unlike that of St. Louis in

[1] "Hunt's Minutes, vol. i. p. 107."

[2] "In the early part of March, 1780, Charles Gratiot, then a resident of Cahokia, sent a barge loaded with goods and provisions to Prairie du Chien for the purpose of trade; but thirty miles below its destination the barge was captured and pillaged by a party of English and Indians. In the suit which in 1781 the boatmen brought for their wages, a charge of collusion with a public enemy was preferred against Mr. Gratiot. In his written defense before Governor Cruzat, Mr. Gratiot says,—

"'Ainsi que le séjour souffert dans ce village de M. St. Paul Lacroix, commerceant de Michilimakinac, qui y étoit venu chercher des vivres, et que le gouvernement lui a permis d'emporter, et cela un mois après le départ de ma berge; *ce qui fesoit donc que nous ignorions absolument la déclaration de la guerre entre l'Espagne et l'Angleterre.*

"'Mon but dans cette expédition n'a été que de faire un commerce que j'avois coutume de faire tous les ans, . . . et non pour aller livrer à nos ennemis (*que j'ignorois pour lors*) des vivres.' July 12, 1781.

"In 1780, Mr. Gratiot, then living in Cahokia, brought an action against Mr. Charles Sanguinet, of St. Louis, for the recovery of some goods which the plaintiff had temporarily placed in the hands of the defendant for safe-keeping. The original papers in both these suits are now in the possession of Mr. F. L. Billon, of St. Louis. The kindness of Mr. Billon has permitted an unrestricted use of these important documents. The present version of the affair of 1780 is mainly based upon the testimony in these cases.

[3] "The papers in the lawsuits that have been mentioned contain frequent allusions to the troubled state of public feeling:

. . . "'Qu'à l'instigation des habitans des Cahos s'étant transporté auprès du Col. Clark pour solliciter auprès de lui un prompt secours contre les incursions des sauvages dont on étoit menacé.'—*Plaintiff in the suit of Gratiot vs. Sanguinet*, May 8, 1780.

"'Le Sieur Grassiot avant son départ pour aller trouver le Col. Clark lui fit dire par son commis de recevoir ces marchandises chez lui en cautionnement de ce qu'il lui devoit dans la crainte de quelques accidents—ce qui le suppliant a accepté volontairement, rapport au tems critique où nous nous trouvons.'—*Defendant in the suit of Gratiot vs. Sanguinet*, May 10, 1780.

"'D'autant qu'il est demeurant sur une rive étrangère et que dans les circonstances présentes son commerce peut se trouver altéré par l'évènement de la guerre dont on est menacé.'—*Ibid.*, May 10, 1780.

"'Qu'il n'avoit mis ces marchandises lui déposant que comme un dépôt dans la crainte qu'elle ne fussent pillée aux Cahos par les sauvages pendant l'absence de Sieur Grassiot.'—*Testimony of François Duchenau in the same suit*, May 11, 1780.

"'En l'absence du suppliant qu'au cas de malheur auquel l'on a été tous les jours menacé sur notre rive, et par le voyage qu'il étoit obligé de faire auprès du Col. Clark, à la réquisition des habitans.'—*Charles Gratiot, Ibid.*, May 12, 1780.

"'Ou d'autres évènemens fâcheux dans le tems critique où nous étions . . . ce n'étoit que pour chercher les sauver des évènemens auquel l'on s'attendoit tous les jours.'—*Ibid.*

"'Mais dans la position où ce pays se trouve, la fortune change d'un jour à l'autre.'—*Charles Sanguinet, Ibid.*, May 20, 1780.

"'De plus s'il fusse vrai que j'eusse eu quelques intelligences secrettes avec les Anglais, nos ennemis, et que j'eusse conspiré à la perte du pays des Illinois tel que mes accusateurs le prétendent par le secours qu'ils ont eu dans ma berge. . . . aurois-je sacrifié mes propres intérêts en laissant mes affaires

1779—there was ground for hostility and a motive for invasion. The American colonies were now fighting the battles that led to their independence. In 1778, Col. Clark had, with distinguished gallantry and without the effusion of a drop of blood, taken possession of Kaskaskia and Cahokia. It was but natural that the British, humiliated by these disasters and fearing a permanent loss of their possessions in the Mississippi valley, should attempt to regain the captured posts. Cahokia, being farther north than Kaskaskia, would be the first point of attack. It was then defenseless. Col. Clark, who presumably would be anxious to hold the place he had taken, was at that time absent. He was at the 'Iron Banks,' on the Mississippi, below the mouth of the Ohio (the site of Fort Jefferson).[1] Impelled by a sense of public danger and the urgency of immediate preparations for defense, the people of Cahokia called a meeting to concert measures for the safety of the village. It was resolved to send for Col. Clark, and employ his skill to provide the means of security. Charles Gratiot, an intelligent young merchant of Cahokia, and a warm personal friend of Col. Clark, was selected for this perilous service. He accepted the mission, ventured down the Mississippi, and succeeded in finding Col. Clark. This officer at once returned to Cahokia, and took effective steps for the defense of the village. These measures, inspiring a confidence in the means of self-protection, allayed the fears of the inhabitants.

"No early records give an account of the expedition of 1780. A mysterious silence keeps the secrets of history. In the absence of documentary description the narrator must trust mainly to the guidance of circumstantial evidence.

"In 1780, Detroit was the most important British military station in the Northwest. This fact would seem to warrant the belief that the invasion of the Illinois settlements was planned at that post. But the assumption, however plausible, is scarcely tenable. Detroit, weakened by the withdrawal of the troops with which Governor Hamilton took Vincennes, could hardly have spared any of its regular soldiers for a remote expedition. When, in 1779, Col. Clark recaptured Vincennes, the seventy-nine men who capitulated were sent as prisoners of war to Virginia. Consequently the fort at Detroit was not strengthened by the return of its former defenders. After the surrender of Fort Sackville, Detroit, guarded by only eighty men, many of whom were disabled by wounds and sickness, was itself in danger. Col. Clark was then urgently soliciting reinforcements for the express purpose of effecting its capture.[2] In this critical condition of weakness and peril, a further reduction of its garrison would have been an act of great military imprudence. The probability that there were no regular soldiers in the invading force borders upon certainty. Of every expedition that was conducted by British commanders the official dispatches give some account; but no military report contains a line of allusion to this incursion. The inference, therefore, that this movement was not under command of British officers, but of irresponsible adventurers and partisans, seems to be unavoidable. This view is corroborated by the declarations of the plaintiffs in the suit of the boatmen against Mr. Gratiot. The claimants state that upon their arrival at Rock Island their leader met a certain Calvé, one of the partisans who levied the Indian forces for an attack upon St. Louis.[3] At Turkey River, thirty miles below Prairie du Chien, Mr. Gratiot's barge was seized and plundered by a band of savages under English leadership. The crew were taken prisoners and carried to Mackinaw.[4]

à l'abandon pour donner un secours que j'ose dire et selon l'avis de tout le monde que sans cela le village des Cahos étoit perdu et auroit probablement entraîné la perte de tout le pays?'—*Defendant in the suit of the Boatmen vs. Charles Gratiot*, July 12, 1781.

"Ce Cardinal qui s'est exposé au plus dur châtiment de la part de nos ennemis, pour avoir voulu détourner les parties sauvages de venir en guerre contre nous,' etc.—*Ibid.*

"With two exceptions, these statements are taken from legal documents that were drawn up before the attack of May 26, 1780. The extracts clearly reveal the feverish disquiet of the public mind. The passages elsewhere cited from the papers in the suit of the Boatmen *vs.* Gratiot also disclose the same state of popular apprehension."

[1] "Aurois-je . . . party immédiatement . . . pour la mine de fer où étoit alors le tien. Clark? . . . Aurois-je abandonné ma maison, mes affaires, exposer ma vie le long du Mississippy?' etc.—*Defense of Mr. Gratiot in the Boatmen's suit*, July 12, 1781.

[2] "M. Butler's History of the Commonwealth of Kentucky, p. 87 (edition of 1834)."

[3] "'Puisque entrant dans l'île de la rivière à La roche, le dit Cardinal . . . a recontré le nommé Calvé, *un des partisans* qui levait les nations pour venir frapper à St. Louis.'—*Plaintiff in the suit of the Boatmen vs. Gratiot*, June 8, 1781. In his reply, dated July 12, 1781, Mr. Gratiot, while partially quoting these words, makes a significant addition. He mentions 'un nommé Calvé, un des partisans *anglais*, qui levoit les nations.'"

[4] "'Et en étant à dix lieues plus bas, les suplians . . . se sont trouvés investés par l'armée anglaises et sauvages, qui les ont pillés jusqu' à leurs armes, et les ont fait prisonniers et conduit à Mic'Alimaquina.'—*Statement of the boatmen in their suit against Mr. Gratiot.*

"'La Berge a été saisie et pillée et les engagés (ont été) faits prisonniers de guerre à la rivière au Dinde, distance de dix lieues de la Prririe du Chien, et de là (ont été) conduit à Michilimakinac.'—*Defense of Mr. Gratiot*, July 12, 1781.

"'Avoir fait notre voyage jusqu' à la rivière au Dinde, distance de dix lieues de la Prairie du Chien, sans aucun accident

"It appears from the documents submitted to Governor Cruzat in the above-mentioned suit that the Indians who captured the barges were the same band that subsequently invaded the Illinois country. The plaintiffs assert that the pillage of the barge supplied the savages with the provisions without which it would have been impossible for them to reach St. Louis.[1] If this statement is true,[2] there can be no reasonable doubt that the assailants of St. Louis were the same Indians whom the partisan Calvé led. It is stated that after the attack of 1780 a tomahawk, inscribed with the name of Calvé, was found in the common fields northwest of St. Louis. Those who place any faith in tradition will find in this incident an additional confirmation of the foregoing view. Upon the well-grounded assumption that the captors of the barge and the invaders of St. Louis were the same band, then the expedition of 1780, wherever planned, must have set out from Mackinaw.[3] Mackinaw, though far inferior to Detroit in military importance, was the only considerable post in the extreme Northwest. It is clear that a force starting from Detroit would not come to St. Louis by way of Mackinaw, and it is equally evident that the marauders of Turkey river, having barely time for the direct march, would not invade the Illinois settlements by the circuitous route of Detroit. The capture of Mr. Gratiot's barge must have taken place in April,[4] and the interval between this event and the attack on the 26th of May was not sufficient to permit a useless détour of several hundred miles.

mais qu'aussitôt notre arrivée en cet endroit nous sommes vus entourés par une armée *tant anglaises que sauvages* qui nous ont pillé les effets de la ditte Berge, et nous ont fait prisonniers . . . que le dit Sieur Cardinal a été envoyé avec nous à Michilimakinac.'—*Testimony of J. A. Matthews*, July 30, 1781."

[1] "'Lesquels vivres, effets, et munitions ont été la seule ressource de l'armée qui est venu frapper à St. Louis qui sans cette approvisionnement était hors d'état d'arriver à St. Louis.'—*Statement of the Prosecution in the Boatmen's suit*, June 8, 1781."

[2] "With a single exception, where there was a selfish motive for misrepresentation, the statements of the plaintiffs seem to be entirely trustworthy. The captain of the barge was John B. Cardinal, and the crew consisted of Peter Lafleur, John M. Durand, Francis Chevallier, Louis Lamarche, and J. A. Matthews. The suit was instituted by Lafleur, Durand, and Chevallier. Lamarche and Matthews did not join in the action. A charge of having had treasonable intercourse with the enemy was brought by the claimants against Mr. Gratiot. This accusation, prompted probably by personal resentment, was subsequently retracted. Betrayed by vindictive feeling, the boatmen misrepresented a business affair that materially affected their own interests; but their account of events, independent of commercial transactions, appears to be fully entitled to credence.

"Their statements are confirmed rather than controverted by the testimony of the other witnesses."

[3] "In his little 'History of Illinois,' p. 99, John Reynolds asserts positively that the expedition was planned at Mackinaw. He gives a very plausible account of its origin. In 1779, Dominique Ducharme, a Canadian trader, bought some goods at Mackinaw, and carried them up the Missouri for the purpose of selling them to the Indians. This trespass upon the commercial rights of Spain the authorities at St. Louis arrested by the seizure and confiscation of the goods. The intruder barely escaped with his life. Full of vindictive indignation at the Spaniards who had despoiled him of his property, he returned to Mackinaw and spent the winter in unremitting efforts to rouse the savages to hostilities against the Spanish settlement. His crafty appeals to the cupidity and warlike passions of the Indians were successful. Enticed by promises of pay and prospects of plunder, the band set forth on their murderous mission. The guides were Canadian Frenchmen, who, through motives of revenge or greed for British gold, were willing to betray their countrymen into the hands of ruthless savages.

"All the traditions of 1780 concur in stating that Ducharme was seen in the neighborhood at the time of the attack. He may have been one of the partisans who acted in conjunction with Calvé.

"As Ducharme began to recruit Indian warriors in 1779, he must have pretended that the object of his invasion was the recapture of Cahokia, for surely the British authorities at Mackinaw, not yet having learned that the king of Spain was a public enemy, would not have allowed him to make war on the subjects of a government with which they supposed that the relations of England were still amicable. Mr. Reynolds does not cite any documents in proof of his account, but if his story is true it affords a possible elucidation of some obscure points. Prior to May 26, 1780, no document refers to any project of an incursion against St. Louis. The repossession of Cahokia was stated to be the sole object of the intended inroad. It was not till 1781 that the records give any intimation of an original purpose to attack St. Louis. Possibly this subsequent announcement of a hostile design resembles the Irish prophecy, in which the event preceded the prediction. It seems strange that the Indians should come so far with the avowed intention of capturing Cahokia, and then not even make a demonstration against the place. But Mr. Reynolds' account affords a simple explanation. The British at Mackinaw would readily sanction an expedition whose ostensible aim was to retake Cahokia from the Americans. A nephew of Calvé lived in St. Louis, and a brother of Ducharme dwelt in Cahokia. The partisans had often visited their kinsmen. They knew the way, and could easily guide the Indians whom they had raised. If revenge was Ducharme's real motive, the capture of Cahokia was merely the pretext by which he secured the approval of the English authorities and the co-operation of his savage allies. Having no ill-will against the people of Cahokia, many of whom were personal friends, he would gladly avail himself of the completeness of their defensive preparations as an excuse for not attacking them. He then proceeded to carry out the secret object of his expedition. Leading his dusky warriors to the west bank of the Mississippi, he sated his vengeance by the slaughter of the unoffending farmers and then withdrew.

"But unless new documents are found, the authenticity of Mr. Reynolds' story will always remain a matter of doubt."

[4] "The distance by river from St. Louis to Prairie du Chien is five hundred and thirty-six miles. Against the current a heavily-laden barge could hardly make a daily progress of more than fifteen miles. At this rate it took about five weeks to make the voyage. The barge started from St. Louis early in March."

"After his capture Cardinal attempted to dissuade the Indians from their contemplated inroad against the Illinois colonies. For this offense he was severely punished. Sent in irons to Mackinaw, and thence to Montreal, he was treated during his whole captivity with unrelenting rigor.[1]

"This severity reveals the embittered earnestness[2] of the British partisans and their exasperation at any effort to frustrate their projected invasion.

"In his endeavors to divert the Indians from the proposed hostilities, Cardinal would naturally address his remonstrances to their principal sachem. This was Matchikiwis,[3] a chief of the Chippeway tribe. But the Chippeways lived in Upper Wisconsin. From this it is evident that the Indians whom Calvé summoned to the expedition of 1780 came from their northern haunts to Mackinaw, crossed over to Prairie du Chien, and then marched directly down the Mississippi valley.

"The statement of the boatmen that the supplies derived from the captured barge were the main support of the Indians on their march from Turkey River to St. Louis has been already quoted. If game was abundant, these provisions were not necessary; if game was scarce,—as the need of additional subsistence implies,—then the band of invaders was not numerous.[4] One small boat, heavily laden with merchandise, could not carry food enough to maintain many warriors on so long a march. The probability that the number of savages was not large is strengthened by the ultimate events of the expedition.

"Cahokia was then a very small village. In 1783 the number of male householders was eighty-one, and some of these were disqualified for military service. Cahokia was one of the main objects of the invasion. Assuredly a large force, which had marched hundreds of miles for the express purpose of recapturing the place, would not have been disheartened by so small an array of defenders. But there is not a single sentence in the public records or private correspondence of Cahokia to show that the main body of Indians ever came in sight of the village. It is, therefore, just to infer that the small band of warriors, informed by their spies of the defensive measures which Col. Clark had taken, and distrusting their ability to capture a place which they could not surprise, desisted from their intended attack. The subsequent movements of the savages are unknown. The lack of records leaves the historian chiefly to the guidance of probability. It is likely that the main body disbanded and retreated to the North, for the same reasons which induced the leaders to refrain from an attack upon Cahokia would also persuade them to relinquish an assault upon St. Louis. They must have presumed that places so near each other were alike apprised of their incursion and equally prepared for defense. But it is certain that some of the Indians, allured probably by hopes of pillage, lingered on the eastern bank in the neighborhood of St. Louis.

"In the mean time, the people of St. Louis, unsuspicious of peril, were indulging in careless gayety. Negligence supplanted vigilance. It has been stated, upon the uncertain authority of tradition, that on the evening of the 25th of May the colonists were warned of their danger. According to rumor, a French guide named Quenelle, informed his brother, who was living in St. Louis, of the intended attack. But, engaged in festive enjoyments and heedless of their impending fate, both Governor De Leyba and the people discredited the report and took no precautions for the public defense. Their want of vigilance exposed them to a surprise which might have proved fatal to the life of the colony. It was very fortunate for the village that the attack did not occur twenty-four hours earlier. The 25th of May was a Catholic holiday. It was the festival of Corpus Christi. The day was spent in religious devotions and social festivities. In the afternoon many of the inhabitants went out into the fields to pick strawberries. Had the attack been made at this time, when the people were engaged in their holiday diversions, it might perhaps have resulted in the

[1] "'N'ayant point la liberté de voir et parler au Sieur Cardinal, notre conducteur, j'appris qu'il avoit été fort maltraité et mis en fer pour avoir parlé aux sauvages, et les avoir détourné de venir en guerre aux Illinois—que le dit Sieur Cardinal a été envoyé avec nous à Michilimakinac et qu'à son arrivée ainsi que pendant le tems qu'il y a été détenu, il a resté dans les fers jusqu'à son départ pour Montréal où il a été envoyé.'—*Testimony of J. A. Matthews in the suit of the Boatmen vs. Gratiot*, July 30, 1781."

[2] "It appears that the sentiment of hostility to the Spaniards and Americans was so strong as to repress the exercise of common charity towards the prisoners of war. 'Croyant que ce Monsieur n'aura aucune eu demander le payement crainte d'être subsonné d'intelligence avec Messieurs les Espagnols et Amériquains, comme nous avons vu nombre de personnes charitable qui auroient chercher à adoucir notre captivité, mais qui n'ausoient crainte de donner des soupçons qui auroient pu leur faire tort sous le governement Brittanique.'—*J. A. Matthews in the suit of Boatmen vs. Gratiot*, July 30, 1781."

[3] "'Car s'il fut vrai que le dit Jean Bapte Cardinal eut reçu de ma part des ordres précises de livrer la dite Berge pour seconder les efforts de nos ennemis, auroit-il publiquement fait des reproches a Mr. Gauthier et ses partisans, les eut-il défié au combat, auroit-il détourné Matchikiwis, *chef de la nation Santeuse* du party royaliste.'—*Defendant in suit of the Boatmen vs. Gratiot*, July 12, 1781."

[4] "In the legal documents above mentioned this body of Indians is styled 'l'armée.' But the phrase conveys no definite indication of numbers. In those days a force of less than one company was sometimes called an army."

capture of St. Louis and the slaughter of its inhabitants.

"Fatigued with the late pleasures of the preceding evening, the merry villagers did not rise early on the morning of the 26th, and but few of the farmers went to work in their fields. The inactivity resulting from the festival probably saved the lives of many Frenchmen. The Indians, who during the 25th had been lurking in the woods of what is now East St. Louis, crossed the Mississippi before dawn on the 26th, and landed near the site of the present water-works. Assuming that most of the able-bodied men would be engaged at this season of the year in cultivating their crops, the savages made a détour, so as to surprise the farmers at their work and deprive the village of its strongest defenders. Stealthily advancing by way of the fair-grounds, the Indians at length came in sight of their victims and rushed to the attack. Five of the unarmed husbandmen were slain, and another, severely wounded, crept into the adjoining underwood and there perished of exhaustion; but the rest of the wounded, aided by their companions, managed to save their lives by flight. If the Indians contemplated the seizure of St. Louis, it must have been their purpose to kill the unprotected farmers in their fields and then capture the village, which they had already stripped of its defenders. But, disappointed in their expectation of finding many laborers at work on their lands, and well aware that the inhabitants, informed of their approach by the fugitive husbandmen, would rush to arms in the defense of their homes, the savages abandoned their intended assault and retired. Mercilessly slaughtering helpless husbandmen, they shrank from an encounter with an alert and armed foe. That no attack was made upon the village itself is evident from the fact that nobody was killed in its immediate neighborhood. The farmers were slain at distances varying from one to five miles from St. Louis.[1] Not even tradition, with all its careless exaggerations of fact, has ventured to assert that a single Indian was killed. This exemption of the savages from the fatalities incident to battle conclusively shows that their assault was limited to the massacre of unarmed men. If the Indians had approached the line of the defenders, their ranks would have been thinned by volleys of musketry. That they should actually have attacked the village and yet have finally retreated without the loss of a single warrior is supremely improbable. Seemingly nothing but the self-distrust of the assailants saved St. Louis from capture. On the 26th of May, 1780, there were ninety-seven male householders in St. Louis. Doubtless there were other residents who, having no families of their own, were inmates of these households. But usually many of the colonists, engaged in hunting, boating, or trading with the Indians, were absent from home in the service of their callings, and others, in consequence of sickness or age, were incapable of bearing arms. At the time of the attack the number of effective men could not have reached one hundred, and even this small force was scattered along an extended line of defense. Weakened by dispersion, it could not have repelled a concentrated assault. Therefore, if timidity had not prevented the onset, the Indians would in all probability have captured St. Louis.

"For days after the attack the inhabitants stood in momentary expectation of its renewal. The men did not venture beyond the limits of the stockade, while the women and children, deserting their defenseless cabins, took refuge in the fortified inclosures of Auguste and Pierre Chouteau. But their immunity from attack soon convinced the people of the final withdrawal of the savages, and permitted them without further apprehension to resume their wonted occupations.

"It is said that the Indians gratified their cruel instincts by mutilation of the dead and inhumanity to the few captives whom they took in the neighborhood of the American and Spanish settlements. The prisoners were carried north, and subjected to all the horrors of an Indian captivity. Half starved and half naked even during the inclemency of a northern winter, they were scourged to the menial service of their barbarous captors; but the peace of 1783 restored them to liberty. After their release they returned in safety to the homes which the hardships of their bondage had doubly endeared to them.

"In commemoration of the Indian attack the old French colonists always called 1780 the year of the massacre. It was a date of tragic prominence in the history of the colony.

"Governor De Leyba survived the humiliation of that eventful day only one month. He was buried in the little log church on the 28th of June, 1780. It was thought that his death was hastened by dissipation and remorse.

"The memory of Governor De Leyba has been covered with unmerited obloquy. His decisions, recorded in the Archives, show that he was a man of clear intelligence, business knowledge, and sound judgment. His insight into the principles of law, and his impartiality in the administration of justice, are unmistakable evidences of high qualities. Possi-

[1] "Hunt's Minutes, vol. ii. p. 56; Commissioners' Minutes, vol. vii. p. 43."

bly something of his unpopularity may have been due to the indiscretions into which his alleged habits of self-indulgence betrayed him. The gravest fault of his official career was his neglect to fortify St. Louis. It appears from the testimony of Mr. Gratiot[1] that Governor De Leyba was aware of the impending danger. In view of this fact, his remissness to prepare for defense was a culpable negligence of duty. But at the time of the massacre even the people themselves believed that the danger was past. If they were still anticipating an attack, they would hardly have neglected every precaution for their personal safety and have gone unarmed to their distant fields. However censurable may have been the Governor's failure to provide adequate means of defense, it seems scarcely just, at this juncture, to reproach him for entertaining a belief that was common to all the inhabitants of the village. Exasperated at the loss of their relatives, the people, with genuine French impulsiveness, not only ascribed the massacre to the criminal misconduct of their Governor, but also imputed to him many offenses and indiscretions of which there is not the slightest evidence that he was guilty. This narrative offers no palliation for the known faults of Governor De Leyba, but simply seeks to perform an act of tardy justice in vindicating his character from undeserved opprobrium.

"The next incumbent of the executive office was Silvio Francisco Cartabona, lieutenant of the Spanish troops. He served as acting Governor until the arrival of Cruzat, who had been reappointed Lieutenant-Governor of Upper Louisiana. The tragic experiences of 1780 forcibly admonished the colonists of the insecurity of their unfortified village. Cruzat signalized his second administration by the erection of a strong system of defenses. The details of this fortification have been given in another place.

"The life of the colony was never again imperiled by an attack of the Indians. Other villages in the West were afterwards assailed, but St. Louis was happily exempt from further molestation. The construction of fortifications probably obviated a necessity for their use. The strength of the works discouraged the hope of a successful assault.

"The peaceful Frenchmen never disturbed the social order of St. Louis by acts of bloodshed, but during the second term of Cruzat a Spanish soldier, in a moment of passion, killed one of his companions. The crime enjoys a unique distinction. It was the only murder ever committed in St. Louis during the whole period of French and Spanish rule.

"In June, 1785, a great flood inundated the Mississippi valley.[2] On the alluvial lands grain-fields were submerged, cattle drowned, and cabins overturned. In some instances the inhabitants, surprised by the sudden rise of the waters, were rescued through the second-story windows of their dwellings. Cahokia and Kaskaskia were islands in a wide waste of waters. Opposite St. Louis, the overflow extended to the far-distant highlands. An eminence of thirty or forty feet above the ordinary stage of water seemed to guarantee to St. Louis an immunity from harm; but when the flood rose in places above the crest of the bluff and began to invade their dwellings the terror of the people became extreme. Apparently their homes had escaped destruction at the hands of the Indians only to be swept away by a resistless rush of waters. The steady rise of the river threatened imminent ruin. But when the inhabitants were preparing to forsake their cottages and remove their household property to the security of the higher ground in the rear of the village, the subsidence of the flood allayed their anxiety for the safety of their dwellings. Tradition claims that, with the single exception of the high water of 1844, this was the greatest deluge that ever inundated the Mississippi valley. The French, who were fond of associating important events with the date of their occurrence, always called 1785 the year of the flood.

"In 1787 the band of pirates which for years had infested the Mississippi River was dispersed. Grand Tower and Cottonwood Creek were the principal rendezvous of the robbers. The names of the leaders were Culbert and Magilvray. The gang was composed of the most vicious elements of every nationality.

[1] "'Aurois-je aussi tel que nous avons eu des nouvelles de l'armée Anglaise et sauvages qui venoit en guerre contre nous party immédiatement à solicitation de Monsieur De Leiba, ainsi qu' à celles des habitans des Cahos, pour la mine de fer où étoit alors le Général Clark à fin de lui exposer le danger où étoit alors le pays, le besoin qu'il y avoit qu'il vint à envoyer de prompt secours et combien sa présence seroit nécessaire pour opposer la force à de tels assacins.'—*Testimony of the Defendant in the suit of the Boatmen vs. Gratiot*, July 12, 1781.

[2] "'The Mississippi rose twenty feet above the highest known water-marks. 'This deponent went in a boat, for the purpose of procuring plank, from St. Louis, through the woods growing in the American Bottom, to Kaskaskia. This was in April, 1785.'—*Auguste Chouteau*, April 18, 1825: *Hunt's Minutes*, vol. i. page 107.

"'The following year after the commencement of the new village (Ste. Genevieve) was "l'année de grandes eaux." The old village was overflowed so as to be on the top of the houses. A boat by Mr. Chouteau arrived at this time, and they made the boat fast to the top of one of the chimneys, and dined on the roof of the house of old André. In the big field the water was in many places ten to fifteen feet deep.'—*Julien Labrière*, Oct. 22, 1825: *Hunt's Minutes*, vol. ii. page 225."

Outcast whites, half breed Indians, and negro desperadoes were members of the league of bandits. To systematic piracy they added frequent murder. They were numerous, well armed, and fully organized. No single boat could repel their attack. Only a fleet of boats could defeat such veterans in the service of rapine. Their murderous rapacity had long since demanded the extinction of this band of brigands. Their very existence was a reproach to the Spanish government. But every effort to suppress them had thus far been ineffectual. At length the Governor-General, alarmed by the frequent loss of life and property, forbade the navigation of the Mississippi by single boats. For the sake of the mutual protection which this order contemplated, in the spring of 1787, ten keel-boats, fully armed and strongly manned, set out from New Orleans for St. Louis. At Grand Tower the crews landed and advanced to the attack. But the robbers, unwilling to encounter an equal force, or to confront the fate which, if taken prisoners, they would be sure to suffer, saved themselves by flight; but their lair, stored with provisions, arms, ammunition, and merchandise, was captured. These goods, the rich booty of successful piracy, were restored to their rightful owners. The dispersion of these robbers freed the commerce of the Mississippi from further depredations. In French traditions the year 1787 was always associated with the arrival of the ten boats.

"On the 25th of November, 1787,[1] Don Manuel Perez succeeded Cruzat in the administration of the government. His affable manners and genial sociability soon won the regard of his subjects. He was very adroit in his management of the Indians. The spirit of some of the neighboring tribes was not wholly friendly. If a white man ventured alone into the solitudes, his life often paid the penalty of his hardihood. Bands of savages, too cowardly for open attack, prowled in the vicinity of St. Louis, and killed or carried into captivity unwary wanderers. The Osage Indians manifested their unfriendliness by numerous acts of rapine and violence. To guard against these predatory incursions, Governor Perez conceived the ingenious policy of interposing friendly Indians between St. Louis and the hostile tribes. The Delaware and Shawnee Indians were then living under British dominion in the region east of St. Louis. To these tribes Governor Perez sent Louis Lorimier, subsequently the commander of the military post at Ste. Genevieve, with overtures of an alliance and offers of large land grants, if they would remove to the west side of the Mississippi. Many of these brave warriors accepted the terms, and, settling in the neighborhood of Cape Girardeau, became stanch allies of the colonists, and a powerful defense against the depredations of the Missouri tribes.[2] For his success in the conduct of these negotiations, M. Lorimier was rewarded with a grant of thirty thousand acres of land.

"During the administration of Perez, Spain and the United States became involved in a misunderstanding that threatened a rupture of their peaceful relations. Spain claimed that the treaty of cession invested the Spanish government with an absolute jurisdiction over the waters of the Mississippi River. The United States strenuously resisted the pretension. The adjustment of this question of commercial rights involved momentous interests. The Mississippi River had already become an important factor in the movement of commodities. The surplus grain and other products of the Ohio valley were carried to market by way of the Mississippi. The West, determined that no foreign power should ever subject this growing commerce to its vexatious imposts, resolved to maintain the freedom of the river by force of arms. But Spain was not idle. Spanish emissaries were actively fomenting dissensions throughout the Western States. Instigated by Spanish promises of emolument and honor, politicians and officers in the military service of the United States were engaged in disloyal intrigues with the court of Spain. It was the aim of these conspiracies to sever the Western States from the Union, and form a new confederacy under the protectorate of Spain. Cannon were planted on the banks of the Mississippi, and both governments were preparing for hostilities. But finally the arts of diplomacy averted the shock of arms, and Spain amicably surrendered its claim to the exclusive navigation of the Mississippi. The treaty of 1795 settled the boundaries between the United States and Spain, and secured to both nations the right of free navigation upon the waters of the Mississippi. But the controversy perceptibly affected the fortunes of Upper Louisiana. The population of the province increased slowly. Governor Perez invited immigration by generous concessions of land. But Americans, lately freed from British thraldom,

[1] "Attested by his signature in the Archives."

[2] "'At the request of the Spanish government, Lorimier brought a number of Shawnee and Delaware Indians to settle in the vicinity of Cape Girardeau, and they served as a guard to the country against the depredations committed by the Osages; the Shawnees and Delawares had six villages between Cape Girardeau and Cape St. Cosme.'—*Pierre Menard*, March 16, 1833: *Commissioners' Minutes*, vol. vi. p. 127."

were naturally disinclined to place themselves under a monarchical form of government, and the recent difficulties with Spain had developed a general aversion to Spanish authority. Consequently, during the administration of Governor Perez very few Americans joined the colony.

"But during these years St. Louis, though it received but few accessions to its population, was sluggishly prosperous. The survey of the public domain was continued, the Indian trade extended, and the appearance of the village gradually improved by the erection of better dwellings.

"1792 was the date of a novel arrival. It was the year in which honey-bees came to St. Louis. The new colonists settled on the grounds of Madame Chouteau. The appearance of the little friends who closely follow the footsteps of pioneers was greeted with expressions of curious interest and satisfaction.

"In 1793, Perez was recalled, and Zeñon Trudeau succeeded to the vacant office. The administration of a Governor amicable in social life and generous in public action was deservedly popular. Impressed with the economic importance of immigration, Governor Trudeau bestowed lavish grants of land upon new settlers. The influence of this unstinted bounty was soon felt. The policy which had addressed itself to human cupidity did not fail in its appeal. Immigration began to flow into the province with a fuller tide. Merchants came to the growing settlement to avail themselves of its superior facilities for trade. Business became more active. The new buildings were more spacious and elegant. In every branch of industry the indications of increasing prosperity were distinctly visible. This flow in the tide that was bearing the colony on to better fortune was partly due to the attractive influence of Governor Trudeau.

"This popular and prosperous administration terminated Aug. 29, 1799.

"His successor was Charles Dehault Delassus de Deluzière.[1] Though a Frenchman, Delassus had become a Spanish subject. He had served with distinction in the armies of Spain, and been honored with positions of military trust. The ability with which he had discharged the duties of post commander at New Madrid caused his promotion to the government of Upper Louisiana.[2] His celibacy did not impair his popularity among the fair maidens of St. Louis. The first executive act of Delassus was to order an enumeration of the population. According to this census the total number of people in Upper Louisiana in 1799 was 6028. Of this aggregate 4948 were whites, 883 slaves, and 197 freedmen. The population of St. Louis was then 925. Delassus even surpassed his predecessors in the prodigality of his concessions. The trouble of asking for land was apparently a valid consideration for the grant. Tracts embracing in some instances thirty thousand acres were conferred for alleged services scarcely more arduous than the draught of the petition. The ease with which concessions of land were obtained stimulated wild hopes of wealth. A spirit of speculative excitement pervaded the community. Distempered dreams of opulence disturbed the wonted repose of society. It was confidently believed that the rise of real estate would soon enrich its owners. To satisfy the numerous applications for grants of the royal domain it became necessary to extend the surveys into the remote districts of the province. These surveys were regarded by the Indians as acts of aggression. In revenge for what they deemed an unwarrantable attempt to dispossess them of their heritage the savages killed many explorers who had incautiously ventured beyond the protection of the forts. Some of the captives were subjected to every refinement of torture which barbarous instincts could suggest. A French surveyor named Bouvet, captured by the Osage Indians in the neighborhood of Ste. Genevieve, was burned at the stake. But not even these unredressed outrages deterred the dauntless pioneers from their quest for valuable lands. Cupidity was stronger than the sense of danger, and brave adventurers, some of whom paid the price of life for their temerity, explored the wilderness in search of mineral wealth. Applicants strove with eager competition to secure grants of land in the rich ore-bearing districts of Southern Missouri.

[1] "It is permissible to judge from the case of Delassus that the Lieutenant-Governors received no compensation for the discharge of the varied duties which the executive office imposed.

"'Charles Dehault Delassus had no salary as Lieutenant-Governor, but sixty dollars per month as his pay for his rank in the army; he acted as civil and military Governor and judge; his jurisdiction extended from Arkansas to the northern extremity of the Spanish possessions on the western side of the Mississippi; his administration of the government of Upper Louisiana gave general satisfaction to the people under his command."—*Albert Tison and Fremon Delaurière*, 1832: *Commissioners' Minutes*, vol. vi. p. 50.

[2] "Delassus stated, Sept. 9, 1825, that 'he left Spain and came to Louisiana, A.D. 1796, and was appointed civil and military commandant of the district of New Madrid, where he resided until July, 1799, at which time, being promoted to the appointment of civil and military Lieutenant-Governor of Upper Louisiana, he came to the seat of government, to wit, at St. Louis, in the said month of July, where shortly after he took command, and acted in that capacity until the delivery of said Upper Louisiana to the United States of America, to wit, on the 9th day March, 1804.'—*Hunt's Minutes*, vol. ii. p. 179."

Yet while many of these tracts ultimately became valuable, the popular expectation of immediate affluence was doomed to disappointment. But few of the settlers attempted to unlock the vaults so richly stor .l with natural treasures. A lack of capital and of scientific method permitted the mineral riches of the province to remain an undeveloped source of public wealth. But while this speculative fever disturbed with its unhealthy excitements the regular industries of the colony, it was not wholly unproductive of good, —it made known the resources and increased the population of the province.

"The winter of 1799–1800 was remarkable for its extreme severity. The intensity of the cold destroyed vines and fruit-trees even in the semi-tropical climate of the Gulf States. At St. Louis the temperature fell as low as thirty-two degrees below zero.[1] In 1801 the smallpox startled St. Louis by its unwelcome presence. It was the first appearance of this dreadful contagion in Upper Louisiana.

"In 1803, Delassus, in consequence of the death of the Intendant-General at New Orleans, was forbidden to issue any more grants of land. The practical disobedience of Delassus to this order was a fruitful cause of litigation.

"At this time Europe was the scene of momentous events. The first Napoleon was now in the midst of his splendid but tragic career. With matchless genius and military skill, he was remodeling the kingdoms of Europe for the aggrandizement of France. Napoleon had the opportunity for which Alexander sighed in vain. There was now a new world to conquer. Eager, perhaps, to attain a distinction which had been denied to the Macedonian hero, and ambitious to equal the colonial greatness of England, Napoleon compelled Spain to retrocede Louisiana to France. But the British navy, obviously intended to intercept the movement, was then watching the east of France with a vigilance which the French fleet could scarcely hope to elude. At length, despairing of his ability to retain possessions which the maritime supremacy of Great Britain constantly endangered, Napoleon resolved to sell Louisiana to the United States. Acting, presumably, in conformity with official instructions, M. Talleyrand conveyed to the American minister an intimation of the willingness of the First Consul to part with Louisiana. This informal proposition was made on the 11th of April, 1803. Mr. Monroe was then on his way to the French court, invested with plenary powers to treat, in conjunction with Minister Livingston, for the purchase of the Floridas and the island of New Orleans. Deeply impressed with the paramount importance of the French overture, the American plenipotentiaries began at once to negotiate for the acquisition of the whole province.

"Messrs. Talleyrand and Marbois,[2] distinguished for their astuteness and diplomacy, represented the interests of France. By this transaction, after nineteen days of negotiation, the American ministers succeeded in purchasing the province of Louisiana for fifteen million dollars. The treaty of sale was concluded on the 30th of April, 1803, signed on the 3d of May, and ratified by the United States Senate on the 21st of the following October. The purchase was the most illustrious act of Jefferson's administration. The sale was a master-stroke of French policy. It replenished the treasury of the First Consul, prevented Louisiana from falling into the hands of England, and conciliated a growing republic, which will ultimately wrest from Great Britain its mastery of the seas. Napoleon expressed his sense of the importance of the transaction in a memorable prediction which time has already verified.

"'This accession of territory,' said the First Consul, 'strengthens forever the power of the United States, and I have given to England a maritime rival that will sooner or later humble her pride.'

"But even the transcendent genius of Napoleon failed to comprehend the extent or to appreciate the value of the boundless territory that had been severed from the domain of France. Not even his intuitive glance fully foresaw the stupendous results of the act which transferred Louisiana to the United States.

"The treaty of 1803 did not meet the approval of Spain. The Spanish government strongly remonstrated against the transfer of Louisiana to the United States. The ostensible cause of its opposition was the alleged illegality of the treaty. It was averred that the articles which reannexed Louisiana to France contained an explicit stipulation that the province should remain an indissoluble portion of the French dominions. In consequence of this covenant it was urged that the treaty of 1803 was invalid, inasmuch as it authorized an act in violation of existing obligations.

"But the protests of Spain did not prevent the fulfillment of the treaty. The act of transfer was consummated at New Orleans, on the 20th of December, 1803. On that day, M. Laussat, the prefect of the French government, delivered to Governor Claiborne and Gen. Wilkinson, commissioners of the

[1] "Hunt's Minutes, vol. i. p. 107."

[2] "On the part of France the negotiations, which terminated in the convention of April 30, 1803, were conducted chiefly by M. Barbé Marbois."

United States, full and formal possession of Louisiana. A proprietary title to the whole province was then vested in the United States. No further action was necessary to perfect its right of ownership. But to avoid all possibility of controversy with regard to the extent of the purchase, the precaution was taken to have the French title to Upper Louisiana formally relinquished to the United States. On the 9th of March, 1804,[1] Governor Delassus transferred Upper Louisiana to Capt. Amos Stoddard, of the United States army, who, by virtue of a commission from the First Consul, took possession of it in the name of France. On the following day Capt. Stoddard delivered the province into the hands of the United States authorities.[2]

This was the last act of foreign rule in Louisiana. For forty years the province had been under the sway of France and Spain. The Governors of Upper Louisiana were men of ability and of exceptionally genial nature. Even De Leyba's faults were probably attributable to insobriety rather than to a lack of intelligence or of affability. Without any assumption of superiority, they mingled with the humblest villagers on terms of social equality. They permitted no prejudices of race to exclude Frenchmen from office. They granted favors with a uniformity that suggested an amiable incapacity of refusal. Under their popular administration the people were content and happy. But their life was indolent and unprogressive. It seems as though an Arcadian simplicity, surviving the changes of time, had been brought into startling contrast with the restless activities of American civilization. Another race, instinct with the energies of liberty and progress, now assumed control of Louisiana.

Appendix to the Affair of 1780.—"Occasional allusions to the affair of 1780 are found in the early writers. A volume of travels written by M. Perrin Du Lac, and published in 1805, contains the following passage:

"'St. Louis fut attaqué très vivement en 1780 par un nombreux parti de Sauvages, commandé et armée par les Anglois. Il n'y avoit eu jusqu' alors aucune fortification, mais à la suite de cet évnément qui coûta la vie à un assez grand nombre d'habitans, le gouvernement fit construire un fort en bois sur la partie la plus élevée de la ville, et y placa quelques pièces de canon de gros calibre. Au commencement de cette guerre, sur les représentations du lieutenant-gouverneur, on y a ajouté quatre tours en maçonnerie, dont les batteries croisées seroient suffisantes pour protéger la ville contre les Sauvages, mais rien de plus. Il est probable que l'avantage le plus réel a été pour le constructeur.'

"In his 'Sketches of Louisiana,' page 79, Maj. Stoddard says,—

"'The commandant of Michilimackinac, in 1780, assembled about 1500 Indians and 140 English, and attempted the reduction of St. Louis, the capital of Upper Louisiana. During the short time they were before the town,' [and when the whole number of male householders was only ninety-seven,] 'sixty of the inhabitants were killed and thirty taken prisoner.'

"In his topographical report, page 83, Mr. Nicollet uses this language:

"'There were not more than one hundred and fifty males in the place, of whom not more than seventy could be relied upon as efficient to repel an enemy numbering, according to the best authorities, nine hundred combatants. . . . It is said that sixty were killed and thirteen made prisoners.'

"All of these passages contain internal evidence of traditional origin. If they had been founded on records, the statements, however varying in diction, would express an identity of facts. The want of uniformity is conclusive proof that the several authors merely reduced to writing inexact verbal descriptions. It would require strong testimony to overcome the inherent improbability of such assertions. That nearly all of the male householders of St. Louis should be slain or captured and no evidence of the fact exist is simply incredible, but not a line of record has been cited in proof of these accounts. Hence it would seem that all of these tales, differing from each other and irreconcilable with reason, emanated from an untrustworthy source. Doubtless some of these legends were obtained from the common stock of traditions by independent inquiry, while all the rest were actual or virtual transcripts. But no mere frequency of repetition can verify an error, and no array of authors who merely copy from each other stories that were originally derived from tradition can authenticate an initial misstatement.

"The earliest references to the attack of 1780 are brief paragraphs, but the first detailed description of the event was written in 1831 by Wilson Primm. It was printed in 1832, in the May number of the *Illinois Monthly Magazine*, and republished with a few alterations in the oration which Judge Primm delivered on the [illegible]sary of the founding of St. Louis, on the [illegible] day of February, 1847. The repetition of this story in nearly all of the sketches of St. Louis has given it the force of accepted history, but in many important respects the account cannot possibly be true. It was more than fifty years after the event before a full narrative of the tragedy was written. For half a century the busy tongues of

[1] "Hunt's Minutes, vol. ii. p. 179."

[2] "But the Spanish authorities did not at once withdraw from Upper Louisiana. It appears from the statement of Paul Dejarnais that 'the Spanish officers had not then (June, 1804) left the country.'—*Commissioners' Minutes*, 1806, vol. i. p. 305."

men were distorting the simple facts with the embellishments of fiction. In the words of Mr. G. S. Chouteau, 'every man had his own tale about the affair,' and in the course of time the exaggerations of lively imaginations and the misstatements of defective memories were received as the facts of authentic history.

"The motive of the following strictures is not at all to depreciate the acknowledged ability of Judge Primm, but simply to show that many of the oral traditions which he incautiously embodied in his sketch lack the elements of historic probability.

"It may be alleged in extenuation of Judge Primm's inaccuracies that at the time his account was written the legal papers which have recently been brought to light were not known to exist, but a study of these documents would have obviated only a part of his errors.

"The sketch of 1831 gives the 6th of May as the day of the attack, but the oration of 1847 states that the massacre occurred on the 26th of May. No authority is quoted in support of either statement, and no reason is given for the change of date.[1] The legal documents quoted in previous notes incontestably prove that no attack was made prior to the 26th of May, and facts will be hereafter adduced to show that no Indian assault was ever made upon St. Louis itself.

"The following passage from Judge Primm's oration describes the fortifications which, it is alleged, were built in anticipation of the Indian attack:

"'The town was almost destitute of works of defense, but the inhabitants . . . immediately proceeded to inclose it with a species of wall, formed of the trunks of small trees planted in the ground, the interstices being filled up with earth. The wall was some five or six feet high. It started from the half-moon, a kind of fort in that form situated on the river.'

"These statements, derived solely from tradition, are probably incorrect. Prior to the erection of fortifications by Governor Cruzat, in the latter part of 1780, no defenses are mentioned in the Archives.

"It is, therefore, in the utter absence of affirmative evidence, almost certain that there was no wall or fort at St. Louis until several months after the attack. There seemed to be no need of costly defenses. The neighboring tribes of Indians had always been friendly. It is indeed true that lawless savages had occasionally committed depredations in the country, but they had never dared to attack the settlement. The number of these marauders, whose acts of rapine were not authorized by their sachems, was too insignificant to cause alarm, and no white foe had ever before menaced the security of the village. The danger could not, then, have been regarded as very grave, for Governor De Leyba, though apprised of the meditated incursion, took no steps to insure the safety of St. Louis. There is not a particle of evidence to show that the 'walls' and 'half-moon' were built by Governor De Leyba, and as it is certain that they were not constructed by any of his predecessors, it is not at all likely that they then existed.[2]

"The following statements, apart from their intrinsic improbability, are inconsistent with each other:

"'In expectation of an attack, Silvio Francisco Cartabona, a governmental officer, had gone to Ste. Genevieve for a company of militia to aid in defending the town in case of necessity, and had, at the beginning of the month, returned with sixty men, who were quartered on the citizens. As soon as the attack commenced, however, neither Cartabona nor his men could be seen. Either through fear or treachery, the greater part concealed themselves in a garret, and there remained until the Indians had retired.'

"'The offer of (Col. Clark's) assistance was rejected, on the ground that no danger was really apprehended.'

"'Under the pretext of proving to them that there was no danger of attack, he (Governor De Leyba) had, a few days before it occurred, sold to the traders all the ammunition belonging to the government.'

"The first extract reproaches the Spanish troops with cowardice, asserting that, in the supreme moment of danger, when every arm was needed to ward off the impending blow, these soldiers ignominiously fled from the post of duty and sought safety in a garret.

"Is it likely that every individual of so large a force would prove an arrant coward, or that the mass of poltroons would huddle in one small room where every shot would be sure to hit?

"Cartabona did not seek aid of his own accord. He would not dare to disobey his superior officer. If he went to Ste. Genevieve for help he was ordered to go by Governor De Leyba. If, then, no danger was really apprehended, 'why did the Governor dispatch an officer for reinforcements, and why did he send to remote Ste. Genevieve for assistance, and yet decline the co-operation of troops that were only three miles distant?'

"But there is proof that the Governor, instead of

[1] "Though the source is not acknowledged, the date of May 6th was, of course, derived from the statement of Auguste Chouteau (Hunt's Minutes, vol. i. p. 107); but this date, given on the fallible authority of memory, is contradicted by the records Catholic Church. The parish register and several inries in the Archives expressly mention the 26th of May as the day of the massacre."

[2] "The words of Du Lac are unequivocal. Speaking of the time of the attack, he says, 'Il n'y avoit eu jusqu' alors aucune fortification.' * If reliance can be placed upon the authority of Du Lac, there can be no further doubt of the incorrectness of Judge Primm's assertion."

rejecting a proffer of succor, himself sought the aid of Col. Clark. Consequently the alleged refusal of Col. Clark's overture conflicts not only with the theory of relief from Ste. Genevieve, but also with the sworn testimony.

"Again, would the Governor, only a few weeks after the pretended arrival of the reinforcements from Ste. Genevieve, and after a proven appeal to Col. Clark for the services of his troops, sell the means of successful defense? The reason assigned for the sale of the powder is as frivolous as the act itself is unlikely. Statements so contradictory and unreasonable seem entitled to little credit.

"Is it probable that Ste. Genevieve sent sixty men to the relief of St. Louis?

"A few historic facts, illustrative of the size of colonial forces, may aid the judgment of the reader.

"When, in 1764, De Neyon evacuated the Illinois country, he had about one hundred men subject to his authority. But this aggregate was divided into four garrisons, which, occupying widely remote forts, protected a vast territory from encroachment.

"In 1765, Capt. Sterling took possession of this domain with a body of soldiers equal to one modern company. But this force, although weakened by distribution in distant posts, was deemed sufficient for the defense of the country.

"In 1767, Antonio de Ulloa came to New Orleans to take possession of Louisiana in the name of the Spanish government. His army of occupation consisted of eighty men,[1] and even this small number was separated into four divisions and sent to guard the principal forts of the country.

"In 1768, Capt. Rios came to St. Louis for the purpose of establishing Spanish authority in Upper Louisiana; the escort to which Spain confided the maintenance of its sovereignty numbered perhaps twenty-five men.

"It should be borne in mind that although in the foregoing instances the troops were sent on pacific errands, they were liable at any time to be assailed before the possible arrival of reinforcements. Their members were adjusted not merely to the idle parades of peace, but also to the grave exigencies of war. The force with which, in 1778, Governor Hamilton retook Fort Sackville from the Americans numbered eighty soldiers and 'about four hundred Indians.'[2]

"On the occasion of the transfer in 1804, Capt. Stoddard, acting in behalf of the United States, brought to St. Louis one company of artillery, comprising perhaps not more than one hundred men. After the transfer the Spanish troops were withdrawn from the 'Fort on the Hill,' and stationed for seven months in a log house at the corner of Third and Elm. Their number may be conjectured from the size of the building in which they were quartered,—their barrack measured twenty by forty feet.

"In 1804, Lewis and Clark set out with a force of twenty-eight men to cross the continent.[3] This small band was considered large enough to surmount all the obstacles of the pathless wilderness, and to repel all the attacks of implacable savages.

"Not a line of record can be cited to prove that a solitary soldier was sent to the relief of St. Louis. In default of confirmation, is it credible that Ste. Genevieve sent reinforcements so much larger than the ordinary military bodies of that period? Every farmer who could devise an ingenious excuse would seek to evade a service that required him to leave his lands for a month or six weeks in the busy season of planting.

"These considerations will enable the reader to decide whether the account of the reinforcements from Ste. Genevieve is entirely fictitious or partly true; wholly true it can hardly be.

"Judge Primm maintains that Col. Clark, in view of the rumored approach of the Indians, tendered to Governor De Leyba the services of his troops in defense of the Spanish colony:

"'In February, 1779, Col. George Rogers Clark . . . was in the neighborhood of St. Louis, raising men . . . for the purpose of recapturing St. Vincent's, now called Vincennes. . . .

"'Understanding from some source that an attack was meditated on St. Louis by a large force under British influence, that, too, at a time when Spain was contending with England for the possession of the Floridas, Clark . . . at once offered to the Lieutenant-Governor, Leyba, all the assistance in his power to repel the contemplated attack. The offer of assistance was rejected, on the ground that no danger was really apprehended.

"'In my former sketch of St. Louis, I had placed the time of this offer by Clark in 1780.'

"This extract is crowded with errors. It is asserted that in February, 1779, Spain was contending with England for the possession of the Floridas. The fact that the king of Spain did not declare war against England until the 16th of June, 1779,[4] somewhat impairs the credibility of this statement. Hostilities

[2] "Butler's History of Kentucky, p. 80."

[3] "Allen's Journal of the Expedition, p. 2."

[4] "Knight's History of England, vol. vi. p. 396. 'Le 16 Juin l'ambassadeur d'Espagne à Londres prit congé du Cabinet de Saint James par un manifeste que suivit immédiatement une déclaration de guerre.'—*Martin's Histoire de France*, vol. xvi. p. 440."

between these powers did not begin in Florida until the following September.[1]

"Two dates of the alleged offer of aid by Col. Clark are given, but no records are cited in verification of either, or in explanation of the change; but neither of the dates is correct, for the simple reason that Col. Clark never made any offer of assistance. In 1781, Mr. Gratiot testified before Governor Cruzat, that at the solicitation of Governor De Leyba and of the inhabitants of Cahokia, he had gone in the spring of the previous year to the iron-mines of Illinois to inform Col. Clark of the public peril and to secure his help.

"It appears from this that the courier who bore to Col. Clark his first intelligence of the meditated invasion undertook his mission partly at the request of Governor De Leyba. It is obvious that Col. Clark would not offer relief before he learned there was any danger, and it is equally clear that Governor De Leyba would not solicit succor if it had already been tendered him. The testimony of the very man who carried the message proves that the Governor sought the help which he had no opportunity to reject. He could not decline an offer that never had been made.

"Other passages in the oration are palpably inconsistent and exaggerated:

"'When within a proper distance the Indians began an irregular fire, which was answered by showers of grape-shot from the artillery. The firing for a while was warm. . . . Had those who discovered the Indians in the prairies fled to the lower gate they would have escaped; but the greater part of them took the road that led to the upper gate, through the very ranks of the enemy, and were thus exposed to the whole of their fire. About twenty persons, it is computed, met their death in endeavoring to get within the entrenchments. None of those within were injured, and none of the Indians were killed, at least none of them were found.

"'On the 26th, the body of the Indians,'—elsewhere said to number 'upwards of 1400,'—'crossed ("the Mississippi, a little above St. Louis") and marched directly towards the fields, expecting to find the greater part of the villagers there. . . . But these perceived the approach of the savage foe, and immediately commenced the retreat towards the town, . . . nearly through the mass of the Indians, and followed by a shower of bullets."

"According to this description, the Indians advanced by way of the common fields. This is substantiated by the fact that the body of one of the victims was found nearly five miles northwest of St. Louis.[2] Other corpses discovered in the outskirts of the village, about four miles from the initial point of attack, indicate the persistency and limit of the pursuit.

"Therefore this account invites us to believe that a small body of Frenchmen broke through the ranks of fourteen hundred Indians, and, though followed several miles with showers of bullets, finally escaped with the loss of only twenty men. It also requires us to credit the absurdity that fourteen hundred savages could assault intrenchments warmly defended with volleys of musketry and of grape-shot, without the injury of a single individual on either side. Surely such statements pass the limits of possible belief.

"From the considerations which have been already adduced, it is likely that tradition, with its usual extravagance of statement, has greatly magnified the invading force. It is not probable that more than five hundred men were engaged in this expedition.

"Stoddard and Nicollet—the former partially originating, and the latter substantially following the popular version—have placed the number of the slain at sixty. If one-half, or even one-sixth of the adult male population of St. Louis had been killed, the registries of burial would enroll the names of the dead, the Archives would contain the inventories of their properties, public documents would record the occurrence, and private description would relate the incidents of so ghastly a tragedy. The reason why none of these proofs has been found is simple: only six men were killed. On the day of the massacre four bodies were brought in from the fields and buried in the Catholic churchyard. Their names are recorded in the parish[3] register. Inventories preserved in the Archives attest

1 "Stoddard's Sketches of Louisiana, p. 76; Remembrancer, vol. ix. p. 359.

"'Immediately after the rupture a Spanish force took possession of Baton Rouge, and finally conquered the whole of West Florida.'—*Lyman's Diplomacy of the United States*, vol. i. p. 211.

"Fort Manchac was captured on the 7th of September, 1779, and Baton Rouge surrendered on the 21st of the same month. This was the beginning of the struggle in Florida.—*Gayarré's Hist. of La.*, vol. iii. pp. 127 and 129; *Monette's Hist. of the Miss. Valley*, vol. i. p. 438.

"The following passage from Mr. Gratiot's testimony, quoted elsewhere to establish a different point, is again cited for convenience of reference: 'Aurois-je aussi tel que nous avons eu de nouvelles de l'armée Anglaise et sauvages qui venoit en guerre contre nous, party immédiatement à solicitation de Monsieur de Leiba, ainsi qu'a celles des habitans des Cahos, pour la mine de fer où étoit alors le Général Clark a fin de lui exposer le danger où étoit alors le pays, le besoin qu'il y avoit qu'il vint à envoyer de prompt secours et combien sa presence etoit nécessaire pour opposer la force à de tels assacins.'"

2 "Commissioners' Minutes, vol. vii. p. 43."

3 "'In the year 1780, the 26th day of May, I, Capuchin priest and apostle missionary, have buried in the cemetery of this parish the bodies of Charles Bissette, Aimable Guion, the lad Calvé, and a negro of Chancellor, *massacred by the Indians*.

"'F. Bernard.'

"Translation from the register of the Catholic Church."

the death of two others.[1] The inhabitants of St. Louis were then all Catholics. The names of all who were interred in consecrated ground were always enrolled in the records of the parish. If twenty men had fallen, surely some evidence of the fact would be found in the lists of their properties. But not the slightest intimation of the death of more than six[2] men can be discovered in the records of church or court.

"The names of the half-dozen who were slain are inscribed upon public documents, and, with the exception of young Calvé and the negro, some facts in the personal history of each are known; but of the fourteen others alleged to have been killed absolutely nothing has been ascertained. It has baffled research to discover even their names, or to find corresponding vacancies in the later lists of householders. The foregoing facts lead to the inevitable conclusion that tradition, with its natural proneness to exaggeration, has magnified a few murders into a battle, and attempted to sustain its fictions by an array of casualties more than three times as large as the actual number.

"The inaccuracies which have been exposed excite distrust in those statements that are based upon the traditions of 1780. The main feature of the received version is the attack upon the village itself. The incompatibility between the alleged assault and its results has already been mentioned. The reasons for the conviction that no onset was ever made on St. Louis will now be given.

"On the 13th of March, 1780, Charles Gratiot, a young merchant of Cahokia, bought on credit a stock of goods of Charles Sanguinet, of St. Louis. Mr. Gratiot's note, payable in the following July, was indorsed by J. B. Cardinal.

"Some time after this transaction the inhabitants of Cahokia, alarmed by rumors of an impending invasion, requested Mr. Gratiot to go in search of Col. Clark, and secure his skillful service in defense of the village. Before starting on his mission, Mr. Gratiot, apprehensive that during his absence the Indians might capture Cahokia and pillage his store, sent his goods and valuable papers to St. Louis, and placed them for safe-keeping in the custody of Mr. Sanguinet. In prompt response to this appeal for help, Col. Clark at once returned to Cahokia, and made preparation to repel the expected incursion. Then Mr. Gratiot, deeming the danger no longer imminent, sent for his goods, but Mr. Sanguinet refused to deliver them on the ground of an alleged insufficiency of security. Pretending that the indorser of Mr. Gratiot's note had become insolvent, he claimed that a protection of his own interests justified his detention of the merchandise until a responsible guarantee of payment was given. He averred that the goods were safe in St. Louis, but insecure in Cahokia; and that, if they were carried back and then plundered by the Indians, he himself would incur the loss, inasmuch as Mr. Gratiot, having been robbed of the means of payment, would be unable to meet his obligations.

"Mr. Gratiot brought an action to recover his property. The following passages from the evidence in this suit suggest important deductions:

"'Qu'il il a fait transporter chez le dit Sieur Sanguinet, avec son agrément et pour l'assurance de son payement en case de malheur au quel sont exposé tous les hommes les susdittes marchandises a dessins de reprendre au retour de son voyage pour en faire la vente et remplir son obligation; que le Sieur Sanguinet à la demande qu'il lui en fait, c'est absolument refusé non seulement de les lui rendre, mais même celles qui lui appartiement en propre et qui ont été pareillement deposée chez lui.'—*Plaintiff in the suit of Gratiot vs. Sanguinet*, May 8, 1780.

"'Le supliant n'a jamais refusé de remettre les marchandises et autres effets au Sieur Grassiot mais il seroit en droit en les remettant de demander un caution au Sieur Grassiot pour le payer a son defaud au terme de son billet. . . . Lorsque le Sr Grassiot a acheté du supliant il a consent y son obligati société avec le nommé Cardinal qui se trouvé aujour d'hui in solvable et même les affaires du dit Sieur Grassiot peut être beaucoup derangées.'—*Defendant, Ibid.*, May 10, 1780.

"'Le supliant a l'honneur de vous observer, monsieur, que hier neuf du courant en présence de Duchesne voyant que le Sieur Grassiot ne lui avoit point demandé une cassette ou il y a des papiers (suivant ce que lui dit son commis en la lui remettant) il l'a offerte le dit jour de hier a son dit commis, dans l'idée que le Sieur Grassiot pouroit avoir besoin des papiers de la dite cassette, et qu'il pourroit former un mauvais pretexte contre le supliant de la lui avoir retenue, il offre encore, monsieur le remettre en même nature qu'elle lui a été remise.'—*Ibid.*, May 10, 1780.

"'Que le Sieur Grassiot l'avoit chargé de chercher une maison à St. Louis pour y déposer ses marchandises, quelques pelleteries et autres effets, que ne connoissant personne à St. Louis, il s'est addressé au Sieur Sanguinet, qui lui dit, "Si vous voulez mettre vos marchandises chez moi, elles y seront en sureté, et vous les reprendrez quand vous voudrez." . . .

"'Qu'il n'avoit mis ces marchandises lui déposant que comme un dépôt dans la crainte qu'elle ne fussent pillée aux Cahokias les sauvages pendant l'absence de Sieur Grassiot. . . . Que le Sieur Sanguinet) lui dit, 'Ne soyez pas inquiet; je sais ce que vous me mettez les marchandises de Sieur Grassiot en dépôt et vous les reprendrez quand vous voudrez.' Et que M. Sanguinet offrit de lui rendre sa marchandises, et qu'il pourra venir chercher quand il voudroit, qu'il savoit bien qu'elle n'qu'en dépôt chez lui, et non en cautionment.'—*Testimony of François Duchenau, Ibid.*, May 11, 1780.

"'Dont il aisé de prouver la faussetté par la déposition commis du demandeur, qui prouvera par serment qu'elle

[1] "Their names were John Marie Cardinal and François Hebert."

[2] "A man called Belhomme was at first supposed to be the *seventh* victim, but it was subsequently ascertained that the name was a sobriquet for François Hebert."

été déposé en l'absence du supliant qu'an cas de malheur au quel l'on été tous les jours menacé sur notre rive, et par le voyage qu'il étoit obligé de faire au près du Colonel Clark, à réquisition des habitans, et que le supliant n'a jamais eu d'autre vue que celle de reprendre ses effets à son retour a fin d'en faire la vente et remplir son engagement envers le deffendeur.'—*Plaintiff, Ibid.*, May 12, 1780.

"'Que s'il les a fait transporter chez lui, ce n'étoit que pour chercher les sauvre des évènemens au quel l'on s'attendoit tous les jours, que même il y' avois fait transporter tous ses papiers les plus précieux, et qu'il crois que le Sieur Sanguinet ni qui que ce soit puisse lui en disputer la propriété.'—*Ibid.*, May 12, 1780.

"The decision in this case was given by Governor De Leyba in the Government House at St. Louis, May 26, 1780. All the other dates were written in the ordinary way, but fortunately this date was expressed in full: 'À St. Louis des Illinois, le vingt-six May, mil sept cent quatre-vingt.'

"If figures only had been used there would be a possibility of clerical error; but no suspicion of such inaccuracy can attach to a date that is written out in full.

"It is a matter of record that the papers in another suit were filed on the 26th of May.

"It appears from the preceding extracts that no attack was made on St. Louis before the 26th. All the tenses and turns of expression indicate the expectation, not the occurrence, of an attack.

"It is alleged that the assault on St. Louis took place on the morning of the 26th, but at this very time Governor De Leyba was engaged in trying the case of Gratiot *vs.* Sanguinet. The record shows no evidence of an interruption of the trial, or of a postponement of the decision. The entry of another suit on the same day proves that there was no interference with the ordinary routine of business. The trial of Mr. Gratiot's case must at least have occupied the whole forenoon. Now is it at all probable that the Governor and some of the principal men of the place spent the morning in court while a desperate conflict, involving the lives and property of the entire colony, was raging almost at the very doors of the Government House?

"The assertion of such a possibility is an affront to the intelligence of the reader.

"The foregoing facts in disproof of an assault upon St. Louis are morally conclusive, but there is also negative evidence that confirms the same view.

"On the 26th of May, 1780, the following persons were residents of St. Louis:

"Governor De Leyba, Lieut. Cartabona, Father Bernard, Joseph Labuscière, J. B. Trudeau; M. M. Piralde, the Spanish surveyor-general (but absent in New Orleans on the 26th); Pierre Pery, the register; Réné Kiercereau, the church-warden; Auguste Chouteau, Pierre Chouteau; Capt. De Volsay, of the Spanish service; Lieut. P. Belestre, of the Spanish service; Eugene Pouré, captain of the militia; J. L. Martigny, captain of the militia; Joseph Conand, physician; Antoine Reynal, physician; Bernard Gibkins, physician; J. P. Sarpy, merchant; Silvestre Labbadie, merchant; Gabriel Cerré, merchant; Louis Perrault, merchant; Joseph Segond, merchant; Louis Dubreuil, merchant; Charles Sanguinet, merchant; J. M. Papin, merchant; Joseph Labrosse, merchant; Auguste Reilhe, merchant.

"All of these individuals were men of intelligence, and many of them were of European birth and education. There is not a man on the list who was not able to write an intelligible account of the attack, and some of the persons were specially fitted for the task.

"It was the official duty of Governor De Leyba to write a report of the repulse of the assailants.

"Cartabona was the officer who is said to have brought reinforcements from Ste. Genevieve.

"Father Bernard was the parish curate who buried four of the men killed by the Indians.

"Labuscière was the notary public who recorded more than one thousand documents in the Archives, and indited numberless letters from those who were unable to write.

"Trudeau was the village schoolmaster. Skillful in composition, he was fully qualified to write a narrative of the tragedy. His attention must have been often called to the massacre, for he married Madame Hebert, the widow of one of its victims. Trudeau did indeed write some verses on the event, in which he freely used the license of poetic art. But an effusion full of fancy, passion, and baseless assertion cannot soberly be cited in proof of contested facts.

"Charles Gratiot was in St. Louis on the 26th of May. His correspondence was extensive. Many of his letters have been preserved. Besides matters of graver import, they contain even trivial details of local news.

"Auguste Chouteau kept a journal, but unfortunately its destruction has deprived posterity of a knowledge of its contents.

"Both Auguste and Pierre Chouteau lived to an advanced age. Before their death St. Louis had already become a large and prosperous city. Facts relative to its early history were eagerly sought. The Chouteaus were not insensible to the impulse of an honorable ambition. Conspicuous among the founders of St. Louis, they would presumably avail themselves of so memorable an opportunity for asso-

ciating their names with the most momentous event in its early annals. Their silence, broken only by a few incidental allusions to the attack, is suggestive.

"Now is it likely that men accustomed to writing, and apparently desirous of facts to record, would ignore an event that threatened the extinction of the whole colony? A story replete with incidents of such tragic interest could not elude recital. And yet, in all the writings of these men who were on the spot and must have participated in the battle, there is not a solitary sentence of formal description of the alleged assault.

"Nor did Col. Clark, who wrote a memoir of his military exploits, leave any narrative of the important event in which he is reported to have acted so conspicuous a part.

"The following passages, cited from depositions in public documents, are the chief if not the only references to the affair of 1780 that the Archives contain:

(1) "'Some time prior to the year 1780 orders were issued by the commandant that all of the settlers at some distance from the village of St. Louis should leave their houses, with their families, and retire to the said village, the same being threatened of an attack from the Indians, and he, the said commandant, not being able to afford any protection nor assistance to settlers at any distance from the same. François Marie Cardinal was, in the year 1780, killed by the Indians within a short distance of said land.'—*Auguste Chouteau*, Sept. 3, 1806: *Commissioners' Minutes*, vol. i. p. 517.

(2) "'He was sent out by the Lieutenant-Governor in 1780 to warn John Hildobrand and other settlers on the Maramec to abandon their habitations on account of the Indian depredations, which they did.'—*Pierre Chouteau*, Nov. 28, 1808: *Commissioners' Minutes*, vol. iii. p. 377.

(3) "'In 1780 he (John Baptiste Gamache) was ordered away by the Governor on account of Indian disturbances.'—*Auguste Chouteau*, Nov. 19, 1811: *Commissioners' Minutes*, vol. v. p. 424.

(4) "'He was born in St. Louis, and lived here ever since. Forty-five years ago, at the time the Indians attacked St. Louis, he was about seventeen years old. The line of intrenchments made by the people or government ran through this lot, and he mounted guard in this. At the time it was owned by Michael Lami, who owned it until he died.'—*Laurent Reed*, April 11, 1825: *Hunt's Minutes*, vol. i. p. 91.

(5) "'On the 6th of May, A.D. 1780, St. Louis was attacked by one thousand four hundred Indians and Canadians.'—*Auguste Chouteau*, April 18, 1825: *Hunt's Minutes*, vol. i. p. 107.

(6) "'He is nearly eighty years of age, and was born at Fort de Chartres, and came to this place at the time Auguste Chouteau first came. They were both young at that time, say about ten or twelve years of age. He, this deponent, was, and he supposes Mr. Chouteau to have been, about sixteen years of age at that time. They came in the company of Laclede Liguest, and he, this deponent, lived in this town until *l'année du comp.* After that he removed to Florisant, and has lived there ever since. He was taken a prisoner at the attack on St. Louis by the Indians at Cardinal's spring, and was tied by the Indians at the spring. He was asleep in the house at the spring, which house was built by and belonged to John Marie Cardinal at this time. At the time the attack commenced (and he, this deponent, was taken prisoner by the Indians), Cardinal was wounded by them in attempting to make his escape, and he lived until he got to the Beaver Pound, about two or three miles when he, Cardinal, died. The inhabitants lost in killed or taken prisoners fifty-eight or fifty-nine by this attack of the Indians, which commenced in Grand Prairie about the middle of the day. He, this deponent, was taken prisoner by the Indians to Chicago, when he made his escape and returned to St. Louis, after which he removed to St. Ferdinand, where he has lived ever since.'—*John Baptiste Rivière, dit Baccanné*, July 9, 1828: *Hunt's Minutes*, vol. ii. p. 56.

(7) "'Francis Hebert was killed by the Indians whilst cultivating his land, and his body could never be found.'—*Pierre Chouteau*, Oct. 20, 1834: *Commissioners' Minutes*, vol. vii. p. 34.

(8). "'After the attack of the Indians on the settlement in 1780, all the settlers were called in.'—*Pierre Chouteau*, July 7, 1835: *Commissioners' Minutes*, vol. vii. p. 210.

"Some of the statements in these depositions require explanation. Nos. 1, 2, and 3:

"The 'orders' here mentioned did not refer to the attack of 1780, for the simple reason that the authorities had no intimation of the contemplated invasion before the spring of that year. The public records show that the Indians had been 'troublesome' for many years. The depredations of the savages during the colonial period of St. Louis were numerous and annoying. The extent of their outrages is partially indicated by the accompanying references: Hunt's Minutes, vol. ii. p. 134; Commissioners' Minutes, vol. i. pp. 48–438, 59–482, 269–485, 270–488, 273–499, 409–517; vol. iii. p. 377; vol. iv. pp. 149, 199, 276; vol. v. p. 261; vol. vi. pp. 100, 118, 125; vol. vii. p. 43.

"Every one of these references, which extend from 1767 to 1806, alludes to acts or fears of savage violence.

"Such orders and warnings as are mentioned in these depositions were frequent. Whenever an inroad of the prowling marauders was apprehended, the distant and defenseless settlers were cautioned to withdraw to a place of safety.

(4) "An attack upon St. Louis does not necessarily imply an assault upon the village itself. The attack was made upon the farmers in Grand Prairie, four or five miles from St. Louis. But men would not, upon every occasion of a reference to the event, stop to enumerate all these particulars. They would naturally use the shorter expression, and describe the occurrence as an attack upon St. Louis.

"It has already been proved that there were no fortifications at St. Louis prior to the 26th of May, 1780, therefore, 'the line of intrenchments' spoken of in the above passage must refer to the defensive works which Governor Cruzat erected after the invasion of the savages. Before the attack the fear of Indians was not strong enough to induce the colonists

to fortify their village, but afterwards the liveliest apprehension existed. It is not surprising that sentinels were stationed on guard, as 'for at least three or four years after 1780 nobody ventured to cultivate land in the Grand Prairie, there being almost every day alarms caused by Indians.'—*Commissioners' Minutes*, vol. vii. p. 43.

(5) "This statement, which was made almost forty-five years after the event, apart from creating a presumption that there was an attack some time in 1780, is worthless, for there is absolute proof that the assault was made, not on the 6th, but on the 26th of May; while from the very circumstances of the case, from the brevity of the onset, the distance from the village of the scene of conflict, and the immediate flight of the Indians, it was utterly impossible for any man to ascertain the number of the invaders. The few farmers, bewildered by the suddenness of the onslaught and fleeing for their lives, would hardly stop to count their assailants.

(6) "This deposition was taken more than forty-eight years after the massacre. The deponent's memory was then so defective that he contradicted himself in successive sentences. And yet Rivière, with faculties confused by the infirmities of fourscore years, is the authority upon whom writers have relied for their statements of the number slain in the attack of 1780. The improbability that many men were then killed by the Indians has already been discussed. The exaggeration is too patent to require further exposure.

"Rivière's assertion that 'this attack of the Indians commenced about the middle of the day' is certainly incorrect. The approach of the savages excited great terror. The inhabitants would not dare to leave the village while the Indians remained in the vicinity, and yet it has been proved by the parish record that the killed were buried on the very day of the attack. The time required to ascertain the retreat of the savages, to go about five miles into the country, to search all over Grand Prairie, to bring in the bodies, and inter them on the day of the massacre is inconsistent with the supposition of a midday attack. Known facts compel us to believe that the assault began early in the morning.

"It will be observed that not one of all these meagre and inconclusive accounts speaks unequivocally of a direct assault upon St. Louis. All of the statements are reconcilable with the theory that the conflict began in Grand Prairie and ended in the outskirts of the village.

"From all of the foregoing considerations it seems reasonable to conclude that the popular account of the affair of 1780 is mainly a tissue of ingenious fictions, fabricated by creative imaginations during fifty years of oral tradition. Full of inconsistencies and unsustained by authority, it is not entitled to a place in authentic history.

"An acceptance of this conclusion consigns a number of alleged incidents to long-merited oblivion.

"The following paragraph from Judge Primm's oration is a conspicuous illustration of historic romance:

> "'At this stage of affairs the Lieutenant-Governor made his appearance. The first intimation that he received of what was going on was by the discharge of artillery on the part of the inhabitants. He immediately ordered several pieces of cannon which were posted in front of the Government House to be spiked and filled with sand, and went, or rather was rolled in a wheelbarrow to the scene of action. In a very peremptory tone he commanded the inhabitants to cease firing and return to their houses. Those posted at the lower gate did not hear the order and consequently kept their stations. The commandant perceived this and ordered a cannon to be fired at them. They had barely time to throw themselves on the ground when the volley passed over them and struck the wall, tearing a great part of it down.'

"Upon the assumption that there was no attack, every single assertion in the above quotation is fabulous.

"No booming of artillery roused the Governor from a debauch; no ordnance was either spiked or discharged at the villagers, and no wall was torn down by grape-shot, for the twofold reason that no cannon was fired and no 'wall' existed.

"It is intimated that early in the morning Governor De Leyba was already so drunk that he could not walk, and that consequently he had to be 'rolled in a wheelbarrow to the scene of action.' Now, it has been proved by sworn testimony that the Governor, at the very time he is represented to have been in a state of helpless intoxication, was in the council-chamber, soberly and wisely discharging his judicial duties. As all of these statements are based upon a common tradition, this example will enable the reader to judge of the solidity of their foundation.

"Some writers have declared that Col. Clark brought reinforcements to the relief of St. Louis. If there was no attack the statement is obviously incorrect, but even upon the supposition that there was an attack the assertion is incredible.

"The evidence in the case of Gratiot *vs.* Sanguinet proves that intelligent men on both sides of the river thought that the main object of the expedition was to reoccupy the places which Col. Clark had taken from the English,—to re-establish British authority in a domain which the invaders regarded as the rightful possession of the king of England. Cahokia was to encounter the brunt of the onset. It is

certain that Mr. Gratiot would never have placed his goods in the custody of Mr. Sanguinet if he had not supposed that they were in greater safety than they were at Cahokia. It is indeed true that Governor De Leyba applied to Col. Clark for aid. His motive in making this request was probably a fear that lawless Indians, in their indiscriminate pursuit of plunder, might cross the river and commit depredations within his province. There is no proof that Col. Clark promised the solicited succor.

"Even if he was not fully occupied with the responsible duties of defending the conquests which he had made, he may have prudently declined to infringe the law of nations. He was well aware that he had no right to march his troops into foreign territory and fight the battles of Spain. It was his duty to observe the American policy of neutrality. But if Col. Clark did promise assistance he had no opportunity of keeping his word.

"If there really was an attack upon St. Louis it was sudden and unexpected. If it had been anticipated at that time, Mr. Gratiot would not have imperiled his life by going to St. Louis on the very day of the assault. Governor De Leyba would have been preparing for the defense of the village instead of hearing a law-case, and the farmers would not have courted death by going unarmed to their remote fields. The fact that Mr. Gratiot had some time before sent for his goods seems to imply that even at Cahokia the danger of an Indian irruption was thought to be less imminent. But the surprise and the brevity of the contest would not permit a seasonable arrival of distant reinforcements. Even the common version, with all its exaggerations, represents the conflict as brief. Cahokia was three miles away. If the struggle lasted two or three hours, the time was still insufficient for a messenger to summon help. If the fleet couriers of the air had been used, and the booming of cannon had been the preconcerted signal for the relief, the troops would have to march three miles and then cross the Mississippi swollen with spring floods. Only a few boats were available. The transportation of 'two hundred' men by means so inadequate implied the delay of repeated returns. Retarded by such impediments, Col. Clark could not possibly have reached St. Louis in season to join in the repulse of the savages. The Indians must have retreated from their ineffectual assault long before the arrival of the American troops.

"Col. Thomas H. Benton explained the withdrawal of the savages as follows:

"'On the approach of so formidable an enemy, the inhabitants, despairing of successful resistance, deputed one of their most respectable citizens, the late Charles Gratiot, to solicit the aid of Gen. G. R. Clark, then encamped with his men in the American Bottom. Gen. Clark, although having but four hundred men, led two hundred of them to the ferry opposite the town, and made a demonstration of crossing, while two hundred more were sent to cross under the bend of the river. The Indians were disconcerted and hastily retreated.'

"This extract is a fine example of compact misstatement. On this occasion a vague fear, rather than positive knowledge, was the motive of public action. It was rumored that an expedition of hostile Indians had been organized at the north, but nothing whatever was known of the actual movements of the savages. The surprise was itself the first credited announcement of their arrival. Therefore it was not a definite intelligence of their approach that led to the appeal for aid. The message was sent several weeks before the massacre, for it has already been proved by legal testimony that the messenger had returned from his mission prior to the 8th of May.

"The application for help was made, not by the inhabitants of St. Louis, but by the people of Cahokia.

"As Mr. Gratiot did not leave Cahokia till 1781, he was not one of the 'citizens' of St. Louis in 1780.

"At the time that his assistance was solicited, Col. Clark was not encamped in the American Bottom. He was then two hundred miles down the Mississippi River.

"It is stated that Col. Clark had a force of four hundred men. When, in 1778, he took possession of Kaskaskia, he had, according to Butler, 'but four companies.'[1] His recruiting orders were to form companies of fifty men each. When, in 1779, Col. Clark captured Vincennes from the English, he had just two hundred and sixteen men, of whom forty-six arrived by boat too late to participate in the reduction of the place. Now, when he had abandoned all further offensive movements, and was simply holding the posts he had taken, how does it happen that the number of his troops was more than twice the available force with which he achieved his greatest conquest? The statement is a palpable fiction.

"The reader is informed that two hundred men, starting from a point opposite St. Louis, made a detour of six miles, exclusive of an obstructed passage of the Mississippi, and yet arrived at the scene of a very brief conflict in time to frighten the savages into retreat. Such celerity of movement is without precedent in the history of forced marches.

"It is said that Col. Clark's troops were encamped on the lowlands east of St. Louis. But why should such a locality be selected for a camp? It commanded no approach and intercepted no retreat. It

[1] "Butler's History of Kentucky."

possessed no advantage of position that justified a removal of the soldiers from convenient quarters and the base of supplies. A force stationed at that point could not shield St. Louis, for the Mississippi, impassable in the presence of a foe, lay between it and the Spanish settlement. It could not guard Cahokia, for that place was three miles distant. The inhabitants of Cahokia besought Col. Clark to protect the village which his arms had won. Bound by no obligation to assist the dependents of a foreign power, he was under the constraint of a high and imperative duty to defend the subjects of his own government.

"If Col. Clark was anywhere in this region on the 26th of May, he was at Cahokia, and not in the immediate neighborhood of St. Louis. Therefore, even in the event of an attack, his forces, delayed by a march of several miles, and by a necessarily slow crossing of the Mississippi, must have arrived at St. Louis too late to participate in the defeat of the Indians.

"The affair of 1780 has been discussed at length, because, even when shorn of its exaggeration, it was one of the most important events in the early history of St. Louis, and also because the common account has been so widely accepted that a different version, unless fully sustained by records and arguments, would fail to convince the public mind of its authenticity."

[NOTE.—While this portion of the history was going through the press we received from Frederick L. Billon a memorandum embodying his views in regard to the affair of 1780. Anxious as we are to throw every possible light upon an event so conspicuous in the early annals of St. Louis, and in regard to which there has been so much controversy, we make room for Mr. Billon's note, written in 1880. It is as follows:]

AN AUTHENTIC VERSION OF THE AFFAIR OF FRIDAY, MAY 26, 1780.—This centennial anniversary of the first serious blow inflicted on the infant village of St. Louis, then in its teens, and numbering some one hundred houses, and less than that many adult males, presents a fitting occasion for a brief sketch of the occurrences of that day, and the antecedent causes that led to it; and as the affair, as here narrated, will differ materially in some of its essential details from the heretofore conceived impressions of it, derived *solely* from oral tradition with its manifold exaggerations, as passed down through successive generations, it will be necessary to go back a few years, and commence our narrative from the period that Clark took possession of the other side by the surprise of Kaskaskia, on the night of July 4, 1778, and supplanted the royal standard of Great Britain with the Stars and Stripes, and from which the present affair had its origin.

After Clark had captured Kaskaskia, he proceeded to Cahokia, which place he also took, and leaving Maj. Bowman in command, he returned to Kaskaskia, where he established his headquarters, and sent Capt. Helm with a small force to Vincennes, which place he took without any opposition from the French inhabitants of the place.

The inhabitants of these several places having generally taken the oath of allegiance to the Commonwealth of Virginia, the Legislative Assembly of that State passed on the 12th day of December, 1778, an act organizing the whole of the newly-acquired territory into the county of Illinois, and establishing the seat of government at Kaskaskia. Col. John Todd, of Lafayette County, was appointed judge and civil commandant; and in a letter to him from Governor Patrick Henry, dated at Williamsburg, Dec. 12, 1778, apprising him of his appointment, the Governor concludes his instructions to him as follows:

"That the people of Illinois could not expect peace and safety so long as their enemy the English had a footing in the country, and so long as they hold Detroit they could intercept the trade of the Mississippi, hence the necessity of the capture of that place and others still held by the English; to assist Clark to the extent of his means to rid the country of the English our enemies; that the French and Indian inhabitants, appearing at present to be favorably inclined towards the Americans, to cultivate and conciliate the affections of the French and Indians by giving them all the aid in his power; to impress upon them the blessings and value of liberty and of being free citizens, and see that justice be administered to them in all cases, and that they receive no injury nor oppression from the troops, etc.; for if their present favorable feelings are once lost, it would be difficult to regain it, etc."

As evidence of the sagacious views of Governor Henry, above set forth, and somewhat remarkable coincident thereto, the British Governor at Detroit, Col. Henry Hamilton, had collected a force of thirty British regulars, fifty French volunteers, and four hundred Indians, had passed down the Wabash, and retook possession of Vincennes on Dec. 15, 1778, only three days after the expression of the views of Governor Henry as given above, taking prisoners Capt. Helm with his few men.

So soon as Clark received this news at Kaskaskia, having but a few men, he ordered Maj. Bowman to evacuate Cahokia and join him at Kaskaskia, where he prepared to defend himself, expecting an attack from

Vincennes. On Jan. 29, 1779, he learned that Hamilton had but eighty men with him, having dispatched his Indians to blockade the Ohio River and prevent assistance to Clark, and that this would be an auspicious time for him to recover possession.

He immediately commenced his preparations, and left Kaskaskia on February 5th, with one hundred and seventy men. After twenty days' march, contending with incredible difficulties from the inundated condition of the country, etc., he finally succeeded in crossing the Wabash, and invested the place on the night of the 23d, and on the 25th, at ten o'clock A.M., Col. Hamilton and his men marched out of the fort as prisoners of war, and Clark received possession. Thus ended Clark's second capture of the place, and the American authority was re-established in the country.

After this second expulsion by Clark of the British domination on the eastern side of the river the country was tranquil for a time, no further attempts being made by them in this direction during the balance of the year 1779.

During the fifteen years prior to this that the British were possessors of the eastern side of the country, they had naturally succeeded in attaching to themselves a number of the old French inhabitants by the various ties of intermarriage, kindred, and interest; among these were some very prominent individuals of Kaskaskia and Cahokia, some of them holding official positions of trust, etc., and that these parties should look upon the "American rebellion" in the same light as did the mother-country and the British authorities in Canada, as an event to be put down at no distant day, and the country restored to British rule, was but natural.

Be that as it may, there is abundant evidence in written documents of the time still extant to show that the British at Detroit had it in contemplation and prepared another expedition in the early part of the year 1780 to repossess themselves of the country by abandoning the old route by the Wabash River, and taking a new one through Illinois, to fall upon and surprise Cahokia, the northernmost settlement of the country, at a moment when, the people of the place being entirely unapprised of it and unprepared for any resistance, it would become an easy conquest.

I must here digress somewhat from the main point in my narrative of this affair to introduce as an important support a gentleman, then but recently in the country, but whose long subsequent residence of nearly forty years in our place, and the important position he attained in this community until his death in 1817, added to his indirect participation in the prior occurrences which led to it, is of itself sufficient to establish the correctness of my theory.

Charles Gratiot, a native of Lausanne, Vaud, Switzerland, had lived for some years in London when quite young, previous to his coming to America, and had there become proficient in the English language. Crossing to America, he remained for a time in Quebec and Montreal, where he became connected with the Scotch house of David McCrae & Co., Indian traders, who furnished him with an outfit of merchandise, with which he came the usual route at that day, through the lakes to Mackinac, and by the portage of the Fox and Ouisconsin and the Mississippi River to Cahokia, where he arrived and established himself in business towards the close of December, 1777, about six months before its capture by Clark, with whom, possessing the advantages of a knowledge of the English and French languages, he soon became on intimate terms, rendering Clark many important services on different occasions, and for these reasons he was selected subsequently by the people of the village as the most proper person for the important and somewhat hazardous mission he undertook and accomplished.

In the spring of the year 1780, the people of Cahokia, having received an intimation that the British authorities at Detroit had in contemplation, aided by their Indian allies, to attempt the surprise of that place, with a view to the re-establishment of the British authority in the country east of the Mississippi, held a meeting and selected Charles Gratiot as the most suitable person, in consequence of his intimacy with Clark, then absent and supposed to be at the Iron Banks in the south, to undertake the perilous mission of going to seek him and apprise him of the danger the village was in, and the necessity for his immediate return to provide for its defense.

Clark, who had spent the winter of 1779 in command at the Falls of the Ohio, was ordered by the Governor of Virginia, early in 1780, to repair to the Iron Banks, on the east side of the Mississippi, below the mouth of the Ohio, to build a fort, which he named Fort Jefferson, and then set out on his return to the Falls on foot, with only one man as a companion. It was here that Gratiot sought Clark; whether he found him or not does not appear. At all events the anticipated expedition against Cahokia, if ever contemplated at all, or ever set out, finding the people of the place apprised of it and prepared for its reception, and that even if successful it could only be so with great loss to themselves, was abandoned, and some straggling portions of the Indians, doubtless disappointed in their expectations of pillage and plun-

der, their sole inducement in their predatory incursions, crossed over to the St. Louis side, and vented their spleen and malice in cruelly shooting down the half-dozen persons whose bodies were found in different parts of the prairie fields, at from one to four miles northwest of the village, and that no combined attack was ever made on the village itself will be made manifest, I think, to all reflecting minds by the various circumstances which will be adduced to substantiate this theory.

What were the reasons that led the British authorities at Detroit to conceive their project for the surprise of Cahokia? Simply to endeavor to regain possession of territory they considered as rightfully belonging to their sovereign, which had been unlawfully wrested from him by his rebellious subjects, "*the Americans*," and to bring them again under the dominion of their legitimate sovereign.

What reasons could they have had for an attack upon St. Louis, the people of which mostly were their fellow-countrymen and kinsmen from Canada, and with whom they and their Indian allies had been on terms of friendship ever since the first establishment of the place? None whatever.

The answers to these two simple queries are in themselves almost sufficient to sustain the correctness of my position, that had they succeeded in their design on Cahokia the affair on this side would never have transpired.

But we will now proceed to more conclusive proofs.

Charles Gratiot, *of Cahokia*, had purchased from Charles Sanguinet, of *St. Louis*, on March 13, 1780, an invoice of merchandise to replenish his stock, and gave Sanguinet his note for the same, payable in July following. These goods he took over to his store in *Cahokia*. Some little time thereafter, at the urgent request of the united people of *that* village, as already stated, he went in search of Col. Clark, in whose skill and bravery these people had unbounded confidence, to assist them in repelling an expected attack of the British and Indians on *that* place, an intimation of which they had received. Gratiot, a man of prudence and foresight in the management of his business affairs, being apprehensive that in his temporary absence on his mission the expected attack on *the place* might occur, and knowing well the main object of the Indians was pillage solely, deemed it prudent to send his goods, etc., over to *St. Louis*, a place of safety. His clerk, Mr. Ducheneau, took them over and deposited them with Mr. Sanguinet, from whom he had purchased a portion, with Mr. Gratiot's casket of his valuables.

After Mr. Gratiot's return to *Cahokia* from his mission, and apprehensions of an attack had measurably subsided, he sent his clerk over to *St. Louis* for his goods, etc.; but Mr. Sanguinet, still apprehensive that an attack might yet be made on Cahokia, declined to return them, unless Mr. Gratiot would give him an additional indorser on his note he had given Sanguinet for them.

Mr. Gratiot thereupon commenced a suit for the recovery of his goods from Sanguinet before Governor De Leyba, on May 8, 1780, and the decision of the Governor, after an impartial trial before him, was rendered on the *identical* 26th day of May, 1780, in the Government Hall (the large central room in the old Laclede building), in presence of the parties and some of the principal personages of the village.[1]

Now, the questions naturally arise,—

1. Why did Mr. Gratiot, a resident of Cahokia, send his goods and valuables across the river to St. Louis?

Because he considered them in danger in Cahokia, and perfectly safe in St. Louis, where no apprehensions existed.

2. Why did Mr. Sanguinet decline to return them to Gratiot?

Because, being still apprehensive that an attack might yet be made on Cahokia, and that Gratiot might be plundered of his goods, and in consequence, perhaps, unable to pay him for them, deemed it advisable for his own surety to still retain them for a time.

I think this makes the case perfectly clear.

But we will proceed to other circumstantial proofs.

How does it happen that Auguste Chouteau, then thirty years of age, and just beginning to assume the important position in the affairs of the place heretofore exercised by Laclede, and who kept a journal of events; Charles Gratiot, who indirectly had some connection with the events from which it arose, and an indefatigable writer; Charles Sanguinet, Gabriel Cerré, Louis Perraute, and Louis C. Dubreuil, merchants; Milong Duralde, surveyor and writer; Pierre Peri, register; Antoine Regnal and Bernard Gibkins, physicians; John I. Motard, Joseph A. Hortiz, and, above all, Joseph Labuscière, the public notary and factotum, all men of education, as their private papers clearly show,—how is it, I ask, that not a word of the affair is found in the papers of either of these gentlemen? Labuscière, "king's attorney," as he styled himself, notary, scrivener, factotum, who did nearly all the writing, official and private, for over

[1] "The papers in another case, Labbadie *vs.* his engagees, were filed on same day, May 26, 1780.

twenty years, more than a thousand documents written by him in the Archives, on every subject great and small, nothing is to be found of his about that affair; very strange that he, of all others, should not have left something about it. It is only found mentioned in the Archives, and then but incidentally in the few inventories of those killed, and of these we find the interment of but four persons in the register of the parish priest on the same day of the affair. Why are not the others noticed? All proving, beyond controversy, either that it was not considered of much importance by the authorities, or that there was gross neglect on their part in not leaving a detailed history of an occurrence which, however trivial it might have been (and no doubt was, when compared with the mammoth proportions it acquired in after-years), yet was at least an event in the history of the village, and should have been preserved in the public documents of the day.

All this is irrefutable and cannot be controverted.

Summed up briefly it amounts to this:

The British authorities at Detroit, being still bent on repossessing the country on the east side of the Mississippi, contemplated another attempt by abandoning the old route by the Wabash and Vincennes, and taking a new route through Illinois farther north, might fall upon and surprise the village of Cahokia, the northernmost settlement, where the people, being ignorant of their approach and totally unprepared for them, they expected an easy conquest with little or no loss to themselves. But learning subsequently that the people of the village had become apprised of their design and were prepared for their reception, the attempt was abandoned; and a small party of their Indian allies, whose only inducement to engage in the enterprise was pillage and plunder, being disappointed in their expectations, crossed the river above the village to this side and committed the murders on the persons of the half-dozen victims of their wrath whose bodies were found at different points at from one to four miles northwest of the place.

The following residents of the place at that day were all men of more or less education, prominent in the place, and each competent to have written a history of the affair, and yet we have not a line from either:

1. The Governor, De Leyba himself.
2. His lieutenant, Cartabona, from Ste. Genevieve.
3. Father Bernard, the parish curate, who buried the four brought in; capable of writing, and, one would suppose, partly his duty.
4. Joseph Labuscière, long in public office, and a professional writer.
5. John B. Trudeau, the school-teacher, a poet, who married the widow of Francis Hebert, one of the victims; fully competent.
6. Martin Duralde, the Spanish surveyor-general.
7. Pierre Pori, the village register.
8. Réné Kierserenu, church-warden, who officiated at funerals in the occasional absences of the parish priest.
9. Capt. De Volsay; and, 10, Lieut. P. Belestre, of the regular service.
11. Auguste Chouteau, then thirty; and, 12, his brother, P. Chouteau, twenty-one years.
13. Louis Dubreuil; 14, John B. Sarpy; 15, Joseph Segond; 16, Louis Perrault; 17, Silvestre Labbadie; 18, Aug't Reilhe, merchants; all European Frenchmen.
19. Joseph Comand, physician, France.
20. Joseph M. Papin, merchant.
21. Joseph Labrosse, merchant.
22. Charles Sanguinet, merchant.
23. John I. Motard, jeweler, France, educated.
24. Eugene Pouré, captain of militia.
25. J. L. Martigny, captain of militia.
26. John B. Tardif, brewer, from France, and some half-dozen others from across the river.

Some of the above may have been temporarily absent from the village on the day named, but very few if any.

Charles Gratiot, Sr., was a man of great system and regularity in his affairs, and withal very careful in preserving all his books and papers relating to his affairs, etc., and after his death, in 1817, and that of his widow, in 1825, and his estate had been settled, the trunk containing these papers was for many years in the loft of the residence of his youngest son, the late Paul M. Gratiot, my brother-in-law, at Cheltenham, a number of which came into my possession from his children.

From a close study of some of his letters, etc., I arrive at the following conclusions regarding the disposition and character of the man:

He was a man of great energy and decision of character and indomitable industry, and withal ambitious to acquire a competency of this world's goods. He kept his own books, attended to his own correspondence, and was very particular to note down in writing every trivial matter connected with his affairs. Now, is it likely that this man, so particular to preserve in writing everything, however trivial, relating to or concerning himself, and who was here on the very day of the occurrence of this affair, and who must have witnessed all that transpired on that occasion, would not have made some note of it, had it been the important affair represented in later days to have resulted in so great a loss of life? Undoubtedly he would. And yet we find not a solitary line, either from this man or any other of the educated men of the day here at the time, giving any account of it, and our sole knowledge of its extent is what has come down to us from the traditions of the period.

Not even the Governor at the time, De Leyba, nor his successor in office, nor the village schoolmaster, John B. Trudeau, who subsequently married the widow of one of the half-dozen who fell victims of that eventful day, and who was fully competent to give an authentic history in detail of the occurrence and its extent, have left a solitary line on the subject.[1]

John Reynolds, who was a man of twenty-nine years at the date of the death of Mr. Gratiot, and who had become acquainted with him and his history, in a brief notice of him in his book, says,—

"Charles Gratiot was born in Lausanne, Switzerland. At ten years of age placed with a friend in London for his education, and learned his business in a large commercial house, where he was taught that the height of human happiness was to keep books neatly and to acquire great wealth."

Governor John Reynolds' version of May 26, 1780:

"Dominique Ducharme, a Canadian Indian trader, lived at intervals in Cahokia, where he had a brother, Charles Ducharme, residing. He had great influence with all the tribes in the Upper Mississippi region. In 1779 he came down from Mackinac, and ascended the Missouri to trade with the Indian nations in the Spanish dominions, contrary to the Spanish regulations. After proceeding up the Missouri some distance, he was overtaken by a barge, with an officer and some Spanish soldiers, sent after him from St. Louis, his boat and goods were captured; he escaped with his gun and life. He swore vengeance against St. Louis. All winter he was active in raising his savage friends for the attack. The British garrison at Mackinac furnished him a few regulars, and some Canadians joined him. With this force Ducharme descended the Mississippi in the spring, and made his assault on St. Louis on the 26th of May, 1780, and after killing as many as appeased his wrath, he withdrew his red warriors and abandoned the massacre. It is said that when Ducharme and his Indians saw their old friends dead, their anger turned to sorrow, and they withdrew to their wigwams in the north. It was Ducharme's campaign, not the British. The year of this attack, 1780, was known afterwards as '*l'année du coup.*'"

Now the capture and confiscation of Ducharme's boat and goods was an actual occurrence, with the difference that it occurred more than six years prior to the date given by Reynolds.

It occurred in the early part of the year 1773, in the administration of Piernas, the first Spanish Governor. The affidavit of Ducharme's men, who were captured with the boat, is dated March 15, 1773, and the inventory of the goods, etc., after the confiscation, March 29, 1773. These dates are found in the Archives of St. Louis.

Now here is a man (Reynolds) who came to Illinois as early as 1800, at the age of twelve years, and passed there the balance of his life, a man of eminent position, as Governor of the State, representative in Congress, etc., known to and acquainted with almost every individual in the country in his day, who got up a history of his times, with every facility and means within his reach to inform himself on the subject, if the information was attainable, who, to procure material sufficient to make up a book, was under the necessity of introducing in his work numerous occurrences and matters of comparatively trivial nature concerning individuals alone, where events and occurrences were tenfold more abundant than on our side of the river. Surely it seems to me that if the affair had been of any historical *importance*, Reynolds was the man to have given such an account of it in his book as it would then have merited, particularly as the people of the two sides of the river were as one, having daily intercourse with each other, and almost isolated from the balance of mankind.

I have read, I believe, almost every work that ever came out in regard to the early history of this Upper Mississippi valley of the French and Spanish domination, and, with the exception of some half-dozen or less, no mention is made of this affair, and then in so brief a manner only by the few who have mentioned it as proves conclusively either that they had learned so little reliable in regard to it, or that the affair in itself was so unimportant as scarcely to need mention. It is altogether from the mere chance of my having come into possession, within the last few years, of the Gratiot manuscripts and other authentic original documents of the day that the true history of this affair has, to some extent, been brought to light; for had Primm ever seen or known of these papers, a man of his judgment would never have embodied in his address the statements he there introduced as based on tradition alone. It is thus that much of what is termed history is produced, either by ignorant pretenders, or by those who undertake it unprovided with authentic data upon which to ground their statements.

[1] This old teacher, Trudeau, kept school here for forty-five years after the event, until about 1825, on Pine Street. He died in 1827.

CHAPTER X.

SPANISH, FRENCH, AND AMERICAN INTRIGUES IN THE WEST.

THE immediate cause of the negotiations which resulted in the purchase and cession of Louisiana, and its permanent annexation to the United States, was the agitation in the West and in Congress in conse-

quence of the refusal of "the right of deposit" at New Orleans to American goods, and the practical denial to this country of the advantages accruing from the free navigation of the Mississippi River. This, in connection with the knowledge of the treaty of San Ildefonso between the French republic and the king of Spain, of the 9th Vendemiaire, an 9ème (Oct. 1, 1800), by which Spain retroceded to France all the colony of Louisiana, just as it was when Spain had come in possession of it, caused such a ferment in the country that the government of Mr. Jefferson was forced to do something as an act of self-defense. Senator Ross, of Pennsylvania, introduced in the United States Senate, in February, 1803, a series of very positive resolutions, on which there was a famous three days' debate, ending in the adoption of a more moderate resolution, which, however, was still significant. Mr. Ross' resolution declared that

"the United States have an indisputable right to the free navigation of the river Mississippi, and to a convenient place of deposit for their produce and merchandise in the island of New Orleans. (2) That the late infraction of such, their unquestioned right, is an aggression hostile to their honor and interests. (3) That it does not consist with the dignity or safety of this Union to hold a right so important by a tenure so uncertain. (4) That it materially concerns such of the American citizens as dwell on the Western waters, and is essential to the union, strength, and prosperity of these States that they obtain complete security for the full and peaceable enjoyment of such their absolute right. (5) That the President be authorized to take immediate possession of such place or places in the said island or the adjacent territories as he may deem fit and convenient for the purpose aforesaid, and to adopt such other measures for obtaining that complete security as to him in his wisdom shall seem meet. (6) That he be authorized to call into actual service any number of the militia of the States of South Carolina, Georgia, Ohio, Kentucky, Tennessee, or of the Mississippi Territory which he may think proper, not exceeding fifty thousand, and to employ them, together with the military and naval forces of the Union, for effecting the objects above mentioned. (7) That the sum of five millions of dollars be appropriated to the carrying into effect the foregoing resolutions, and that the whole or any part of that sum be paid or applied on warrants drawn in pursuance of such directions as the President may from time to time think proper to give to the Secretary of the Treasury."

These resolutions, though not adopted, did not convey an idle threat. They were no mere *brutum fulmen*. The policy they embodied had been vehemently urged upon the government in many quarters, and was seriously contemplated by numbers of sagacious statesmen and soldiers as the best and most effective, and possibly the most pacific, solution of the difficulty. The idea contemplated was such a *coup de main* as would anticipate, and probably forestall, the expected arrival of the army of Gen. Victor from Hayti, after the downfall of Toussaint L'Ouverture and the conquest of that island. If Victor's troops came, there would be a war anyhow for the control of the Mississippi, and it was easier to act on the defensive than to take the offensive against a *corps de armée* of Napoleon's veterans. The people of New Orleans, excepting the Creoles, all yearned for such action as Ross' resolution directed. In Mississippi Territory the Legislature tendered the lives and fortunes of the inhabitants in support of an energetic policy. From all sections west of the Alleghanies memorials poured in upon Congress demanding instant action by the general government, or leave to the people of that section to act, so as to save themselves and their crops. These memorials took high ground. No protection, they said, no allegiance. If the government did not defend them it was their duty to march in their own defense.

But, in fact, the policy of seizing New Orleans had been closely considered at Washington during the trouble with the French, which terminated in 1800, and action was only prevented in 1795 and 1799 by the concession then of the right of deposit at New Orleans for a term of three years. It was commonly supposed that the calling out of the troops under Washington and Hamilton had an ulterior object besides resistance to the French, and that this object, even of John Adams' pacific administration, was the capture of New Orleans. Wilkinson, in his "Memoirs," shows that Alexander Hamilton, practically commander-in-chief of the army to be levied, was very particular in his inquiries as to the offensive and defensive resources of the West and the state of affairs in Louisiana, and the first outbreak of the Spanish war then looked for would have been signalized by an immediate descent upon New Orleans. After it became known that Spain had yielded possession of Louisiana to France, statesmen of all parties united in believing that the time had come to act. Even Mr. Addington, the British minister in Downing Street, went out of his way to let Rufus King, United States ambassador to the Court of St. James, know and understand that Great Britain not only would not object, but would be very glad if the United States should seize upon the whole of Louisiana. Its possession by France would be sure to lead to a war with England, and the mouth of the Mississippi was not at that time thought to be worth a war to any power except the United States.

Still Mr. Ross did not succeed in getting the Senate to adopt his resolutions. A substitute was offered, in the way of an amendment, by Hon. John Breckinridge, of Kentucky, and carried by a vote of yeas 15, nays 11; after which the Senate voted unanimously

in favor of the resolutions as amended. These were to the effect that

"the President of the United States be and he is hereby authorized, whenever he shall judge it expedient, to require of the Executives of the several States to take effectual measures to organize, arm, and equip, according to law, and hold in readiness to march at a moment's warning, eighty thousand effective militia, officers included. (2) That the President may, if he judges it expedient, authorize the Executives of the several States to accept, as part of the detachment aforesaid, any corps of volunteers, who shall continue in service for such time, not exceeding —— months, and perform such services as shall be prescribed by law. (3) That —— dollars be appropriated for paying and subsisting such part of the troops aforesaid whose actual service may be wanted, and for defraying such other expenses as, during the recess of Congress, the President may deem necessary for the security of the territory of the United States. That —— dollars be appropriated for erecting, at such place or places on the Western waters as the President may judge most proper, one or more arsenals."

The money actually appropriated under this resolution was two million dollars, and, as it was not expended for military recruiting, it was looked upon as belonging to the secret service, and Napoleon openly spoke of it as a fund for corruption, to the temptation of which he would not permit the immaculate Talleyrand to be exposed.

In the House of Representatives a resolution of John Randolph's was adopted, expressing the unalterable determination of the country to maintain the boundaries and rights of navigation and commerce through the Mississippi River as established by existing treaties. It was on this basis, and fortified by careful instructions by Jefferson and Madison, that James Monroe went to Paris to reinforce Robert R. Livingston, our minister there, and settle the Mississippi imbroglio upon a definitive plan. The result was the cession of Louisiana.

But a long train of preliminary circumstances led up to this event, many of them of the greatest interest in the general history of the West and of importance to the history of St. Louis, since it was the scene of a great many of these transactions, all of which, perhaps, were necessary to secure the annexation of Louisiana and Missouri to the territory of the Union. The political intrigues in the West in the period immediately after the Revolution were of the most exciting character, and they were carried so far, in consequence of the adroit devices of the adventurers who conducted them, the keen desires of the European governments interested to curb the progress of the nascent republic, and the turbulent men and disorganized society of the sections involved, that almost at any time between 1781 and 1802 a spark of excitement might have been fanned into such a flame of revolution as would have disintegrated the republic and restricted the United States to the regions east of the Alleghany Mountains. The discontent of the West in 1783 was as distinctly formulated as that of the South in 1830. The difference was this, that while the South claimed that its rights under the Constitution had been violated to such an extent that it would not consent to support the Union any longer without additional safeguards defining and maintaining its specific interpretation of the Constitution, the West took the more practical view that, in consequence of insuperable geographical obstacles, the Union, and the Constitution when it should be formed, were of no value to them, and would become hurtful. There could be no allegiance without protection, they contended, and protection was impossible with the mountain barrier where it was. Every increase of population, every development of resources would simply make the condition of the people of the West more intolerable. They would naturally gravitate towards the country which might control the Mississippi. That was the law of nature, the "manifest destiny" of a great and growing section. It was only wisdom to prepare for it, and it was simply a vicious sentimentalism which clung to the idea of Union and a continuance of the old Confederacy, because a successful war had been waged by the Eastern colonies against the waning forces of Great Britain. This was the way in which the people and their leaders had come to look at it almost universally, and it is useless to deny the fact that in 1785 every section of the West that was settled at all was settled by a thoroughly disaffected, if not disloyal, people.

The true history of this condition of affairs has never been fully set forth, for several reasons: (1) the prime actors and leaders of those days found it expedient at a later period to be very silent in regard to their views and position, for they wished to retain their influence in a community which forgot it was ever disaffected, and would have repudiated the men who ventured to remind it of the fact; (2) the foreign governments mixed up in these intrigues were constrained by a variety of considerations to conceal their methods and ignore their contrivances, in order at once to screen their agents and pensioners and to avoid entangling and compromising revelations; (3) the *history* of this country, as a rule, has been written by Northern people, and the greater part of these intrigues and discontents had ceased to agitate the public mind and were conclusively quieted before any authorized and legitimate settlements began in the Northwestern Territory. Kentucky and Tennessee were as

wide apart from one another in those pioneer days as Japan is apart from China. The political history of Kentucky and Tennessee, Georgia and the Mississippi Territory has indeed been written, but in a fragmentary way, and it has not been connected at all with the proper history of the great West as an extension of the thirteen colonies which secured the independence of the United States.

France and Spain were not actuated entirely by a disinterested sympathy for the weak struggling against the oppressor in extending the liberal and vital aid which they gave to this country during the Revolutionary war. There were many purely selfish considerations to impel them to act as they did. In France, indeed, there was a force of popular sympathy and enthusiasm which a government desiring and needing popularity could not well resist. But while availing themselves of this enthusiasm for their own purposes, the cool heads of administration in France by no means shared it. Maurepas frequently told the elder Ségur that public opinion had forced the government, against its own wishes, to side with America.[1] The Count de Vergennes is said to have originally opposed the American alliance, and to have resisted, as far as he safely could, every separate measure of aid, either in money or men, extended by France to the United States. He did all that was in his power to narrow the boundaries of the new country and restrict and confuse its authority.

The object of France in giving support at all to America was twofold,—jealousy and opportunity. England was her commercial and maritime rival. To injure British commerce, defeat British armies and navies, and dismember the British empire would, according to the notions which control international relations, contribute at one and the same time to the glory and to the welfare of France. A large portion of the British territory in America had been French territory until a very recent period, and another portion, equally large, had been ceded by France to Spain merely in order to prevent Great Britain from taking possession of it. France might easily expect to recover at least some portion of this lost empire while aiding to humiliate her rival, and to reduce the magnificent proportions which the genius of Pitt had given to the British colonial possessions. Spain's motives for an alliance with the United States, and for sharing the risks and burdens of the war in America, are not so clear, though the genius and decision of Galvez enabled her to turn that war to great profit by the reduction of Baton Rouge, Natchez, Mobile, and Pensacola, thus completing the conquest of Florida, and securing under her absolute and sole control every part of the firm land boundaries of the Gulf of Mexico, which now became truly a Spanish lake. But Spain's colonial interests were too great for that country to avoid viewing with lively apprehension a colonial revolt of such proportions as that of the American Revolution, and the rulers of that monarchy were not easy in contemplation of the enterprise, audacity, and growth of the rebellious States. Maj. Stoddard, in his "Sketches of Louisiana," remarks that "the era of the American Revolution was not viewed by Spain with indifference, and she found it no easy matter to decide on the policy which it became her to pursue. . . . Nothing disturbed Spain more than the contemplated establishment of an independent empire in America. She was apprehensive that the spirit of innovation would make its way into her provinces, and eventually dismember them from the parent country. But she could not resist the lures held out by France, and when she engaged in the war it was merely as an auxiliary, and with a determination to protect her own interest and to remain quiescent as regarded the independence of the United States. The acquisition of Gibraltar Jamaica, Minorca, and the Floridas were splendid objects in her view. She readily perceived that, in case the United States succeeded in breaking their connection with England, the Floridas would change masters, and she deemed it prudent to add them to her own dominions before we had a legitimate claim to them." Probably the "family compact," by which Spain had originally acquired Louisiana from France would have compelled her under any circumstances to unite with that country and the United States in the alliance against Great Britain. But the chance to acquire control of the Gulf of Mexico, and with it the Mississippi River, was not to be thrown away slightly The danger from revolution was not so prominent in 1778 as it had become when Maj. Stoddard wrote It was a real danger, as was proved by the movements of Gen. Miranda (which had the sympathy of Jefferson and the aid of Burr) immediately after the peace of 1783. But Spain was quite aware that it was necessary for her to take possession of the Floridas in order to prevent the United States from doing so. The operations of Capt. Walling in the Mississippi in 1776 proved that conclusively. This officer attempted to take Natchez, and it was well understood that Georgia claimed through to the Mississippi River on the parallel of Savannah, while Virginia and North Carolina had begun already to survey a boundary line t

[1] Ségur: "Mémoires," i. 111. Flassan: "Diplomatie Française," vii. 166.

that river from the Atlantic, which would mark the limits of their claims in the West. The most effectual way for Spain to prevent the United States from encroaching upon either her western limits or those bordering on the Gulf was to occupy new ground in her own right. The proverbial slowness of Spanish military movements enabled Gen. George Rogers Clark to establish a fort in the name of Virginia on the eastern bank of the Mississippi (Fort Jefferson), below the mouth of the Ohio, before Spain could do so much, and this act, with the capture of Kaskaskia, Cahokia, and Vincennes, and the American victories in the Cherokee and Chickasaw country, materially reduced the prospects of carrying out the Spanish programme. Galvez, however, did the best he could to repair the consequences of this dilatoriness by extending the limits of West Florida towards the Tennessee River, and by sending an expedition to the St. Joseph's River, to plant a fort where La Salle had had his trading-post in 1679. Upon these movements Spain claimed that she was entitled to a boundary far east of the Mississippi River, and also that the navigation of that river must be entirely in her control.

These pretensions of Spain were supported and insisted upon by France. That country did indeed render hearty and valuable aid to the United States, but in return for it demanded things which it did not comport with national self-respect to concede. In fact, France assumed the right to direct almost the entire foreign policy of the United States, and to select the limits within which our growth and ambition were to be given room to play. Gouverneur Morris, in the course of the debate in the Senate on the resolution of Mr. Ross, quoted above, took occasion to say that "The French minister, Mons. De la Lucerne, when Congress were deliberating on the ultimatum for peace, obtained a resolution that our ministers should, as to our Western boundary, treat under the dictation of France. Our ministers disdained the condition, and refused to obey. Their manly conduct obtained for us the countries whose fate is now suspended on your deliberations." In fact, however, Congress did not quite obey the terms dictated by France. These were insolent in the highest degree, and would never have been suggested had not our country been feeble, impoverished, and anxious for peace at any price. They make it probable that the policy of the French Cabinet, from the time of the cession of Louisiana to Spain in 1763, had contemplated its retrocession at the first favorable opportunity, as occurred under the treaty of San Ildefonso in 1800, and that in the mean time it was expedient to aid the tenant at will in every possible effort to extend and improve his premises. With a boundary line coming near the Alleghanies, Napoleon could have made Louisiana a very uncomfortable neighbor of Great Britain in Canada, if indeed he failed to conquer back that country. When John Jay arrived as minister of the United States at Madrid, in 1780, he found that the French minister in Philadelphia had already signified to Congress what should be his instructions and what terms Spain would expect him to be willing to concede in order to consummate an alliance. The United States, Mr. Jay was informed, were to take explicit and moderate grounds on the subject of "a precise and invariable Western boundary to the United States, the exclusive navigation of the Mississippi River, the possession of the Floridas and the territory on the left or eastern bank of the Mississippi River;

"that on the first article, it is the idea of the Cabinet of Madrid that the United States extend to the westward no farther than settlements were permitted by the royal proclamation bearing date the 7th day of October, 1763. (This limit was the Alleghany Mountains.)

"On the second, that the United States do not consider themselves as having any right to navigate the river Mississippi, no territory belonging to them being situated therein.

"On the third, that it is probable the king of Spain will conquer the Floridas during the course of the present war; and in such an event, every cause of dispute relative thereto between Spain and the United States ought to be removed.

"On the fourth, that the lands lying on the east side of the Mississippi, whereon the settlements were prohibited by the aforesaid proclamation, are possessions of the crown of Great Britain, and proper objects against which the arms of Spain may be employed for the purpose of making a permanent conquest for the Spanish crown. That such conquest may probably be made during the present war. That, therefore, it would be advisable to restrain the Southern States from making any settlements or conquests in these territories. That the Council of Madrid consider the United States as having no claim to these territories, either as not having had possession of them before the present war, or not having any foundation for a claim in the right of the sovereignty of Great Britain, whose dominion they have abjured."[1]

This was a very serious business, and demanded a great deal of tact on the part of Mr. Jay. In fact, France did not want the United States to become strong and powerful, nor to extend the area of their

[1] This claim, however, did exist, and was perfectly well founded, for the reason that the Mississippi River was made the boundary between France (and therefore Spain) and Great Britain, in an explicit manner, in the treaty of Paris in 1763. In 1783, again, when Great Britain recognized the independence of the United States, and signed a treaty of peace with them, it was defined that the boundaries should be the same as those of 1763, *i.e.*, the Mississippi and Iberville Rivers. Georgia and South Carolina, therefore, as well as Tennessee and Virginia, while often disputing about their own frontiers, united at all times in insisting that the Mississippi was the true boundary of the United States on the west. (See Dr. Stevens' "History of Georgia," vol. ii., for a complete statement of this chain of titles.)

territories. Vergennes was afraid of the example of the nation he had helped to create. He understood that republicanism propagates itself, and he wished to wall it in. His successor, the Count Montmorin, went still farther. He instructed the French envoy to this country that "it is not advisable for France to give America all the stability of which she is susceptible. She will acquire a degree of power which she will be too well disposed to abuse."[1] In fact, the French and Spanish governments thought to check the Revolution by limiting the territory of the United States and paralyzing their autonomy. Spain trusted neither England nor the revolted colonies. The Governor of Louisiana, Don Luis de Unzaga, at the time of the first outbreak of the Revolution, wrote to his government that he had sent a spy to Philadelphia, and was watching everything carefully. "I suspect," said he, "that at any moment the royalists and insurgents may make up their quarrel and unite their forces, in order to take possession by surprise of one of the domains of some European power, and thus to indemnify themselves for their losses and expenses." In 1777, Galvez was instructed that in case the Americans, Capt. Walling, or any one else, showed a disposition to capture the British posts on the lower Mississippi, he was himself to seize and hold them "in trust or deposit" until they could be otherwise disposed of. And the French and Spanish authorities both reprobated Capt. Walling's attack upon Baton Rouge and Fort Manchac in 1778, albeit it was made from New Orleans. The French commissioners wrote from New Orleans about it, saying,—

"The Spaniards here see with regret these conquests, because it cuts off their hope of executing them on their own account, and of thereby securing for themselves the exclusive possession of the Gulf of Mexico. Besides, they feel that the mildness and other advantages of the climate of Louisiana may seduce the Americans, and attract them to a region from which the communication with the Gulf of Mexico begins to be better and more practically known."

Under such circumstances Jay was called upon to act with exceeding circumspection. His course was greatly simplified by the fact that Patrick Henry, Jefferson, and Gen. Clark had removed two of the conditions laid down by Spain and France from the region of fact. The capture and occupation of Kaskaskia, the building of Fort Jefferson, and the erection of Illinois into a county made it no longer possible to say that the United States had no territory on the Mississippi River. So, likewise, Tennessee was extending towards the river, and Georgia preparing to create its new "Bourbon County," afterwards the State of Mississippi. In the instructions to Jay from Congress, that body had been so anxious to please that it had told him "not to insist" upon the right to navigate the Mississippi. And Jay himself was finally willing to *waive* that right in exchange for other considerations for a term of years. In this he had the support of Washington and a majority of the Eastern statesmen, who thought that the right to navigate the Mississippi was of no present importance. Indeed, there were others not a few (Jefferson, Adams, Hamilton, and Washington among the number) who looked with mistrust upon facility in navigating the great river. They were afraid it would be injurious to other parts and especially to the stability of the new government, by depopulating the older States and pouring the farm labor of the country into the West. Jefferson, as one of the reasons he gives in favor of the purchase of Louisiana in 1803, stated that the country could not possibly be settled for many years, and hence it would do no hurt in diverting or attracting population.

M. De la Lucerne was careful that the instructions to Mr. Jay should be forwarded to him at once, and also that new ambassadors should be sent out to Europe to reinforce Franklin and Doane and overrule John Adams. The instructions were to the effect that Jay should not "insist" upon the free navigation of the Mississippi below the thirty-first parallel. This specific "instruction" grew out of an act of the Virginia Legislature in 1781, assented to by all the Southern State Legislatures except that of North Carolina. Spain at this stage of the proceedings had advanced money to the United States—Congress, in fact, had drawn upon her to the extent of half a million dollars—and was at war with Great Britain. But she would neither acknowledge American independence nor make a treaty with the United States, so that the situation was one of considerable embarrassment. Franklin, when Jay went to Paris, thought that he should yield the matter as he was instructed to do. But Jay was reluctant to make such a sacrifice. Count Aranda and Count de Vergennes pressed it upon his attention again in Paris, and this pressure was the more potent from the fact that Congress had under the manipulation of Lucerne, instructed its plenipotentiaries in Paris to undertake nothing in the way of negotiations for peace or truce without the knowledge and concurrence of the French ministers, and in their final action to be governed by "their advice and opinion." This, of course, was perfectly right in case of such an alliance, the continuance of

[1] Barbé Marbois, "History of Louisiana," p. 152.

[2] Butler's History of Kentucky, 140.

which was not possible without perfect mutual confidence, though Mr. Mann Butler, in his "History of Kentucky," is disposed to treat it as "a step of degrading compliance, which, whenever this country may be again disposed to take, it had better surrender in form an independence which she would no longer retain in reality." But advice and opinion of allies are not to govern in case of boundaries, except under very peculiar circumstances, for no power has the right to expect its ally to surrender territory which it would not surrender in a similar contingency. This was the position to which Jay held when France endeavored to influence and control him in his negotiations with Spain, and the result finally was that he secured the support of his associate envoys and carried the main point for which he had been contending,—the ultimate right of the United States to enjoy the benefits of the free navigation of the Mississippi. But De Vergennes gave him great trouble, his object undoubtedly being to open the way for the retrocession of some part of the West to France, either by Spain, or Great Britain, or by the United States in acknowledgment of their obligations to France. The country west of the Alleghanies and south of the Ohio, he contended, could not belong to the United States except as being a part of British territory. But it was not territory of Great Britain, because that country had excluded the whites from it and acknowledged the independence of the Indians settled in it,—the Shawanese, Cherokees, Chocktaws, Creeks, and Chickasaws. He proposed, therefore, a line starting at the north boundary of West Florida, on the Tombigbee River, up that river northeast till its head was reached, thence across to the bend of the Cumberland, and down that river to the Ohio. East of this line was to be territory of the United States; west of it free Indian territory, but the tribes to be under the protection of Spain. The lands situated to the north of the Ohio, Vergennes proposed, with significant obscurity, were to be "regulated by the Court of London." This proposed boundary, it will be observed, excluded the United States entirely from the Mississippi River.

Jay would not assent to any such terms, however, and after a tedious negotiation,—the preliminary articles being signed Jan. 20, 1783, but the final treaty of peace not being concluded until September 3d, and the ratifications were not exchanged until May, 1784,—a basis for peace between the four powers was determined, Spain securing East and West Florida and the free navigation of the Mississippi River from its source to its mouth being granted to both the United States and Great Britain. The dividing line between Spain and the United States on the south was on the thirty-first parallel, running due east from the Mississippi to the Chattahoochie, down that to its junction with the Flint, thence to the head of St. Mary's River, and down that river to the ocean. Spain, however, had no intention whatever of conceding the free navigation of the lower Mississippi to the United States. She explicitly withheld and denied the privilege in fact, with the sinister intention of profiting by the agitation which was expected to ensue. A correspondence arose between Mr. Jay and the State Department authorities and the Spanish minister, Don Diego Gardoqui, who protested that the Spanish king would never permit any nation to use that river, both banks of which belonged to him. Mr. Jay was called before Congress, the only power in the country under the feeble and disorganized *régime* of the old Confederacy, and he informed that body that Spain was ready to grant the United States some extensive and valuable commercial privileges, but also that she was capable, by favoring Portugal and England, and by spurring the Barbary States to new acts of piracy, to injure us seriously. No treaty could be had with Spain, however, he assured Congress, until boundary lines and the Mississippi River question were definitely settled. The claims of the United States were just and should prevail, but, under existing circumstances, Mr. Jay was inclined to believe in the expediency of "a treaty with Spain, limited to twenty or thirty years, the United States stipulating that, for the term of the treaty, they would forbear to navigate the Mississippi below their southern boundary." Mr. Jay's view was that, "however important the navigation might ultimately be, it would not probably be very essential during the proposed term; and that, therefore, it might be good policy to consent not to use for a certain period what they did not want, in consideration of valuable commercial privileges."

Gardoqui rejected this proposition of Jay's, which had been adopted by Congress by a vote of seven Eastern States to five Southern ones. The Spanish minister would not make that the subject of a treaty which his sovereign claimed as an absolute right, and so accordingly he declined to negotiate further. The news, however, got to Kentucky of these negotiations. It reached there in the shape of a distorted rumor that Jay had proposed to the Spanish minister to surrender the navigation of the Mississippi for twenty or thirty years, and this rumor, circulated among a disquieted, discontented, and excitable people, was like fire to tinder. A flame of disorder arose, adroitly fanned by designing men, which several times threatened war and the dissolution of the Union.

Kentucky had many causes for discontent about

this time. There was a great rush of immigration, and there had been so many changes in the land laws that titles were in constant conflict, and many of the old settlers had lost their lands entirely. The products of the rich and teeming soil of Kentucky could only find their way to market down the Mississippi to New Orleans, where they were liable to seizure and plunder, and subject to a hundred exactions. The rapidly-growing population had scarcely any government at all, and no protection except what their own strong arms afforded them, while all the northern frontier of the country across the Ohio was infested by hostile savages, urged to murder and rapine by British emissaries and British pay. Virginia had taken but little care of her strapping backwoods child; the great and big-hearted soldier who, under Virginia's commission, had defended Kentucky, captured Illinois, conquered peace and quelled the savages, by the mere terror of George Rogers Clark's name, into subjection, had been ignobly cashiered; his drafts were dishonored; the debts contracted by him in Virginia's name were unpaid; he and his friends were ruined as well as humiliated, and warrants and writs were taking from him even the little pittance of land which had been the only reward paid him for services such as few men ever rendered to an infant State. Kentucky, moreover, had petitioned Virginia, and Congress likewise, for liberty to become a separate State in the Union; but the petitions were disregarded and ignored. The spirit of self-reliance and independence was very strong in those people; the yoke of allegiance sat very lightly upon their necks, and they were convinced that they could never be very closely united to States with which the only intercourse possible must be had over a barrier of mountains and wilderness.

Spain took note of this condition of Kentucky, and began to encourage it, so as to make it the basis of a series of complicated and subtle intrigues, almost immediately after the close of the war of the Revolution. But the field of the operations of Spain was not confined to Kentucky by any means. They were extended into the whole South west of the Alleghany Mountains. They involved States, Territories, public men, land companies, and Indian tribes, and for nearly twenty years they made the country south of the Ohio the focus of more intrigues of the sword and cloak order than our territory has ever known before or since. Nor was Spain alone in these designs against the peace and unity of the United States. Great Britain twice took part in the intrigues, the first one leading to the exposure, humiliation, and expulsion of a United States senator, and the next to the detection of the miserable Henry conspiracy, the explosion of which was the immediate cause of the war of 1812. France also tried her hand in these Western intrigues under the irrepressible Minister Genet. Don Gardoqui succeeded in his part of the intrigues so far as to establish a plantation of Americans at New Madrid under Col. George W. Morgan, and also in organizing the Mississippi land companies that attempted the Yazoo "land grab," by means of which St. Louis, at least, gained the O'Fallon family. But, indeed, it was the failure of all these Spanish intrigues, and the backwater from them of turbulent and open plotting against Spanish authority on the Mississippi, which principally induced Spain to sign the treaty of San Ildefonso. The Americans were so strong and so unruly as neighbors that Spain feared them, and especially feared for the safety of her most valuable possession, Mexico and the cession of Louisiana and Missouri to France was hastened by the desire to have a strong power like Napoleon's France to guard the Mexican frontier from the Americans. Thus these intrigues may be said to have been one of the chief causes of the cession of Louisiana and Missouri to the United States for it would have been many years probably before we demanded those Territories from Spain, just as we have permitted that country to retain possession of Cuba and Porto Rico undisturbed, whereas these islands would have been ours thirty years ago if Spain had ceded them to Great Britain or France.

The policy of Spain was exceedingly adroit. It consisted in an alternation of annoying restrictions and generous concessions. The people of Kentucky, Tennessee, and Mississippi were made to feel the weight of Spain's barbarity and oppression to them as aliens, but the comforts and wealth attending allegiance to Spain; immigration and colonization were encouraged by every sort of liberal concession, but all who refused to become Spanish subjects were driven off and persecuted in every way. The object was to convince the Western people that their interests were bound up in the Mississippi River, which belonged to Spain, and therefore they must also attach themselves to Spain if they wanted to secure the advantages inuring to them from the free navigation of the river. Those advantages, however, it was made plain, were never to be opened to American citizens. Exorbitant duties and fees were levied upon all the products of American industry which went down the Mississippi River, and these were collected and increased peremptorily by the military power. There were imposts and export duties, port dues and taxes, revenue officers and custom-houses in every quarter, and scarce

and confiscation was the penalty of every infraction of a complicated and arbitrary revenue system. These things, while they did not teach the Western people to feel any greater love for Spain, and indeed they hated her heartily, made them see the benefits to them of securing the Spanish system, and made them despise the helplessness of the confederation under which they lived, but which gave them no protection and did not save them from every sort of imposition. It was then that the subtle Spanish agents promised them that they would get free navigation and all the advantages of an untrammeled commerce without becoming Spanish subjects simply by throwing off their allegiance to the government of the United States and erecting one of their own as a free and independent State.

The offer was a tempting one, and it chimed in with the natural instincts of the people. The burdens upon their commerce were so heavy that immunity from them seemed like a rich reward to receive for a simple act of secession. The Spanish exactions on American commerce in the Mississippi were similar to those now imposed on American commerce with Cuba. They took the shape of heavy transit and port duties on exports of produce and merchandise descending the river. "Every article thus introduced into Louisiana, of which Western Tennessee was claimed as a portion, and all kinds of trade descending the river were compelled to pay an excise duty to the government, varying at different times, according to the arbitrary will of the intendant or the orders of the king, from six to twenty-five per cent. *ad valorem*. For the collection of this duty a military force with revenue officers was stationed at New Madrid and other points below, by whom every boat was compelled to land and submit to have their cargoes overhauled, and sometimes when deception was suspected to have them unloaded, in order that the Spanish officers might be satisfied of the cargo upon which to assess the duties. When duties were thus paid and papers furnished the boat was required to land at each port below and exhibit the evidence of having paid duties; refusal to do so exposed them to be fired into from the batteries or to be pursued, and subjected to heavy fines, imprisonment, and confiscations. The latter penalty was a favorite measure with the Spanish officers; for in that case they generally managed to appropriate the spoils to their own use."[1] The Spanish officials were tyrannical, and they were corrupt and greedy, and were easily able to add severity to laws naturally offensive. The new policy was profitable to them, while it seemed to promote the far-reaching designs of their government.

Those designs at the start had the encouragement of prosperity and success. The Tallapoosa Indians, under their chief, the shrewd and accomplished half-breed, McGillivray, as early as 1784, proposed a scheme of alliance and commerce with Florida and Louisiana, one object of which was to promote the dismemberment of the United States. The chief showed with great acuteness what he thought should be Spanish policy under the circumstances of the times.

"Since the publication of the general treaty of peace," he wrote, "the American Congress has brought to light a situation of its affairs showing the debts and revenues of the Confederacy. . . . In order to raise the necessary funds to meet these claims, the Congress has imposed duties, taxes, and contributions, striking alike the thirteen United States. This expedient has produced so unfavorable an impression that a good many of their citizens, in order to escape from the burden of taxation, have abandoned their dwellings for the woods, and have marched towards the Mississippi, in order to unite with a certain number of disbanded soldiers who are anxious to possess themselves of a considerable portion of the territory watered by this river, and they propose establishing what they call *Western Independence*, and throwing aside the authority of the American Congress. The emigrants are so numerous that in a short time it is possible that they may find themselves strong enough to carry into execution their scheme of separation; and if they once form settlements on the Mississippi, it will require much time, trouble, and expense to dislodge them. I can assure you the Americans of the South employ every means in their power to enlist the feelings of the Tallapoosas in their behalf and to secure the support of their nation. Should they succeed the result of their influence will be that the Indians, instead of remaining the friends of Spain, will become very dangerous neighbors, and will assist the Americans in all the designs which they may form against Pensacola, Mobile, or any part of the adjacent Spanish dominions; and of all these things the Americans speak openly. I will now communicate my views as to the best course to be pursued to frustrate their designs."[2]

The plan advocated by McGillivray was to conciliate the Indians and secure their alliance by liberal commercial favors and advantages. The Spaniards accordingly called a grand council of the Southern Indian tribes at Pensacola and Mobile, at which were present Arthur O'Neil, commandant at Pensacola; the Spanish intendant of Louisiana, Navarro; and the deputy or *ad interim* Governor, Esteban Miró,—Galvez having been promoted. The Indian congress met May 30, 1784, with great pomp and many presents, and treaties of alliance and commerce were duly negotiated. McGillivray was pensioned by being placed on the Spanish pay-roll as commissary general to his tribe. The Choctaws, Chickasaws, and Ala-

[1] Monette's History of the Valley of the Mississippi, vol. i. p. 72.

[2] Gayarré, History of Louisiana, ii. 159.

bamas were duly conciliated in the same manner. It is to the lasting honor of Spain that her representatives, as it was expressed, "*en obsequio de la humanidad, y correspondiendo à los generosos sentimientos de la nacion Española,*" compelled the Indians to pledge themselves specifically in all these treaties to "renounce forever the custom of raising scalps and of making slaves of our white captives," and also to treat prisoners humanely and bring them promptly forward for exchange. The treaties confirmed the Indians in possession of their lands, and provided carefully for their trade on principles of equity.

McGillivray proved a useful and active ally to the Spaniards. He had a share in the profits of the trade of his tribe at Pensacola, and his pension paid him six hundred dollars a year. In return, as the Intendant Navarro put it, "so long as we have this chief on our side, we may rely on having established between the Floridas and Georgia a barrier which it will not be easy to break through. The Indians are now fully convinced of the ambition of the Americans; the recollection of past injuries still dwells in their minds, and, with it, the fear that these greedy neighbors may one day seize upon their lands, and strip them of a property to which they consider themselves as having a right derived from nature itself. *It ought to be one of the chief points in the policy of this government to keep this sentiment alive in their hearts.*" Navarro added that "if the province of Louisiana is intended to serve as a barrier against the Americans, it cannot answer this purpose without a considerable increase of its population, and it can acquire the numerous population of which it is susceptible only through agriculture and commerce. The one requires protection, the other assistance. The latter cannot prosper without freedom and unlimited expansion; the former cannot succeed without laborers." Navarro had a full appreciation of the difficulties of the situation of Louisiana in respect to the United States, and it seems probable that he was one of the first to urge Governor Mirò to act upon McGillivray's hints and suggestions. Georgia had sent its commissioners to New Orleans in 1785, claiming a great territory on the east bank of the Mississippi, from Loftus' Heights northward. This territory was settled by Spaniards and Frenchmen and already had a large population,—ten thousand souls, it is said. Mirò and Navarro temporized. They knew that there was a much deeper trouble up above, and that the people on the Ohio, if they could not be conciliated or diverted in some way, would soon be organizing expeditions to take New Orleans. They were already petitioning Congress on the subject. Navarro insisted on special privileges and exemptions to aid and promote immigration, and so successful were these measures that a large American population soon began to pour into West Florida. It was Navarro's idea to use Americans and foreign immigrants generally to keep out Americans. "The powerful enemies we have to fear in this province," he wrote to the home government, "are not the English, but the Americans, whom we must oppose by active and sufficient measures. . . . There is no time to be lost. Mexico is on the other side of the Mississippi, in the vicinity of the already formidable establishment of the Americans. The only way to check them is with a proportionate population, and is not by imposing commercial restrictions that this population is to be acquired, but by granting a prudent extension and freedom of trade."

And now the Spanish policy and Spanish intrigues began to tell in various parts of the country south of the Ohio. What is now the State of Tennessee was the first to succumb to the ingenious wiles of the enemy, supplemented, as these were, by the ambition and impatience of restraint of a self-governing people in a comparative wilderness, and by the adroit contrivances of popular leaders, many, if not the most of whom were subsidized by Spain, and regular or irregular pensioners of the unscrupulous government of that country. The Spanish pay-rolls of that day are not yet accessible, but when they do eventually come to the light the world will be surprised to see how many hirelings Spain had among men prominent in American councils and leaders of public opinion, particularly at the West. It is pretty conclusively established even now that the list of Spanish pensioners did not end with Innis, Brown, Sebastian, Wilkinson, O'Fallon, etc. Blount was not the only senator who deserved expulsion, nor Wilkinson the only prominent officer in the service of the United States who deserved to be hung. George Rogers Clark with his usual insight into affairs and his usual resolute promptitude for signal and decisive action, was in favor of breaking the thread of Spanish intrigue by force, and of profiting by British countenance and sympathy to provoke actual hostilities with Spain. He did not believe in a free Kentucky or in a Spanish alliance, but in the prompt expulsion of the Spanish flag from the Mississippi, which it was attempting to close to American commerce. He was willing to commit the overt act himself which should lead to war, for he knew that any such war must end in the conquest of Louisiana. Accordingly, being at Vincennes he seized the goods of Spanish traders there, and took care to publish the fact, at the same time sending notice of it to the Georgians who were seeking to plant themselves in the lower Mississippi. "The

will not let us trade down the Mississippi,—we will prevent them from trading up the Wabash. They seize and confiscate our goods,—let us confiscate theirs." But Virginia and Congress, while they did not expressly repudiate Clark's vigorous action, carefully refrained from following it up. Washington's watchful conservatism at this time offered an almost invincible barrier to vigorous action, for he saw instinctively that the passive, expectant policy was the only safe one. While Harry Innis was writing to the Governor of Virginia that he was "decidedly of the opinion that this Western country will in a few years act for itself and erect an independent government," and while John Sevier was actually erecting the free and independent "State of Frankland" (Stevens, "History of Georgia," says the proper name was Frank*lin*) in Western North Carolina, Washington was sedulously pursuing the means he thought fittest to knit the detached portions of the republic close together in one common indissoluble union. His plan was to develop as promptly as possible a comprehensive scheme of internal improvements, and secure to the people of the West what they desired and needed most,—cheap and adequate means of transportation for their products to Atlantic seaports. Canals and roads to unite the Ohio with the Potomac and the Susquehanna, he was fully persuaded, would so bind together the East and the West by the indissoluble bonds of interest, that no intrigues would avail of Spaniards in the South or British in the North to lure the West away to illicit commercial and political connections.

"Would it not be," he wrote to Richard Henry Lee, "worthy of the wisdom and attention of Congress to have the Western waters well explored, the navigation of them fully ascertained and accurately laid down, and a complete and perfect map made of the country, at least as far westerly as the Miamis, running into the Ohio and Lake Erie, and to see how the waters of these communicate with the River St. Joseph, which empties into . . . Michigan, and with the Wabash? . . .

. . "However singular the opinion may be," he writes to the same gentleman on another occasion, "I cannot divest myself of it, that the navigation of the Mississippi *at this time* . . to be no object with us. On the contrary, until we have . . time allowed to open and make easy the ways between Atlantic States and the Western territory, *the obstructions* . . . *ties remain*. There is nothing that binds one country or State to another but interest."

At the same time that this canal and national road policy was favored, the general government was fostering schemes for extensive immigration into the country north of the Ohio, three or four very large land companies being interested in it as a matter of speculation. It was characteristic of these Western land companies that while those of the North were usually large corporations, buying up enormous tracts, employing agents, and proposing to plant colonies in order to enhance the value of their lands, those of the South were (excepting the Yazoo jobbery) made up of bodies of settlers, who, having secured capital sufficient for their purposes, arranged to go upon their lands and improve them in person. The early land claims in Kentucky, Western Carolina, and Georgia were those of actual settlers and pioneers. Col. Morgan led his own party to New Madrid, and the O'Fallon party from South Carolina was also made up of intending settlers. It was this class which began to improve lands and take up homesteads in the western part of North Carolina as early as 1777. At that time the county of Washington was formed, comprising nearly the whole of the present State of Tennessee. Many of the settlers were fugitives, driven out by the Scotch Highlanders and Tories, who were so numerous on the eastern slopes of the Blue Ridge. These formed a settlement near the site of Nashville, and by the end of the Revolutionary war there was quite a population in East and Middle Tennessee. These people were cut off from the mother State, they were harassed by their neighbors the Cherokees, they had no military organization, and Congress was not prepared to give them a State or Territorial government, though North Carolina was quite willing to cede the entire territory for that purpose. The people thereupon called a convention, declared their independence of North Carolina, and erected the "State of Frankland," with a full corps of officials. A delegate was elected and sent to Congress to ask admission for the new State, but Congress refused to receive the delegate, while North Carolina determined to enforce its own jurisdiction and put down the State of Frankland as a rebel against its authority. Col. John Sevier was at the head of the new State organization, and for a time there was conflict of authority and many other troubles. Finally, however, North Carolina succeeded in overthrowing the squatter sovereignty party. Sevier was attainted of treason, amnestied, outlawed, arrested, but finally released. He had, however, undoubtedly been engaged in intrigues with the Indians friendly to Spain and Spanish interests, and now he began to intrigue directly with Spain itself. He opened a correspondence with Don Diego Gardoqui, while at the same time the people of West Tennessee, to show where their sympathies lay, changed the name of their district from Cumberland to Mirò District, in compliment to the Governor of Louisiana.

Sevier wrote to Gardoqui in 1788 that "the inhabitants of Frankland are unanimous in their vehement

desire to form an alliance and treaty of commerce with Spain, and to put themselves under her protection." He also asked for a supply of arms and ammunition to enable them to throw off the yoke of North Carolina. Gardoqui, who was acting under the same general orders as those which governed Mirò, but who seems to have preferred to plot unassisted, thought that Sevier's propositions deserved attention. He employed a delegate in Congress, Dr. James White, of Davidson County, a man very prominent in the early Legislatures of Tennessee, to go to Frankland and Mirò Districts and prepare the people for the Spanish protectorate. It is said that White's pay was only four hundred dollars. He went to Tennessee, and thence proceeded to Louisiana to consult with Governor Mirò. He bore letters from Gardoqui, assuring the leaders of Frankland that they would be protected in every way if they gave their allegiance to Spain. Governor Mirò received White very coldly. He thought that Gardoqui was invading his own province. "The inhabitants of Frankland," he wrote to the home government, "had already thrown off the mask when White came among them, and would certainly have had recourse to me, as is proved by John Sevier's letters, without the interference of the doctor." Still, he told White he would deal generously by Tennessee, granting special trade immunities to all persons who were in the interest of Spain. He would not join them in plotting against the United States, but if they secured their independence by their own act, then Spain would accord them protection and trade privileges. He also put White *en rapport* with Gen. Wilkinson, at that time the chief Spanish agent in Kentucky, and made arrangements to secure complete concert of action between them.[1]

While these intrigues were in progress their contrivers were reinforced from another quarter. A land company was formed in Charleston, S. C., in 1789, which, in conjunction with other companies in Georgia and the North, bought of the State of Georgia a tract of fifty-two thousand nine hundred square miles in the Yazoo country on the Mississippi. This sale was afterwards repudiated by Georgia, and protracted litigation grew out of it. The principal members of the Yazoo Land Company were Alexander Moultrie, Col. Washington (his real name Walsh,—hung afterwards for forgery), Isaac Huger, and William Snipes. Wilkinson applied to the company to be appointed their agent. He did this, so he wrote to Mirò, in order to induce them to sue for Spanish protection. The company, however, declined Wilkinson's overtures, and selected as their agent Dr. James O'Fallon. This gentleman was a resident of Charleston. He was of an old Irish family, had been highly educated in the land of his birth, and had served with distinction in the Revolutionary army of the land of his adoption. He was "as thoroughly a traitor as Wilkinson," says the edition of Albach's "Annals of the West." It is certain that he at once put himself in communication with Mirò, and expressed himself with what he styled "characteristic frankness" in regard to the importance of his mission to the Spanish empire in general, and Louisiana and West Florida in particular. He also refers, specifically, to "my natural disposition to contribute to the glory and prosperity of the crown which you serve (*which disposition is quite notorious at the Spanish Court, through the information afforded by its minister at New York and the Governor of St. Augustine, who, from abundant experience, can testify to it*"). O'Fallon said he had a great scheme, all of his own contriving, a long time ago, and the members of the land company he represented had fallen into it, being all of them dissatisfied with the present government. They had given him plenary powers to execute the plot. He had also, he said, completely hoodwinked the most influential members of the Legis-

[1] These people were all embarked very sedulously in treasonable plots, yet they did not consider themselves traitors, nor do their fellow-citizens appear to have so regarded them. Perhaps these latter were not aware of the fact that their leaders were all in Spanish pay, but certainly they lost no popularity. White was elected again and again to the Legislature. Sevier, who was a soldier in the Revolution, one of the leaders at King's Mountain, and a daring and successful partisan in repeated attacks upon the Indians, was one of the most popular men of his day. He was a standing toast in Georgia, for which he had fought against the Cherokees. He was twice elected Governor of Tennessee, and held many other important positions. Blount, first Governor of Tennessee Territory by Washington's appointment, and first United States senator from Tennessee, was expelled the Senate for bribery and treason. Gen. Daniel Smith and Col. James Robertson, also distinguished leaders, were foremost in trying to surrender Tennessee to Spanish influence. Wilkinson was always a favorite in Kentucky, and Judge Sebastian did not lose his popularity until, many years after the excitement of these times had died away, it was proved he was in receipt of a regular annual stipend from Spain. In fact, there was a general spirit of disunion at that time along the whole Southern border, and the Spanish agents had been so active as to disintegrate the instinct itself of loyalty and union. Discontent and pelf were at the bottom of it,—land greed and rude resentment of people and soldiers impoverished by a worthless currency. As has been said by a writer who has studied the subject closely, "In all the settlements and the districts of the Southwest, at the formation of the Federal Constitution, there was a general hostility to the Federal government, and the leading politicians of that country, acting as it were, by a common impulse, were plotting the dissolution of the Union and the surrender of their country to the dominion of Spain."

ture of Georgia, "and, without their having suspected in the beginning what I was aiming at, I insensibly prevailed upon them to acquiesce in my political views (after the obtaining of the concession), *and led them to consent to be the slaves of Spain*, under the appearance of a free and independent State, forming a rampart for the adjoining Spanish territories, and establishing with them an eternal reciprocal alliance, offensive and defensive."

This beginning, O'Fallon felt sure, would open the way to the severance from the Union of all the settlements west of the mountains. He had induced his colonists, people of great influence, power, and talent, to move to the colony in person with their families, and to repudiate the authority of Congress. There would soon be ten thousand men in the settlement, and all that they desired of Spain for their projected establishment was a secret co-operation, eventually to be ripened into a close friendship. "I assure you," wrote O'Fallon, "that Spain will obtain everything from them in return except the sacrifice of their liberty of conscience and of their civil government." He volunteers the information that he had been corresponding with Spanish officials for over two years, and acting as the secret agent and spy of the Spanish government, and that of Great Britain also, while aiding and promoting an immigration of ten thousand Irish, American, and German families to East Florida.

O'Fallon also informs Mirò that he intends to go to New Orleans and confer with him, and that in the mean time he will do nothing without that official's consent and approbation, "because I aim at nothing else than serving the interests of Spain, to which I am hereditarily attached." In short, he was that sort of traitor who loved the treason, who betrayed double trusts from an instinctive duplicity, which he tried to disguise under a decent cloak to his conscience. Mirò mistrusted him, did not want his colony so near to Natchez and New Orleans, did not put faith in his colonists, and quietly supplied the Chickasaw Indians with powder and ball and advice to expel by force any Americans who might undertake to trespass on their lands. He was quite willing to let O'Fallon's people come in and settle as Spanish subjects, but he arranged it so that the Indians could mount guard over them. Afterwards he showed his contempt for and mistrust of all this horde of traitors, big and small, by erecting a strong Spanish fort on the Chickasaw Bluff at Memphis. Likewise, he proposed to the home government the propriety of pensioning Gen. Wilkinson, as a useful spy upon the American people, and Judge Sebastian, as a spy upon Wilkinson.

It has been made evident, without coming to the case of Kentucky, which will presently be stated in full, that there was a pretty general conspiracy at this time for the dismemberment of the United States. The Union, under the old articles of confederation, was, in the words of Gayarré, "weak in the very bones and marrow of its organization." The Western people were utterly discontented and disheartened. Congress had not only failed to give them relief in response to their numerous petitions, but they had entirely lost faith in its capacity to relieve them, and they determined to look elsewhere. Judge Martin, in his "History of Louisiana," classifies the malcontents into five distinctive parties:

"The first was for being independent of the United States, and for the formation of a new republic, unconnected with the old one and resting on a basis of its own and a close alliance with Spain.

"Another party was willing that the country should become a part of the province of Louisiana, and submit to the admission of the laws of Spain.

"A third desired a war with Spain and the seizure of New Orleans.

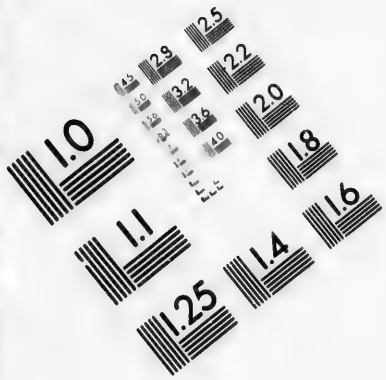
"A fourth plan was to prevail on Congress, by a show of preparation for war, to extort from the cabinet of Madrid what it persisted in refusing.

"The last, as unnatural as the second, was to solicit France to procure a retrocession of Louisiana, and to extend her protection to Kentucky."

It was the policy of Gardoqui and Mirò, while fostering discontent in every quarter and promoting the tendency to secession, to secure as large an immigration as possible into Spanish territory, and to that end there were very liberal concessions of public lands. After 1795, when the Spanish intrigues were confessedly a failure as regards the acquisition of new territory, the inducements to individual settlers were made still stronger, and Spanish agents offered large tracts to influential pioneers who might be expected to become the foci of settlements and immigration. In this way, in 1795, the family of Daniel Boone, and the old pioneer himself, were induced to leave Kentucky and settle on lands given to them by the Governor of St. Louis.

Gardoqui and Mirò would probably have been much more successful in their plottings if they had co-operated with one another. But, as Gayarré has noted, "both these Spanish functionaries were partners in the same game, and yet they were unwilling to communicate to each other the cards they had in hand. Each one was bent upon his own plan, and taking care to conceal it from the other; each one had his own secret agents, unknown to the colleague whom he ought to have called to his assistance. There was a want of concert, arising perhaps from jealousy, from

the lack of confidence, from ambition, from the desire of engrossing all the praise and reward in case of success, or from some other cause. Be it what it may, the consequence was that the schemes of these two men frequently counteracted each other, and resulted in a series of measures which were at variance and contradictory, and which seemed inexplicable to him who had not the key to what was going on behind the curtain."



We have seen that the first mutterings of discontent arose in Kentucky, upon a Pittsburgh version reaching there of the proposition not to insist on the navigation of the Mississippi. At that date there was no printing-press in Kentucky, and the garbled Pittsburgh report is said to have been written out and stuck up upon trees in the court towns, like sheriff's notices. At that time there was but one store in Louisville, that of Daniel Brodhead, who had come from Philadelphia, whence his merchandise was hauled by teams over the mountains to Pittsburgh, thence carried in flat-boat, ark, and "broad-horn" to the place of his destination. In February, 1784, however, Brevet Brig.-Gen. James Wilkinson, late United States army, arrived in Lexington, shortly afterwards going to Louisville to represent sundry speculative enterprises, land, trading, and commerce, which originated in Philadelphia, and of which Wilkinson was agent or active partner. This active, enterprising, and ingenious person played so large a part in the affairs of the West from that time forth that it is proper to say a word or two concerning him. His store in Lexington was the first opened there, his ferry at Frankfort the first also. Wilkinson was a Marylander, born in Prince George's County. When the Revolution broke out he was in Georgetown, member of a local military company. He at once went on to Boston and attached himself to a Pennsylvania regiment. He finally became aide-de-camp to Gates, distinguished himself in the Saratoga campaign, and bore the dispatches to Congress announcing the surrender of Burgoyne. Congress rewarded him with the brevet of brigadier-general, but he was so pompous about it and so slow that caustic old Dr. Witherspoon proposed to "vote the young man a pair of spurs." Wilkinson contrived to get himself mixed up in the Gates-Conway imbroglio,—indeed, his indiscreet disclosures led to that trouble. After the war he went to Kentucky, and for several years engaged in business. He returned to the army and served as brigadier under Wayne; and when that officer died he received the vacant major-generalship. He commanded the Western Department, from Detroit to New Orleans, until the war of 1812, when he was assigned to service on the lakes, but showed such a general incompetency that he was forced to withdraw. He was three times tried by court-martial, but each time acquitted. He died in Mexico in 1825, just when he had succeeded in getting a large grant of land in Texas. He was a fussy, conceited, turbulent, unscrupulous, and untruthful person, given to intrigue, dishonest and malicious; but his abilities were really great, and his energy and activity most remarkable. He had a talent for command, organization, leadership, and few men have exercised greater influence or had a wider acquaintance. His knowledge of the West was close and intimate, and, on the whole, he was of service to the country. He established the first United States troops in the cantonments at Bellefontaine, near St. Louis, and he had a fine military eye, as the places he chose for camps and forts proved well enough. As soon as Wilkinson arrived in Kentucky he made himself the leader of a political party, and was for years the most conspicuous man in the West. He had great audacity in conceiving and initiating bold and broad enterprises; he was full of *finesse*, address, and had an eloquence, inflated and meretricious to be sure, but which served his ends. He was in all the early Kentucky conventions, and all the addresses and petitions of the day show marks of his pen. His manners were easy and winning; he was amiable, a *bon vivant*, with a head trained under Gates (it is said that in one of his drinking bouts, out of which he came unharmed, he killed the Spanish Governor, Don Gayoso de Lemos); his hospitality was liberal, he liked display and fuss and feathers, and under cover of these carried on intrigues of the deepest and most complicated sort. He plied up and down the Ohio and Mississippi in the gayest of ornamental barges, but never failed to do the work of his employers and carry out his own selfish adventures.[1]

[1] Was James Wilkinson a traitor? The question is ... asked; the answer must be, after examining the testimony ... that he certainly was. His treason may not have been ... injurious. He managed to turn about at the right time in ... Spanish intrigues, and to abandon and betray Burr at the ... moment for his own advantage. But that is not the ques... Did he betray his government for hire, and take pay for sel... ing the secrets of the United States while an officer in the ... pay? The reports of Mirò to the Spanish government ... that Wilkinson believed he had put both his life and hono...

As soon as Wilkinson arrived in Kentucky he began to take an active interest in political intrigue. He was well trained for this from his experience in the headquarters' department of camps. He became a delegate to the first regular Kentucky convention, which met at Danville on Dec. 27, 1784. His associates in this and subsequent conventions were the ablest men in the State,—Samuel McDowell, George Muter, Benjamin Logan, James Speed, Harry Innis, Christopher Irvine, James Rogers, John Craig, Benjamin Sebastian, James Meriwether, Isaac Shelby, Humphrey Marshall, Alex. Breckinridge, William Kennedy, etc.,—yet Wilkinson, a comparative stranger, was selected to draw up the address and resolutions in favor of separation from Virginia, and of "sovereignty and independence." Wilkinson had just that florid style, that tone of elevated ideality of buncombe which suited a young and ardent community of backwoodsmen, and his address made such an impression as gave him a firm and strong hold upon the affections of the people. In fact, the address carried the point with Virginia also, and in 1787–89, Kentucky secured its final divorce from the mother of States and statesmen. Meantime the commercial operations of Wilkinson became more extensive, and he was naturally led to take an interest in the Mississippi River question, that river being Kentucky's only outlet for trade. The report came down the Ohio from Pittsburgh that Minister Jay had "proposed to the Spanish minister to surrender the navigation of the Mississippi for twenty or thirty years." Wilkinson immediately took up the subject in a practical and business-like way, while Muter, Innis, John Brown (afterwards member of Congress), and Sebastian, in March, 1787, made it the revolving-point of a bitter political agitation by calling a public meeting on the subject at Danville. The circular calling the meeting impeached and reproached the action of Congress in neglecting the rights of the Western people to free navigation of the Mississippi. Congress and Virginia, however, explained that there had been no surrender and would be no waiver, and the Danville meeting took no action, though the feelings of the people were much worked up, and it was said that "to sell us and make us vassals to the merciless Spaniards was a grievance not to be borne." In June, 1787, however, Wilkinson descended the Mississippi River to New Orleans with a boat load of tobacco, broke the blockade, saw Miro, and came back triumphant. He had secured, he said, special trading privileges for himself, including annual shipments of tobacco for account of Spanish government, and made an arrangement for colonizing several thousand families in West Florida. This was the beginning of the secret cipher correspondence between Wilkinson and Mirò and his successor, Carondelet; and the tobacco arrangement gave him great influence, for all who wanted to sell the staple in New Orleans to any advantage must do so through him. Mann Butler, in his "History of Kentucky," believes that Wilkinson must be acquitted of treasonable practices in respect

---

Mirò's hands. He declared to Mirò that his main object was to deliver Kentucky to Spain, and after Mirò had retired and Carondelet took his place, his first act was to put himself in communication with Wilkinson as a well-known Spanish agent. In one of his letters Wilkinson refers to numerous Federal appointments made in Kentucky in order to break up the secession party, adding, "But I know that Harry Innis is friendly to Spain and hostile to Congress, and I am authorized to say that he would much prefer receiving a pension from New Orleans than from New York." Could or would any but a pensioner himself write thus? The fact that Wilkinson refused the ten thousand dollars offered him by Power in 1795, when he knew the Spanish cause was hopeless, proves that Power was informed he had taken Spanish money before or else he would never have dared approach a man of such high military rank in any such way. But the most conclusive evidence of Wilkinson's treason is to be found in the secret *memoir*, a report on Louisiana, made to Napoleon when First Consul of the French republic, by M. de Pontalba, an old resident of New Orleans, and thoroughly versed in the history, statistics, and politics of Louisiana. In speaking of the efforts made by Spain to induce Kentucky and Tennessee to secede, Pontalba said, "The Spanish government was assisted in this policy by a powerful inhabitant of Kentucky, who possesses much influence with his countrymen, and enjoys great consideration for the services he rendered to the cause of liberty when occupying high grades in the army of the United States, who from that time has never ceased to serve Spain in all her views, and who will put the same zeal at the command of France, because he thinks with reason that an intimate union between her and Louisiana is more advantageous to his country (Kentucky) than its present relations with the United States. This individual, whose name I shall not mention in order not to expose him, but which I shall make known when his services shall be needed, came to New Orleans in 1787," etc. Here Pontalba goes on to enumerate Wilkinson's repeated services to Spain, adding, in a foot-note, "Four times, from 1786 to 1792, preparations were made in Kentucky and Cumberland to attack Louisiana, and every time this same individual caused them to fail through his influence over his countrymen. I make these facts known to show that France must not neglect to enlist this individual in her service." *Che Gan fu traditore primà che nato!* If this be not the portrait of a traitor and hireling, what is it then? Wilkinson detected and exposed Burr's conspiracy, but how did he do it? By partaking first so deep of Burr's treason himself as to divert suspicion from himself. This, indeed, Wilkinson admits, and treats it as a necessary circumstance, but if Wilkinson had seen an assured successful issue to Burr's plot, who imagines that he would have betrayed it? Burr always declared that the suggestion of the plot came from Wilkinson, while he matured it. That would have been like Wilkinson, who, after Burr's trial, had the impudence to send his aide-de-camp Burling to Mexico to demand two hundred thousand dollars from the viceroy as compensation for having betrayed that province.

to these transactions. But he had only the record of the military court to guide him. The official papers leave no room for doubt that, in the words of Marshall's "History of Kentucky," "the tobacco contract was a mere cover for a pension, and the clandestine and dishonorable part was carefully concealed from all but coadjutors."

Wilkinson sought but was not able to get himself received as a Spanish subject. He got a contract, however, to deliver two hundred thousand pounds of tobacco per annum at ten dollars a hundred, and he began to buy accordingly on his return to Kentucky, in February, 1788. He also had much to say about the indispensable privilege of free navigation, and the necessity of a close commercial connection with Louisiana and Spain in order to secure it. In the mean time he was reporting, in frequent dispatches to Mirò, all that transpired in Kentucky, and especially all the fine performances of Wilkinson in making ground for Spain. In July, 1788, immediately after Virginia had ratified the Constitution of the United States, Kentucky's Constitutional Convention met, and it was discovered that there was a deep feeling abroad already. In the words of Marshall, "there was now observed the most deep-felt vexation, a share of ill temper bordering on disaffection, and strong symptoms of assuming independent government. The navigation of the Mississippi and the trade to New Orleans, now just tasted for the first time, were strenuously pressed into the argument in favor of completing the Constitution and organizing government without delay." Wilkinson's hand may be seen in this; that of Gardoqui also, who had sent an agent of his own into Kentucky in the person of Pierre Wower d'Argès, now soliciting emigrants from Kentucky and Cumberland to West Florida, liberal grants of land being offered them by way of persuasion. Slaves, stock, utensils, provisions could be introduced by them for two years free of duty, religion was made free, and large bodies of land conceded. Col. George Morgan, of Princeton, N. J., as has already been said, on this incentive, got considerable concession at L'Anse de la Graisse, and founded New Madrid, to which much immigration, and trade also, was attracted in the next few years. Mirò was afraid the operations of d'Argès would embarrass or else provoke Wilkinson, and wrote to the home government about it. Besides, d'Argès offered the Kentuckians free trade, and that did not suit either Mirò or Wilkinson, who sought to exasperate the Kentuckians by obstructing trade as much as possible. "The Western people," he wrote, "would no longer have any inducement to emigrate if they were put in possession of a free trade with us. This is the reason why this privilege should only be granted to a few individuals having influence among them, as is suggested in Wilkinson's memorial, because on their seeing the advantages bestowed on those few they might be easily persuaded to acquire the like by becoming Spanish subjects."

Wilkinson, in fact, was now in his glory. He was going back and forth, gathering news, pulling wires, moving men, and making money also. The Spanish authorities deferred to him in every little matter, and received his long cipher dispaches as if they were oracles. He had been east, and north across the mountains, and found all his predictions were coming true. Kentucky had separated from Virginia: she would soon go to Spain. "I have collected much European and American news," he wrote; "not a measure is taken on both sides of the mountains which does not conspire to favor ours." Mirò wrote to the government to give Wilkinson a chance to increase his profits,—they must buy more tobacco of him. "There is no means more powerful to accomplish the principal object we have in view in the memorial which has been laid before his Majesty than the promise that the government will take as much as six million pounds of their tobacco, instead of the two millions which are now bought from them." Six hundred thousand dollars a year to distribute among Wilkinson and his little tobacco syndicate! No wonder he was anxious to serve Mirò. He wrote of the Kentucky convention to meet in July; says he will feel the pulse of the members, consult with two or three who are capable of assisting him, and then "disclose so much of our great scheme as may appear opportune, according to circumstances." He had no doubt of its favorable reception. He had not been communicative, but had sounded many and found that they were ready to act, and that all could be accomplished by next March. He did not fear Congress; all he feared was the disposition of the Spanish Court.

In fact, the Kentucky convention passed an ordinance for the election of another Assembly in November, to continue in office till January, 1790, and to delegate to the members full powers for securing the admission of the district into the Union and provide for the navigation trouble. There was a secret understanding that the only solution for the troubles of Kentucky now was to treat with Spain, and that was the construction put upon the indefinite proviso mentioned above by such men as Chief Justice Muter and John Brown, as well as Oliver Pollock, the best-informed and most influential American merchant in New Orleans, a man too honest and honorable to be made privy to the secret intrigues of Mirò and Wil-

kinson. The latter wrote, however, after studying the situation, that separation from the United States must preclude alliance with Spain, and the people were not quite ripe for either. "I had to work on a ground not yet prepared for the seed to be deposited in it, and I felt that to produce a favorable impression I had to proceed with reserve, and avoid with the utmost care any demonstration which might be calculated to cause surprise or alarm. . . . I can give you the solemn assurance that I found all the men belonging to the first class in the district, with the exception of Col. Marshall, our surveyor, and Col. Muter, one of our judges, decidedly in favor of separation from the United States and of an alliance with Spain." Wilkinson urges that Spain shall precipitate matters by prohibiting the navigation of the Mississippi to Kentuckians. That will bring ruin. The people will not be able to pay the taxes which the government must levy, and the result will be resistance and civil war. It will be seen from this that Wilkinson's devilish ingenuity anticipated exactly the result which came from the whiskey excise tax in Pennsylvania, and he was willing to expose Kentucky to such disasters in order to promote the objects of his employers. He repeatedly urged the denial of the right to navigate the Mississippi as sure to disrupt the Union and pin all the hopes of the Western section to "the liberality of Spain."

"While this affair is pending," he wrote, "Spain ought to consider the navigation of the Mississippi as one of the most precious jewels of her crown, for whatever power shall command that navigation will control all the country which is watered by that river and by those streams which fall into it. This control will be as effective and complete as that of the key upon the lock, or that of the citadel over the exterior works which it commands. The grant of this boon ought to be looked upon as the price of our attachment and gratitude. . . . I entreat you, sir, to believe that this question of navigation is the main one, on which depends the union of the West and East, and that if Congress can obtain the free use of the Mississippi, and if Spain should cede it without condition, it would strengthen the Union, and would deprive Spain of all its influence in this district."

Don Gardoqui, meantime, had seen John Brown, member of Congress in the old Congress from Kentucky, and informed him that if the people of Kentucky would erect themselves into an independent State and appoint a proper person to negotiate with him, "he had authority for that purpose, and would enter into an arrangement with them for the exportation of their produce to New Orleans on terms of mutual advantage." Congress delayed in admitting Kentucky. The old jealousy of North and South had begun, and the Union was imperiled by holding Kentucky back until Vermont was ready for admission along with it. Brown was in favor of treating with Gardoqui. Wilkinson was loudly repeating that the only safety for Kentucky was the free navigation of the river, which he was in secret urging Mirò to close peremptorily and seize the property of all who ventured on the Mississippi, as was then being done.[1]

Wilkinson's power and influence culminated in the Constitutional Convention. He was the leader to whom all looked up. He contemplated a revolution, and he had the audacity to put the machinery in operation to bring it about. His party was called the Court party, and he was easily their chief. He boldly sprung the Mississippi question in the convention, and frankly avowed himself in favor of separation. Spain, he said, would not grant the navigation of the Mississippi to the United States,—Congress could not obtain it for Kentucky. There was but one way, only one, for obviating these difficulties; that way was beset by constitutions and guarded by laws. He need not state it more explicitly; every gentleman present would connect it with a declaration of independence, the formation of a Constitution, and the organization of a new State. Wilkinson was followed by Brown, who had no specific communications to make from Don Gardoqui, but he would simply inform the convention that, "provided we are *unanimous*, everything we could wish for is within our reach."

But now the golden opportunity was suffered to slip by. The matter was referred to a committee, a report was postponed, and the convention took a long recess. When it met again, Washington was President, and the stable power of the new government began to be felt in Kentucky. Spain had procrastinated too much, as usual, and Washington and Marshall set to work to conciliate the Kentuckians by showing confidence in them. Political and military appointments were bestowed upon Brown, Innis, Scott, Sebastian, Shelby, and Logan, and even Wilkinson himself was recommended by Marshall for appointment as colonel in the regular army. The appointment was made and Wilkinson accepted it.

He did not on that account discontinue his treasonable practices nor cease his correspondence with Mirò, but he became much more circumspect, and, for that

[1] Letter of Daniel Clark, in Wilkinson's Memoirs, Appendix 11, vol. ii.

reason, probably, more dangerous. Gen. St. Clair, in taking command in the Northwest, had somehow heard of his complicity with Spanish intrigue, and wrote to Maj. Dunn, Wilkinson's intimate, to detach him from all such connections. Dunn showed Wilkinson the letter, and the latter wrote to Mirò about it, inclosing a copy of St. Clair's note, to show the dangers he was exposed to in the service of His Catholic Majesty. At the same time Wilkinson showed how cunningly he had balked and baffled a British agent. This was the notorious Dr. Conolly, who now bore a commission as colonel either in the English army or the militia of Canada. Conolly, in 1774, had been in Kentucky and on the upper waters of the Ohio with Lord Dunmore. He had bought land there, the site of Louisville, in fact. He met and had much intercourse with the Indians and Canadian French of the Northwest, and when the war of the Revolution broke out he attempted, by correspondence and liberal offers of arms and money, to organize a general conspiracy and Indian outbreak on the frontier. He was captured near Hagerstown, Md., in the midst of his intrigues, and with the evidences of his treasonable correspondence on his person, sent to Philadelphia, and detained as a prisoner of war until near the close of the war, when he was exchanged for Lieut.-Col. Nathaniel Ramsey of Maryland, the hero of the battle of Monmouth. At the time of Conolly's second visit to Kentucky, his old partner, Lord Dunmore, was Governor of the Bahamas, and had taken in his employment a renegade Marylander, by name William Augustus Bowles, an unprincipled adventurer of remarkable talents and most versatile in his accomplishments.[1]

Bowles made Dunmore acquainted with the Spanish intrigues in the Southwest, and the wide-spread discontent of the inhabitants of those sections, and it was probably this which led to the new adventure of Conolly in Kentucky, though he came in part to try to reclaim his lands, which had been confiscated in 1781. He came from Detroit, as the emissary of Lord Dorchester (formerly Sir Guy Carleton), who was then Governor-General of Canada, while William Eden, brother of the last British Governor of Maryland, was minister at Madrid.

At every point, therefore, the United States were environed by individuals who added special knowledge of their affairs to personal hostility to their cause. It is claimed by Matthew L. Davis and by Martin Van Buren that the war of the Revolution was pro-

[1] Bowles, who was probably a member of one of the Tory families of Southern Maryland, though a native of Frederick County, entered the British army as a foot-soldier in 1776, being then only fifteen years old, and being sent on foreign service, attained the rank of ensign in 1777. At Pensacola, shortly afterwards, he was deprived of his grade and reduced to the ranks for insubordination. He stripped off his British uniform, sunk it in the sea, and fled to the Creek Indians, acquired their language, was naturalized among them, married the daughter of a chief, and became himself a chief, head warrior, and one of the most influential men of the tribe. When Galvez laid siege to Pensacola in 1781, Bowles made his peace with Col. Campbell, and led a band of Creeks to the defense of that post. After the surrender of Pensacola he deserted his Indian friends, joined a troop of strolling actors, and made his appearance on the stage in New York, where also, it is said, he successfully practiced the art of portrait-painting. After the evacuation of New York, Bowles turned up in Nassau, New Providence, which Spain had just restored to the British crown. He won the confidence of Lord Dunmore, and was by him appointed commercial agent of the English in Florida, having a store on the Chattahoochie, where it was his object to break up the business of Panton, the great Spanish Indian agent of Pensacola. Bowles undertook to disturb the Indian tribes so as to promote British interest, and also to undermine McGillivray, the chief of the Tallapoosas, and, as has been already shown, a Spanish pensioner. His conduct gave such trouble and offense to the Georgia people that they notified him they would cut off his ears if he did not abandon his post in twenty-four hours. He fled to Nassau, and Lord Dunmore sent him to England, at the head of a deputation of Creeks, Seminoles, and Cherokees, to ask aid in repelling American aggression. Bowles returned to Florida, and organized a system of filibustering in the Gulf of Mexico, having taught his Creek warriors the arts of piracy, reinforcing them with select levies from the ruffian population of London prisons. Their cruelty, debaucheries, horrid oaths, and panther screams soon arrayed all the commercial world against Bowles' pirates, yet their leader is said to have been a person of most gentle address and winning mien,—a true Lara. "His was the sweetest of smiles," say the historians (Gayarré, "History of Louisiana," Pickett, "History of Alabama"), "femininely beautiful, and apparently indicative of the bubbling well of human kindness within, with the dark eyebrow that shaded at times the glance of fire,—'demon in act but god at least in face.'" Bowles conspired against McGillivray, and that astute half-Scotchman went to Carondelet, and procured his capture by the Spanish upon the charge of robbing Panton's trading-stores. Bowles was sent to Madrid, and offered his release if he would abandon the English service and use his influence among the Creeks for Spain. He refused, and was deportated to Manilla, in the Philippine Islands, where he was detained prisoner until 1797. Then he was ordered back to Spain, still a close prisoner, but escaped at Ascension Island, where the ship put in for water, made his way to Sierra Leone, and thence to London, where Pitt and the Duke of Portland made much of him. Again he returned to the Gulf, in charge of a privateer, warring upon Spanish commerce, and looking particularly after the boxes of Señor Panton, whom he seems to have hated as much as Robin Hood hated the Abbot of Nottingham. He was shipwrecked, but made his way to the Creeks, and enlisted them in a general war upon Americans and Spaniards alike. At last Panton and the American authorities combined in offering a large reward for his capture. He was betrayed by his own followers, delivered to the Spaniards, and after one or two wonderful escapes, was finally securely immured in the dungeons of the Moro Castle, Havana, where he ended a life of adventure remarkable even in that age of adventures.

longed two or three years by the personal exertions, hostilities, and misrepresentations of the Tory leaders, such as Galloway, De Lancey, and others, who eventually, through Alexander Hamilton, secured the direction of the Federalist party and provoked the Whiskey war in Pennsylvania and Shay's rebellion in Massachusetts, besides coming very near disrupting the Union by causing the secession of Kentucky and Tennessee. In this view of the case, the services of Gen. Wilkinson in frustrating the designs of Dr. Conolly must not be lightly esteemed. This adroit plotter arrived at Louisville in October, 1788, having descended the Miami in a canoe. He visited Col. Campbell, saw Marshall and Wilkinson, and sounded the leading men of Kentucky in regard to a scheme to conquer Louisiana from Spain. "Four thousand troops," he said, "were in Canada, ready to march and support the Kentuckians at a moment's warning, in furtherance of that design." By Marshall, Conolly was informed that the people of the West would not be disposed to make any terms or co-operate in any adventure with Great Britain as long as that power, in the teeth of the treaty of 1783, retained possession of the Western posts and forts inside the frontier of the United States. Wilkinson invited Conolly to visit him at Lexington, gained his confidence, found out all he knew (reporting the fact to his Spanish employers), and then coolly ran him out of the country by practicing upon his fears. He employed a hunter to pretend to assassinate the doctor in revenge for the death of his son, murdered by the Indians, and got up a mob in Louisville, who threatened to deal with Conolly by lynch law. Under these discouraging circumstances Conolly thought it no more than prudent in him to return whence he came, while Wilkinson gained a double credit for loyalty to the Union from the Marshall party, and for attention to the interests of Spain from Mirò. A man who could so ingeniously frustrate an attack upon Spain, the latter thought, must be able, when the time came, to lead a revolt in favor of Spain with success. Conolly, apparently much "demoralized," was secretly conveyed to Limestone (Maysville), whence he secured transportation to the frontier.[1]

The Federal government of the United States under the new Constitution managed the affairs of Kentucky with great skill and adroitness, both before and after the admission of the district into the Union. Virginia had withdrawn its scouts and soldiers because the Kentuckians refused to pay taxes; but Gen. St. Clair, Governor of the Northwestern Territory, at once took measures to protect the frontier, and to secure the confidence and quiet the susceptibilities of the Kentuckians it was agreed to appoint a board of war of leading Kentuckians, to act in every case where the people of that State were expected to operate as militia against the Indians. This board, which had ample powers, consisted of Gen. Charles Scott, Harry Innis (United States district attorney and afterwards judge), Isaac Shelby (afterwards Governor), Gen. Logan, and John Brown, member of Congress. The board was constituted, at Brown's suggestion, as a safeguard in case of hostile acts upon the part of St. Clair, whom the Kentuckians thought to be unfriendly to their interests, and Wilkinson was commissioned as colonel. He and Scott marched against the Miami and Wea and Piankeshaw Indians, destroyed their towns, slew their warriors, and did much to reduce their strength and that of the Kickapoos also. Wilkinson's expedition to Eel River was as successful an operation as those of the regulars under Harmar and St. Clair were unfortunate. Indeed, all those who know the versatility of his talents are convinced that Wilkinson might have made a good soldier if he had been less of a politician.

His commission made him lieutenant-colonel of the Second Regiment of the United States army, and his position gave him command of Fort Washington (now Cincinnati), then already one of the most important points upon the Ohio River. For several years now his chief services were of a military character, in connection with Indian affairs, and he managed to make himself conspicuous in various ways, and especially in producing the impression that he had been unjustly and invidiously ignored by Gen. Wayne in his report of the battle of Fallen Timbers, in which Wilkinson was brigadier and second in command. So industriously was this intrigue pushed that when Wayne died, after being most unjustly treated, Wilkinson secured the major-generalship made vacant by his death.

Kentucky, after many years of agitation and struggle, became a member of the Federal Union on June 1, 1792, with a Constitution elaborated by the thoughtful intelligence of George Nicholas, Samuel McDowell, Benjamin Sebastian, Alexander Bullitt, Robert Breckenridge, Benjamin Logan, Isaac Shelby, and others like them. The Constitution of the United States was

[1] Conolly contributed, against his will, to the first and one of the most important efforts made by Kentucky to promote the cause of education in that pioneer community. By an act of the Legislature of Virginia passed in 1780, the first eight thousand acres seized of lands of British subjects confiscated in Kentucky were set apart for educational purposes, and this constituted the original endowment of Transylvania University, now the University of Kentucky, at Lexington.

the general model, but many features were borrowed from the organic law of Maryland, adopted in 1776. Shelby became Governor, James Brown Secretary of State, John Brown and John Edwards United States senators, and George Nicholas attorney-general. The first judges were Benjamin Sebastian, Caleb Wallace, and George Muter, the latter being made chief justice in the place of Harry Innis, who declined the position, accepting instead that of United States district judge. Wilkinson and Posey, Scott and Hardin and Anderson were in the field, and it was at this moment that "Citizen Genet," the new minister of the new French republic, undertook to organize a revolution in Kentucky on his own particular account.

Wilkinson, who regarded France as "the most intriguing and craftiest of all nations," and was disposed to distrust its machinations and warn the Spanish authorities against them, would probably have prevented Genet from carrying forward his designs, but he was now in active service, and, besides that, there had been a change in the Spanish administration at New Orleans. Mirò had retired, and Baron de Carondelet was his successor. The young men who yielded themselves to French theories and French influence were too impulsive to be guided by such a veteran and *rusé* intriguant as Wilkinson. Besides, Mirò had latterly not always taken his advice, nor advanced all the money which he suggested it would be necessary to put up. He had repaid the five thousand dollars which Wilkinson claimed he had disbursed out of his own pocket, but had read without response the suggestion of a fund to corrupt Thomas Marshall and George Muter. Probably Mirò knew, from other sources, that Muter and Marshall were not to be bought with the same coin that had compensated Wilkinson for his treason. Wilkinson, besides, had been pretending too much in other respects, as, for instance, that he and his friends had sent John Brown to Congress as their hireling and to be their spy. He had attempted to frustrate Col. Morgan's project of a settlement at New Madrid, in favor of a land concession at Natchez to himself, Brown, Sebastian, and Maj. Dunn. He had also corresponded with Mirò's rival and enemy, Gardoqui, which probably made the Spanish government mistrust him. Mirò was also displeased with Wilkinson for leaving Kentucky at that particular crisis. He wanted him to remain there until the question of secession was settled in one way or the other, and thought it his duty to do so, "because, according to the answer received from the court, *you are now our agent*, and I am instructed to give you to hope that the king will reward your services, as I have already intimated to you." Still, he paid the agent a handsome contingent fee at the same time, buying from him two hundred and thirty-five thousand pounds of tobacco in one lot, "*tener contento al dicho brigadier*" (to keep the said brigadier in a good humor).[1]

Wilkinson had, moreover, discovered that Washington's administration, wise and firm, was a government in fact, and meant to be a government of the whole country. It had already converted many malcontents into loyalty, and it was paying Wilkinson himself a salary as one of its officers. He knew that Washington mistrusted him, and he was so afraid of the Federal authority that he sought to become a Spanish subject, in order to claim the protection of that crown in any emergency. With the end of the year 1791 Mirò's administration terminated, he returned to Spain, served actively in the army, and rose to the rank of field-marshal.

His successor, François Louis Hector, Baron de Carondelet, colonel in the royal army of Spain, Governor and intendant of the provinces of West Florida and Louisiana, had not fairly warmed himself in the chair of office and made himself acquainted with the Spanish intrigues and agents before he was called to combat the intrigue of Monsieur Genet. When Louis XVI. was executed, Jan. 21, 1793, the king of Spain declared war on the French republic. The people of Louisiana, the majority of them at least, sympathized with the new order of things. They did not, perhaps, go the length of approving the killing of "Citizen Capet," still they had learned to call for the singing of the *Marsellaise* at the theatre, and to chant the *Ça ira* among themselves at their billiard saloons and places of public resort. Carondelet had not much experience in dealing with what the French now politely call *incivisme*, but it must be confessed his methods show that those who have succeeded him have not learned much. He called on the people to take the oath and subscribe to an address of allegiance; he forbade any seditious airs to be played at the theatre, and he arrested six of the liberal leaders, sending them to Havana and detaining

[1] At ten cents per pound this would have yielded the brigadier $23,500, and in goods, according to the Spanish accounts with him, over $60,000. Wilkinson, when court-martialed, only produced accounts of tobacco transactions with the New Orleans government, during the ten years of his intercourse with Mirò and Carondelet, to the extent of $28,000. Mirò wrote to his government, in regard to another purchase besides that mentioned in the text, that he had received $7000 worth of tobacco from Wilkinson, and sent him in return $18,000 worth of goods. The suppression of figures of this sort is the strongest possible evidence of the illicit and disreputable character of Wilkinson's relations with the Spanish administration in New Orleans.

them there for a year, to give time for their opinions to crystallize. It was not a great while, however, before the baron was soliciting his government for the means with which to construct forts, not only to repel and keep out the foreign enemy, but likewise to keep in order the domesticated subject, already "contaminated" with "notions and maxims of equality," introduced by the "Frenchmen lately come among us."

In fact, Carondelet's trouble did not proceed from indigenous Frenchmen only. A society of Philadelphia Jacobins (there were such societies in all our chief cities at that time) had issued a stirring address to their compatriots in Louisiana at that period. In this address they were appealed to, in the name of *liberté et égalité*, to hasten the moment when despotism should disappear from the earth. France was so happy in its possession of the new interpretation of the rights of man that it would never cease from propagating them while a benighted people remained, and declared to all nations "that she is ready to give her powerful assistance to those that may be disposed to follow her virtuous example." In this address, which did not lack ingenuity, the people of Louisiana were urged to rise against their king and overthrow their other masters. They were pointed to the example of France, where "a perjured king, prevaricating ministers, vile and insolent courtiers, who fattened on the labors of the people whose blood they sucked, have suffered the punishment due to their crimes. . . . The Spanish despotism"—and here the address struck home—"has surpassed in atrocity and stupidity all the other despotisms that have ever been known. Has not barbarism always been the companion of that government, which has rendered the Spanish name execrable and horrible on the continent of America? . . . What have been the fruits of so many crimes? The annihilation, the disgrace, the impoverishment, and the besotting of the Spanish nation in Europe, and a fatal lethargy, servitude, or death for an infinite number of the inhabitants of America. . . . Therefore, inhabitants of Louisiana, show who you are; prove that you have not been stupefied by despotism, and that you have retained in your breasts French valor and intrepidity; demonstrate that you are worthy to be free and independent, because we do not solicit you to unite yourselves with us, but to seek your own freedom." The address ended with the familiar "away with pusillanimity" and the *Ça ira*,—"*audaces fortuna juvat.*"

This address, flowery though it was, really meant business. At that period the people of the United States were almost equally divided into two political parties, and both of them were parties of action. The Republicans believed in the cause of France and liberty, and believed to such an extent that they sincerely thought the sympathy of the government should take some active shape. Lafayette represented the average American sentiment of his day, and Lafayette was a leader of the insurrection. He had sent the keys of the Bastile to Washington, and the immediate struggles of France entitled her, if anything, to more rather than less of our hereditary sympathy. This was what Mr. Jefferson thought,—our minister in Paris at the time,—and all of Jefferson's political followers thought so likewise. Our devotion to the French monarchy must naturally grow to the proportions of paternal affection towards the French republic. Tom Paine and several other Americans were members of the French Assembly. Jefferson was counselor of the leaders of the revolt. What more natural than to expect the heartiest and most universal sympathy in Continental America for the brute idealogues of the Champs Elysées! Translated into the flat English of the period, and diluted by an ocean transit of thirty-five hundred miles, even the Carmagnoles did not seem to be very incendiary to native-born Republicans contending against Tories, who were unquestionably aristocrats, for those natural rights of man which the war of the Revolution had very largely hinged upon, and which the "alien and sedition laws," soon to be enforced, put in actual peril. The struggle between Hamilton and Jefferson, which we at this distance are inclined to regard as simply a contest of parties, was, perhaps, really much more of a social war. Even so late as the war of 1812 it is noticeable that persons of "family," the "well born," and those of estate, no matter what their Revolutionary antecedents, thought it their duty to themselves and to "society" to take a stand on one side, and the representatives of the *novi homines* felt it to be equally imperious on them to take a stand on the other side. John Adams, although the leader and the foremost agent of the old Federal party, was abandoned and deserted by them before the expiration of his first term of office, because, while this party knew they could depend on him for services, his family connections made him untrustworthy in case of a final issue such as Hamilton's friends contemplated between Federalists and Republicans.[1]

[1] John Adams was deliberately betrayed by Hamilton in particular, and by all whom Hamilton could influence, in the Presidential election of 1800. It would have been impossible for Jefferson to have thrown that election into the House of Representatives—neither he nor Burr dreamed of such a result pending the contest—had the Federalists been true to Adams.

Jefferson's fault lay in his indiscriminate suspicions and his general want of balance. To-day nobody can question his magnificent patriotism, any more than they will feel disposed to call into account that of John Adams. But many persons will still challenge Jefferson's methods, and they can do so justly. His conception of a national conspiracy against the republic was erroneous; the conspiracy may have been a fact, but it never attained any such proportions as entitled it to be suspected to be the programme of the Federalist party. Hamilton was too politic to have trusted an entire party with an issue so momentous, even if he had formulated to his own mind the project of an aristocracy as the successor of the old Confederacy. Still, there were causes for suspicion and mistrust, and Jefferson, through Philip Freneau and the *United States Gazette*, did not let sleeping dogs lie. The universal effervescence in Europe could not fail to froth over bodily into the United States. Jefferson's party had the memories and the sense of gratitude of the country on its side, and the furies, the vengeance, and the absurdities of the French Revolution lost much of their terrible and their grotesque aspects when presented to the people through the mediums of the weekly Republican press.

Minister Genet arrived in the country just at the moment when the people were most divided upon this issue of Federalism and Republicanism. The 10th of August, 1792, plunged France into anarchy and ruin according to the conception of some persons, but, in the opinion of others, a new and glorious *régime* was then inaugurated. M. E. C. Genet came out to the country as the exponent and interpreter of this new *régime*. On April 8, 1793, he arrived at Charleston, S. C., and his route to Philadelphia partook of the character of a triumphal march.[1] Genet landed from a French frigate, and it was at once sent to sea with a letter-of-marque to prey upon British commerce, soon bringing one of her prizes into Philadelphia. Genet also equipped other privateers, and then made his state entry into Philadelphia, amid the firing of cannon and the ringing of bells, citizens thronging to welcome him, and many deputations waiting upon him with addresses. He was invited to a public dinner before he had even presented his credentials to President Washington. When he did call upon the President he met with a chilling reception,—dignity that intrenched behind an impenetrable reserve. But the Republicans gave Genet warmth enough to compensate him even for the icy atmosphere of the President's house, and he proceeded forthwith to demonstrate that he did not believe in and did not mean to respect our principles of neutrality. In this he soon found out his error. The French privateer's prize was restored to her owners, and strict orders were given to the collectors of all ports to prevent the sailing of all privateers and the sale of any prizes. Genet protested, and the law was shown to him, and he was told that he must respect the sovereignty of the United States by dismissing his privateers from American waters. Genet flatly refused to do this, and threatened to appeal from the President to the people, clinching his performance by beginning to fit out a privateer in Philadelphia. Washington, as soon as he learned this, requested the French government to recall their minister. It was done, but with a bad grace.

Genet had already begun extensive filibustering

But the latter was keen to insure his own re-election, and—evidence enough—he thought he could do so by conciliating the real force of the Tory organization, by giving practical value to the alien and sedition laws, and publishing his edition of Davila. Hamilton and his friends literally sold John Adams out on this, and with the worst intentions in the world, Hamilton publishing an anonymous pamphlet which insured the defeat of Adams. Aaron Burr was a politician whose memory the country endures, and that is all; but the death of Hamilton was not his worst performance.

[1] Genet was a man of ability, although he is generally credited with being simply an absurd person by our annalists. The only mistake he made was that he did not comprehend our institutions and the already inveterate attachment of the American citizens to "law,"—something the citizen himself had made, and therefore to be obeyed religiously by him, even though it should plunge him into absurdity in the process of execution. Citizen Genet was not aware of this superstition; in other respects his course was not only judicious but very ingenious. He was, in fact, a clear and cool-headed man; he had no very intense sympathies with the party of which he was the spokesman, and when he failed to secure the objects for which he had been sent out he very wisely abstained from returning to France. He married a daughter of George Clinton, Governor of New York and representative of the anti-Hamilton party, and spent the rest of his life very peacefully and happily as an American farmer at Prospect Hill, Greenbush, near Albany, N. Y., where he died in 1834. Edmund Charles Genet was a trained diplomatist, an attaché, before the Revolution, to the embassies of Berlin, Vienna, London, and St. Petersburg. He was a man of tact and culture; passed himself over from the old French establishment to the new, and became the favorite of the Jacobins without losing the support of the reactionists. Robespierre's faction made him adjutant-general of France and minister plenipotentiary to Holland and Switzerland. He was successful in revolutionizing the Netherlands, and by means of his intrigues Geneva became republican and was annexed to France. Such a man might be expected to render France good service in America, and he came very near doing so. Washington and Hamilton profited by his ignorance of and disregard for the statutes, but it is doubtful if he did not succeed against them on the stump. In other words, it seems probable that Genet's mission to this country had much to do with securing the election of Jefferson, or, rather, the defeat of Adams, in 1800.

operations in the West. He played for high stakes,—no less than to involve the United States in war with Great Britain, and to capture Florida and Louisiana from Spain. The West was full of bitter feelings against both countries. British gold paid for the tomahawk and scalping-knife which desolated the borders of Kentucky. Spain closed the navigation of the Mississippi to them and harassed and beggared them with trade restrictions. There was also a strong sentiment of good feeling and gratitude towards the French among the Revolutionary soldiers who had moved to the West. Clark, Shelby, Scott, Hardin, Anderson, Croghan, and their followers had marched and fought shoulder to shoulder with the French in the struggle for American independence. The Democratic societies profited by this sort of feeling, that of Lexington, Ky., resolving "that the right of the people on the waters of the Mississippi to the navigation is undoubted, and it ought to be peremptorily demanded of Spain by the government of the United States."

In November, 1793, Genet sent four of his agents —La Chaise, Charles Delpeau, Mathurin, and Gignoux—to Kentucky and other parts of the West, to enlist men for expeditions against the Spanish possessions, and those also of other countries at war with France. These recruiting agents bore with them blank commissions for the use of American officers enlisted in the French service. One of these commissions, as major-general, was accepted by George Rogers Clark.[1] Another was conferred upon Gen. Elijah Clarke, of Georgia, who had already made trouble by leading an expedition into the country of the Creek Indians, and who soon raised a force and undertook to invade Florida. He did not, however, accomplish much, and the greater Gen. Clark was probably deterred from attempting an extensive movement by the news that followed Genet's agents to Kentucky, informing the Governor of the State that Genet's movements were extremely inopportune, as negotiations were now in progress which promised to secure to the United States the absolute right to the free navigation of the Mississippi. Genet's agents, in the teeth of the opposition and warnings of the President and Governor Shelby, of Kentucky, proceeded with their preparations, buying cannon and arms, and arranging to enlist two thousand men as French soldiers. George Rogers Clark's commission made him "commander-in-chief of the revolutionary legions on the Mississippi." As such, he called for volunteers for the reduction of the Spanish forts on the Mississippi, for opening the trade of that river and giving freedom to its inhabitants; each person serving on the expedition being promised a thousand acres of land, those serving a year two thousand acres, and those three years three thousand acres, as well as a share of the plunder. Those who preferred pay to lands would get one shilling a day.

Governor St. Clair, of the Northwestern Territory, and Gen. Wayne, wrote to apprise Governor Shelby of these movements, Wayne putting a corps of United States cavalry at his service, and offering him any more troops he should need. But Shelby, who was not a profound lawyer and desired his own popularity, now wrote to the Secretary of State that he had grave doubts about detaining Clark and his Frenchmen if they attempted to put their plan into execution. "If they manage their business with prudence, he doubted whether there is any legal authority to restrain or punish them, at least before they have actually accomplished it; for if it is lawful for any one citizen of the States to leave it, it is equally so for any number of them to do it. It is also lawful for them to carry any quantity of provisions, arms, and ammunition." The President of the United States thought so differently from Governor Shelby that he at once issued his proclamation, notifying the people of the West of the unlawful project, and warning them to take no part in it. To make this more effectual, Gen. Wayne fortified and armed Fort Massac, at the mouth of the Ohio, so as to prevent any hostile armament from descending the Mississippi. These acts, the recall of Citizen Genet, and the general understanding that the Mississippi question would soon be settled, led to the abandonment of the expedition, and the Georgia attempt, as has been shown above, resulted in nothing.

That is to say, nothing directly. These movements and threatened movements undoubtedly hastened the settlement of the frontier disputes with Great Britain, and enabled Wayne to consummate his treaty with the Miamis, obstructed previously by British agencies. They also disposed Spain to yield her pretensions in regard to the Mississippi question, and settle that matter more speedily than it might otherwise have been done. It was in December, 1791, that Spain made her first verbal overtures for a settlement of the navigation question. In March, 1794, the Secretary of State was compelled to confess that the negotiations had not reached any definite conclusion. But the knowledge that these negotiations were in actual *bona fide* progress had a most quieting and beneficial effect on Kentucky. It snapped the last thread of Carondelet's schemes, and made Wil-

[1] Letter of Minister Genet to Jefferson, in Am. State Papers.

kinson send Power, the Spanish agent, at a double-quick pace through his line.[1]

In May of that year Kentucky was greatly excited by a proclamation from La Chaise, announcing the failure of the expedition under Clark, and by a public meeting in Lexington, at which John Jay was censured for procrastination and weakness, and denounced as the enemy of the Western country. But even at this moment Jay was concluding a treaty with Great Britain, which insured the enforcement of that of 1783, and the consequent protection of the West from the Indians, and on Oct. 27, 1795, Thomas Pinckney secured from Spain the treaty which insured the navigation of the Mississippi to the West. This treaty acknowledged our southern limits to be the thirty-first parallel of latitude; our western limits to be the middle of the channel of the Mississippi, the navigation of which was made free to the United States, with the concession, furthermore, of a right of deposit at New Orleans for three years of American produce descending the river. It was at this crisis that Carondelet attempted to play his last card. He had sent Power to Wilkinson, but that astute warrior knew that the Mississippi question would soon be settled, when his usefulness to Spain would cease; so he dismissed Power forthwith under custody of a guard.

Power now went to Judge Sebastian to make an important communication to him in regard to Kentucky. This was from Carondelet, and to the effect that "the king of Spain was willing to open the navigation of the Mississippi to the Western country, and desirous to establish certain regulations reciprocally beneficial to the commerce of both countries." Judge Sebastian was expected to procure delegates for a conference at New Madrid with Col. Gayoso, the duly accredited agent of Spain. There was a conference at the house of Col. Nicholas, of this gentleman, Sebastian, Harry Innis, and Wm. Murray, and it was agreed that Sebastian should go to meet Gayoso. He did so, and reported that he had nearly concluded a commercial agreement, the only difference being about a small duty on imports. They went to New Orleans, where Carondelet readily yielded to Sebastian's demands, when the news came, by a courier from Havana, of the signing of the treaty in Madrid. Sebastian still urged Carondelet to sign his little private Kentucky treaty, on the ground that the United States treaty would never be ratified. Carondelet, however, said that his business with Sebastian was now at an end.

Why was Sebastian anxious to have these papers signed? This negotiation was kept a dead secret until 1806 (time of Burr's conspiracy), when Judge Harry Innis voluntarily disclosed the matter before a committee of the Kentucky Legislature. In 1797, just when the right of deposit was coming into use and the Florida boundary line, under the treaty of 1795, was being run off, Power again came to Kentucky and gave him a letter from Carondelet, to be laid before Murray, Innis, and Nicholas, as before. Carondelet proposed, bluntly, that Kentucky should secede forthwith, and "form a government wholly unconnected with that of the Atlantic States." Spain was to have her northern boundary in Louisiana extended to the Yazoo, in return for which she would furnish the conspirators all the artillery, arms, etc., needed for their object, which included the forcible seizure of Fort Massac; and to supply, also, one or two hundred thousand dollars, to be sent quietly to any person's address.

Sebastian laid this conspiracy scheme before his co-workers, who rejected it, but so quietly and gently that, when Innis told his story before the Legislature nine years afterwards, there was a prompt investigation, and proof obtained that Judge Sebastian had for years been in receipt of a $2000 pension from Spain. He resigned to save himself from impeachment. Innis and Nicholas escaped conviction, but not obloquy and censure. At the time of this last intrigue, Spain had just made an alliance with France which guaranteed to both their territorial integrity, and for that reason the treaty of 1795 was very obnoxious. In fact, as soon as the three years' term of deposit was out, Spain, which now had given up Louisiana to France (or rather to Napoleon) by the secret treaty of San Ildefonso, gave notice of her intention not to renew the right of commercial deposit to Americans. The flame thus kindled led to the purchase and cession of Louisiana.

In 1806, when Sebastian was being investigated and condemned by the Kentucky Legislature, the judge's co-conspirator, Wilkinson, had his headquarters in St. Louis. Here he was visited by Aaron Burr, who also visited him at Fort Massac and at Natchez, and always said that Wilkinson was the original author of his conspiracy. Burr's movements had begun already; Jo Daviess was bringing him to the notice of courts and grand juries, and Spain was so uneasy and anxious on account of his connection with the Bastrop and other land claims near the Texas lines, that the Spanish army crossed the Sabine, invading United States

[1] It was charged, however, at Wilkinson's court-martial, that he did not so curtly dismiss Power until he had first possessed himself of all the envoy's papers, including some which he would not choose to be seen at the State Department.

territory, whereupon Wilkinson marched down the river and promptly drove them back. Burr claimed great tracts of land; he proposed colonies; but he was an unscrupulous "opportunist," and he was raising an army big enough to rob the United States of territory, as well as Spain. Jefferson evidently feared him and his power to do evil, which, with the West as it had been and then was, was considerable. That condition of affairs in the West was brought about by the Spanish intrigues and the American traitors who sustained and fomented them, and Burr was there to profit by their work and seek his opportunity in those disorders. He could be Jacobin or Bonaparte with equal facility, and he at least owed his power for danger to the seed sown by Wilkinson, who finally betrayed and captured him, but not before he had found out that President Jefferson was in dead earnest. Indeed, Jefferson, the strictest of strict constructionists as a rule, violated his principles boldly in order to seal the West to the Union. He urged, almost compelled, the Louisiana purchase; he subscribed earnestly to the great national road to the West; he pursued Burr until it was in fact a persecution, and he made all haste to send Lewis and Clark on their exploring expedition that the whole country might learn the extent and value of the West. Burr's is the last of the early intrigues which in any way bear upon the Mississippi River and its navigation. And it may be added that Jefferson, in connecting the Atlantic with the Ohio, in securing the Mississippi to the great West, and in exploring the wilderness beyond the Missouri, did more to open up a fortune for St. Louis than any other man ever did for a city that was yet to begin growing.

CHAPTER XI.

THE LOUISIANA CESSION.

THOMAS JEFFERSON, as was shown in the last chapter, consummated the fortunes of the West, and secured the prosperity and growth of St. Louis, by completing the arrangements for the cession of Louisiana and all the indefinite extension of territory to the westward comprehended under that title. But the merit of securing and promoting this transfer of an empire, so far as it redounds to the credit of Jefferson's foresight and patriotism, does not lie in the fact that it was a conquest over the French and Spanish so much as the fact that it was a victory over the old Federal party and the commercial and agricultural prejudices, prepossessions, and jealousies of the communities on the Atlantic slope of the Alleghanies, who were opposed to the growth and aggrandizement of the West and Southwest.[1]

[1] This amounted to an actual hostility, and it was a ruling policy of the administrations preceding Jefferson's, with the one exception that John Adams, at the time of the suspension of intercourse and the maritime war with France, seems to have contemplated the seizure of the Spanish posts from St. Louis to the Belize, so as to insure the free navigation of the Mississippi. But John Adams' policy was not that of either Washington or Hamilton, nor of any of the States north of the Susquehanna. Washington's feelings on this subject, as has been shown, were carefully considered, and he did not disguise them nor the reasons which influenced them. He did not think the free navigation of the Mississippi, nor the rapid opening of Western lands to settlers desirable, because he thought it would tend to prevent the proper colonization of Western New York, Pennsylvania, and Virginia. He was hostile to the wholesale openings of the Yazoo and other lands in Georgia, Tennessee, and Carolina; and he looked for resistance to government similar to that encountered by him in Western Pennsylvania if he should do anything to encourage squatter sovereignty in Kentucky and the Northwest and Southwest Territories. It is noteworthy that all three of the generals—Harmar, St. Clair, and Wayne—sent by him to command against the Indians and regulate the affairs of the Northwest were Pennsylvanians, and it was their instructions, in making treaties, to draw a north and south line, east of which Indians should not come, but, equally, west of which the whites should not be allowed to trespass. The prejudice of Hamilton and other Federalists, however, was only partly political. In some respects it was social, as has been shown in another place; in many particulars it was geographical. The completion of schemes of internal improvement, the collection of revenue, and the fostering of manufactures were difficult in new and poor communities unless the population could be kept compact and solid. The fisheries and an extended commerce promised more certain results to revenue than trapping and hunting. A compact State, with large cities and a strong government, was the idea of the Federalists; but men like Jefferson and Patrick Henry were filled already with the conception of "manifest destiny," of continental proportions, and the Gulf and the lakes united one way, as the two great oceans should be in the other direction. Jefferson appears to have prepared to bring this about while Minister to France, at which time he engaged John Ledyard, the traveler, to find and explore the Columbia River and trace the connection between its headwaters and those of the Missouri. "His mind was early impressed with the belief that where the deep snows that clad the eastern slope of the Rocky Mountains, and shed its collected waters into and formed such a river as the Missouri, 'there must be a corresponding shedding and collection of waters on the other, and thus he was perfectly assured of the existence of a river where the Columbia River has since been found to be, although no navigator had seen its mouth and no explorer trod its banks.' Impressed with this important truth, and desirous of accomplishing that grand design of opening a commercial communication with Asia through the heart of our own continent, he made the acquaintance of Ledyard, who was then about to explore the Nile. He proposed to him to change his theatre from the Old to the New World, and to proceed to St. Petersburg upon a passport which he would obtain for him. He should there obtain permission from the Empress Catherine to traverse her domains

In respect to France and Spain, the battle had been already substantially fought out before the final cession of Louisiana. The intrigues and manœuvres detailed in the preceding chapter indicate simply the expiring efforts of Spain to prevent a strong country from being planted immediately on the frontiers of Cuba and Mexico, which Louisiana and Florida were. But the attempts to retain possession of the Missis-

in a high northern latitude to their eastern extremity, cross the sea from Kamschatka or at Behring's Strait, and, descending the northwest coast of America, come down upon the river which must head opposite the head of the Missouri, and ascend it to its source in the Rocky Mountains. Ledyard undertook this daring and grand project of discovery. He received permission from the empress and proceeded as far as Siberia, where he was overtaken by a revocation of the permission, and he returned to France. Mr. Jefferson was thus defeated in his first great effort to find the existence of the Columbia River, but continued true to his great purpose of opening our inland commercial communication with Asia; so that when he became President of the United States, he projected the expedition of Lewis and Clark, and sent them forth to discover the head and source of that river which he was convinced existed, though it had not yet been discovered. The existence of the river was discovered and established by Lewis and Clark, as well as by the explorer, Capt. Gray; and by the purchase of Louisiana we have become the *bona fide* and absolute owners of the river and some three hundred miles of the Pacific coast farther north, until we reach Vancouver's Island at parallel of 49°."

When Jefferson returned from Europe he found the Northern Federalists arrayed in bitter and uncompromising hostility to the settlement and development of the Northwest. When Mr. Ross' proposition to compel Spain to open the Mississippi was laid before the Senate, it was bitterly opposed by this party. In the secret session to which the treaty for ceding Louisiana was sent, the Northern Federalists resisted its ratification in vehement language, dreading the preponderance the West and Southwest might acquire by it. Harrison Gray Otis, of Massachusetts, rose in his place in the Senate and said, "I would rather the Mississippi was a running stream of burning lava, over which no human being could pass, than that the treaty should be ratified."

After they failed in defeating the purchase of Louisiana, we find them in 1818 giving away a large portion of that territory by ceding Texas to Spain. We find the combined opposition of the North marshaled in strong array against the Southwest in 1820, upon the Missouri Compromise, threatening a dismemberment and dissolution of the Union rather than the interests of the Southwest should be promoted. One of the most gorgeous displays of American eloquence (except, perhaps, the mighty struggle between the giant mind of Mr. Webster and the argumentative and majestic brilliancy of Mr. Hayne, of South Carolina, in the United States Senate, in the session of 1830, upon the resolution of Mr. Foote, of Connecticut, to suspend the sales of public lands in the West, in which discussion was introduced the great constitutional question of nullification and the effort to cripple and retard the settlement of the West) was exhibited in that memorable debate in the United States Senate between Mr. Rufus King, of the North, and Mr. William Pinkney, of Maryland, for the Southwest.

If the reader will examine the votes on that important question, he will see that all votes cast against that measure were from the North, and it was ultimately carried by the friends of the Southwest. We find, also, their opposition exhibited in the war of 1812, when a foreign enemy penetrated into the Northwestern Territory, and some of the Southern States had been drained of almost all of her noble young men for the defense of their country and to prosecute the war to an honorable close. They even met in secret council and projected the dissolution of the Union.

It will be remembered that in the year 1818, under the administration of Mr. Monroe, a proposition was made to exchange for Florida that portion of this territory embraced in what was called Texas. John Quincy Adams was Secretary of State, one of Mr. Monroe's cabinet, and was the author and negotiator of this treaty. When the treaty was made known through the papers of Washington City, a citizen of the "Territory of Missouri," a young lawyer and a member of the St. Louis bar, wrote a series of articles over the signature of "Americanus," denouncing the treaty and attacking its authors, "imprecating a woe upon the heads of those who should favor it, asserting that the magnificent valley of the Mississippi is ours, with all its fountains, springs, and floods, and woe to the statesman who should undertake to surrender one drop of its waters, one inch of its soil to any foreign power." The treaty was sent to the Senate on the 4th day of July, 1819, and by the Senate ratified. Mr. Monroe, in attempting to justify himself and cabinet for this, holds the following language in a letter to Gen. Jackson, dated at Washington, May 22, 1820, some twelve months after the date of the treaty. He says, "Having long known the repugnance with which the eastern portion of our Union, or rather some of those who have enjoyed its confidence (for I do not think that the people themselves have any interest or wish of that kind), have seen its aggrandizement to the West and South, I have been decidedly of opinion that we ought to be content with Florida for the present, and until public opinion in that quarter shall be reconciled to any further change. I mention these circumstances to show that our difficulties are not with Spain alone, but are likewise internal, proceeding from various causes, which certain men are prompt to seize and turn to the account of their own ambitious views." All this shows the constant efforts to injure the efforts and cripple the advance of the Southwest. Gen. Jackson reluctantly yielded to it as a temporary measure. Mr. Jefferson, to whom a similar letter had been written, would yield to nothing that would tend to dismember or mutilate that grand valley for which he had bestowed so much labor and pains. "Not one inch of the waters of the Mississippi to any foreign nation," was his language. As before stated, the treaty was promptly ratified by the American Senate; but Spain, upon her part, hesitated and delayed, and finally permitted the time limited for the exchange of ratifications to expire. Negotiations, however, were soon renewed, and in October, 1820, Spain ratified the treaty. It is worthy of remark here that this amputated part of Louisiana—the whole of Texas was to be attached to Mexico—ceased to be a part of Spain, for the revolution of Mexico had resulted in her independence, which superseded the Spanish treaty in regard to the boundaries. So we had to re-treat with Mexico, which was done, and all will remember that in a few years after a political tempest swept over the land, overturning everything that came in its way, to get back this country which had been given away, which brought on our government a war with Mexico, and cost millions of dollars more than the original cost of all the Louisiana territory.

In the same way, at the treaty of Ghent, Great Britain's lapsed right to navigate the Mississippi, secured under the tripartite treaty of 1783, but not mentioned in that of Paris of

sippi were as irrational as the struggles of a prostrate and defeated opponent to avoid conceding the fruits of victory. The original contests for the possession of the Mississippi valley were had between France and Spain. Until the British colonies in America waxed strong and aggressive, these countries took no notice of the British pretensions to own to the Mississippi and the South Sea by the discoverer's prior right, acquired through John Cabot. Later, when England grew strong and pressed vigorously upon their flanks, Spain and France settled their own disputes and united against Great Britain. In 1760–63, however, both powers were defeated and forced to make the best terms they could. France gave up Canada, and Illinois and Louisiana east of the Mississippi; Spain gave up Florida. To protect Mexico, and to spare France the humiliation of surrendering all her American empire to Great Britain, Louisiana west of the Mississippi was secretly conveyed to Spain. The boundary line of Great Britain thus fell along the channel of the Mississippi River from the forty-ninth parallel of latitude,—from the Lake of the Woods to a point below Natchez. When Great Britain signed with the United States, in 1783, she conceded to them exactly this same line, and in any international court of arbitration this concession could have been maintained.

These matters have been closely investigated, for they were under earnest discussion in State and Federal courts in connection with the Yazoo land claims, and in cabinet and ambassadorial council, in connection with the Ashburton treaty and the San Juan del Fuca claims. England, France, and Spain have all three claimed portions of the Mississippi valley upon the ground of original discovery. In 1604 the attempt was made to settle the various pretensions by a treaty. The parties could not agree. Nothing further was done until 1670, when, by Article VII. of the so-called "American treaty" between England and Spain, it was stipulated that the possessions of the English crown, as they then existed in America, were to be confirmed to "the most serene king of Great Britain," with "plenary right of sovereignty, dominion, possession, and propriety." The southern boundary of this tract happened to be definitely determined by the first and second charters of King Charles II. to the Earl of Clarendon and others (1663 and 1665), granting them the province of Carolina between 36° and 29° north latitude. The crown fell heir to this in 1729, under George II., and in 1732 the grant was made to Oglethorpe, with bounds of Savannah River north, Altamaha south, and "South Seas" west. Under the treaty of 1763 the Mississippi was conceded to be the boundary, and in 1787 Georgia, to prove the claim, created a new county, "Bourbon," in the Yazoo country.

Again, in the peace negotiations at Utrecht in 1704, the boundaries of Canada were left to be determined by commissioners, who fixed the parallel of 49° as the common boundary from the Lake of the Woods indefinitely to the west. By this treaty and the fixing of this boundary France came into possession of all of Louisiana south of latitude 49°. In this the British government acquiesced for nearly a century. Previous to the celebrated treaty of Paris of Feb. 10, 1763, disputed boundaries had led to calamitous Indian wars, and hence, as has been said already, there was a very careful defining of lines in that treaty.

In the fourth article it is stipulated that "His Most Christian Majesty renounces all pretensions which he has heretofore formed, or might form, to Nova Scotia, or Acadia, in all its parts, and guarantees the whole of it, and with all its dependencies, to the King of Great Britain; moreover, His Most Christian Majesty cedes and guarantees to his said Britannic Majesty, in full right, Canada, with all its dependencies, as well as the Island of Cape Breton, and all the other islands and coasts in the Gulf and River of St. Lawrence, and, in general, everything that depends on the said countries, lands, islands, and coasts, with the sovereignty, prosperity, possession, and all rights acquired by treaty or otherwise, which the most Christian King and Crown of France have had till now over the said countries, lands, islands, places, coasts, and their inhabitants; so that the Most Christian King cedes and makes over the whole to the said King and to the Crown of Great Britain, and that in the most ample manner and form without restriction and without any liberty to depart from the said cession and guarantee under any pretense, or to disturb Great Britain in the possessions above mentioned." Upon the part of his Britannic Majesty, the king of Great Britain agrees in Article 7th as follows:

"In order to establish peace on solid and durable foundations, and to remove forever all subjects of dispute with regard to the limits of the British and French territories on the Continent of America, it is agreed that for the future the confines between the dominions of His Britannic Majesty and those of His Most Christian Majesty in that part of the world shall be fixed irrevocably by a line drawn along the middle of the River Mississippi, from its source to the River Iberville, and from thence by a line drawn along the middle of this river and the Lakes Maurepas and Pontchartrain to the sea, and for this purpose the Most Christian King cedes, in full right, and guarantees to His Britannic Majesty, the river and port of the Mobile, and everything which he possesses or ought to possess on the east side of the River Mississippi, with the exception of the town of New Orleans, and of the island in which it is situated, which shall remain to France, it being well understood that the navi-

1803, was restored to her upon condition of extending fishing privileges upon the coasts of Newfoundland and Labrador and Nova Scotia to the fishermen of Gloucester and Cape Cod. It was over hostility and jealousy and intrigue, over sectional party influence of this sort that Jefferson's chief victory was gained.

gation of the River Mississippi shall be equally free, as well to the subjects of Great Britain as to those of France, in its whole breadth and length, from its source to the sea, and expressly that part which is between the said island of New Orleans and the right bank of that river, as well as the passage both in and out of its mouth. It is further stipulated that the vessels belonging to the subjects of either nations shall not be stopped, visited, or subjected to the payment of any duty whatever."

By the above extracts from the treaty of Paris, it will be seen that the two governments fixed definitely and irrevocably the boundaries of their respective dominions in North America, the boundary being the middle of the Mississippi from its source, the Lake of the Woods, latitude 49°, to the river Iberville. By this treaty France became possessed in fee-simple of all the territory west of the Mississippi River as Louisiana, including the town of New Orleans. It will be remembered that a secret treaty was entered into on the 3d of November, 1762, between the French and Spanish governments, by which the former ceded to the latter the province of Louisiana, which lay on the western side of the Mississippi River, but it was not until the 21st of April, 1764, that Louis XV. proclaimed this change to the colony.

Spain succeeded, then, to all the rights and duties of France towards Great Britain under the treaty of 1763; but by the treaty of 1783 the United States succeeded to all the rights and duties of Great Britain under that treaty of 1763, *quoad* American territory, and Spain could not deny us the navigation of the Mississippi or refuse to recognize our boundaries, without an infraction of the treaty. But Spain did deny these things, and was backed up in it by France. The specious pretext was that the king of Great Britain, by proclamation in 1769, had excluded his subjects from settling west of certain lines. This was done, to be sure, but to prevent trouble with the Indians, and by no means to vacate his own sovereignty over the territories reserved. Still, it became evident that in Spain we would have a neighbor ever harassing. When Spain ceded Louisiana to France, at the same moment that her intendant Morales refused the right of deposit at New Orleans, the situation became intolerable, and the various measures and negotiations were at once instituted which presently resulted in the cession of Louisiana.

The volume of M. Barbé Marbois and the various reports and dispatches of Livingston and Monroe leave us full of information on this subject. Our plenipotentiaries were fortunate in having to deal with Napoleon, who could and did despise the remonstrances of Spain, who wanted money in order to go to war with England, and who knew that the first step in that war on England's part would be to take Louisiana and hold it. He knew that this would occur from his false step in sending Le Clerc and Victor with an army to San Domingo, with instructions to go to Louisiana after they had recovered the island. The only way to repair the effects of this false step would be to take a prompt one in the right direction. Spain ceded Louisiana to him to prevent the United States from getting it. He would cede it to the United States to prevent Great Britain from getting it. Thus he would prevent his chief enemy from acquiring new territory, and he would make $15,000,000 on a piece of real estate which had never cost him a penny and of which he had not even taken possession.

Jefferson thought at first that it would not be possible to secure more than a place of deposit, and when Robert R. Livingston was sent out as minister to the Court of St. Cloud on Jan. 11, 1803, his instructions were restricted to a vigorous insistance upon an immediate possession of "the island of Orleans" or some equivalent place of deposit. But things were more ripe on both sides of the ocean than Jefferson had conceived. The progress of excitement in Congress and the country required Mr. Monroe to be sent out with fuller powers and more extensive demands, and before Monroe arrived out, Livingston was only waiting to see him to conclude terms with Barbé Marbois and Napoleon for the purchase of the whole of Lower and Upper Louisiana at a cash price so low as to be quite within the reach of our treasury and not extravagant even in the eyes of parsimonious Republicans.

Mr. Jefferson wrote a manly letter to Mr. Monroe, in which he made occasion to pay that estimable statesman a rare and noteworthy compliment. The agitation in the public mind, he said, was extreme, and remonstrances, memorials, etc., were everywhere being signed by the whole body of the people.

"The measures which we have been pursuing, being invisible, do not satisfy their minds; something sensible, therefore, has become necessary, and indeed our object of purchasing New Orleans and the Floridas is a measure likely to assume so many shapes that no instructions could be squared to fit them. It was essential, then, to send a minister extraordinary, to be joined with the ordinary one, with discretionary power,—first, however, well impressed with all our views, and therefore qualified to meet and modify to these every form of proposition which could come from the opposite party. This could only be done in frequent and full oral communication. Having determined on this, there could not be two opinions as to the person. You possessed the unlimited confidence of the administration and of the Western people, and were you to refuse to go no other man can be found who does this. All eyes are now fixed on you, and were you to decline the chagrin would be great, and would shake under your feet the high ground on which you stand with the public. Indeed, I know nothing which would produce such a shock, for on the event of this mission depend the future destinies of this republic. If we cannot, by a purchase of the country, insure to ourselves a course of peo-

petual peace and friendship with all nations, then, as war cannot be distant, it behooves us immediately to be preparing for that course, without, however, hastening it, and it may be necessary to cross the channel. We shall get entangled in European politics, and, figuring more, be much less happy and prosperous. This can only be prevented by a successful issue to your present mission. I am sensible, after the measure you have taken for getting into a different line of business, that it will be a great sacrifice on your part, and presents, from the season and other circumstances, serious difficulties. But some men are born for the public. Nature, by fitting them for the service of the human race on a broad scale, has stamped them with the evidences of her destination and their duty."

Jefferson was supposed to be a fanatical friend of France, but he was very decided at this time, and quite ready to have war with Napoleon, which indeed he looked upon as probable. He wrote to R. R. Livingston that

"The day that France takes possession of New Orleans fixes the sentence which is to restrain her forever within her low-water mark. It seals the union of two nations who in conjunction can maintain exclusive possession of the ocean. From that moment we must marry ourselves to the British fleet and nation. We must turn all our attention to a maritime force, for which our resources place us on very high ground, and, having formed and connected together a power which may render reinforcement of her settlements here impossible to France, make the first cannon which shall be fired in Europe the signal for tearing up any settlement she may have made, and for holding the two continents of America in sequestration for the common purposes of the united British and American nations. This is not a state of things we seek or desire. It is one which this measure, if adopted by France, forces on us necessarily, as any other cause, by the laws of nature, brings on its necessary effect."

These two letters embrace the sum and substance of the instructions given by the President and by Secretary of State Madison to the Ministers Livingston and Monroe. The latter sailed from New York on March 8, 1803, arriving in Paris on April 12th. The very next day he began his conferences with Marbois, who was selected to conduct the negotiation instead of Talleyrand as soon as Napoleon heard that Congress had voted a large secret-service fund for use in promoting the settlement of the Louisiana imbroglio.

Meantime Napoleon's situation disposed him to settle promptly. The Fox ministry was out of power, and the First Consul was preparing to resume war with Great Britain. He wanted a navy. He hated to leave England mistress of the ocean. "Without the liberty of the seas," he said, "there is no happiness for the world." Gen. Leclerc was dead, and the conquest of the slave insurrection in Hayti still not achieved. Malta had not been evacuated by the British, and Napoleon could get no redress for atrocious libels published concerning him in the English papers. Both countries were already busily arming, and Napoleon had gone the length of attempting to bully Lord Whitworth, English ambassador, as he had often bullied his officers and courtiers. On Easter Sunday, April 10th, he told Talleyrand that he expected to sell Louisiana. He knew its full value, but he could not retain it, and the English should not get it. "I think of ceding it to the United States," he said. "I can scarcely say that I cede it to them, for it is not yet in our possession. If, however, I leave the least time to our enemies, I shall only transmit an empty title to those republicans whose friendship I seek. They only ask of me one town in Louisiana, but I already consider the colony as entirely lost; and it appears to me that in the hands of this growing power it will be more useful to the policy and even to the commerce of France than if I should attempt to keep it." Marbois strongly advised the adoption of this policy.

On the other hand, Mr. Livingston had learned through Mr. Rufus King, United States minister to London, that it would be entirely agreeable to the British government if the United States could procure the cession of Louisiana. This government had first proposed to Mr. King a joint conquest of the colony, to be retroceded to the United States after peace; but this was not admissible, and it was then made known that England wished the United States to secure control of Louisiana by any means found desirable. Spain was repugnant and hostile, but Napoleon had means to compel her assent.

When Monroe arrived, Marbois straightway asked of him and his colleague to name a sum they would pay for Louisiana. Napoleon said he wanted fifty million francs, and would not treat for a less sum. Livingston named thirty million francs. Marbois asked for one hundred and twenty-five million. The sum agreed upon was eighty million francs, of which a part was to be employed in paying the French spoliation claims of American citizens. Napoleon urged an instant closing of negotiations. Marbois demanded that some consideration should be had for the people of Louisiana, whom they were thus about to trade off. The First Consul replied, in his brutal way,—

"You are giving me in all its perfection the ideology of the law of nature and nations. But I require money to make war on the richest nation of the world. Send your maxims to London; I am sure that they will be greatly admired there, and yet no great attention is paid to them when the question is the occupation of the finest regions of Asia. Perhaps it will also be objected to me that the Americans may be found too powerful for Europe in two or three centuries; but my foresight does not embrace such remote fears. Besides, we may hereafter expect rivalries among the members of the Union. The confederations that are called perpetual only last till one of the con-

tracting parties finds it to its interest to break them, and it is to prevent the danger to which the colossal power of England exposes us that I would provide a remedy."

The conferences proceeded rapidly as soon as it was understood that business was meant. The sum once agreed on, terms and boundaries and conditions were speedily adjusted. The treaty and the two definitive conventions accompanying it were engrossed in French, and signed, the date being April 30, 1803, the actual signing being done four days later. Mr. Monroe was not two months out from New York. "The authors of these solemn instruments that regulate the lot of nations," says M. de Marbois in his history, with a touch of sentiment which is graceful and appropriate, "cannot be insensible to the honor of having done acts useful to their country. A sentiment superior even to glory seemed to animate the three ministers, and never, perhaps, did negotiations taste a purer joy. As soon as they had signed the treaties they rose and shook hands, and Livingston, expressing the general satisfaction," made forthwith, *more Americano*, a neat and clever speech.[1]

Napoleon, when he heard of the signing of the treaty, said, "This accession of territory strengthens forever the power of the United States, and I have just given to England a maritime rival that will

[1] The following is the text—English official version—of the treaty and conventions concluded and ratified April 30, 1803, by the United States of America and the French republic relative to the cession of Louisiana:

TREATY BETWEEN THE UNITED STATES OF AMERICA AND THE FRENCH REPUBLIC.

"The President of the United States of America and the First Consul of the French Republic, in the name of the French people, always animated with the desire to remove all misunderstandings in relation to the subjects of discussion mentioned in the second and fifteenth articles of the convention of the 8th Vendémiaire, year nine (Sept. 30, 1800), in relation to the claims of the United States, in virtue of the treaty concluded at Madrid the 27th of October, 1795, between His Catholic Majesty and the said United States, wishing to maintain the union and friendship which at the period of the aforesaid convention was happily re-established between the two nations, have named respectively their plenipotentiaries as follows:

"The President of the United States of America, with the advice and consent of the Senate of said States, names as his Minister Plenipotentiary Robert R. Livingston, and James Monroe Minister Plenipotentiary and Envoy Extraordinary of the United States to the government of the French Republic; and the First Consul, in the name of the French people, names the citizen Francis Barbé Marbois, minister of the public treasury, who after having exchanged their respective powers have agreed upon the following articles:

"ARTICLE 1st. In virtue of Article 3d of the treaty concluded at San Ildefonso the 9th Vendémiaire, year nine (Oct. 1, 1800), between the First Consul of the French Republic and His Catholic Majesty, it was stipulated as follows: His Catholic Majesty promises and binds himself on his part to cede to the French Republic, six months after the full and complete execution of the conditions and agreements of the said article in relation to His Royal Highness the Duke of Parma the colony and province of Louisiana, in all its extent as now actually possessed by Spain, and as formerly possessed by France, and as also stipulated in all treaties that might have been made between Spain and other States. In consequence of said treaty, and particularly of the third article, the French Republic, enjoying the incontestable rights of domain and possession of the said territory, and the First Consul desirous of giving to the United States incontestable proofs of his friendship, cedes to them by these presents, in the name of the French Republic, forever and in full sovereignty the said territory, with all its rights and dependencies, as fully and in the same manner as she acquired it in virtue of the above cited treaty concluded with His Catholic Majesty.

"ARTICLE 2d. In the cession made by the preceding article there is included all the islands adjacent and belonging to Louisiana, all the lots and public places, the vacant levees, the buildings, fortifications, barracks, and other buildings that have no owners; the archives, papers, and instructions relating to the domains and sovereignty of Louisiana will be placed into the possession of the commissioners of the United States, and copies of the same in good and due form will be furnished to the magistrates and municipal officers that may be necessary to them.

"ARTICLE 3d. The inhabitants of the ceded territory will be incorporated into the Union of the States, and admitted as soon as possible, conformably to the requirements of the Federal Constitution, to enjoy all the rights, advantages, and immunities of the citizens of the United States, and during this time they will be upheld and protected in the enjoyment of their liberty, property, and religion they profess.

"ARTICLE 4th. The French government will send a commissioner to Louisiana, who will prepare all that is necessary, as much to receive from the officers of His Catholic Majesty the said territory with its dependencies in behalf of the French Republic, if that has not already been done, as to transmit it in the name of the French Republic to the commissioner or agent of the United States.

"ARTICLE 5th. Immediately after the ratification of the present treaty on the part of the President of the United States, and of that of the First Consul, if it has been done, the commissioner of the French Republic will deliver up all the military posts of New Orleans, as of other parts of the said territory, to the commissioner appointed by the President to receive possession; all the French and Spanish troops that may be there will cease to occupy the said posts from the moment of the delivery of possession, and will be embarked, if possible, in the course of three months after the ratification of this treaty.

"ARTICLE 6th. The United States engages and promises to execute all the treaties and articles that might have been agreed on between the Indian tribes and Spain until such time as by mutual consent between the United States and said tribes or people other suitable articles are agreed on.

"ARTICLE 7th. As it is equally advantageous to the commerce of France and the United States to foster the intercourse of the two nations for a limited period in the country ceded by the present treaty, until arrangements are made relative to the commerce of the two nations, the contracting parties have agreed that all the French vessels coming directly from France or her colonies, loaded exclusively with her productions, and, also, that those coming directly from Spain or her colonies, and loaded in like manner with her productions, will be admitted for the period of twelve years into the ports of New Orleans, as

sooner or later humble her pride." Jefferson, on the other hand, was startled at the complete success of the mission. He wrote to Senator Breckenridge, of Kentucky, that "the Executive, in seizing the fugitive occurrence which so much advances the good of his country, *has done an act beyond the Constitution.*" It was his wish to incorporate a new article in the Federal Constitution ratifying the act, but the people

well as in all those of the ceded territory, in the same manner as the vessels of the United States coming directly from France or Spain, or their colonies, without being subject to other duties on their cargoes or other imposts than those paid by the citizens of the United States during the period of time above specified; no other nation shall partake of this privilege in the said territory, the twelve years to commence three months after the exchange of ratifications, whether at Paris or in the United States, well understood that this article has for its object to favor the manufactures, commerce, charges, and navigation of France and Spain alone, as to the importations which these two nations may make in the above said ports of the United States, without detriment to the regulations which the said United States may adopt for the exportation of the products or merchandise of their States, nor to their right to establish others.

"ARTICLE 8th. After the expiration of the twelve years all French vessels will be treated on the same footing as the most favored nations in the above-mentioned ports.

"ARTICLE 9th. The especial convention signed this day by the respective ministers, having for its object the payment of the debts due to citizens of the United States by the French Republic prior to the 30th of September, 1800 (8th Vendémiaire, year nine) is approved; and to be put in full execution, as stipulated in the present treaty, it will be ratified at that same time, and in the same manner, so that the one will not be without the other.

"Another special convention, signed the same date as the present treaty, relative to the definitive law between the contracting parties, and which has been in like manner approved, will also be confirmed at the same time.

"ARTICLE 10th. The present treaty will be ratified in good and proper form, and the ratifications exchanged within six months after the date of signatures of the ministers plenipotentiary, or sooner if possible, in faith of which the ministers plenipotentiary have signed these articles in French and in English, remarking, however, that the present treaty is primitively in the French idiom, and have thereto affixed their seals.

"Executed at Paris the 10th Floreal, eleventh year of the French Republic (the 30th April, 1803).

(Signed) "ROBERT R. LIVINGSTON.
"JAMES MONROE.
"F. BARBÉ MARBOIS."

CONVENTION BETWEEN THE UNITED STATES OF AMERICA AND THE FRENCH REPUBLIC.

"The President of the United States of America and the First Consul of the French Republic, in the name of the French people, in consequence of the treaty of cession of Louisiana, which has been signed this day, desiring to settle definitely all matters pertaining to the said cession, have for that purpose authorized the plenipotentiaries, to wit., the President of the United States, with the advice and consent of the Senate of the said States, has appointed for their plenipotentiary Robert R. Livingston, Minister Plenipotentiary and Envoy Extraordinary of the said States to the government of the French Republic, and the First Consul of the French Republic, in the name of the French people, has appointed for plenipotentiary of the said republic the citizen Francis Barbé Marbois, who, in virtue of their full powers, this day exchanged, have agreed upon the following articles:

"ARTICLE 1st. The government of the United States obligates itself to pay to the French government, in the manner specified in the next article, the sum of sixty millions of livres, independent of that which will be fixed upon by another convention to pay the debts which France has contracted towards the citizens of the United States.

"ARTICLE 2d. For the payment of the sixty millions of livres stipulated in the preceding article the United States will create a stock of eleven millions two hundred and fifty thousand dollars, bearing interest at six per cent. per annum, payable half-yearly at London, Amsterdam, or at Paris, being the sum of three hundred and thirty-seven thousand five hundred dollars for six months, in the proportions that the French government will determine on for these places. The principal of this fund reimbursed at the treasury of the United States in annual payments of not less than three millions each, the first of which will commence fifteen years after the date of the exchange of ratifications. This fund will be remitted to the French government, or to any other person who will be empowered to receive it, in three months, at the furthest, after the exchange or ratifications of the treaty and of the possession of Louisiana on the part of the United States. It is also agreed that if the French government desires to earlier realize the capital of this stock by disposing of it in Europe, they will take the proper steps, as well to augment the credit of the United States as to give greater value to said stock.

"ARTICLE 3d. It is also agreed that the dollar of the United States specified in the present convention shall be fixed at five livres and eight sous tournois; the present convention shall be ratified in good and due form, and the ratifications exchanged in the period of six months from this day's date, or sooner if possible.

"In faith of which the respective plenipotentiaries have signed the said articles in both French and English, declaring also that the present treaty was made and primitively written in the French idiom, to which they have attached their seals.

"Done at Paris the 10th Floreal, the eleventh year of the French republic, April 30, 1800 (1803?).

(Signed) "ROBERT R. LIVINGSTON.
"JAMES MONROE.
"FRAN'S BARBÉ MARBOIS."

CONVENTION BETWEEN THE FRENCH REPUBLIC AND THE UNITED STATES OF AMERICA.

"The President of the United States of America and the First Consul of the French Republic, in the name of the French people, after having, by a treaty of this date, terminated all difficulties relating to Louisiana, always desiring to establish on a solid basis the friendship which unites the two nations, more and more animated with the desire to accomplish the second and fifteenth articles of the convention of the 8th Vendémiaire, year nine of the French Republic (30th September, 1800), and to assure the payment of the amount due by France to citizens of the United States, have respectively appointed for their plenipotentiaries, namely, the President of the United States of America, with the advice and consent of their Senate, has appointed Robert R. Livingston Minister Plenipotentiary, and James Monroe also Minister Plenipotentiary and Envoy Extraordinary of the said United States near the government of the French Republic; and the First Consul, in t

of the United States of all parties and in all sections indorsed the act, and passed *sub silentio* over his constitutional objections.

Lord Hawkesbury, the British Secretary of State for Foreign Affairs, on being notified of the completion of the treaty of session, replied to Mr. King, "I have received His Majesty's commands to express to you the pleasure with which His Majesty has received this intelligence." Thus everybody was pleased, except the Spanish king and ministers. The treaties, forwarded at once to Washington, were received there July 14th, and M. Pichon, the French *chargé*, was communicated with, to enable him to transmit the necessary documents to Louisiana, to M. Laussat, the French intendant and *locum tenens* there, who had been in New Orleans since the ratification of the treaty of San Ildefonso, observing events but not assuming any official position, though his powers were well known to and recognized by the Spanish authorities. The interdict had been taken off from the New Orleans

name of the French people, has appointed the citizen Francis Barbé Marbois, minister of the public treasury, who, after exchanging their full powers, agreed upon the following articles:

"ARTICLE 1st. The debts due by France to citizens of the United States, contracted prior to the 8th Vendémiaire, year nine of the French Republic (Sept. 30, 1800), will be paid in the following manner, with interest at six per cent. from the date of the presentation of their claims by the parties interested to the French government.

"ARTICLE 2d. The claims to be paid by the preceding article are those designated in the note annexed to the present convention, which with interest must not exceed the sum of twenty millions of livres; the claims included in said note which will be found rejected in the articles following cannot be admitted to the benefits of this provision.

"ARTICLE 3d. The principal and interest of said debts will be paid by the United States, through orders drawn by their Ministers Plenipotentiary on their treasury; these orders will be payable sixty days after the exchange of the ratification of the treaty and conventions this day signed, and after the French commissioners shall place those of the United States in possession of Louisiana.

"ARTICLE 4th. It is especially agreed that the foregoing articles are confined exclusively to the debts contracted to the citizens collectively who have been, or may yet be, creditors of France for provisions embargoed and taken on the high seas and for which the claim was duly made within the time specified in said convention on 8th Vendémiaire, year nine (Sept. 30, 1800).

"ARTICLE 5th. The preceding articles will be only applicable 1st to prizes which the Prize Court have ordered to be restored, well understood that the claimant can have no relief from the United States otherwise than he could have had from the French government.

"2d. The claims specified in the above-mentioned second article of the convention, contracted prior to the 8th Vendémiaire, year nine (Sept. 30, 1800), the payment of which has heretofore been demanded from the actual government of France, and for which the creditors have the right to demand the protection of the United States.

"ARTICLE 6th. For the purpose of amicably clearing up the various questions that may arise from the preceding article, the Ministers Plenipotentiary of the United States will appoint three persons, who will act provisionally at this time, having full power to examine without delay all the statements of the various claims already liquidated by the offices established for that purpose by the French Republic, and to satisfy themselves if they are admissible into the classes of claims designated in the present convention, and based upon the regulations there found, or if they are included in some one of the exceptions; and declaring by their certificates that the debt is due to American citizens or their representatives, and existing before the 8th Vendémiaire, year nine (Sept. 30, 1800), the debtor (creditor?) will receive an order on the treasury of the United States in the manner prescribed in the third article.

"ARTICLE 7th. The same agents will also possess the authority to examine the claims presented for examination, and to certify those that should be allowed,—in marking them to show that they are not to be shut out with those excluded by the present convention.

"ARTICLE 8th. The same agents will also examine the claims which may not have been presented for liquidation, and will certify that they decide them admissible for liquidation.

"ARTICLE 9th. According as the debts designated in these articles will be admitted, they will be paid with interest at six per cent. by the treasury of the United States.

"ARTICLE 10th. To remove all doubt on the above-mentioned conditions, and to reject all unjust and exorbitant demands, the commercial agent of the United States at Paris, in his capacity as Minister Plenipotentiary of the United States, will appoint, if he thinks proper, an agent to assist in the operations of the offices and examine the claims preferred. If he thinks the debt is not sufficiently proven, or that it is perhaps comprised in the rules of the fifteenth article above mentioned, and if, notwithstanding his opinion, the offices established by the French government should decide that the debt should be settled, he will pass his observations thereon to the judicial courts of the United States, which will at once examine into it, and give the result to the minister of the United States, who will transmit his observations in like manner to the minister of the treasury of the French Republic, and the French government will then decide definitely on the case.

"ARTICLE 11th. All decisions must be made within the period of one year from the exchange of the ratifications, after which period no claim will be considered.

"ARTICLE 12th. In cases where the claims for debts contracted by the French government with citizens of the United States since the 8th Vendémiaire, year nine (Sept. 30, 1800), are not included in this convention, the payment of the same can be claimed and prosecuted as if no convention had been agreed on.

"ARTICLE 13th. This convention will be ratified in good and due form, and the ratifications exchanged within six months from the date of the signatures of the Ministers Plenipotentiaries, or sooner if possible. In faith of which the Ministers Plenipotentiaries respective have signed the foregoing articles in French and in English, declaring that the present treaty was first made and written in the French idiom, to which they have affixed their seals.

"Done at Paris, the 10th Floreal, year eleventh of the French Republic (April 30, 1803).

"JAMES MONROE.
"F. BARBÉ MARBOIS"

entrepôt and the right of deposit restored forthwith. Jefferson called a special session of Congress for October 17th, and the treaty was finally ratified, but not until after serious opposition. M. Landais, an officer of the French embassy, was forthwith sent overland to New Orleans to communicate with M. Laussat. He arrived on November 23d, and on the 30th of the month the ceremony was performed by France of taking formal possession, while on December 20th, Laussat transferred Upper and Lower Louisiana to the United States, represented by its commissioners, Governor William Claiborne and Maj.-Gen. James Wilkinson, U.S.A. Casa Calvo and Juan Manuel Salcedo were at that time Governors of Louisiana. Laussat was acting intendant and provisional representative of France in the ceded province.

The news of the cession had been at once transmitted to St. Louis, and on Friday, March 9, 1804, the formal transfer of Upper Louisiana was made, in St. Louis.

"The little village," says Frederick L. Billon, "was then just forty years old, and so slowly had it grown in that period that it then contained, including all descriptions, dwellings, stores, etc., but one hundred and eighty houses of stone and log, and a population numbering not exceeding one thousand souls. On that day the inhabitants witnessed a scene which, to much the largest portion of them, was fraught with sadness and apprehension. These people had been so long contented and happy under the mild sway of all their Spanish commandants, with one exception alone (De Leyba), that it was not surprising that they should have entertained those feelings at being transferred, themselves and homes, to a nation whose people were mainly descended from the English, a nation that for generations back they had looked upon as the natural and hereditary enemy of the land from whence they sprung. For it must be borne in mind that they were nearly all of French origin, and although under Spanish domination, there were but few Spaniards in the country, outside of the officials and soldiery."

Don Carlos Dehault Delassus, the last of the Spanish Governors of the place, had been in power since 1799, a wise, mild, and gentle administrator, who had done many things to benefit the province and none to hurt it. His official papers relating to the transfer are now before us, and they possess a fine local interest. Just before the news of the transfer to France became known, Delassus had a spasm of activity rather unusual in a man of his pacific counsels. Perhaps the agitation beyond the border in consequence of Intendant Morales' precipitate action in withholding the right of deposit had convinced the Governor that it would be best for him to furbish up his arms a little and drill his troops for any emergency that might suddenly arise. At any rate, he equipped and went forth at the head of a military expedition to New Madrid. The occasion of this he explained afterwards, at the time of the cession, in a letter to Maj. Amos Stoddard, his successor, who received the surrender and commanded the post in the name of the United States. It is written from St. Louis of the Illinois, under date of March 30, 1804, and is as follows:

"Mr. Amos Stoddard, *Captain of Artillery, and First Civil Commandant of Upper Louisiana:*

"Sir,—I think it essential for the measures you may probably take for the safety and tranquillity of these inhabitants to inform you that there exists in these parts since nearly ten years a party of vagabond robbers of the Mascoux nation, or self-styled Talapousa Creeks, expelled from their tribe and not daring to return on account of the crimes they there committed, and who since that time have been wandering about on both the east and west banks of the river, scattered along this side from New Madrid to the upper waters of the Maramec, and constantly committing barbarities, in stealing, killing, violating, or burning houses.

"In the year 1802 they carried their audacity to the extent of killing an inhabitant of New Madrid named David Trotter, and afterwards burnt his house; some time thereafter this same party, to the number of five, were captured through the watchfulness and vigilance of Mr. Louis Lorimier, commandant of Cape Girardeau, who went with a detachment of the militia of his post and took them in custody, since which time I had them taken to New Madrid, where they were detained as prisoners, guarded by the militia of that post, until the decision of the Governor-General, who subsequently sent me his orders to execute by shooting the principal culprit, named Tewanayé, with all the necessary care and preparation, as an example, usual in similar cases, and which orders I executed in January of the past year, 1803, in presence of the four other culprits and one of their chiefs named Ayputetchy, and one of consideration called Kaskaloua; this sentence, after some representations of these two chiefs, without bitterness, was finally put in execution with their own consent, and after they had again admitted in full council that it was but an act of well-merited justice, and that their principal chief would be satisfied with it, as it is stated in the copy of the sentence of execution which I transmit you herewith, and which is verified by a party of their nation who came to accompany the chiefs of said nation to collect the balance of this gang of vagabonds, as you will see by the official statement appended hereto of the council held by the commandant of New Madrid, Mr. John Lavallé, in which the chief very clearly says, to '*run after and chastise them and cut off their ears, and if they cannot be caught to fire on them as on deer.*'

"But the above-cited execution and arrangement with their nation has not put an end to their barbarities; for last autumn I received notice that one Gabriel Bolon and his two nephews were beaten and killed by a party of Osages on the Grand Glaise River. It was a Delaware woman who was with them, and who escaped, that came and reported this to me. But a few days afterwards, I learned that a party of seven or eight Mascoux came into the village of Ste. Genevieve, singing the war-song and danced the scalp-dance, and when questioned as to whose scalp they had, they denied it, and said that they had met with the Osages, that they had fired on them, but they had one man wounded, '*who was of the band.*' Shortly after their falsehood was discovered, in that they were in possession of the spoils of the unfortunate persons they had murdered, that is, the blanket-coat of one of the nephews of Hyppolite Bolon, his rifle and his horse; they also had the insolence some days afterwards to come to the post of St. Louis with the said rifle. I

was about to have them arrested to ascertain the fact, but in the interval some imprudent persons who went to see wanted to take this rifle from them; they resisted and made their escape. Since then Hyppolite Bolon came and brought me these two gun-barrels, which I send you, with this war tomahawk, and which he told me were found near the corpses of his brother and his two children, and which, he says, were arms of these Mascoux, and the tomahawk left as a signal of war, and added that the man who found them would come here this spring. I awaited this period to proceed and demand reparation from the chiefs of that nation, in the event of not being enabled to take the guilty parties, and on the 2d of January I was informed that these same barbarians were in this village, that they went drunk from house to house. I found it impossible to discover them by a very heavy rain and one of the darkest of nights. I could only warn the various houses for the inmates to remain quiet and to keep their doors fastened, and in case of insult or attack from them to defend themselves if they had not the time to apprise me. The next day, January 3d, I was informed early that there was a dead Indian in the street opposite the house of one Thibault, and that he was supposed to be a Mascoux, because two or three of that nation had passed the body, which they had looked at, one weeping, another singing the war-song, and that they had started off immediately.

"After a proper examination of the body, it was taken up and interred, as is verified and stated in a document now on file in the archives, which I have delivered over to you. I immediately notified the commandants and syndics of the lower posts, including New Madrid, to be on the alert, and to bear with nothing from those brigands, and to be ready to protect themselves if insulted by them. Five Indians of that nation came to talk with me, and brought to me the subjoined letter. I held a talk with them; they said they had no head-man, and they would go and seek him. They left, and I did not see them again. The nineteenth day of the month of February, the syndic of Maramec came to bring me his report that there were five of that band that were killed by the inhabitants of the two banks of the river, who gave chase to them to recover a canoe or pirogue that they had stolen from the salt-works on the Maramec, and which was afterwards confirmed by a paragraph, subjoined from a letter of the deceased Don Francis Vallé, commandant of Ste. Genevieve.

"I also made known this affair to all the commandants and syndics, including New Madrid, in reiterating to them to be on the lookout.

"All this I communicate for your information, so that it may be of use to you in the steps you may judge proper to take.

"I have the honor to be, with the highest consideration,

"Sir, yours, etc.,

"CHAS. DEHAULT DELASSUS."[1]

[1] The other letter, embodying trivial details, it is not necessary to give. Delassus went about his military work with the grave importance of a general of forty battalions, and his order-book is an exemplar of how little things may be made to seem great by environing them with noise and enveloping them in words. First comes a sheaf of notes from Francisco Vallé, of Ste. Genevieve, and other local commanders, asking or answering questions about quotas, savages, etc. Each is stiff as a ramrod, punctilious as a hidalgo's beard, and each is subscribed, "God have you in his holy keeping." Then follows the series of military orders from Delassus. "The assembled inhabitants" are directed to recognize Capt. Don Francis Vallé as second in command of the expedition, while other companies and detachments are assigned to Lieuts. Don Joseph Pratte, Don Francis Vallé, Jr., and Don Camille Delassus, the latter being also aide-de-camp and adjutant. Each company must furnish a mounted orderly as a body-guard for the Lieutenant-Governor and commander-in-chief, and first corporals are to replace sergeants when the latter are otherwise engaged. The following are some of the

"ORDERS FOR THE MARCH OF THE EXPEDITION.

"1. Seven men will be taken from each company to form the advance-guard, which will be commanded by each sergeant alternatively.

"2. This guard will have twelve axes, and will start every morning two hours before the main body of the militia; when towards noon they will have reached a suitable place for the noonday halt, they will stop there and kindle two fires at a distance of an arpent apart.

"3. On the arrival of the main body at the halting-place, the vanguard will remount and proceed on to select the camping-ground for the night, where they will kindle five fires, at the distance of half an arpent apart, taking care to select the said camp-ground early enough to enable the main body to reach it a half-hour before sunset.

"4. The vanguard will be relieved every morning, and will then form the rear-guard for the day.

"5. The sergeant commanding the vanguard will proceed at a slow trot in good roads and at a walk in bad places.

"6. Should there be met in the route which will be indicated to him any serious impediment, such as rivers, creeks, bad crossings, etc., he will await the arrival of the main body of the militia.

"7. Should he meet with any gathering of Indians, or other armed men, he will at once communicate the same to the chief commandant by mounted messenger.

"8. In such bad places as may not require his waiting for the main body, as per article 6, he will expedite the passage of the said body as much as possible by cutting the ice if not strong enough to bear the horses, or bridging it with branches of trees or saplings to make the crossing practicable.

"9. The main body of the detachment will start two hours after the vanguard, going on a trot in good places and at a walk in bad, and will maintain, as far as possible, the order of march which will be given them at starting.

"10. In all cases where Messrs. the officers may command silence, or other orders, we doubt not that all who compose our detachment will be eager to obey.

"11. Immediately on arriving at a camping-ground, a guard will be formed of seven men from each company, commanded by an officer, a sergeant, and a corporal, who will place the sentinels that the location may require, to guard against surprises and prevent the escape of any of the horses. The officer commanding the guard will report every morning, and his sergeant will immediately take the command of the advance-guard.

"12. The officers will carefully watch over their respective companies, and have the roll called every morning; they will see that no arms are loaded without orders, and make their report on each day before resuming the march.

"13. If, while marching, the officer or sergeant at the rear perceives that they go too fast, he will immediately notify the commandant at the front by passing the word to halt.

from Salcedo and Casa Calvo. The letters are as follows (it will be observed that the intendant exercises the Frenchman's usual privilege of spelling wrongly the name of his correspondent):

"14. All the horses, packed or loose, with their drivers, will be placed between the detachment and the rear-guard, allowing none to pass the front by the flanks nor remain in rear of the said guard.

"15. The rear-guard will keep at about two arpens in rear of the detachment, and will take care to pick up anything that may have been dropped. Should any one, from sickness or fault of his horse, be compelled to drop behind, the guard will at once notify the commander by a messenger.

"16. They will see that no horse-driver remain behind, their place on the march being between the detachment and the guard. Should anything fall or become disarranged, they will call a halt and lend assistance to remedy it, and then resume their march at the proper distance from the detachment. This order will be read to each company under arms by its respective commanding officer, at the hour to be named by the second in command, Don Francis Vallé.

"New Bourbon, Dec. 11, 1802."

"ORDER OF THE 17th DECEMBER, 1802, AT CAPE GIRARDEAU.

"Don Louis Lorimier, commandant at Cape Girardeau, will be recognized as captain of the militia of said post, and Don William Lorimier as lieutenant of said militia, and they will be obeyed in all their orders, either verbal or written, in this expedition for the service of his Catholic Majesty.

"Afterwards Don Louis Lorimier, at the head of his militia, will designate the sergeants and corporals of his company.

"From to-day an officer, a sergeant, and a corporal of the company of the Cape, with twenty of her men, will set out as an advance-guard before the detachment; on arriving at the camping-place they will kindle ten fires, at the distance of half an arpent from each other; they will clear the snow from around the fires so that the militiamen may encamp there comfortably. The colors of the Cape Girardeau company will remain attached to its company, but it will be placed in the centre of the detachment, with a guard of two men from each company, who will surround it in the order in which we post them.

"On arriving at each camping-place or settlement, the officer Don Camille Delassus will repair to the fire of the vanguard of the detachment, and, if in a settlement, to the quarters of the commander-in-chief, where the guard will repair.

"The eight axe-men of the company of the Cape will always march at the head of the main body of the detachment, a half-arpent in advance, and, when in line, they will repair to the centre of the detachment, where they will form themselves in the manner there indicated.

"The companies will be formed as follows: the Ste. Genevieve company on the right, next in line that of New Bourbon, then that of Cape Girardeau, and then the Platin camp,—all according to the seniority of the settlements."

"GENERAL ORDER, DECEMBER 20th.

"The advance-guard is to march at 8 A.M., weather permitting; Messrs. the officers of the various posts, in addition to the zeal and promptitude they have displayed from the moment of our departure, will watch over with diligent care to see that all the worthy and reputable inhabitants of our detachment be made as comfortable as possible in their quarters, and that the provisions for themselves and forage for their horses be fairly distributed, requiring also the sergeants and corporals to have an eye to the same. They will inform me of the least innovation, etc.

"5. Commandant Peyroux, of the detachment from above, aide-de-camp and adjutant, will receive the word of order each day, which he will give in writing to each commandant of the guard of their companies; for which purpose the said officers will send an armed corporal at five o'clock P.M. to the said principal, who will carry it sealed to his officer.

"6. The signal of alarm is to be beating a drum, a red flag and a blue flame at the fort, assured by three cannon-shots in the daytime and five cannon-shots at night."

"DECEMBER 22d, ORDER.

"As it is absolutely necessary to observe the greatest order for the tranquillity of the public, Messrs. the officers will see to it this evening, at the roll-call of their respective companies, that all the fire-arms are discharged, and that firing in the village is prohibited without orders, under any pretext whatever.

"Those persons at whose houses the recently-arrived militia are quartered will take good care of the horses of those on duty with the forage which will be distributed to them for this purpose."

"ORDER FROM THE 2d TO 3d JANUARY, 1803.

"The officers of the companies of cavalry will assemble their respective companies to-morrow at nine o'clock A.M. near their quarters. They will order arms to be loaded, and take the necessary precautions to strictly charge every man to exercise the greatest possible care that his piece is not discharged involuntarily without orders; and as soon as the companies are formed, each will advise me of it by an orderly he will dispatch to me.

"Each commandant of said companies will await the cannon-shot which will be fired from the fort as the signal of assembling, and will march his company, according to orders previously given him, to form the line, and the officers, sergeants, and corporals will take their positions as previously ordered.

"The adjutant, Don Camille Delassus, will detail a guard of a sergeant, a corporal, and one man from each company to go for the standard with drums beating, which having brought they will place it opposite the cavalry in the centre. When he will be commanded to carry the order to the officer of the prisoners' guard to deliver up the criminal Tewannyé to the commandant of the detachment of the Louisiana regiment, he will repair there and cause his shackles to be taken off by the blacksmith he will find there for the purpose, and will give the order to the officer of the guard to immediately place the four other prisoners on the gallery, to enable them to witness the execution of Tewannyé.

"He will place himself at the head of the regiment of Louisiana, which he will march to opposite the standard, where the sentence of Tewannyé will be read by Don Antoine Pierre Laforge, of the militia of this post, public writer, and appointed in that capacity for the instruction of the said prisoners, which sentence will be interpreted to them by the interpreter.

"Immediately after, the criminal will be conducted in the same manner to the place appointed, and there shot to death, according to the orders to the detail of the garrison. Imme-

I.—LAUSSAT TO DELASSUS.

"New Orleans, 21 Nivose, year 12 (Jan. 12, 1804.)

"*The Colonial Prefect, com. of the French Government, to Mr. Dehault de Lasuze, Lieutenant-Governor of Illinois at St. Louis:*

"I have this day forwarded to Mr. Stoddard, captain of artillery in the United States army, and who is authorized to take possession of the territory and the establishments where

you command for His Catholic Majesty, the following documents, viz.:

"*First.*—A letter, unsealed, from M. de Salcedo and Marquis of Casa Calvo, commissioners of his C. M., dated the 31st of December last, which authorizes you to give possession of the post where you now command to the officer or agent that may be sent by me to receive it, in virtue of the treaty of San. Ildefonso, by which Louisiana was retroceded to the French republic.

"*Second.*—A letter written by me to Mr. Stoddard, which was approved by the commissioners of the United States who were sent here for the execution of the treaty of Paris, by which France has ceded Louisiana to the United States. By said letter, bearing date this day, I transferred to said officer my power to receive from you, in the name of the French republic, the military and civil possession of that part of Louisiana over which you command, and I authorize him at the same time to keep possession for the United States.

"*Third.*—Also another letter written by me this day to Mr. Pierre Chouteau, by which I give him all the necessary power to make, in concert with you, and for the republic of France, an inventory and appraisement of the buildings and houses (except, however, the fortifications and works of defense) which belong to his C. M. in the country under your command, and possession of which must also be given to us.

"*Fourth.*—Letters from the commissioners of his C. M., dated 21st December, also unsealed, and addressed to

"Don Pedro Dehault Delassus, commandant at New Bourbon.

"Don Francisco Vallé, commandant at Ste. Genevieve.

"Don Louis Lorimier, commandant at Cape Girardeau.

"Don Juan Lavallée, commandant at New Madrid.

"These letters are nearly similar to the letter that was sent to you by the same commissioner.

"I am ignorant whether your authority over these commandants is such that it would have been sufficient if I had transmitted you alone my dispositions, and that they would have conformed to these, but the distances are so great, and misdiately after, the corpse will be placed in the coffin and carried by the soldiers of the garrison to the place of interment. The detachment of cavalry will then form by fours on the right, at the command of the adjutant, and will then pass opposite the grave, drums beating, and will then form in its first position. The standard will then be returned in the manner it was brought to its place of keeping. The senior officer, having brought back the detachment, will give an order for each company to return to its place of meeting near their quarters, where they may dismount for a brief period, leaving their horses saddled ready to remount at the first order, under the command of the sergeants and corporals of the respective companies, the officers having to assemble at my quarters to be present and witness the release of the other four prisoners, to which end the senior officer will carry the order to the officer of the guard to take off their shackles and send them, with one-half of his guard, to my quarters, to be restored to the chief Aypousetchy, of the Mashkou nation.

"The guard and the orderlies will be relieved after the close of the council, according to orders which circumstances may suggest.

"CHARLES DEHAULT DELASSUS."

The above is the sole result of the "expedition,"—the execution of one Indian who had been a prisoner for six months. The expedition returned home, after the commandant had taken severe measures for the reform of the New Madrid militia, who were found to be "without the slightest order or organization, for want of *despotism*." One thing more, however, Commander-in-chief Delassus accomplished, which should cover his memory with honor. He took severe and effective measures (exercised his despotism, in other words) "to entirely eradicate the prime cause of all the disorders, occasioned by liquor sold by tavern-keepers, dramshop-keepers, traders, and other inhabitants to the Indians, in spite of the reiterated prohibitions of our predecessors and ourselves, and without the fines which have been paid by the delinquents serving as an example to prevent it, being generally proven that the said Indians commit no excesses but when drunk. This is proven by the assassination of Mr. Trotter by the Indians to whom he had traded liquor. All this compels us to use the most rigorous measures for the public tranquillity.

"1. At each post there shall be but a certain number of tavern and dramshop-keepers that we will appoint, and who shall be persons of good conduct and devoted to the government; these, under no pretext, can either sell or give liquor to Indians or to slaves. They will give immediate notice of the least disturbance at their house which may lead to disorder, to the commandant or nearest syndic of its occurrence, to the end that he may apply the most prompt remedy. And all other persons than those who shall be authorized to keep tavern or dram-shop who shall be found to have sold liquor will undergo for the first offense three days' imprisonment and two dollars fine, the second offense fifty dollars fine and fifteen days' imprisonment, and for a third relapse they shall be sent to New Orleans, under safe conduct, at their own cost and expense.

"2. Every person whomsoever, either keeper of tavern or dram-shop, or any other who shall be found to have given or sold liquor to Indians, will be at once arrested, put in irons, and sent under escort of a detachment of militia, at his cost and expense, to New Orleans, and his effects will be seized and sequestered until the decision of His Lordship the Governor-General.

"3. All commanders of every post will be held responsible to the government for the least neglect of the articles above, and of the least negligence in listening to the complaints which may be made him on the subject, and to make the strictest inquiry and investigation to ascertain the truth.

"4. For this post of New Madrid, one single tavern being sufficient, Mr. Jno. B. Olive will be the only one who will have the privilege of selling and putting off liquors in conforming to present regulations; and for the convenience of travelers on the road to Illinois in this district, Mr. Ed. Robertson will have the right to sell and put off liquor in conforming strictly to present regulations, and at the Little Prairie, Mr. Charles Guibault, etc.

"5. The two tavern-keepers above named will pay per annum such sum as a tax that the Governor-General may deem just, to be applied to the construction of a prison at this post.

"This order will be translated into English by the interpreter of the king, Mr. J. Charpentier, published and posted up in the public places of this post, and at the doors of the tavern keepers above named, and a copy will be sent to each district dependent on this post."

This law is plain and practical, and Lieutenant-Governor Delassus is entitled to the credit of having promulgated the first effective regulation for the restriction and control of indiscriminate dram-selling in St. Louis and Missouri.

We have thought it necessary to present pretty fully the particulars of this expedition, the most important and the last military operation conducted during the Spanish *régime* in Upper Louisiana.

takes would be too vexatious, that I concluded to write to them also.

"*Fifth.*—I sent then, also, to Capt. Stoddard a separate circular for each of these commandants.

"I pray you, sir, in all these changes of governments, to accept the different powers which I have announced to you, so far as they concern the French republic, and I hope that you will graciously receive the persons who will present them to you.

"I have the honor to salute you.

"LAUSSAT."

II.—SALCEDO AND CASA CALVO TO DELASSUS.

"The king, our sovereign, having determined to retrocede this province of Louisiana to the French republic, according to the announcement in the royal order issued at Barcelona on the 15th of October, 1802, to that effect, and having also commissioned us to carry the same into effect by his subsequent royal order dated at Madrid on the 18th of January, 1803, we have put in execution the intentions of the sovereign by delivering up the Governorship of this place and the command of the province to the Colonial Prefect Pedro Clement Laussat, commissioner of the French republic, on the 30th day of November of the present year, and you are hereby requested to deliver up to the agent or officer of the said prefect who may be authorized by him to receive from you the command of the post and its dependencies, now under the orders of Your Excellency, as soon as he shall present himself before you, under the formalities of an inventory and valuation to be made by skillful persons in that post, upon oath to act with due impartiality, of the buildings which belong to the king, not including the artillery and other munitions of war, which must be remitted entire to this place.

"Under the same formalities of an inventory the archives, with the papers and documents which concern only the inhabitants of the district and their property, shall be delivered, taking for the whole a receipt, in order that there always may be evidence of what has been delivered upon our part to the French republic, and cause the same to appear on the general inventory.

"We particularly enjoin upon Your Excellency the punctual execution of the foregoing, for which you are authorized to avail yourself of all the means that may be found in the district under your charge.

"NEW ORLEANS, 30th December, 1803.

"MANUEL DE SALCEDO.'

"THE MARQUIS OF CASA CALVO.

"For Don CARLOS DE LASSUS, *Commander of Illinois.*"

III.—FROM CAPT. STODDARD TO GOVERNOR DELASSUS, ST. LOUIS.

"KASKASKIA, 18th Feb., 1804.

"SIR,—I have just received by express from New Orleans a variety of dispatches relative to the late retrocession of Louisiana.

"Those addressed to you and intrusted to my care by the French and Spanish commissioners I do myself the honor to forward by a sergeant of our army, who is bound on business to Capt. Lewis.

"In a few days the troops under my command will ascend the Mississippi in public boats. I shall proceed before them by land and concert with you the necessary arrangements before their arrival at St. Louis. The inclosed letter to Mr. Chouteau I would thank you to deliver him.

"Please accept the assurances of my respectful consideration.

"AMOS STODDARD,

"*Captain U. S. Artillerists, Agent and Commissioner for the French Republic.*

"CHARLES DEHAULT DELASSUS,

"*Lieutenant-Governor Upper Louisiana.*"

IV.—GOVERNOR DELASSUS' REPLY TO THE FOREGOING.

"ST. LOUIS, 20th February, 1804.

"SIR,—I received yesterday your letter of the 18th of this month, with those intrusted to your care, and which you had the kindness to send to me, and which contained the orders of the brigadiers and commissioners of his C. M. for the retrocession of this colony to the French republic, and the disposition of the French prefect, which authorize you to receive possession of this part of Louisiana.

"I hasten to reply to you by the same sergeant of the U. S. army by whom you had forwarded to me your dispatches, and notify you that Mr. Louis Lorimier, Jr., is bearer of the necessary orders for each one of the commandants of the posts of this province, and which, joined with those delivered to them by the said commissioners, will sufficiently authorize them to receive the commissioners that you may deem proper to send to receive from them possession of the said posts, and as Mr. Lausat, prefect, advises me that he has written to them also upon the same subject, and if those letters are addressed to you, and if you wish to avail yourself of the opportunity of Mr. Louis Lorimier to send said letters to them, you can hand them over to him with confidence, and he is hereby directed to present himself to you for that object.

"I am also informed by your letter that troops under your orders are about to march for this post, and that you come ahead of them so that we may understand ourselves before their arrival. I shall have the honor to receive you, offering to you in advance the most gracious reception which will be possible to bestow upon you in the name of the king, my sovereign.

"I have handed to Mr. Pierre Chouteau the letter that you had recommended to me. I shall be obliged to you if you make known to me in advance the day of your arrival, and if you are coming by land or water.

"I write you in French, being informed that the Spanish language is not understood by you.

"I have the honor, etc., CHAS. DEHAULT DELASSUS.

"AMOS STODDARD, *Captain, U.S.A., and Agent and Commissioner for the French Republic.*"

V.—ORDER FOR THE TROOPS AT THE POST TO BE IN READINESS FOR THE TRANSFER REGIMENT OF INFANTRY OF LOUISIANA.

"REGIMENT OF INFANTRY OF LOUISIANA,

"STATION OF ST. LOUIS,

"ORDER OF THE 23d FEBRUARY, 1808.

"From this day forth all of this detachment, including the guard, will keep themselves in full uniform, and with strict regard to cleanliness, etc., so that all the garrison will be in readiness to take arms at the first verbal order, through Sergeant Juan Robayna, to evacuate the fort, with arms at a shoulder and knapsacks on the back.

"Pursuant to this order, no one will absent himself from quarters, either by day or night, except those necessarily so, such as water-carriers, hostlers, etc., until the day of the delivery of these fortifications to the United States.

"As all this detachment is composed of individuals, the major part of whom have been long in the service and know how to comport themselves in a praiseworthy manner, the commandant expects that from the day of the transfer, and afterwards until we take up the line of march to embody ourselves with our countrymen, each man will so conduct himself as to uphold the reputation of the Spanish troops, so justly acquired, and extolled for ages past, and I flatter myself that during the time they remain at this post their conduct will be such as to earn for themselves the respect and esteem of the American troops.

"At the moment when the United States commandant will enter this Government House to receive possession, he will be

saluted from the fort by a salvo from all the cannon that are mounted and in battery. This will be carried into execution by a signal from a soldier stationed for the purpose at the corner of the gallery of the house, by waving his hat to the sentinel at the fort, when the firing will commence, taking good care that there will be a regular interval of time between each successive discharge.

"CARLOS DEHAULT DELASSUS."

Upon the arrival of the boats from Kaskaskia with Capt. Stoddard's troops, they landed at Cahokia, on the American side, where they were cantoned for some days awaiting the final arrangements for the transfer.

Meantime Capt. Stoddard arrived in St. Louis, and the following correspondence ensued:

VI.—STODDARD TO DELASSUS.

"ST. LOUIS, 25th February, 1804.

"SIR,—The colonial prefect, Mr. Laussat, agent and commissioner on the part of the French Republic, by an instrument under his hand, directed to me, bearing date at New Orleans, the 12th day of January, 1804, has been pleased, in consequence of the authority with which he is invested, to appoint me sole agent and commissioner on the part of the said republic, with plenary powers to demand and receive in the name of his nation the quiet and peaceable possession of Upper Louisiana, together with all the military posts at St. Louis and its dependencies, from his Catholic Majesty's Lieutenant-Governor and commandants, agreeably to the late treaty of retrocession; and I do by these presents demand the quiet and peaceable delivery, in due form, of the said territory, posts, and dependencies accordingly.

"Accept the assurances of respectful consideration.

"AMOS STODDARD,

"*Captain Corps of United States Artillerists, and Agent and Commissioner of the French Republic.*

"COL. CHARLES DEHAULT DELASSUS,

"*Lieutenant-Governor of Upper Louisiana.*"

VII.—DELASSUS TO STODDARD.

"ST. LOUIS OF ILLINOIS Feb. 25, 1804.

"SIR,—As the terms of the letter which I have the honor to receive from you accord entirely with those of the brigadiers of his C. M. dated New Orleans, Dec. 31, 1803, and are also in accordance with the requisition of Mr. Pierre Clement Laussat, dated New Orleans, Jan. 12, 1804, and which contained the documents that had been sent to you, and which you had the kindness to forward to me from Kaskaskia on the 18th, and which I received on the 19th of the present month.

"In virtue of their contents, I have made the necessary arrangements to give you possessions of Upper Louisiana.

"I am ready to give you possession of this province on the day and hour you may name, in the most authentic form, as the circumstances and nature of the country will permit.

"I have the honor to be, etc,

"CHARLES DEHAULT DELASSUS.

"MR. AMOS STODDARD, *St. Louis.*"

When the eventful day at length arrived,—to wit, Friday, March 9, 1804,—the American troops were brought over to this side under the command of Lieut. Worrall, of the United States army, acting as adjutant to Capt. Stoddard, who, accompanied by Capt. M. Lewis, of the United States infantry (then in St. Louis on his expedition to the Pacific), and others, repaired to the Government House, at the southeast corner of our present Main and Walnut Streets, where he was formally received by Governor Delassus, in presence of his officials and some of the most prominent citizens of the place, the largest portion of the inhabitants of the village being assembled in the street in front.

Governor Delassus then addressed to the people the following brief

"PROCLAMATION.

"MARCH 9, 1804.

"INHABITANTS OF UPPER LOUISIANA:

"By the king's command, I am about to deliver up this post and its dependencies!

"The flag under which you have been protected for a period of nearly thirty-six years is to be withdrawn. From this moment you are released from the oath of fidelity you took to support it.

"The fidelity and courage with which you have guarded and defended it will never be forgotten; and in my character of representative I entertain the most sincere wishes for your perfect prosperity."

Governor Delassus then in a brief address to Capt. Stoddard placed him in possession of the governmental residence, to which Capt. Stoddard made an appropriate reply, at the conclusion of which, the prearranged signal being given by the soldier placed at the northwest corner of the gallery for that purpose, the Spanish troops at the fort on the hill commenced to fire the salute ordered by Governor Delassus, and which was continued at intervals until completed.

Pending these proceedings the official document testifying to the transfer, which had been previously prepared for the purpose, was duly executed in triplicate by the representatives of the two governments in the following terms:

"In consequence of a letter sent from New Orleans of 31st December of last year (1803) by the Marquis de Casa Calvo and Don Juan Manuel de Salcedo, brigadier-general of the royal armies and commissaries for his Catholic Majesty, for the transfer of the colony and province of Louisiana to the French republic, addressed to Don Chas. D. Delassus, colonel in the same armies, Lieutenant-Governor of Upper Louisiana, and commissioner, appointed by the said Casa Calvo and Salcedo, for its transfer, according to the contents of said letter, requiring him to give full and entire possession of said Upper Louisiana, including the military posts of St. Louis and its dependencies, to wit: Clement Laussat, appointed by the said French republic to take possession of the said colony and province of Louisiana, or any other person which may have been named to that effect, according to the treaty of cession, and as by letter also sent from New Orleans, dated 12th of January of the current year, the said commissary of the French republic appoints, constitutes, and nominates as sole agent and commissary in behalf of his nation Amos Stoddard, captain of artillery of the United States of America, for the purpose of demanding and receiving the said Upper Louisiana, comprehending the aforesaid military posts of St.

Louis and its dependencies, in virtue of the respective powers which are explained above.

"Now, be it known by these presents, that I, the above Don Carlos D. Delassus, in quality of Lieutenant-Governor of the same, at the requirement duly made to me by the said Amos Stoddard, agent and commissary of the French republic, have delivered the full possession, sovereignty, and government of the said Upper Louisiana, with all the military posts, quarters, and fortifications thereto belonging or dependent thereof, and I, Amos Stoddard, commissary as such, do acknowledge to have received the said possession on the same terms already mentioned, of which I acknowledge myself satisfied and possessed of on this day. In testimony whereof the aforesaid Lieutenant-Governor and myself have respectively signed these presents, sealed with the seal of our *arms*, being assisted with the witnesses signed below, of which proceedings six copies have been made out, to wit, three in the Spanish and the other three in the English languages.

"Given in the town of St. Louis of Illinois, 9th March, 1804.

"Amos Stoddard. [Seal.]

"Carlos Dehault Delassus. [Seal.]

"In presence of

"Meriwether Lewis, *Capt. First United States Regiment Infantry.*

"Antoine Soulard, *Surveyor-General*, etc.

"Charles Gratiot."

Upon the conclusion of the proceedings at the Government House the American troops were marched up to the fort on the hill, where they were received by the Spanish troops under arms, and placed in possession and quartered therein, the Stars and Stripes being displayed on the staff in lieu of that of Spain.

The Spanish troops after the evacuation of the fort were marched down to the large old French house of posts, built by Montardy in 1765, at the southwest corner of our present Third and Elm Streets, then the property of Manuel Lisa, from whom it had been rented by Governor Delassus for the temporary quarters of the Spanish troops until their departure for New Orleans.

The late Madame Aspasia Desilate, of Florissant, was an eye-witness of these ceremonies. "Some of the older inhabitants," she said, "took it sadly to heart."

On the following Monday, March 12, 1804, Col. Delassus, at the request of Capt. Stoddard, delivered to certain Indian tribes then in and about St. Louis, in the presence of Capts. Stoddard and Lewis, Lieut. Worrall and others, the following speech, announcing to them the change of government:

"Delawares, Abenakis, Saquis, and Others:

"Your old fathers, the Spaniard and the Frenchman, who grasp by the hand your new father, the head chief of the United States, by an act of their good will, and in virtue of their last treaty, I have delivered up to them all these lands. They will keep and defend them, and protect all the white and redskins who live thereon. You will live as happily as if the Spaniard was still here.

"I have informed your new father, who here takes my place, that since I have been here the Delawares, Shawnees, and Sakis have always conducted themselves well; that I have always received them kindly; that the chiefs have always restrained their young men as much as it was possible. I have recommended thee, Takinonsa, as chief of the nation, that thou hast always labored much and well to maintain a sincere friendship with the whites, and that in consequence of thy good services I recently presented thee a medal with the portrait of thy great father, the Spaniard, and letters patent reciting thy good and loyal services.

"For several days past we have fired off cannon-shots to announce to all the nations that your father, the Spaniard, is going, his heart happy to know that you will be protected and sustained by your new father, and that the smoke of the powder may ascend to the Master of life, praying him to shower on you all a happy destiny and prosperity in always living in good union with the whites."

Col. Delassus also on the same day addressed the following official circular to the several commandants in his jurisdiction, apprising them of the change:

"To M. Baptiste Vallé, Ste. Genevieve.
"To M. Deluzière, New Bourbon.
"To M. Louis Lorimier, Cape Girardeau.
"To M. Jean Lavallée, New Madrid.
"To M. Pierre de Treget, Carondelet.
"To M. James Mackay, St. Andrew.
"To M. Francis Dunegant, St. Ferdinand.
"To M. Charles Tayon, St. Charles.
"To M. Francis Saucier, Portage des Sioux.
"To M. Pierre Lajoie, Syndic at Maramec, and
"To M. —— Hodges, at the Post of the Missouri:

"On the 9th day of the present month I relinquished the command of this place and of all Upper Louisiana to Mr. Amos Stoddard, captain of artillery of the United States and commissioner for the French republic, who since has retained it in the name of the said States.

"I apprise you of this for your guidance, according to orders I issued to you of date February 20th last past, notifying you to communicate the same to the syndics of your dependency.

"God have you in His holy keeping.

"Charles Dehault Delassus.

"St. Louis of Illinois, March 12, 1804."

After the transfer Col. Delassus remained in St. Louis until the month of October of the same year, closing up the affairs of the Spanish government, and awaiting further orders, and finally left with his soldiers and the munitions of war, which were not included in the sale, for New Orleans, and on his arrival there was ordered to Pensacola, Fla., the headquarters of his regiment.

While he continued in St. Louis, Delassus, like the good officer that he was, did all that he could to aid and instruct the United States officers in the easy discharge of their duties, and to prevent irritation and promote good and kindly feelings. An assistant surveyor had got into difficulties with the inhabitants of Mine à Burton, and Delassus, looking into the matter, presented the facts to Capt. Stoddard, who at once ordered a temporary suspension of all surveys on

Spanish grants. He was also careful to see that all public property was inventoried and conveyed over to the United States, his high sense of responsibility constraining him to give personal attention to the matter. Thus, as late as August 10th, we find him reproving J. B. Vallé, at Ste. Genevieve, for remissness, and requiring the delivery to him of the archives, and the surrender of four or five cannon in the fort.

When Delassus entered upon his administration of the government of this upper country in 1799, in his appointments to office he retained in their positions all those he found competent and acceptable to the people of their respective localities.

Spanish, being the official language of the country, was used in all matters and documents pertaining to the government of a public nature, but inasmuch as far the largest portion of the inhabitants were of French origin this was the almost universal language of the people. As a sudden change from the Spanish to the English language, and the introduction of American customs and usages would have occasioned the people no little embarrassment, and to give them some little time to accustom themselves to the new order of things, Stoddard had been instructed to make but little, if any, change in the *modus operandi* of administering the government under the old *régime* until Congress at its then next session might provide therefor. With this purpose, at the request of Stoddard, Delassus furnished a list of all those who had office under him, with such observations in regard to their *personnel* as he supposed might be useful to the new commandant.[1]

[1] As a matter of record and something which concerns some of the leading inhabitants of St. Louis at this period, we give the report of

"DELASSUS TO STODDARD ON THE PERSONNEL OF THE OFFICERS, Etc.

"1. Antoine Soulard, St. Louis, is a former officer of the French navy, emigrated since the Revolution. Since his arrival in the country he has been in the employ of the government, and has discharged his duty with zeal and accuracy. He would have received a salary as assistant to the Lieutenant-Governor, who designed to raise his rank, had it not been for the change of government, so that for over two years he has done nothing of this kind for the Spanish service. He was recommended to the king to be appointed a captain with the pay of lieutenant, and lately withdrew his application, which I have favored anew. In his character of surveyor of this Upper Louisiana, he can furnish you the most reliable information in regard to all the titles of grants, including those in New Madrid, the last post in Upper Louisiana where grants of land have been made. In my opinion he is an officer of much merit.

"2. Don Benito Basquez, a former officer, father of a numerous family, poor, who does not succeed in business, and whose age makes him at present of but little force for the service.

"3. Jacques de St. Vrain, officer of the French navy, emigrated to the country with his family since 1797. He commands His Majesty's galliot the 'Phebé;' he serves with zeal and exactness; he has made several voyages or campaigns with his galliot, in which he always carried out his instructions with sagacity and prudence. In his last campaign to Prairie du Chien he obtained a little paraclete (comfort or consolation) of forty dollars pay, forty-five dollars of bounty, and one and one-half reals a day rations, together ninety dollars the month. He is my brother, and I confine myself to expressing his desire to be useful to the new government under which he is to live.

"4. Mr. Antoine Dubreuil, a young officer, very zealous in all he is commanded to execute; he was employed in the expeditions of the galliot under De St. Vrain, who was satisfied with his conduct.

"5. Mr. Joseph Robidoux, an infirm old man, almost blind.

"6. Mr. Pierre Chouteau, a very zealous officer; he was commandant of Fort Carondelet at the Osage nation, whose trade it pleased His Majesty's Governor Laclede to grant exclusively to Messrs. Manuel Lisa, Sanguinet, Greg. Sarpy, and Benoit. So long as this officer had the trade of this nation he so managed them and his authority was such as to induce them whenever they killed any one to bring in the ringleaders. He is respected and feared and, I believe, loved by this nation. On one occasion I saw him here with a party of two hundred Indians make himself respected and obeyed, and managed them with firmness and mildness. I think he is the most suitable officer of this post to be employed in that nation and others of the Missouri.

"7. Mr. Vincent Bouy. I am unacquainted with his services. He is an honest man in business affairs, but entirely given to drink since I have been here.

"8. Mr. Pascal Cerré, S. L., a very zealous officer, speaks and writes English.

"9. Mr. Benito Vasquez, Jr. I believe him very zealous, although I have not had occasion to employ him.

"10. M. Francis Dunegant, commandant at St. Ferdinand. A perfectly honest man, brave officer, who has filled posts, and who was made commandant at the commencement of the settlement, but his capacity is such that he is now often embarrassed in view of the growth of his district, and that he can neither read nor write.

"11. M. Francis Delorier, of the same genus as Dunegant, preceding.

"12. M. Charles Tayon, commandant at St. Charles, a brave officer, and zealous in obeying orders he receives when he can comprehend them; he received a brevet from the king of second lieutenant and pay of eleven or twelve dollars a month for having distinguished himself in an action, I think, with the English; for some time past he gives himself to drink; he recently committed an injustice towards the inhabitants of his post, which is already too important for his capacity to enable him to regulate as it should be; he neither reads nor writes.

"13. M. Antoine Gauthier, a good man, without knowledge, but zealous in the service.

"14. M. Pierre Troyé, about the same stamp as the preceding one.

"15. M. James Mackay, an officer of knowledge, zealous and punctual; he formed the settlement of St. Andrew; he caused roads and bridges to be constructed by the inhabitants to communicate with this chief place; he is not quarrelsome, and has

Carlos Dehault Delassus earned the respect and esteem of the American officers with whom he was thrown in association, as the following letters amply testify. The slight touch of punctilio is a genuine

Spanish trait that adds to rather than detracts from the general amiability of character of this veteran soldier of his Most Catholic Majesty:

adjusted dissensions between the inhabitants as much as lay in his power, and he keeps them in good order with judgment. I think him a recommendable officer with many good qualities; he reads and writes French.

"16. M. Edmon Hodges, syndic Columbia Bottom. Since I appointed him I have always found him very correct and devoted to the public service.

"17. Mr. Amos Richerson. I think him a proper man for public business, and since his appointment he has always borne himself earnestly in the matters which required his attention.

"18. Mr. Boone, a respectable old man, just and impartial. He has already, since I appointed him, offered his resignation, owing to his infirmities; believing I know his probity, I have induced him to remain, in view of my confidence in him for the public good. (This is Daniel Boone, of Kentucky.)

"19. Mr. Mat. McKinot I have not had the opportunity of knowing personally, but since I have appointed him the reports I hear of his conduct, if so, are not advantageous for the public.

"20. Mr. Francis Saucier, commandant at Portage des Sioux, a former French officer in the colony, father of a numerous family, an honest man, zealous, and a friend of good order.

"21. Mr. Pierre de Treget, syndic of Carondelet, a good man with no capacity; he neither reads nor writes; he was appointed captain-commandant for want of others; the post is so near here that the least affair of that post is done here, nevertheless it should have its archives, which are not important.

"22. Pierre Lapie, a bad fellow, but the best I could find there, and a syndic (trustee) at Maramec was absolutely necessary when I appointed him; he speaks English; a determined man.

"23. M. François Vallé, Ste. Genevieve. The fidelity of the family of these officers under all the administrations where they found themselves, the much good services of this one since his employment, the universal esteem of all the inhabitants, that he so justly merited, cannot but cause to be regretted so useful a man at the moment when perhaps he is about to depart this life; and recommend his family, which has always been zealous in the public service, and have given proofs of it under all circumstances.

"24. M. John B. Vallé, brother of Don Francis, a very zealous officer. He has been employed under several circumstances. He always conducted himself well, and commands at present temporarily the post of Ste. Genevieve, since the illness of his brother.

"25. M. John Pratte, a zealous officer when employed; speaks English.

"26. M. Francis Vallé, Jr., son of the dying commandant. He resembles his father in disposition; in an expedition I commanded last year, composed of a detachment of militia I conducted to New Madrid, I noticed his zeal, alacrity, and correctness in the service.

"27. M. John B. Janis, a zealous officer. Ste. Genevieve.

"28. M. Camille Delassus. This officer is at present on duty at New Bourbon, where he acts as interpreter, without pay, for the English language. He has been employed several times in the service. He commanded the post of New Bourbon in the absence of his father. He discharged the duty of adjutant of the detachment I conducted last year to New Madrid.

"He is my brother. The desire I entertain to see him obtain promotion under the new government, where he is to remain, forbids my saying anything further of him, but I think I may

"My dear Sir,—I had the honor this moment to receive your note of the present day, together with your very acceptable present for Mrs. Harrison and myself.

"Believe me, my dear sir, that I esteem my visit to St. Louis as an event the most fortunate,—it has produced an intimacy

..ld without compromising myself that he will always be highly flattered at being employed.

"29. Pierre Delassus Deluziere, New Bourbon. Entirely devoted to public affairs, gained him the approbation of the Governor-General of Louisiana. He is my father; I can only recommend him as a zealous servant.

"30. M. Louis Lorimier, commandant at Cape Girardeau. This officer can neither read nor write, but he has natural genius; since he has had the command at the Cape he has always had the judgment to have some one near him able to assist him. In regard to his correspondence, he signs nothing without having it read to him two or three times until he comprehends it, or it must be read again. He has maintained order in his post with incredible firmness against some inhabitants who designed to mutiny against him without cause. He is extremely zealous when employed. Although supposed to be interested, I have known him to neglect all his business to execute a commission which would produce him instead of profit but expense. He is much experienced in regard to Indians, particularly the Shawnees and Loups. It was through his influence with this latter tribe that the Delaware Indian who had killed a citizen of the United States on the road to Post Vincennes was taken by his nation to Kaskaskia. I had an incontestable proof of his talent with the Indians last year at New Madrid, where, without his mediation, I would have been obliged to employ force to execute the Masceux Indian. It was he who eventually persuaded them to attend the council. The letter of the Governor-General is a testimonial of his services. He is brave and extremely well posted in the Indian method of war, feared and respected by the savages. I think I should recommend him especially for these matters, which he knows thoroughly.

"31. Mr. John Lavallée, a zealous and skillful officer, recommended for a long time for captain. I appointed him commandant *ad interim* of New Madrid. He was recognized by the government, and I think would have been retained but for the change; every time I employed him he gave me great satisfaction in the manner he acquitted himself of his commissions of service. He speaks and writes Spanish, French, and English, and is a firm, brave, and prudent man. I recommend him as an officer to be employed.

"32. M. Richard J. Waters, zealous officer of extensive knowledge, but of a somewhat extravagant disposition, and very quarrelsome.

"33. M. Francis Riché Dupin, a zealous officer.

"34. M. Robert McKay, a brave officer, extremely zealous. He was a long time in command of a galley of His Majesty stationed at New Madrid. He always served well. He was wounded by the Masceux brigand while bringing him up from New Orleans to Natchez. He is crippled for life.

"35. M. Peter Anthony Laforge, New Madrid, a very zealous officer, performing the duties of adjutant of the militia. He is also justice of the peace and notary public. He performs these various duties with correctness and precision. He records all that is done, either for unusual services, orders, depositions, etc. I can do no less than recommend him as a man very active, correct, and useful for the public service; but he does not write English.

"36. M. Francis Lesceur, a zealous officer, settled at the Little Prairie, where, although without appointment of syndic, it is him in his official character to whom they apply concerning the

with a family which I shall continue to love and honor as long as I have life.

"Inclosed you have a copy of my notification respecting the wood. I have taken care to have it made as public as possible.

"Be pleased to present me in terms of the warmest respect to Mr. and Mrs. De Louissière.

"I have the honor to be, with sincere respect and attachment,

"My dear sir,

"Your most humble serv't,

"WM. HENRY HARRISON.

"CAHOKIA, 6th Nov., 1802.

"THE HON'BLE CHARLES DEHAULT DELASSUS," etc.

"ST. LOUIS, 26th September, 1804.

"DEAR SIR,—In consequence of your letter of this date, I am led to suspect that I have been guilty of a breach of *etiquette*, if not of duty. It never before occurred to me that it was necessary and proper on my part to acquaint you of the arrival of Maj. Bruff, and of the consequent military command of Upper Louisiana, which has devolved on him.

"I now do myself the honor to inclose you an extract of a letter from the Secretary of War to me on the subject, and permit me to add that Maj. Bruff quarters in the same house with me, and that he assumed the military command of Upper Louisiana on the first day of July last.

"With sentiments of respect,

"I am, sir, your hum'e serv't,

"AMOS STODDARD, *Capt. Art'y Corps.*[1]

"COL. CHAS. DEHAULT DELASSUS."

necessary affairs of this new settlement. He does not read nor write.

"37. There is also at New Madrid M. Charpentier, interpreter of the English language, appointed by the government, who receives at present twenty dollars a month.

"38. Samuel Dorsey, surgeon of the post, receives thirty dollars a month.

"There are in the districts of Ste. Genevieve, New Bourbon, Cape Girardeau, New Madrid syndics, of whom each commandant of those posts may obtain information.

"All the syndics I mention were appointed by me the year we were threatened with an attack by the Indians from the English side, for the purpose of placing themselves at the head of the inhabitants of their district, to be in readiness to lead them to the place where they would have been ordered. Since then I have retained them, with the approval of the government, to settle small misunderstandings between the inhabitants with a view to do justice.

"All the commandants named and appointed by the government, and who receive no pay proceeding from their military capacity, receive a gratuity of one hundred dollars per annum, and receive their post expenses according to the time.

"ST. LOUIS OF ILLINOIS, March 9, 1804. C. H. D.

"TO CAPT. AMOS STODDARD, etc.

"39. Hippolite Bolon speaks several languages of the Mississippi tribe. I have always been satisfied with him, and know no other here to interpret for those nations. In that capacity he receives two hundred dollars a year and his firewood.

"40. Le Conte, St. Louis, gunsmith for the Indians, receives one hundred and forty dollars a year. This office is indispensable for the nations accustomed to have their fire-arms repaired. When they come to the place they make the trip expressly to bring them.

"41. Mr. ——, curate of this parish, receives a salary of ——.

"42. Mr. ——, curate of St. Charles and St. Ferdinand, receives ——.

"43. Dr. Saugrain, surgeon of the hospital, receives thirty dollars per month."

Note of the presents made to the Indians.—These presents cost the Spanish government for Upper Louisiana, including provisions, liquors, etc., for St. Louis, Ste. Genevieve, and New Madrid, about from twelve to thirteen thousand dollars, more or less.

Nothing can do more credit to the character of Delassus than this report. The care and discrimination of his judgment, and the modesty and reticence of his reference to his own relations and connections, must earn him the applause of every one. The last Spanish Governor of St. Louis certainly had every quality of a gentleman.

[1] Gen. Harrison, from his post at Cahokia, organized the civil government of St. Louis and established the first United States court there. Capt. (afterwards Maj.) Stoddard accompanied him to other fields of duty and service. His "Sketches of Louisiana" was published in 1810. In May, 1813, during the attack upon Fort Meigs by the British Gen. Proctor, Stoddard, who had been acting commander of the fort until Harrison arrived, was struck by a piece of shell and so badly wounded that he died of lockjaw ten days afterwards. Stoddard was a native of Massachusetts, an old soldier, and had served in the Revolution. His commission as captain of artillery is dated 1798, and he became major in 1807. Charles Gratiot, of St. Louis, who was captain of engineers, and chief engineer on Harrison's staff, was also in the fort at this time, and, though very ill, took charge of the heaviest battery, and served the fort in two very critical emergencies.

CHAPTER XII.

MANNERS AND CUSTOMS.

JAMES HALL, who has achieved a reputation well deserved by his pleasing and accurate studies of Western life and manners, relates in one of his volumes an anecdote illustrating in a striking way one of the differences in race which give variety, contrast, and picturesqueness to the early manners of St. Louis:

"When Gen. George Rogers Clark," he says, "the Hannibal of the West, captured Kaskaskia, he made his headquarters at the house of a Mr. Michael A——, one of the wealthiest inhabitants. Michael lived in a capital French house, enveloped with piazzas and surrounded by gardens, all in the most approved style. He was a merry, contented, happy man, abounding in good living and good stories, and as hospitable as any gentleman whatever. The general remained his guest some time, treated with the greatest kindness and attention, and took leave of Mr. A. with a high respect for his character and a grateful sense of his warm-hearted hospitality. Years rolled away; Gen. Clark had retired from public life and was dwelling in an humble log house in Indiana, a disappointed man. His brilliant services had not been appreciated by his country; his political prospects had been blighted; he was unemployed and unhappy,—a proud man, conscious of merit, pining away his life in obscurity. One day as he strolled along the banks of the Ohio he espied a circle of French boatmen, the crew of a barge, who were seated round a fire on the beach smoking their pipes and singing their merry French songs. One voice arrested

his car, it was that of his old friend Michael; he could not mistake the blithe tones and ever buoyant humor of his former host. He approached, and there sat Michael in the garb of a boatman, with a red cap on his head, the merriest of the circle. They recognized each other instantly. Michael was as glad to see the general, and invited him to take a seat on the log beside him with as much unembarrassed hospitality as if he had still been in his spacious house surrounded by his train of servants. He had suddenly been reduced from affluence to poverty, from a prosperous gentleman who lived comfortably on his estate to a boatman,—the cook, if we mistake not, of a barge. Although a man of vivacity and strong mind, he was illiterate and unsuspecting. The change of government had brought in new laws, new customs, and keener speculators than the honest French had been accustomed to deal with, and Michael was ruined. But he was as happy as ever, while his friend, the general, whose change of circumstances had not been so sudden or complete, was a moody, discontented man. Such is the diversity of national character."

No better text than the above could be selected for the present chapter, for any full exposition of and commentary upon it must include a complete and accurate account of the manners and customs of that Western life of which St. Louis, in its primitive periods, was the focus and centre. To present such a picture the canvas must be large, the handling liberal and free, and the palette must contain many and rich colors, carefully blended. After all, the task is a very difficult one, not from the poverty of the subject, but, on the contrary, from its exceeding richness, variety of movement, and rapidity and vividness of contrast. There was not simply variety and contrast of individual life and character, but variety and contrast of national types. In this frontier town, between 1780 and 1820, you might meet more of life—viewed from the point of contrast—than you will encounter at the great festival of Benares, or in Rome during the Carnival, or at the Oaks on a Derby Day. The American Indian comes to Washington sometimes in all his picturesque bravery and paint, and commands attention. But in St. Louis, in the period spoken of, delegates from all the scattered tribes, some of them now no longer in existence, were regular visitors and guests. The wild, naked, low-browed Sioux, the tall, lordly Osage, the Knisteneau from the Great Slave Lake, the fair and ornate Mandan from the Upper Missouri, the Shoshone and the Nez Percé habitually encountered the descendants of Uncas and Taminch from the Delaware and Long Island Sound; the fierce Iroquois and brave Wyandot, that panther of the canebrakes, the wandering Shawanese, and the sensual and volatile Illinois meeting, in turn, the gayly-clad, dark-skinned, handsome Seminole and Creek, the Cherokee, the Tallapoosa, the Yazoo, the Chickasaw, and the last remnants of those Southern, sun-worshiping tribes who are supposed to be descendants of the semi-civilized Mound-builders. This is but one, the savage type, yet it is more diversified than all the portraits in Catlin's gallery. If we turn now to the whites,—leaving out the negroes entirely, some of them just swept from every kraal upon the Guinea and Congo coast, some long enough in the French or Spanish Antilles to chatter a French or Spanish *patois*,—we encounter the Louisiana Creole, the Creole of Mexico, Cuba, Pensacola, the Creole of Illinois and Canada, alongside of the blue-blooded Spaniard of every province from Biscay and Asturia to Catalonia, Frenchmen of Normandy, and of Picardy, and of Provence, as well as Paris, French half-breeds, *coureurs* and *voyageurs*, wild as Pawnees, gaunt Saxon hunters from Kentucky, or from the Wind River Mountains, pioneers "bound west" from every State in the Union, singing and dancing boatmen of *La Belle Rivière* and their counterparts, the swaggering, unkempt, red-necked "American" boatmen from Pittsburgh and Redstone, whose fathers may have fought in the Revolution, and whose grandsires were probably "redemptioners" in Maryland and Virginia; with these, the Puritan, the Quaker, the blackleg, the cavalier, the high-bred gentleman and lady from Europe, the cultivated army officer, the pliant and pushing politician,—a throng endlessly various to study, but almost impossible to group. Who tries to group the figures in one of Hans Makart's nightmare canvases?

As to contrasts of individual character, take one instance only, the people Henry Brackenridge remembers meeting in and around St. Louis, in his lively study called "Recollections of the West." There is M. Beauvais, of Ste. Genevieve, the "tall, dry old Canadian, dressed in the costume of the place," courtly, precise, with snuff-box in one hand and pipe in the other; Madame Beauvais, fat, pious, warm-hearted, effusive, best of motherly French dames; Dr. Saugrain, weazened *émigré* and man of science, chemist, philosopher, and Sangrado; good Father St. Pierre, teaching the boy his catechism, and *soignant* madame and her daughters with alternate penances and benedictions; Vanbibber, the retired Indian-fighter, with his blind eyes and long, venerable white beard; Capt. Smith and Gen. Wilkinson, in their blue-and-gilt uniforms, with the gay, thirty-oared barge, the general's pleasant Christian wife, band of music, and imposing, smooth presence; Graves, the sedate and proper Quaker youth, going West to enter business, whom the mosquitoes turned into the simulacrum of a smallpox patient; the brutal captain of the keel-boat, in leathern doublet, blue trousers, and Suwarrow boots, who first bullied his passengers with

pistols, and then challenged them to fight him with butchers' knives; Ralph Higginbotham, the "squire's" son from up the Monongahela, making his first trip from home in a misfitting suit of homemade homespun, with fourteen dollars and a silver watch in his pocket; Bill Hulings, "neither the first nor the last of the boatmen," in tow shirt and trousers, with handkerchief on his head; the Connecticut "squatter," with his pleasant wife and baker's dozen of flaxen-haired children; Col. Smith, the Southern duelist and planter, who, like "Nestor" Macon, of North Carolina, "never wished to live so near another as to be within hearing of his dog," and who felt hipped and out of sorts unless he shot a man every month or two; the dapper ferryman of the Maramec, who dwelt in a cabin alone with dog and cat, and only came across to travelers shrewd enough to find and blow the horn hung up in a tree; the religious procession of all the good people in town, like a scene out of the Middle Ages, which Brackenridge encountered in riding into St. Louis; Herr Shewe, licentiate of half the learned institutions of Europe, with his penny shop, his paint-brushes, and his madness; Graham, the refined young lawyer, graduate of an Eastern college, murdered in a duel as he was upon the threshold of prominence in his profession; the solitary Indian in the fort-prison, beguiling his weariness by inviting passers-by to play draughts with him; Mullanphy, the mulberry-faced millionaire, eccentric, besotted, yet original and comprehensive in his business views and grasp,—these are but the chance recollections of a sketcher, put down after forty years' absence from the scene.

In view of this multifariousness, therefore, there does not seem any way to do full justice to the subject, and treat it accurately and comprehensively, except by working in upon a clean canvas what constitutes the real and substantial groundwork of St. Louis society, adding the accessories afterwards. Undoubtedly the substratum of the society is French and Creole; and when we have differentiated further and eliminated every unessential, we are entitled to conclude that the foundations of St. Louis society are best to be ascertained by analyzing the society of that group of French towns around it in a circle, of which it was by no means the oldest, yet was early the centre, and has long been the chief. These towns and settlements comprised, among others, Fort Chartres, Kaskaskia, Prairie du Rocher, and Cahokia, on the east side, and Cape Girardeau, Little Prairie, Ste. Genevieve, Maramec, Carondelet, St. Louis, Florissant (St. Fernando), St. Charles, Portage des Sioux, St. André, Village à Robert, Marie des Liards, Nouvelle Bourbon, and Femme Osage, on the west side of the Mississippi River. Originally these towns and the intermediate and circumjacent lands composed as distinctively a French settlement as the Chinese quarter in San Francisco is a Chinese settlement.

We have already, in writing of the beginnings and early history of Lower and Upper Louisiana, said a good deal in regard to these old French towns, how they originated and how their people lived, and there is no occasion to repeat any of that. Nor is there any occasion to go further into the history or fortunes of any of these places than will serve to supply us with materials for elucidating the manners and customs of old St. Louis. So far as Fort Chartres, Kaskaskia, Ste. Genevieve, and Cahokia are concerned, in which these old manners were most firmly rooted and were best preserved, it is to be observed that they originated and grew up under somewhat different auspices from those which presided at the birth and directed the destinies of St. Louis, and, for that matter, of all the French towns in Louisiana and most of those of Canada. In Louisiana the towns were founded by French planters and peopled by them and the factors, merchants, tradesmen, etc., who supplied their wants and carried their products to market. In Illinois and Missouri and Canada the towns were settled by trappers, hunters, and boatmen, and their traders and factors. But in Canada, except perhaps Detroit, Michilimackinac, and one or two other places, the towns began with a fort or trading-post or station, to which the Indians and other nomads came afterwards, drawn by the attractions of exchange and the desire for barter. In Illinois, on the other hand, whether we consider Vincennes, Peoria, Kaskaskia, or Cahokia, there was first an Indian town of some importance and as much stability as a nomadic population can give to such a place, to which the white nomads—the missionaries, traders, trappers, hunters, and boatmen—were attracted, and where they afterwards settled down, slowly and gradually expelling the Indians. The distinction is more important to observe than would at first blush seem to be the case, since it resulted in essential differences in the character of the population. Now St. Louis was settled as the Canadian towns were, by an original plantation of whites, but then, on the other hand, these whites were in the first instance principally drafted from the populations of the distinctive Illinois towns, afterwards reinforced by traders and planters from the Louisiana populations, and deriving *all* of its government and legal institutions from those of the later Louisiana. It is evident, therefore, that St. Louis represents a compromise series of manners and customs. It partakes of those of Canada, Illinois, and

Louisiana, but without absolutely representing any of the three.

St. Louis, for example, had no early existence previous to the Spanish *régime*, as Cahokia and Kaskaskia had, and this affected it in many ways. It is sufficient, however, to note one,—the difference in the land system. It was highly repugnant to the very aristocratic French frame of government, as it was imported into Canada and Louisiana, to give or lease land to any but the gentry and nobility. The *town* itself might hold and own land enough for its own purposes, but it must do so as a *commune*,—it must own and hold it in common, and not part with an arpent of it, in fee, to the burghers, trades-people, and other "base mechanicals" who helped to make up its population. The Spanish system was more democratic, however. The commandant was not constrained by his regulations and instructions to adhere to the communal system;[1] and hence, while the Cahokians and Kaskaskians were never dreaming of their ability, while townspeople, to get more land than they had the use of in the common fields and commons, the early settlers of St. Louis, who did not come from these towns, like the Chouteaus, were seeking great "concessions" of land in every direction, and obtaining them from the Spanish Governors upon very easy terms, chiefly an oath of allegiance and acknowledgment of sovereignty in the king of Spain, a small fee, and a survey and indefinite record.[2] So it is evident that, if St. Louis had a good deal of the sleepy element of the old French towns in its composition at the start, it had still something also of the go-ahead element which leads to enterprise and to combination. This was the effect of original differences in the fundamental political constitution. Another instance of this difference, to be traced up to the same cause,—defects in the old French system, as compared with that of Spain,—may be found in the fact that, while St. Louis, Kaskaskia, and Cahokia all three sent out hunters, trappers, and boatmen in numbers, only St. Louis had fur companies and transportation and mining companies.[3]

Having shown something of what these early French towns of the Illinois (including both banks of the Mississippi in the term) were not, let us now attempt to show what they were:

Names.	When Founded.
Kaskaskia ("Kas.")	between 1690 and 1700
Cahokia (Caos)	" " "
Fort Chartres (St. Philippe)	1718
Ste. Genevieve (Le Vieux Village)	1735
La Prairie du Rocher	1735
Nouvelle Bourbon	1763
St. Louis	1764
St. Charles	1769
Portage des Sioux	1770
L'Anse de la Graisse (New Madrid)	1769

Carondelet, Florissant, Marius des Liard, Maramec, La Petite Prairie, St. André, and many more small towns, chiefly on the west bank, and of various dates of founding, are embraced within this area. The settlers of all of them were Frenchmen or their descendants, coming there either by the way of Louisiana or of Canada, chiefly the latter. After 1718, when Ribault took up many men and began mining in this section, the government of Louisiana gave considerable attention to it, while the hierarchy of Canada provided for the spiritual wants of the inhabitants. Fort Chartres was built in 1718–20, and the fort at Kaskaskia was apparently constructed about the same time. In 1756 Fort Chartres was rebuilt, strongly and elaborately. At this time the fort at Kaskaskia appears to have been rebuilt; another fort was built on the Ohio River (Fort Massac), and, as a matter of defense, a strong and solid military road was constructed from Fort Massac to Kaskaskia, this city being already connected by a road with Fort Chartres, and one also to Cahokia.[4]

[1] Indeed, as we have incidentally showed in a preceding chapter, one of the Spanish Lieutenant-Governors of St. Louis had to have explained to him, in a town-meeting, what a commune was, what were the principles and rules by which it was regulated, what were the functions of its officers, and how they were chosen.

[2] A striking instance of this is to be found in the fact that while Auguste Chouteau, on one side of the river, was demanding a fourteen hundred arpens tract as a reward for his enterprise in erecting a distillery which would be profitable to him only, on the other side of the river, at Cahokia, Father Gibault was humbly petitioning Governor Harrison, of the Northwest Territory, and Congress through him, for a small block on which to build his house and keep his cow, in compensation for all his little fortune spent and his two slaves sold to enable him to advance money to Gen. Clark at the time of the memorable expedition against Vincennes.

[3] This is obviously the effect of French law, or rather regulation. Frontenac and his predecessors in Canada, in order to keep the fur trade a monopoly, drew a rigid line of circumvallation around it, forbade any one to trap or hunt without a license, or to sell furs except to designated persons at designated places. The traders, *voyageurs*, and *coureurs des bois* easily and naturally broke through these absurd rules, but in so doing they made themselves outlaws, and were forced to become denizens of the wilderness. Combination and co-operation, except for self-defense, became impossible under such circumstances. The free trapper and trader must become rich before he can dream of seeking—in order to make better use of his capital—to make peace with the law and get leave to form a company. So the pressure of the law intensified the propensity to individual action in these outlaws, and these outlaws formed a great part of the original population of Cahokia and Kaskaskia, as they did also of Peoria, Michilimackinac, Vincennes, and Detroit.

[4] G. Collins' Hist. Kentucky, ii. 595, where he says, "Old Fort Massac . . . was established by the French about 1711.

These facts are important, since no government makes roads through the wilderness, or in a country which is of no value to it. The country was, in fact, valuable. Though not populous—it contained less than a thousand souls in 1763—it was very productive, and all its surplus went to New Orleans. This included not only peltries and lead, but much grain, beef, pork, butter, honey, tobacco, etc. Stoddard says that one hundred hogsheads of wine per annum were produced in the Illinois country at the period when the English took possession of it. After that the population rapidly fell off by the return of people to Louisiana, or their removal to the west side of the river. There is reason to believe, however, that the extent of this depopulation has been exaggerated. Cahokia is said to have suffered much more than Kaskaskia, of which it never had more than one-fifth the numbers. We have before us, however, a certified copy of a list of heads of families residing in Cahokia and its environs in the year 1783, taken from the files of the county clerk's office at Belleville, Ill. The list was made in 1797, upon the sworn statement of Jean Baptiste Dubuque, Jean Baptiste Saucier, and Charles Ducharme, taken by order of the Governor. It contains the names of ninety-five persons, twelve of whom are widows, and very few of these persons have any but French names.[1] These figures should give a population of 500 to Cahokia alone, and for the district 3500 to 4000. The ordinance of 1787 drove all the slave-holding French out of the country, but in 1809, when Illinois Territory was organized, the population, almost entirely in the American Bottom, and thence to Alton on the north, and Fort Massac on the south, was 9000. In 1799, by a census taken by Delassus, the population of the west side, including New Madrid and Cape Girardeau, was 6028, of whom 883 were slaves.

The transfer to England was the greatest and worst shock these people had to encounter. It alarmed their fears and offended their sensibilities and their pride, and they recovered from it slowly. In 1778, Gen. George Rogers Clark, acting under the orders of the Governor of Virginia, descended upon Kaskaskia and Cahokia like a thunderbolt from they knew not where, and for a few days the peaceful *habitans* were in the utmost panic, for he came among them as the buccaneer Morgan came upon Panama, and they had been taught to look upon the American rebels as little better than pirates and outlaws. But Clark speedily allayed their fears, established the best possible understanding with them, and secured their cordial and active services in the cause for which he fought. It is not believed that any of the population fled on account of this invasion, and it is probable that some of the enterprising youth of St. Louis and vicinity came across the river to do service in Clark's militia. But it is nevertheless the fact that the *habitans* never caught the spirit of enterprise and the instinct of movement that possessed their restless neighbors and fellow-citizens. Their peace became a calm; their calm was stagnation. The French settlements of the Illinois had run their little race, and have been content to stand still ever since.

What has transformed the *voyageur* and the tameless *coureur des bois* of Canada into this pacific and home-haunting *habitant* of the Illinois? It has been accomplished by a process of evolution much more curious and more roundabout than that which made those nomads of the wilderness out of quiet Norman and Breton *paysans*. The Creole of Mexico and South America, degenerate though he be, retains some traits of the fierce, fiery, and magnificent Conquistador, his ancestor, who during two centuries of daring enterprise ransacked a continent in pursuit of gold. He may loll all day in his hammock, wooing his *dolce far niente* between the puffs of his cigarette and the draughts of his chocolate, but you still know that he carries a dirk in his stocking or his sleeve for every foe; that he is a master of the horse, the lasso, and the *bolo*, and never shirks from the call to arms. The descendants of Raleigh and Frobisher are not prevented from enterprise on sea and shore, from feats of daring and endurance, by becoming the *jeunesse dorée* of the clubs, the *enfans gatés* of a civilization by steam. But the descendants of the men who came over with Cartier and Champlain, with D'Iberville and St. Denys, how can we recognize them in the snuff *paysans* of the American Bottom, wearing cotto

It was a missionary station until 1756, when it was greatly enlarged and strengthened. . . . Probably before 1720 [this is conjecture] a military road was opened by the French, when they had dominion over the country from Massac to Kaskaskia. The numbers of the miles were cut in ciphers on trees with an iron and painted red, and were still plainly visible in 1800. The road made a great curve to the north to avoid the swamps and rough country on the sources of Cash River, and also to attain the prairie country as soon as possible. Another road extended from Fort Massac to Cape Girardeau." Collins gives the "Life and Times of Governor John Reynolds" as his authority for this. Among the papers of the Louisiana Historical Society are several memoirs, between 1733 and 1741, by M. Duverge, civil engineer, relating to a road discovered, surveyed, and mapped out by him "through the Chickasaw country to the Illinois."

[1] The only exceptions are Thomas, Brady, Philip Engel, William Biggs, Mary Graw, Mary Moony, and Joseph Andrews. The rest are all of them intensely French, while Engel is German, and Moony, Graw, and Brady are unmistakably Irish.

night-caps and singing *chansons* in a hundred-year-old *patois*?

A smooth-faced youth, with light hair, round shoulders, wooden *sabots*, and simple air, lands at Quebec in Frontenac's time, to earn his living in the *Nouvelle France* he has heard the sailors talk so much about, while loitering by the wharves of Caen or Fécamp, or behind the tavern-doors (as Father Hennepin describes himself doing) of Havre and Dieppe. He has a trade and can ply it prosperously, or get good wages as a soldier going to fight the Iroquois. But a party of trappers or *voyageurs* or traders just in from the wilderness, all their feathers ruffling, and every pocket bursting with crown-pieces, decides his destiny at once. He, too, will become a *voyageur* and trapper, and he goes off to Montreal or to La Chine to enlist among the adventurers in the fur trade. He has no capital to go out as a trader or *voyageur*, no influence to procure a license, so he must take service under a licensed trader, and accept that trader's terms. Hard enough those terms are, to be sure, but he does not know that, and probably would not care if he did. His concern is chiefly now to see and learn something for himself about those adventures of which he has heard so much. The trader or factor under whom he hires has bought a license to fit out several parties of two canoes each. These canoes, forty feet long, four feet wide at the middle and widest part, accommodate a cargo of two or three tons of arms, supplies, provisions, Indian goods, ammunition, traps, etc., for the uses of the party,—all the goods done up in eighty-pound packages for convenience in making the portage. The young man's share in the venture is only six per cent., from which his own expenses must be deducted, the merchant's share being fifty-two per cent., besides insurance from all risks, and goods charged at an advance of fifteen per cent. above ready money rates in the colony. Having joined the party and put himself under the charge of an experienced *voyageur* and trapper for instruction, the neophyte is ready to start. But not so the veterans of the party. There must be a final carouse and debauch first, of which the harpies of the town reap the chief profit after the patriarchal trader fitting out the party, who is willing to advance any reasonable sum for such extravagances, since he is sure to get his money back again, with a liberal interest added.[1]

When the debauch was over, the *voyageurs* under a commander or foreman, who, if the party was large enough, was called either "brigadier" or "partisan," set out upon their long and tiresome and perilous voyage, partly to trade for the peltries of others, especially the Indians, partly to hunt and trap themselves. The *voyageurs* have been compared to the carriers, muleteers (*arrieros*) of Spain; they were a faithful, toiling confraternity, half-civilized only in manners and in dress; timid in their ways, yet daring the most arduous and perilous adventures, and never afraid of labor. It came natural to them, from their French descent, to be fond of song and dance, to be gay and light-hearted, cheerful always, though sometimes bewildered when without leadership or brought to the encounter of unexpected difficulties. They were docile and respectful to their superiors, helpful and kindly to their equals, civil and complaisant to all. They liked to call one another "brother" or "cousin," and to be mutually obliging, accommodating, and giving good office for good office. Community of suffering and danger in an uncertain life in the wilderness, far from hardening and brutalizing them, inspired them with feelings of genuine good will towards each other, and made them good-humored under all sorts of privations. Their philosophy was the embodiment of "Tapleyism," and they got a real zest out of the wild and savage life they led, enjoying the gossip of the bivouac and lightening the heavy burden of the portage or the pull against the rapids and the chute with quip and *chanson*. They had great skill with oar and paddle, and unflagging power of bending down to the task. In truth they needed it, for their expeditions were inconceivably rough and fatiguing. Their bateaux and canoes were paddled, rowed, and carried from Montreal up the Ottawa, and thence by river, lake, and portage to Lake Nipissing, Lakes Huron, Superior, and Michigan, and the Lake of the Woods, and through all the Western waters until they came to the headwaters of the Red, the Arkansas, the St. Francis, and the Missouri Rivers in one direction, and to the Athabasca and Great Slave Lake in the other. At night they slept in their boats or in a bark bivouac under the drooping firs. They endured hunger, cold, rain, and deep snows; they set their traps by beaver dams and lake and stream, hunted and traded and toiled, until, in one, two, or

[1] "The French merchant at his trading post, in those primitive days of Canada, was a kind of commercial patriarch. With the lax habits and easy familiarity of his race, he had a little world of self-indulgence and misrule around him. He had his clerks, canoe-men, and retainers of all kinds, who lived with him on terms of perfect sociability, always calling him by his Christian name; he had his harem of Indian beauties, and his troop of half-breed children: nor was there ever wanting a louting train of Indians, hanging about the establishment, eating and drinking at his expense in the intervals of their hunting expeditions."—*Irving: Astoria.* With such establishments the traders' profits needed to be large.

three years, they were ready to come home, with full cargoes for their employers and very scant wages for themselves.

But, no matter whether rich or poor, that coming home with laden canoes was bound to be made a season of revelry and frolic, of riot, self-indulgence, and extravagant debauchery. "You would be amazed," wrote La Hontan, "if you saw how lewd these peddlers are when they return, how they feast and game, and how prodigal they are, not only in their clothes, but upon their sweethearts. Such of them as are married have the wisdom to retire to their own houses, but the bachelors act just as our East Indiamen and pirates are wont to do, for they lavish, eat, drink, and play all away as long as the goods hold out, and when these are gone they even sell their embroidery, their lace, and their clothes. This done, they are forced upon a new voyage for subsistence."

It is this which turns into a *coureur des bois* our fine Norman lad, a youth of spirit, who has come home from his first expedition, bronzed and weather-beaten, an experienced *voyageur*. For he finds there is no independence for him under the strict rules of the government and the excessive exactions of the licensed traders. He has learned the business now, and he knows where—in the wilderness, beyond the reach of the intendant, out of the range of the forts and patrols—he can trade his peltries off for a good price in spite of the Governor's veto. He knows some lads who think as he does about this, and so, the frolic over, he and they take to the woods once more, and turn their backs upon the rigid *régime* of civilization. Any of them can make a birch-bark canoe, a trapper's outfit does not cost much, and, once in the woods and among the Indians, plenty of illicit traders can be found who will advance them goods and supplies for the refusal of their peltries.[1] Once in the woods the *coureur* made himself a smaller canoe and trapped along the small streams. He and his comrades built themselves a hut, where they used to dress their peltries. Often the Indian hunters joined them, or, when they wanted a change of diet, they would go to some neighboring Indian camp and arrange to hunt the deer or the bison.

The trader with whom they were dealing and working would appoint them a time or place to meet him, usually late in the spring, when the peltry season was past, and this rendezvous would usually be at some large Indian village, to which the trader would bring his stores, and thither the trappers and hunters would congregate with their pelts and furs.[2]

Our French youth, once *voyageur*, now *coureur*, finds his trader at some town of the Illinois Indians, Peoria, or Tamaroa, or Kaskaskia the elder, or some one of the large cantonments of this tribe upon the Illinois River. He has been in the woods long. He enjoys the perfect freedom of the wild life he has been leading; he has lost his relish for civilization; church bells and the pale faces of the Montreal maidens have no longer any charms for him. But these dark beauties of the Illinois have,—and the girls of the tribe are said to have been remarkably handsome,—he is young, he has unlimited credit with the trader, he can make his favorite girl the envied of all the females of the tribe, as far as toilet goes, and it is no wonder that he finds his wooing easy. He takes an Indian wife, buys her with appropriate presents, and thus erects another barrier between himself and civilization.

Then, after an indolent and prolonged honeymoon, the *coureur* goes into the woods again, either taking his wife with him or leaving her behind. When he returns he finds that the Iroquois have been there since he left; the village is burned, the tribe fled, and it is only from wandering hunters that he learns of the new home on the banks of the Mississippi, the camping-grounds of old time, to which the tribes and bands have fled for defense and refuge. When the *coureur* has made up his mind to follow his Indian wife and her kinsman to the new plantations and new villages of the Illinois, he has determined likewise to cast the world of civilization behind him once and for all. With more voyages, further excursions into the woods, trapping and hunting, middle age is reached,

[1] A trapper's outfit includes a gun,—the American trapper and hunter restricted himself to the rifle, but the Frenchman always carried the fusil,—ammunition (not much, since the traps are expected to supply food as well as furs, and the beaver was esteemed good eating), six or seven traps, hatchet, knife and awl, blankets, camp-kettle, and tobacco. All the rest could be found in the woods, except flour, and that the trapper could dispense with. If snow-shoes were needed or clothes gave out, the woods and the gun provided the means to supply these things. The trapper wanted no better food than the beaver, when it was plenty, and if it was not plenty in one spot, the rule was to up traps and go elsewhere. The beaver's tail was a tidbit.

[2] This independent trading business was always very large, especially in the teeth of attempted monopolies. Thus the late Col. George Davenport, founder of Rock Island and Davenport, Iowa, would sometimes twice a year send as much as one hundred thousand dollars' worth of goods up Fever River, half of which was sold to the Indians *on credit*, to be repaid in furs after the next annual hunt. The earlier traders, by going to the woods to meet the *coureurs des bois*, were always able to get the pick of furs and pelts; besides, in this case they could pay for them in spirits; and Indians and *coureurs* both, after their necessary wants were supplied, were content to take the rest of the products of their hunts in drink.

infirmities from exposure begin to be felt, conservatism and household cares temper the wild heedlessness of youth. A family of half-breeds is growing up about the lowly cabin; the oldest boys are able to take the father's place at the paddle and oar and with the traps. The wood ranger finds himself anchored, and he must make all he can of his own home. He is not a savage, though he has spent so many years among savages. He knows that by the recollections which swell within him as he hears the bell of the little chapel, planted near his lot, since he went into the woods, by the devoted Jesuits, who have followed the Indians down from Green Bay and Mackinac and Peoria, intent only on converting the rude savages to the knowledge of the one true God. He knows it by his pleasure at finding a white man a neighbor to him, a *coureur* like himself, but who has brought a white wife somehow down from Detroit or Montreal, or up from New Orleans. His children must be baptized, they must learn enough of the catechism to take the first communion, for that is what the church requires of all her children, and, with all his wanderings, he has never strayed far away from the fold. Now, he must make his peace with the church; but in order to do that the good father requires him to be formally united to his wife, with all rites and ceremonies. This is done, and now again the *coureur* settles down and back into the *paysan* or the *bourgeois*, not materially changed from the state of his father and grandfather in Normandy and Picardy. He and his French neighbors have houses, a village of their own; they do not dwell in the Indian wigwam, nor in the Indian village.[1] They have their little patches of common land under tillage, their little communal laws and regulations, imitated, as far as can be remembered, from similar things in the old country; and thus the village begins to build itself up.

Meantime, the retired *coureur* and *voyageur's* son pursues his father's avocation in the wilderness, but with a difference which tends to make him a still freer and wilder personage. The trader now comes to the home village for his peltries, or else the elders pack and take them with other produce down the river to New Orleans. As the beaver is pursued farther away from the interlacing streams and lakes which could be joined together in long links by short portages, the portage becomes more difficult if not impossible, and the canoe is less serviceable. It ceases to be used except on the immediate field of action; the bateau and the birch canoe are laid aside for the horse, and the voyageur-trapper becomes the hunter-trapper, the *coureur* is transformed into the free trapper, a change which is almost revolutionary in its character. The rifle supplants the fusil, and the wild half-breed imitates the Pawnee of the plains, instead of taking the Ottawa trapper or the stealthy Delaware hunter, stepping with noiseless foot from tree to tree, as his model. "Wanderers of the wilderness," says Washington Irving, describing Regis Brugière, one of this class, "according to the vicissitudes of the seasons, the migration of animals, and the plenty or scarcity of game, they lead a precarious and unsettled existence, exposed to sun and storm and all kinds of hardships, until they resemble the Indians in complexion as well as in tastes and habits. From time to time they bring the peltries they have collected up to the trading-houses of the company in whose employ they have been brought up. Here they traffic them away for such articles of merchandise and ammunition as they may stand in need of. At the time when Montreal was the great emporium of the fur-trader, one of these freemen of the wilderness would suddenly return after an absence of many years among his old friends and comrades. He would be greeted as one risen from the dead; and with the greater welcome as he returned flush of money. A short time, however, spent in revelry would be sufficient to drain his purse and sate him with civilized life, and he would return with new relish to the unshackled freedom of the forest."

A band of such hardy adventurers, in the freedom of the Western wilderness, at bivouac or rendezvous, was a sight to see. Their equipment and looks made you half doubt whether they were civilized or savage by nature. Their garbs and accoutrements and the gay and gaudy trappings of their horses made them resemble the Indians, whom indeed they imitated, sometimes to the extent of painting their faces. They wore their hair long and flowing, and their leggings and moccasins were quilled and beaded. They copied the ways of the savages also, yelping, shouting, talking loudly, practicing all sorts of boisterous jokes, and

[1] All authorities concur—and the maps of Pittman and others prove it—that in every case the French village stood a little apart from the Indian village, while adjacent to it. There was frequent, unrestricted, and most friendly association at all times, but never any complete or close assimilation of manners. The Frenchman in nearly all cases remained a Frenchman still, the Indian was always an Indian. The half-breeds very often clung to their mother's kin, and went completely over to barbarism, because, under the Indians' peculiar social system, all inheritance and descent was through the female, and the half-breed had all the tribal rights, and bore the "totem," of his mother; but with the pure born whites the tendency was always to better themselves more rapidly than the Indians could do, and to segregate themselves more completely from their savage associations.

exploding in wild laughter. Their lives were hard, but it brightened their faculties instead of rendering them more stolid, and the free trapper was always a lively and jocund mortal, hardy, active, brave, a braggart capable of making his extravagance good, careless of the future and making the present fly,—game-cocks of the wilderness. They needed to be so, for their only bed was their blanket, and the trap and the rifle their only resource. They provided for themselves always, and acquired a singular independence of all adventitious aid. Chester Harding, the artist who went to Missouri expressly to paint Daniel Boone's portrait, relates that when he reached the house of the old pioneer, then over eighty, and bedridden, he found him lying by the fire, cooking his own venison, wrapped upon the handle of his ramrod.

In this respect, however, the French trapper and hunter was less bold and self-reliant than the American who superseded him in the farther West. The Creole wanted his hut or cabin, if he could get it, and his Indian wife to cook for him. He was lighter, milder, softer, more self-indulgent than the stark and stalwart man from "Kaintuck," the peerless backwoodsman of the world. The Creole was sometimes thoughtless and did not heed landmarks, but the American knew even more of "sign" and its interpretation than the Indian, and likewise he had greater endurance. "I consider one American," said an experienced forester and fur-trader, "equal to three Canadians in point of sagacity, aptness at resources, self-dependence, and fearlessness of spirit. In fact, no one can cope with him as a tramper of the wilderness."[1]

It is for this reason that, after a season, the French Creole was gradually supplanted as a trapper and hunter in the far West by the more stanch American, and forced to return more or less to his original trade as *voyageur* and carrier and packman, or else to adopt the duller but certainly not less laborious occupation of boatman on the rivers. The latter, finally, until the steamboats monopolized transportation, became the chief pursuit of the Creoles about the American Bottom who cared to vent 'e from home at all, and there were no boatmen so good for rowing or paddling or handling the pole or the *cordelle* as the long-haired, dark-skinned lithe lads of "Kas" and of Prairie du Chien, who thought nothing of keel-boat voyages from "Redstone" and Pittsburgh and from Prairie du Chien down to New Orleans and back again, taking heavy cargoes both ways. Boatmen and *voyageur* and *coureur*, there was but one costume of the whole class, except when the man had grown so wild as to copy the dress of the savages as well as their ways, and this was the dress too of the *habitant* of Kaskaskia and Cahokia, of St. Louis and Ste. Genevieve in some sort, modified more or less by circumstances, the "national costume" of the male Creole of Upper Louisiana. The head was left bare, or wrapped about with a gay handkerchief, except in age, when a skull-cap or a cotton night-cap, like the liberty-cap on old coins, took the place and supplied the absence of the long, unkempt, and flowing locks. But the *capot*, our surcoat, invariably had a hood, and this could be drawn over the head in bad weather. The *capot* was made of a blanket; it was, indeed, the counterpart of the Indian's match-coat, except that its long skirts were suffered to flow loose. The shirt was of tow, or blue or striped cotton, colored always. The legs were clad either in trousers of tow or else in leather leggings, and there was a belt about the waist of leather or variegated worsted, which supported the trousers, and from it were suspended the knife, tobacco-pouch, and other implements and articles in regular use. The feet were clothed in deer-skin moccasins. The women wore moccasins or shoes, either, sometimes, perhaps, sabots; often, weather permitting, went barefooted. Their frock was of cotton or calimanco. They wore a mantlet and a Madras handkerchief about their shoulders, and, when grown older, a handkerchief about their heads, wrapped turban-fashion.[2]

But we are not content to pass over the subject of dress in this easy manner. We have before us[3] the transcript of an invoice of goods received and for sale by Charles Gratiot, merchant in Cahokia, in 1780,

[1] Captain Bonneville's Adventures.

[2] Brackenridge, "Views of Louisiana," says, "Their dress was formerly extremely simple. The men wore a blanket-coat of coarse cloth or coating, with a cape behind, which could be drawn over the head, from which circumstance it was called a *capote*. Both sexes wore blue handkerchiefs on their heads, but no hats or shoes or stockings; moccasins, or the Indian sandals, were also used. The dress of the females was generally simple, and the varieties of fashion few, though they were dressed in a much better taste than the other sex . . . We still see a few of both sexes in their ancient habiliments,—*capote*, moccasins, blue handkerchiefs on their heads, a pipe in the mouth, and the hair tied up in a long cue." This was written in 1811, and published on the spot. Again, in his "Recollections of the West," he describes M. Beauvais as "dressed in the costume of the place (Ste. Genevieve),—that is, with a blue cotton handkerchief on his head, one corner thereof descending behind and partly covering the eel-skin which bound his hair, a check shirt, coarse linen pantaloons on his hips, and the Indian sandal, or moccasin, the only covering to the feet worn here by both sexes." And Monsieur Beauvais was a person of consequence in the little town.

[3] Thanks to Mr. Billon.

l'année de grand coup, with the retail price marked against each article in livres. The livre of the day (livre tournois) was a coin worth eighteen and a half cents; but we are not informed whether the values in Mr. Gratiot's invoice are meant for coin or the currency of the country, which was almost exclusively peltries. Probably the invoice values were coin, reduced to peltry values at an agreed rate, so much per pound of pelts, according to quality, there being three grades, twenty, thirty, and forty cents or sous per pound respectively. This understood, we find that Mr. Gratiot had for sale: Blankets at ten livres the "point," the best sort ranging from two and a half to three "points,"[1] which would be about six dollars for a first quality double blanket, not so high. Blue and red cloth was furnished at thirty livres per yard, and cotton buckram was the same, but this was as compact and durable as corduroy. Kersey jackets, thirty livres (for negroes). Blanket capots, thirty livres each,—the capot blanket cloth was invariably white and fine, durable stuff. Under capots of melton, seven to ten livres per yard. Calimanco cloaks, double, six livres. The original says *les mantelets de calmande*, and the mantelet exactly corresponds to the mantilla, or cape calmande, or calamanco, being a sort of grogram or mohair stuff, with a fine gloss, light but warm, and very generally worn at that period and later. Double flannel for cloaks, six livres per yard; small flannel dresses for children, ten livres each. Goods of this quality cannot be bought any cheaper in Cahokia to-day. Shirts, cotton and linen, large, twenty livres, small, ten livres; melton, ten livres a yard, and kersey the same,—cheap enough if double-width. Scarlet cloth (for the Indian trade), forty livres per yard; "cotty," a coarse India muslin, white and gray, fifteen livres, striped the same, used for shirts. Red cotton handkerchiefs, ten livres (but these were genuine "Turkey red" Madras handkerchiefs); knit caps, six livres each; striped caps, four livres, and white cotton ones five livres. Blue romal ("chappa romal" was a Canton silk) handkerchiefs (for head-gear), six livres.

It is evident from the above that the Cahokians dressed in good stuff, if plainly, and that their clothes were warm and comfortable. They did wear stockings and shoes, too, sometimes, for Mr. Gratiot's invoice mentions black stockings at ten livres per pair, and purple stockings, fifteen livres; for men, on State occasions, when they also wore small-clothes and polished up their buckles and shoes, ten livres the pair. Thread was ten livres the "hank," and lace edging, seven and one-half livres per yard. Hats were fifteen livres apiece; black silk handkerchiefs, fifteen livres; collar-buttons, one and a half livres each (think of twenty-eight cents for a pearl button!); ribbon, four livres per yard; silk ferret (galloon), fifteen livres per piece; white thread, the same price per hank; sleeve-buttons, thirty livres per pair; Holland lace, fifteen livres a piece.[2] Obviously, the regular costume which all contemporary writers have described so particularly and identically, while it was ordinarily worn, and by all classes, was varied on special occasions by the substitution or addition of something finer and better. We have, indeed, the evidence of this in more than one shape. In 1788 the family of a man named Kerr was murdered by Indians on a farm of Jacques Clamorgan's, on the Bellefontaine road, six miles north of St. Louis. Lieutenant-Governor Perez went to the place and had an inventory made of the effects by Benito Basquez, Bentura Collell, and Santiago Chauvin, who appraised each article. Among them were nine women's dresses (Kerr had a wife and two daughters), valued at one hundred and fifty livres; two gowns, fifty livres; eight jackets (what are now called "joseys"), twenty livres; one pellerine, thirty livres; five yards black silk, seventy-five livres; seven handkerchiefs, thirty-five livres; five caps, one livre; five chemises, forty livres; one piece of cloth, ten and one-half livres; two pair of stockings, seven livres; one apron, seven and one-half livres; two pillow-cases, three livres; one looking-glass, five livres; four leather gloves, five livres; two pair silver buckles, thirty-five livres; three snuff-boxes, five livres; two pair shoes,

[1] The "point" was the stamp or "rose" in the corner of a blanket, indicating its size, those with a worsted "rose" being for domestic use, those with a black stamp for camp service.

[2] Other prices in this inventory are useful as guides. We must remember Mr. Gratiot traded to St. Louis, and by boat up the river to Prairie du Chien, so that he supplied both trappers, Indian traders, and the Indians themselves. Fire-steels, for getting sparks from flints, were three livres per dozen; scissors, each six livres; ferule knives, six livres each; canoe awls (punches used in stitching birch-bark canoes together), four livres per dozen; grass awls, twenty-four livres per dozen; grass wad-screws, twenty-four livres; vermilion, twenty livres per pound; gun-flints, ten livres per hundred; small knives, five livres per dozen; cartridge-knives, three livres each; butcher-knives, twelve livres per dozen; fine buck-horn handle butcher-knives, five livres each; tobacco boxes, three livres each; box-wood combs, ten livres per pair; hooked knives, two livres each; guns, forty livres; and gunpowder, twenty livres per pound, Glass beads (*graine d'orge*) for the Indian trade, two livres per pound in bulk, and three livres when strung. Only a few articles in this list—gunpowder for example—would be considered high by purchasers for the Indian trade to-day. Some are so cheap—butcher's knives for example—as to create the suspicion that they were "Brummagen ware," got up expressly for the Indian trade.

fifteen livres.[1] Monette, in his "History of the Valley of the Mississippi," describes the winter dress of the men as

"Generally a coarse blanket capote, drawn over their shirt and long vest. [But other writers either deny or ignore the vest.] The capote served the double purpose of cloak and hat; for the hood, attached to the collar behind, hung upon the back and shoulders as a cape, and, when desired, it served to cover the whole head from intense cold. Most commonly, in summer, and especially among the boatmen, *voyageurs*, and *coureurs des bois*, the head was enveloped in a blue handkerchief, turban-like, as a protection from solar heat and noxious insects. The same material, of lighter quality and fancy colors, wreathed with bright-colored ribbons, and sometimes flowers, formed the fancy head-dress of the females on festive occasions; at other times they also used the handkerchief in the more patriarchal style. The dress of the matrons was simple and plain; the old-fashioned short-jacket and petticoat, varied to suit the diversities of taste, was the most common over-dress of the women. The feet in winter were protected by Indian moccasins, or the more unwieldy clog-shoe; but in summer, and in dry weather, the foot was left uncovered and free, except on festive occasions and holidays, when it was adorned with the light moccasin, gorgeously ornamented with brilliants of porcupine quills, shells, beads, or lace, ingeniously wrought over the front instead of buckles, and on the side flaps."

The primitive people dressing thus spoke rather an idiom of the French tongue than a pure French, as might have naturally been inferred from their isolated situations in a remote and unfrequented locality. It lacked the nervousness, the *verve* and "snap" of the animated and brilliant dialect of Paris. There was a drawl and a languor about it noticeable to-day in the French of the Louisiana Creoles, but it was not corrupted, like that, with imported negro words and the vices of a defective negro pronunciation, and the occasional English words in it were not naturalized, but duly recognized as foreigners. These people are described by Stoddard, a good and trustworthy observer, as rather small in stature and slender in their make, "though their bodies and limbs are remarkably well proportioned, supple, and active. Their complexions," he says, "are somewhat sallow, and exhibit a sickly aspect, though they experience a good degree of health, which results in a great measure from the nature of their food (mostly of the vegetable kind), and their manner of dressing it.[2] They usually possess a keen, piercing eye, and retain their sight longer than most other people. They are almost strangers to the gout, consumption, the gravel and stone in the bladder, and in general to all chronic complaints. The hair of the people in the Delta and neighborhood of it retains a dark-brown color, while that of the old people in Upper Louisiana commonly becomes gray. The young men at this time manifest no great passion for long hair; not many years ago they were seen with cues dangling about their legs. Most of the laboring class disregard dress, and appear no better at home than on a trading voyage among the Indians."

The people of "the Illinois country" were to be envied in all their external relations. Therein they were blest enough to entitle them to La Salle's praise, that the land they dwelt in was truly a "terrestrial paradise." Government, both under French and Spanish rule, was a paternal, patriarchial despotism of the mildest sort. The commandant was everything, because content to be almost nobody. He seldom interfered unless appealed to, and then he was judge, jury, and executive all in one. Local affairs, the little concerns of the commune, the fences, roads, and ditches, were cared for by the people themselves, and

[1] The other effects of this family, which, however, was English or American—they came "from the other side"—were a horse (worth one hundred livres), two cows and calf (three hundred livres), one large hog and two sows, an old file, a box of pewter spoons, a pewter dish, eleven cups and saucers and six plates, "ware" (Edgewood), six tin measures, a tin coffee-pot, a tin tea-pot, two iron candlesticks, a side-saddle, four iron ovens, one hundred and fifty livres (bake-ovens), a frying-pan, seven wooden buckets, a pump, a lot of kegs, a water-bucket, three spades, two axes, a feather bed, three blankets, two smoothing-irons, one trunk, four chairs, one beaver hat, one bedstead frame, one plow, one spinning-wheel, one gun, a cock, six hens, and fifteen chickens.

[2] But Stoddard shows in other places that they lived well enough at times. He says, They "are temperate; they mostly limit their desires to vegetables, soups, and coffee. They are great smokers of tobacco, and no doubt this gives a yellow tinge to their skins. Ardent spirits are seldom used, except by the most laborious classes of society. They even dislike white wines because they possess too much spirit. . . . Clarets and other light red wines are common among them; and those who can afford it are not sparing of this beverage. Great economy is displayed in their family meals. This is not the effect of a parsimonious disposition, nor always of the want of adequate means; it results from a conviction of what their constitutions require; they readily sacrifice what may be termed luxury for the preservation of health, and it is seldom they contract diseases from intemperate excesses. Naturally volatile in their dispositions, they sometimes precipitate themselves from one extreme to another. Hence it is that, in making entertainment for their friends, especially for strangers of distinction, they study to render them sumptuous; their tables are covered with a great variety of dishes; almost every sort of food dressed in all manner of ways, is exhibited in profusion. The master of the house, out of respect for his guests, frequently waits on them himself. On such occasions no trouble or expense is spared in procuring the best wines and other liquors the country affords. Their desserts are no less plentiful, and there is no want of delicacy in their quality or variety. Many of these entertainments cost from two hundred and fifty to four hundred dollars, especially in Upper Louisiana, where the luxuries of the table are much more expensive than in the Delta." Stoddard, however, writing in 1804, is referring to the Lucullans of St. Louis, rich by the fur trade, and not to the frugal Catos and Columellas of the American Bottom.

there was practically no taxation. The Illinois French were always on the best possible terms with their Indian neighbors, with all the Indian race, in fact. There was unity and harmony, good will and friendship between the two races, joined to an unlimited reciprocal confidence. They interchanged good offices frequently, and the Indian never attempted to rob the Frenchman, who, as he felt assured, would never seek to despoil him of his land, nor to defraud him in the exchange of goods. "Providence," says Monette, "smiled upon the happy union of the white man of Europe with the red man of the American wilderness." In other words, the Frenchman treated the Indian justly and kindly, and in return the Indian acted in his natural character towards the Frenchman, neither suffering his instincts to be warped by passion nor distorted by fear. The French who settled in Illinois had habits at once vagrant and gregarious, and they assimilated themselves to and amalgamated themselves with the Indians in a remarkable way. They understood Indian habits, and respected Indian customs with unvarying courtesy and *politesse*. They did nothing by violence, made no attempt to take alien and repugnant natures by storm, as the Puritans, indeed, the Englishman of any degree, would have done under similar circumstances. On the contrary, they were not only conciliatory, but they paid the Indian the compliment—and none higher can be paid to a savage—of adjusting, in some measure, their habits and customs to his own. This policy, if such a cold term can be applied to what was the natural, spontaneous impulse of gentle and kindly natures, had its reward in a contented, happy, and prosperous existence.

The *habitant*, *voyageur*, and *coureur*, vagrant of lonely lake and stream and forest solitudes as he had been, was by nature gregarious and sociable. He and his kind and kin planted their villages in the wilderness alongside of another village of Indians, remote enough to avoid actual contact with its dirt and squalor, near enough to interchange visits and courtesy, to co-operate for mutual defense, and to have the use of one common chapel. The French village was compact. Its site was well chosen,—the margin of a prairie, the bank of some gentle stream, with room for common and common field, and resources whence firewood might easily be derived. Here it was placed in long, narrow streets, upon which the houses fronted close and in such contiguity that merriment and sociability might be common to all, and conversation might promote the consciousness of having neighbors. Here the old men sat on the porches in front of their houses, tapping their *tabatierès*, smoking their long pipes, and recounting adventures of days gone by to their dames beside them, while the youths, just home with stores of peltries gained at the headwaters of distant streams, related more thrilling adventures still to the ears of maidens ready to hearken forever. The villages were patriarchal in every suggestion of their aspects. The whole assemblage of houses resembled each homestead; all about it spoke of the family unit. There was a striking simplicity and uniformity about the houses. Each homestead had its own separate lot, its own separate inclosure of picket-fence dividing it from the neighbors. The house most commonly was a one-story structure, raised above the ground and surrounded usually by a gallery, which the owner roofed if he could afford it. The walls were generally made of logs of wood, planted erect in the ground or erect upon the comb of a wall. Sometimes, instead of the posts, there was simply a framework, with corner posts and studs horizontally connected by cross-ties, and filled in with "cat and clay," a paste of mud finely mixed with cut straw or with Spanish moss. When this surface had dried, it was whitewashed until it had a dazzling whiteness. The chimney, filled in with the like material, was made of four long corner-posts, converging towards the top, so that the interior diameter of the chimney at the top was not more than half as great as at the hearth. The primitive houses usually had the dimensions of twenty by twenty feet, or twenty by forty feet. They were low in the ceiling, and the roof, which had but little slope, was covered with large shingles or clapboards laid on poles, with a lap of three in four. When they had been carefully laid they were held in place by battens of poles stretched across them, the ends pinned down

with wooden pegs to the corners and the frame. Interiors were of two or five rooms, or more, with generally a lean-to or detached kitchen. There was seldom more than one window to a room; the frames, set with eight by ten inch glass, were hinged and swung like doors. When the chimney was erected in the middle of the house, it was built of stone throughout. In the ruder cabins the floors were made of slats or puncheons, but in better built houses there was a floor of nicely-joined plank, and this was kept well waxed.[1]

There was a primitive simplicity about the patriarchal homesteads which all unite in pronouncing very charming. The inclosure of the "lot" was a common yard, part for culture, part for general use, and in the towns was often an acre or so in extent. The father of the family had here planted his residence; as his children grew up, married, and had children of their own, a cottage or addition to the main building was put up for them hard by, until the original building was like an Indian banyan-tree, a dozen slenderer stems growing vigorously around the venerable central trunk. This same idea was carried out in the "commons" and "common fields" which every commandant, in making a grant of land for a village, was careful to designate and reserve. The greater part of the agricultural work of the French *habitant* was done in his garden and his common-field lot, the latter being always one arpent wide and forty arpens long, containing about thirty-four acres. Very few villagers owned or required for their simple agriculture more land than the common lots afforded them. As population increased, and new families were formed, more common lots were added for each one, taken from the commons. The "common field," as it has already been described, was a large contiguous tract of arable land, inclosed in a single fence, each family having its own lot for farm and garden, the entire product of which it enjoyed in fee-simple, but liable, however, to forfeiture from such neglect of the inclosure as endangered the safety of the whole. The syndic and the "viewers" regulated the fence, and the elders of the village also determined the seasons for conducting the various agricultural operations of the field, so as to prevent trespass, plundering, and neglect. The inclosures of the "common field" were so strong as to serve in some cases as a protection against hostile irruptions. The "commons" was simply a common pasture-field, free for the use of all, and supplying fuel also if it contained timber. Many had large flocks and herds, but few villagers pursuing any trade for a livelihood, and each being his own mechanic.

In the "common field" the villagers attended to their plowing and reaping in a regular and primitive way. The soil was rich and kindly, producing bounteously a great variety of plants. The American Bottom is peculiarly rich in fruits and in trees producing nuts, in berries and in almost every other product of the temperate zone. It yielded pecans and chestnuts, strawberries and melons, indigo, rice, and cotton, alongside of grapes and peaches, wheat and corn, and the *habitans* were thrifty and careful husbandmen, reasonably industrious. "The pursuits of the inhabitants were chiefly agricultural," writes Brackenridge of his infant days at Ste. Genevieve. "Their farming was carried on in a field of several thousand acres in the fertile river-bottom of the Mississippi, inclosed at the common expense and divided into lots separated by some natural or permanent boundary. Horses or cattle, depastured, were tethered with long ropes, or the grass was cut and carried to them in their stalls. It was a pleasing sight to mark the rural population going and returning, morning and evening, to and from the field, with their working cattle, carts, old-fashioned plows, and other implements of husbandry." These plows were peculiar. Gen. de Rozier, in his lecture on Ste. Gene-

[1] "The house of M. Beauvais was a long, low building, with a porch or shed in front, and another in the rear; the chimney occupied the centre, dividing the house into two parts, with each a fireplace. One of these served for dining-room, parlor, and principal bedroom; the other was the kitchen, and each had a small room taken off at the end for private chambers or cabinets. There was no loft or garret, a pair of stairs being a rare thing in the village. The furniture, excepting the beds and the looking-glass, was of the most common kind, consisting of an armoire, a rough table or two, and some coarse chairs. The yard was inclosed with cedar pickets, eight or ten inches in diameter, and seven feet high, placed upright, sharpened at the top, in the manner of a stockade fort. In front the yard was narrow, but in the rear quite spacious, and containing the barn and stables, the negro quarters, and all the necessary offices of a farm-yard. Beyond this there was a spacious garden, inclosed with pickets in the same manner with the yard. It was indeed a garden, in which the greatest variety and the finest vegetables were cultivated, intermingled with flowers and shrubs; on one side of it there was a small orchard containing a variety of the choicest fruits. The substantial and permanent character of these inclosures is in singular contrast with the slight and temporary fences and palings of the Americans. The house was a ponderous wooden frame, which, instead of being weather-boarded, was filled in with clay, and then white-washed. As to the living, the table was provided in a very different manner from that of the generality of Americans. With the poorest French peasant cookery is an art well understood. They make great use of vegetables, and prepared in a manner to be wholesome and palatable. Instead of roast and fried they had soups and fricassees and gumbo (a dish supposed to be derived from the Africans), and a variety of other dishes."—*H. W. Brackenridge: Recollections of the West.* The house of which Brackenridge is writing was situated in Ste. Genevieve, and the time of his first visit 1802.

vieve (the same plow was used everywhere else in "French Illinois"), says that they were made entirely of wood, without iron fastenings. The mould-board had only the curve that could be found in a root of the appropriate shape, but the beam was strong, the point sharpened. It could easily penetrate the soil, which, from repeated careful working, was light and friable. The only vehicle, says the same authority, was the wooden French cart, without tires. It was made light and strong, long and narrow, very suitable and convenient for travel or hauling over such roads as existed. It had strong, heavy shafts, to which a horse was attached, with two horses in the lead, and it could easily convey a large quantity of furs, lead, merchandise, or wood. The load of the latter was five-eighths of a cord, and the people of Carondelet made a business of fetching that load of wood to St. Louis for a great number of years. Perhaps some of them do it yet. The cart has not changed.[1] The traces used were made of strong seasoned raw-hide, well twisted, but still apt to "pull out" in warm weather. The horses of the period were ponies in size, resembling mustangs, but strong, of great endurance, and easy in their keep. They were Canadians in breed, but crossed with the blood of the wild Spanish horse of the plains, which the Osages, Pawnees, and Comanches captured and sold to Indian traders in considerable numbers. In stock indeed the French settlements of Illinois were rich. The commons and adjacent forests and prairies teemed with herds of domestic animals—swine, cattle, horses, sheep—wandering at will, almost a common stock and general store-house, from which all who needed, all who came along, might supply themselves.

A happy race. Competence and peace smiled upon them; the climate was benign; nature in her most unsophisticated and genial form brooded over their dwellings and guided their ways. Contentment was the only monarch enthroned there; joy and mirth sat on every countenance. The affluence natural to climate and soil, and common to all the *habitans*, became in effect great riches where the community's wants were so few and their tastes so simple,—in fact, there have been few people on earth ever so rich as were these Creoles of Upper Louisiana. They had no politics save loyalty to France and a dim belief that the king of France was monarch of all the earth, or, if he was not, ought to be. They were out of the world, and too ignorant of and indifferent to its affairs to be perplexed or anxious about them. Care was, indeed, a stranger in the village; and if it ever came at all, did not venture to tarry where everything was so alien to its haggard, hollow aspect. Learning none had, unless it was the curé, and he, their oracle in matters of faith, could be taken likewise as their voucher in matters of science. They wanted neither culture nor learning, so they had virtue and content, could speak the truth, and were bound by bargains. This they were, so much so that after land values had advanced a hundred-fold, sons and grandsons thought it the simplest, most matter of course duty for them to ratify, confirm, and complete the verbal contracts made by their parents. The records of St. Louis show this to have been done in hundreds of cases, and in spite of the vicious example set by ravenous "land-sharks" of another race.

In fact, their good name, and their unaffected respect and reverence for it, was no small part of this people's riches, to whom truth was the largest jewel in their carcanet, and mere sordid wealth gave no privileges that weighed a feather in the scale with actual merit. The calm, quiet tenor of their lives, the same from day to day and year to year, and the example of their Indian neighbors, perhaps, gave a sort of serious gravity, almost saturnine, to the ordinary deportment of the common people. There was a languid softness, an indifferent equipoise in their manners that might erroneously be mistaken for a gentle sadness till you knew and understood them better. But you had only to become their guest to understand their faculty to be amused and their zest in amusement, such zest that *fêtes* became a duty and enjoyment a business. Hospitality was not a virtue, for the neglect of it was a crime and a sin. There were no taverns in the Illinois, for every latch-string hung out, and every man's house was the stranger's.

But they had virtues of a positive sort, to exercise which was a duty, to neglect them a disgrace. Punctuality and honesty in all dealing were among these, politeness and courtesy to strangers, friendship and cordiality and *bienséance* among neighbors, gentle kindness and affection in the domestic relations, reverence and respect to elders, justice to all. Women were blest in these simple communities, for they had, in addition to kindness and affection, all the consideration which belongs to equals and some of the deference which is yielded to a superior faculty of judgment. In a matter of business the husband

[1] The pattern of the cart in which Madame Chouteau and family were seated when old Rivière drove them from Fort Chartres to Cahokia, Laclede riding alongside, to make their first visit to yet unplanted St. Louis, is identical with that in which ex-Capt. U. S. Grant used to drive his load of wood from Dent's place in Carondelet to St. Louis not a generation ago.

always consulted his wife, and, as she seldom judged wrong, her opinions usually prevailed. It seems as if all this could only be said of Utopia; it is written, however, about "the country of the Illinois,"—but that, as La Salle declared it to be, was "the terrestrial paradise."

Amusements, festivals, and holidays were natural among such a people. They were too devout not to keep every *fête* in the calendar, and too fond of enjoyment not to wish there were twice as many more. The dance, the music of the violin, cards, billiards,—every evening had something of the sort; every festival, every Sunday was rounded up with the innocent recreations which these words imply, when the young people gave themselves to amusement as to acts of devotion, and priest and patriarch, when their joints were too stiff to permit participation, looked on and smiled and cheered the scene. It was part of their religion to be cheerful on *fête* days, and to celebrate all festivals with the jocund sacrament of mirth. Neither sex nor condition were kept from these festive enjoyments; pleasure was like the church floor, free to all without distinction of quality. The black slave danced to the same fiddle that sent his mistress and master tripping, and the stolid Indian sat by on his haunches, wrapped in his blanket, watching and wondering. It has become a proverb, the contentment and happiness of the negro slaves in French Illinois. All were Catholics, and all kept the festivals of the great mother church in the same identical spirit. The New Englander, Capt. Stoddard, saw these things, so contrary to what he had been used to behold at home, but he could not bring himself to condemn or believe them wrong.

"Perhaps the levities displayed and the amusements pursued by the French people on Sunday," he says, "may be considered by some to border upon licentiousness. They attend mass in the morning with great devotion; but after the exercises of the church are over, they usually collect in parties and pass away their time in social and merry intercourse. They play at billiards and other games, and to balls and assemblies the Sundays are particularly devoted. To those educated in regular and pious Protestant habits such parties and amusements appear unseasonable, strange, and odious, if not prophetic of some signal curse on the workers of iniquity. It must, however, be confessed that the French people, in these days, avoid all intemperate and immoral excesses, and conduct themselves with apparent decorum. They are of opinion that there is true and undefiled religion in their amusements, much more, indeed, than they can see in certain night conferences and obscure meetings in various parts among the tombs. When questioned relative to their gayety on Sundays, they will answer that men were made for happiness, and that the more they are able to enjoy themselves the more acceptable they are to their Creator. They are of opinion that a sullen countenance, attention to gloomy subjects, a set form of speech, and a stiff behavior are more indicative of hypocrisy than of religion; and they say they have often remarked that those who practiced these singularities on Sunday will most assuredly cheat and defraud their neighbors during the remainder of the week. Such are the religious sentiments of a people void of superstition; of a people prone to hospitality, urbanity of manners, and innocent recreation, and who present their daily orisons at the throne of Grace with as much confidence of success as the most devout Puritan in Christendom."[1]

The festivals and joy-days of French Illinois were numerous. It was Corpus Christi Sunday, the day before the famous affair of May 26, 1780, and the people of St. Louis were afield picking wild strawberries. There were harvest-homes and vintage feasts and feasts of corn-planting, Easter and Whitsuntide, and midsummer and Michaelmas; but we have no space to consider all of these. Let us see how Christmas and New Year's and Twelfth-night were kept in Upper Louisiana, turning to and confining ourselves to these *fêtes* the more readily because in speaking of them we can put ourselves under the guidance of that appreciative and accurate pilot, the late Judge Wilson Primm. Let us imagine ourselves in ancient and venerable Cahokia upon a Christmas-eve, almost any time between 1760 and 1800. The little village, not as distant from the river then as now, is in a stir of preparation and a bustle and a hubbub of joy and celebration; for the long-absent ones have come home for the holidays, the last keel-boat, with its load of good things, in charge of the patriarchs of the village, has arrived on time, as it was bound indeed to do with two such stout lads as François Lefebre and Jean Baptiste Saulcier tugging at the *cordelle*, pushing with the poles, and plying the short nervous oars. They had Christmas presents for Manon Peletier and Thérèse Bissonnet, and it would have been an endless pity if they had failed to arrive in time to deliver them. And this very morning, could anything be more opportune! the long-absent fleet came into the creek from distant Prairie du Chien. A bateau and three long canoes they went out ('tis now fifteen months long gone), and they have come back with two bateaux and five canoes, laden down to the gunwale with robes, furs, and peltries,—a fortune for the young men and their parents. Besides the Indians and mulattoes, there was Regis Cabassier, the widow's handsome son, and Laurent Saulcier, and Jean Marie Amalin, Gabriel Dumain,—what a tall *voyageur* he's grown to be, to be sure!—and Tonish Labuxière, a perfect Nadowissioux, with his long black hair, flashing eyes, brown skin, and beaded leggings and moccasins,—fine doings in the wilderness, to be sure, when such costumes can be found hanging on the bushes

[1] Sketches of Louisiana, 316–17.

Pierre Martin, too, and Louis Pancrasse! Warrant ye we'll have kings a plenty for *jour des rois*, and some weddings to come off at Paques! So runs the busy, idle tongue of village gossip, as the boats are unpacked, their cargoes carried up to the village, and the absent ones made welcome home, singing, as they draw near, the immemorial *chanson* of the *voyageurs*, which the demoiselles pretend not to hear, but listen to all the time:

"Tous les printemps
Tan' de nouvelles,
Tous les amants
Changent de maitresses;
Jamais le bon vin ne m'endort,
Quand l'amour me réveille.

"Tous les amants
Changent de maitresses;
Qu'ils changent qui voudront,
Pour moi je garde la mienne," etc.

Or else that other rondeau, which you may still hear the canoe-men sing or the Pembina cart-drivers chant almost any time up in far-away Manitoba:

"Dans mon chemin j'ai rencontré
Trois cavaliers bien montés.
Lon, lon, laridon daine,
Lon, lon, laridon dé.

"Trois cavaliers bien montés,
L'un à cheval et l'autre à pied.
Lon, lon, laridon daine,
Lon, lon, laridon dé."

In the houses of the village there is a busy stir of preparation,—busy, that is, for people so quiet and usually undisturbed. Floors are scrubbed and waxed, decorations and evergreens prepared for the church and for houses, and the young ladies get ready their own finery too. There is much cooking going on in the kitchen, for this is a time of feasting and of many neighborly interchanges of rival dishes. The cordials and cherry bounce and honey are hunted up in the store-room, with the bottles of home-made wine from last year's vintage,—currant and gooseberry, anyhow, if not grape,—and the ratafia brought from New Orleans is strained and decanted.[1] In every house almost there was game for the pasty, and every housewife without exception was making, after her grandmother's recipe, a store of *croquecignolles*, a sort of doughnut or cruller, fashioned and fried in odd fantastic shapes. These, with pies, cakes, and the glass of cordial or bounce or ratafia, were handed to every visitor on every occasion, and each housewife tried to give a sort of individuality to her *croquecignolles*, so as to make them, as it were, the trade-mark of her culinary superiority.

When night fell on Christmas Eve, and the decorations were all arranged and the cooking done, none went to bed, but, on the contrary, all arrayed themselves in their best, and turned their thoughts with expectancy to holy things. At last the clock struck, and the church-bell echoed, twelve o'clock midnight,—the hour of Bethlehem,—and all the *habitans* made their way to the church, to attend the midnight mass. No scene could be more impressive in its quiet solemnity. The old log church was filled, and outside a dusky cloud of Indians and negroes, each decked forth in his best. The altar was decorated gorgeously, and illuminated with a profusion of wax candles, while the venerable priest bent under the weight of his sacred vestments, and trembled with the solemn impression of the holy occasion. A still hush pervaded the scene, broken at last by the swelling music of the Gregorian chant, chorded by trained and tuneful voices, and by the solemn words of the appropriate offices which the holy man intoned. Then the host was consecrated, and all the congregation, equals in the eye of God, and, just now, of man, pressed thronging to the balustrade to partake the sacrament. Then the words of the benediction trembled upon the celebrant's lips, and the concourse withdrew from the sacred building, and made their silent way homeward. The man is not to be envied upon whose imagination such scenes fail to leave a powerful and enduring impression.[2] It seems certain that to their honest religious convictions, and the candor with which they obeyed them, the *habitans* of Upper Louisiana owed much of that sterling business integrity and that rigid adherence to truth in all its forms which always excited the surprise and admiration of strangers.

On leaving the church all the different members of each family turned homeward, proceeding in a body, when once they had assembled, to the domicile of the head or oldest member or patriarch of the family, to partake of the *réveillon*. This was a Christmas

[1] Ratafia was a semi-distilled rum, made from molasses or sugar, alcoholic, but sweet and cloying.

[2] F. M. Bracken[illegible], writing in 1851 of such a scene witnessed in 1802, says, "On Christmas-eve it was the custom to keep the church open all night, and at midnight to say mass. On this occasion I found myself alone for nearly an hour before the time, seated on a high stool or chair, with a cross in my hand, in front of the altar, which was splendidly decorated, and lighted with the largest wax candles the village could afford. My imagination was at first filled with an indescribable awe at the situation in which I was placed, and I gazed upon the sacred images about the altar as if they were in reality what they represented; but after the first impression had passed away, I began to reflect upon what I was doing, and asked myself many questions, to which I could find no satisfactory answer."—*Recollections of the West.*

breakfast, ample and abundant for all, the eating of which was made an occasion for expressing and acknowledging the reciprocal sentiments and obligations which should ever exist in families, and remain the backbone of social well-being. It was a family reunion, a thanksgiving feast *sans gêne*.

The rest of the day was given to religious exercises at the church, and when evening began to fall the neighbors were apt to gather in some house where there was the most room and the best waxed floor; the violin found its way thither also, and there was sure to be dancing, to last as long as nature did not fail, and they were tough, these people of French Illinois.

On New Year's Eve, soon after nightfall, the young men of the villages would assemble at some rendezvous, decked forth in fantastic costumes and masked. Each was provided with a bucket, basket, sack, or other receptacle in which solids and liquids could be carried. Thus equipped, they proceeded in a band from house to house, excepting none, and in each place they sang in full chorus, "*La Guignolée*."[1]

"*La Guignolée*" was a quaint song set to quaint music, and the words ran thus:

"Bonoir, les maître et la maîtresse,
Et tout le monde du logis!
Pour le premier jour de l'année
La guignolée vous nous devez.
Si vous n'avez rien à nous donner,
Dites-nous le;
Nous vous demandons pas grand'chose,
Une échinée,—
Une échinée n'est pas bien longue—
De quatre-vingt-dix pieds de longue—
Encore nous demandons pas grand'chose!
La fille âinée de la maison
Nous lui ferons faire bonne chère,
Nous lui ferons chauffer les pieds.
Nous saluons la campagnie,
Et la prions nous excuser;
Si l'on a fait quelque folie,
C'était pour nous desennuyer;
Une autre fois nous prendrons garde,
Quand sera temps d'y revenir.
Dansons la guenille—
Dansons la guenille—
Dansons la guenille!

"*Chorus:* Bonsoir, le maître et la maîtresse,
Et tout le monde du logis!"[2]

In its present form the song is evidently of negro origin: slave is written in every line. There was of course an accompaniment of action, and rude or gross enough to demand the apologetic latter part. Judge Primm says that when the young men came to that part of the song where the young lady is to be feasted and have her feet warmed, some swain would break in with a ditty about doves and cuckoos, nightingales and green bowers, "closing with a protestation that he was dying for the soft eyes of his mistress."

All this preliminary performance concluded, the baskets, etc., were produced and donations were bestowed, the masquers capering in the rag-dance, which, by the way, was a true Saturnalian performance, and akin to the sword-dance of the English Christmas mummers, in which the hobby-horse, Robin Hood, Maid Marian, etc., bore conspicuous parts. In departing, the chorus bore the masquers on to the next house, where the same performance was renewed, and so on until all the village had been traversed or the night was well spent. At the different houses contributions of various sorts were received, but generally such as would be of service towards a coming festival, as sugar, maple sugar, coffee, lard, flour, candles, syrup, eggs, meat, poultry

[1] "What the meaning of this word is," says Judge Primm, "I do not know, and no one of the inhabitants has been able to explain it to me. The Gauls, at the commencement of the new year, were accustomed to present to each other small branches of '*gui*' (mistletoe), which had been previously blessed by the Druids, singing at the same time a kind of hymn, the burden of which was '*au gui l'an neuf*' ('to the mistletoe the new year'). *Au gui l'an neuf* may have been transformed into *au gui la nouvelle année*, and this may have been still further corrupted into *la guignolée*." This is sufficiently far-fetched to suit antiquarians, but philologists will still wish to be informed how the second *g* got into the word, which Judge Primm does not explain. But, in fact, he looks too far. The *guignolée* is a Christmas-box, but not the "aguilaneuf" of the Roman and Druidic feast of fools. On the contrary, it is a Christianized remnant of the old Pagan tradition. The church used to say masses at this season for the absent and those at sea, etc.; and as they could not pay for those masses themselves, the charitable and compassionate were solicited to contribute to prevent the dire consequences which might otherwise ensue. "Guignole," in French, is the beam of the steel-yard,—the balance,—and the burden of the song was, "Give us money, good people, fill the mass-box, so that if any of those poor absent souls shall have perished, they may not turn out to be weighed in the balance and found wanting for lack of a few masses." When three-fourths of the male population were away in the wilderness two-thirds of the year, such appeals would naturally have force. At any rate, *La Guignolée* is "the balanced."

[2] Judge Primm's prose translation of this song—he rightly says it cannot be reduced to English verse—is as follows: "Good-night, master and mistress, and everybody in the house! For the first day of the year you owe us the guignolée. If you have nothing to give us, say so. We do not ask you to give us much,—a chine; a chine of pork is not very long, ninety feet long, that is all we ask. We do not ask much, once more, only the eldest daughter of the house. We will give her good cheer and have her feet kept warm. We salute the company, beg them to excuse us if we have perpetrated any folly, it was only for fun and to make fun. Another time we will be more careful,—when it is time for us to come again. Let us dance the rag-dance—let us dance the rag-dance—let us dance the rag-dance! Good-night, master and mistress, and people of the house!"

ratafia, etc. These provisions being all gathered up were put away for the future.

At daybreak the next morning the whole population attended the celebration of the mass, and when this duty was performed the next thing was to ask the paternal blessing, "and then could be seen the children, the grandchildren, and the great-grandchildren, each in their turn, on bended knee, imploring a blessing from the authors of their being; and that blessing was given, ever coupled with the heartfelt prayer that God, the father of all, would ratify it in heaven, and so guide and protect them amid the joys and sorrows, the snares and perils of life as to fit them for another and better existence. This touching ceremony," adds Judge Primm, from whom we have been quoting, "repeated at the commencement of each year, gave tone to the whole current of their thoughts and acts. Filial piety was their guiding star. The young never dreamed of forming matrimonial alliances without the full and unqualified assent not only of the immediate parents, but of family relatives; and even grown men, settled in life, scarcely ever entered into any important business contract without the assent or advice of their parents; and never, even where it might otherwise have been to his advantage, has a child been known to repudiate the acts of his parents. When the assent of the parents had been obtained to a marriage, the affianced pair would together visit the relatives, explaining, '*Nous sommes venus demander votre consentement à notre marriage*,'"—a pretty enough custom, by the way, since it made a direct bid in advance for the good will of the whole circle of relatives on both sides.

After the blessings—and the breakfast, of course—the several families of the village began to interchange visits, and pay one another the compliments of the season with that exquisite grace of courtesy which so embellishes the French character. The regular phrase, "*je vous souhaite*," or "*je te souhaite*" (according to the degree of intimacy), "*une bonne et heureuse année*," was full of feeling and meaning, because full of sincerity. Old feuds were healed, old quarrels made up, old animosities ceased to rankle, because then and there forgiven and forgotten. All breaches of social intercourse and family ties were healed by the kiss of peace and amity, and, indeed, kisses ran round in volleys. Naturally the young men took advantage of this custom to kiss and compose their quarrels with all the young girls whose rosy lips were at all accessible, saying, "*Mam'selle, je vous souhaite une belle et heureuse, et un gros mari à Pâques*." (Happy New Year, and a big husband at Easter!) To which mademoiselle probably replied with a glance only, as she handed the glass of cordial or ratafia and the plate of *croquecignolles*. Always, before the day passed, children went to visit their godfathers and godmothers, and to receive from them their "*étrennes*," or New Year's presents, and even the poorest contrived to give something. The New Year's night generally wound up with a ball.

Twelfth-night, however, was the occasion which the young people looked upon as most exclusively theirs. This, the feast of the Epiphany, commemorative of the adoration of the Magi, of the recognition and worship of the infant Jesus by the wise men of the East, has always been a festival of peculiar legendary interest in the Catholic Church. It has just the flavor of mysticism about it which touches the popular imagination, and from the earliest mediæval periods *le jour des rois* has been a season of essentially popular festivals. On Twelfth-night, some fitting house being dedicated to the *fête*, the articles collected by the young men who "ran *la guignolée*" were brought to the spot, and converted by the young girls and matrons into as sumptuous a feast and supper as the materials justified. There were pasties and pies, stews and ragouts, and the *croquecignolles* were piled as high as they would go. An especial Twelfth cake was always baked by the girls, but before the dough was put in the pan four beans were kneaded into it. The table was spread, the feast served, it disappeared, the fiddles began to be tuned up for the dancing, and now the Twelfth cake was cut,—*à tout cavalier toute honneur*. Each lady whose slice contained a bean became a queen of the revels, and she in turn chose some swain to be her king, signifying her preference by presenting to him a bouquet. Before the coronation, however, the ball must be in full swing. The violins respond to the nimble bow, there is neither waltz nor mazourka nor German, but the ball is opened by the elder and married people with a stately regulation "*mennet de la cour*," in a style that would have won dignified recognition and qualified approval even from the haughty chin of Louis Quatorze. After that the floor is the young people's by prerogative right, but is often disputed by some venerable grandsire and his spouse, who hobble forth and exhibit fancy steps learned by them during the *beaux jours de jeunesse*—the days of Frontenac or D'Iberville, or perhaps those days before the hoar Atlantic rolled between them and La Belle France. Such *ailes de pigeon*, such *chasses* and *battus*, and such applause welcomes the rheumatic caperings of the roguish exiles from the chimney-corner!

Shortly before midnight, the queens having selected

and proclaimed their kings,—the court-cards of the pack,—a night and place are chosen for the first of the "kings' balls," at which all present are expected to attend without further bidding. The expenses of this ball are borne by the four kings just chosen and enthroned. They are not heavy. The room and fuel cost nothing. The music can be hired generally for a livre or two, with a good supper and an allowance of ratafia, which sometimes disturbs the *tempo* of the violins towards daylight. The lights are but tallow candles mounted in sconces hung against the walls, and the "refreshments" do not go much beyond coffee, cakes, pies, a little *bouillon* of game, and a glass or two of cordial or ratafia,—not near enough to make a hole in the treasury of the four kings. At the close of the first kings' ball, the queens select other four kings, who in turn select new queens for the next kings' ball, and so a series of festivities is begun which lasts until Shrove Tuesday and the carnival.

We have tried to present a faithful picture of life as it was in the old French towns of Upper Louisiana. It is such a picture as will tempt the modern poet of "the Earthly Paradise" to burn his book and buy a limited express ticket for the American Bottom. Yet there are said to have been Cahokians, even in those primitive days, who climbed upon the top of Monk's Mound, and, looking across the river, yearned to get away, as Prince Rasselas yearned to be set free from the Happy Valley in Abyssinia. We do not believe the story. We would far rather credit that other legend of the Yankee from St. Louis who found himself in Cahokia one day and tried to persuade an old citizen of the town to go West (to St. Louis) and grow up with the place. "Look at the stacks of furnaces and forges," said he, "look at the industries, and the manufactures,—man alive, you'll get rich there; here you'll rust!" But the Cahokian, sitting on the top rail of his common-field fence and resting his elbows on his knees, without taking the pipe from his mouth, gently and mildly replied, "The town is young, dear sir, and can't help these things. After a while, when it has grown older, it will learn better. I truly hope so, for I wish it well. It has a noble example before it," and he waved his hand in the direction of the hamlet of his affections. "It has a noble example, sir, and must profit by it in the end."

St. Louis was one of the old towns of the Illinois, but it was so much more, and so very different from them in a hundred respects, that we only get the broad and general features of the place, and very few of the distinctive particular ones, from their description. That lays, as we said before, simply the groundwork of the picture,—the features of the landscape which identify the spot must still be painted in. It is to be said that the rough and hardy American pioneers who invaded the French settlements during and immediately after the war of the Revolution had no great opinion of the primitive French settlers. Neither had the Americans who began to come into St. Louis from that date, until, between 1816 and 1820, there was a flood of these rough, pushing, enterprising, and rather unscrupulous immigrants, changing, in the course of a few years, the entire face of the country and the manners of the people. These Goths and Vandals of the border called Kaskaskia "Kusky," and took power and progress away from the old Illinois towns without so much as saying "by your leave." They carried off the capital, and actually tried to teach the simple *habitans* the mysteries of "shin-plasters" and "wild-cat" banking. The common opinion concerning the French settlers is exactly reflected in the late Governor Ford's "History of Illinois," a book full of the frankest solecisms and the most meritorious faults and defects:

"These people," he says, speaking of the descendants of the old French settlers of Kaskaskia, Prairie du Rocher, Prairie du Pont, and Cahokia, "had fields in common for farming, and farmed, built houses, and lived in the style of the peasantry of old France an hundred and fifty years ago. They had made no improvements in anything, nor had they adopted any of the improvements made by others. They were the descendants of those French people who had first settled the country . . . and such as subsequently joined them from New Orleans and Canada, and they now formed all that remained of the once proud empire which Louis XIV., king of France, and the Regent, Duke of Orleans, had intended to plant in the Illinois country. The original settlers had, many of them, intermarried with the native Indians, and some of the descendants of these partook of the wild, roving disposition of the savage, united to the politeness and courtesy of the Frenchman. In the year 1818, and for many years before, the crews of keel-boats on the Ohio and Mississippi Rivers were furnished from the Frenchmen of this stock. Many of them spent a great part of their time, in the spring and fall season, in paddling their canoes up and down the rivers and lakes of the river-bottoms, on hunting excursions, in pursuit of deer, fur and wild-fowl, and generally returned home well laden with skins, fur, and feathers, which were with them the great staples of trade. Those who stayed at home contented themselves with cultivating a few acres of Indian corn in their common fields for bread, and providing a supply of prairie hay for their cattle and horses. No genuine Frenchman in those days ever wore a hat, cap, or coat. The heads of both men and women were covered with Madras cotton handkerchiefs, which were tied around in the fashion of night-caps. For an upper covering of the body the men wore a blanket garment called a 'capot' (pronounced 'cappo'), with a cap to it at the back of the neck to be drawn over the head for protection in cold weather, or in warm weather to be thrown back upon the shoulders in the fashion of a cape. Notwithstanding this people had been so long separated by an immense wilderness from civilized society, they still retained all the suavity and politeness of their race. And it is a remarkable fact that the roughest hunter and boatman among them could at any time appear in a ball-room or other polite and gay assembly with the carriage and behavior of a well-bred

gentleman. The Frenchwomen were remarkable for the sprightliness of their conversation and the grace and elegance of their manners. And the whole population lived lives of alternate toil, pleasure, innocent amusement, and gayety.

"Their horses and cattle for want of proper care and food for many generations had degenerated in size, but had acquired additional vigor and toughness; so that a French pony was a proverb for strength and endurance. These ponies were made to draw, sometimes one alone, sometimes two together, one hitched before the other, to the plow or to carts made entirely of wood, the bodies of which held about double the contents of the body of a common large wheelbarrow. The oxen were yoked by the horns instead of the neck, and in this way were made to draw the plow and cart. Nothing like reins were ever used in driving; the whip of the driver, with a handle about two feet long, and a lash two yards long, stopped or guided the horse as effectually as the strongest reins.

"The French houses were mostly of hewn timber set upright in the ground, or upon plates laid upon a wall, the intervals between the upright pieces being filled with stone and mortar. Scarcely any of them were more than one story high, with a porch on one or two sides, and sometimes all around, with low roofs, extending with slopes of different steepness from the comb in the centre to the lowest part of the porch. These houses were generally placed in gardens surrounded by fruit-trees of apples, pears, cherries, and peaches; and in the villages each inclosure for a house and garden occupied a whole block or square, or the greater part of one. Each village had its Catholic Church and priest. The church was the great place of gay resort on Sundays and holidays, and the priest was the adviser and director and companion of all his flock. The people looked up to him with affection and reverence, and he upon them with compassion and tenderness. He was ever ready to sympathize with them in all their sorrows, enter into all their joys, and counsel them in all their perplexities. Many good Protestant ministers, who stoutly believed these Catholic priests to be the emissaries of Satan, would have done well to imitate their simple-hearted goodness to the members of their flocks."

In St. Louis, from the very first, congregated the most enterprising and adventurous of the *coureurs* and the *voyageurs* of the French settlements, reinforced by men of active and energetic purpose and intelligence from abroad. There is no computing the impression and influence of a handful of men like Laclede, the Chouteaus, Charles Gratiot, Manuel Lisa, the Cerrés, the Vallés, François Vigo, etc., upon a litle community of some hundreds of persons, where, as was said, "everybody knew everybody and everybody's dog." Three-fourths the early population of St. Louis were hunters and boatmen, to the exclusion of other occupations. While the population of Kaskaskia, Ste. Genevieve, and Carondelet was agricultural, that of St. Louis did not till the common fields assiduously enough to raise its own bread. Its neighbors derisively called it "Pain Court," and it was for many years in the regular habit of buying provisions from the towns just named, which gave attention to the cultivation of the soil. Its early traders, from the very first, undertook extensive operations and embraced wide areas in their transactions, employing not only capital, but the best men who could be found. Laclede had his partners in New Orleans, and the most of his time was spent in establishing trading-posts up the Arkansas, the St. Francis, and the Red Rivers. The Chouteaus spent years among the Indians, acquiring such a familiarity with their language and manners and customs that they were sought after by the government as Indian agents and interpreters. In addition to the posts which Laclede established, they had stations on the Osage, the Upper Missouri, the Des Moins, and on Lake Michigan. Vigo traded from St. Louis to Vincennes, thence to Montreal and Detroit, and back again to New Orleans. Gratiot traded to Prairie du Chien and New Orleans, and went to England in the regular routine of business for his partners. Manuel Lisa was an explorer as much as a fur-trader, and he was as ready to fight his rivals and the Indians as to buy their peltries.

Charles Gratiot and Auguste and Pierre Chouteau, indeed, were merchants such as sometimes do not appear more than once in a century. The former, for all he did business in Cahokia, and had lawsuits with Sanguinet of St. Louis, was better known in New York and Philadelphia than in the latter town, and better known in Paris, London, and Geneva than on this continent. A man of the firmest convictions, he was an American and a republican from the first, and never ceased to exert himself to procure the annexation of Upper Louisiana to the Union. These convictions guided his conduct and that of his family on all occasions, and it is well known that the latter finally left St. Louis on account of their intolerance of slavery. As a business man, Pierre Chouteau is said to have had no rival in the valley of the Mississippi for forty years. The very genius of commerce inspired him, and the plans of this Indian trader, who got his earliest training among the Osages, on the borders of Kansas, reached out wide like the arms of the Mississippi River. His spirit was bold, his sagacity unerring, his business reputation never sullied by a breath. He was a man who looked what was in him,—tall, erect, splendidly proportioned, his black hair, dark, penetrating eyes, and pleasant but commanding features, all indicated the leader, while his sympathetic but strong, vibrating, accentuated voice, and the French vivacity and courtly frankness of his manners gave him the stamp of the diplomatist.

Men of this sort ought to have been able to build up their own town, since they built up others whenever it suited their business. Note this of the founding of New Madrid by Cerré, from the narrative of Godfrey Lesieur, whose father, François, with Joseph, a brother, started away in youth from Trois

Rivières, Canada, and found themselves, two penniless adventurers, in St. Louis. They sought and found employment with Gabriel Cerré, a fur-trader, and the father-in-law of Auguste Chouteau. He was a Kaskaskian, but his business took him to St. Louis, as it did all the enterprising people of that section. Cerré set the two youths to classifying and baling furs and peltries for market, and this one fact gives an idea of the extensive scale on which the business was then carried. "After remaining about a year with Mr. Cerré, they were both sent in a canoe down the Mississippi River, and instructed to find the most suitable place for the establishment of a trading-house among the several tribes of Indians then inhabiting the country. The first place they found which afforded the greatest advantages and inducements was a large Delaware Indian town, where New Madrid now stands. There were also, on the margin of the Louis Prairie and Big Prairie, several other large Indian villages. They quickly returned to St. Louis, and reported to Mr. Cerré all they had seen, portraying to him the results that would, in their opinion, be derived from starting a house at the place mentioned. The year following they were sent by Mr. Cerré to build a house, and taking with them a lot of goods suitable to the Indian trade, were successful beyond their expectations, making large collections of furs and peltries." In a few years competition reduced the profits, whereupon Cerré sent them to build a house at some other point. This is the way to build up business. François Lesieur's son, some years after, reports that his own collections of furs in this country, as agent for Pierre Chouteau, averaged sixty or seventy thousand dollars a year.

This business it was which established St. Louis at once, gave the town stability, and the leading inhabitants incentives to enterprise and control of wealth. Hunters found regular employment and good pay in the little trading-post town, and they profited by it. The spot, indeed, had been a hunter's paradise from the first, as well as a fur-trader's goal. Game abounded in the adjoining prairie, and the hunters in primitive times had no difficulty, when starting out at daybreak, in getting a fat buck for breakfast. The deer lingered long around grounds so familiar to their feet as if loth to leave. Daniel Webster killed one in the American Bottom opposite Jefferson Barracks about 1835, and in 1837 Judges Wash and Krum both killed deer one morning while hunting near the residence of the late Hon. Edward Bates. The hunters went forth from St. Louis to gather furs and peltries for the traders of St. Louis, and from Laclede's day up to 1830 the town was the general rendezvous of hunters and fur-traders, the Montreal of the Mississippi, and the depot of all the basin of the great rivers emptying into that river between the Minnesota and the Rio del Norte. Washington Irving[1] has graphically described the appearance of the town in 1810, when John Jacob Astor's "partisans" first came there to provoke the rivalries of the Missouri Fur Company. It was at that time, he says,

"a frontier settlement, and the last fitting-out place for the Indian trade of the Southwest. It possessed a motley population, composed of the Creole descendants of the original French colonists, the keen traders from the Atlantic States, the backwoodsmen of Kentucky and Tennessee, the Indians and half-breeds of the prairies, together with a singular aquatic race that had grown up from the navigation of the rivers, the 'boatmen of the Mississippi,' who possessed habits, manners, and almost a language peculiarly their own, and strongly technical. They at that time were extremely numerous, and conducted the chief navigation and commerce of the Ohio and the Mississippi, as the *voyageurs* did of the Canadian waters; but, like them, their consequence and characteristics are rapidly vanishing before the all-pervading intrusion of steamboats.

"The old French houses engaged in the Indian trade had gathered around them a train of dependents, mongrel Indians and mongrel Frenchmen, who had intermarried with Frenchmen. These they employed in their various expeditions by land and water. Various individuals of other countries had of late years pushed the trade farther into the interior, to the upper waters of the Missouri, and had swelled the number of these hangers-on. Several of these traders had two or three years previously formed themselves into a company, composed of twelve partners, with a capital of about forty thousand dollars, called the Missouri Fur Company, the object of which was to establish posts along the upper part of that river and monopolize the trade. This company had in its employ about two hundred and fifty men, partly American hunters, and partly Creoles and Canadian *voyageurs*. All these circumstances combined to produce a population at St. Louis even still more motley than that at Mackinaw. Here were to be seen, about the river-banks, the hectoring, extravagant, bragging boatmen of the Mississippi, with the gay, grimacing, singing, good-humored Canadian *voyageurs*. Vagrant Indians of various tribes loitered about the streets. Now and then a stark Kentucky hunter, in leathern hunting-dress, with rifle on shoulder and knife in belt, strode along. Here and there were new brick houses and shops,[2] just set up by bustling, driving, and eager men of traffic from the Atlantic States; while, on the other hand, the old French mansions, with open casements, still retained the easy, indolent air of the original colonists; and now and then the scraping of a fiddle, a strain of an ancient French song, or the sound of billiard-balls showed that the happy Gallic turn for gayety and amusement still lingered about the place."

But the Missouri Fur Company was not the first of these co-operative establishments in St. Louis by more than a dozen years. The Missouri Trading Company was formed in 1794, at the suggestion of

[1] Astoria, i. 141.

[2] No brick houses yet, Mr. Irving; it will be a year before the first one is begun, and a dozen more years before there are a dozen brick houses.

Lieutenant-Governor Zeñon Trudeau, and comprised "all the traders of St. Louis." who were assembled to "unite in copartnership, consolidate their respective capitals, and control the trade in peltries," of the regions of the Upper Missouri. A petition addressed to Governor Don Gayoso de Lemos, in regard to this company, by Joseph Robidou, declares that only two of the St. Louis traders drew out after the organization was formed. Robidou complained of Jacques Clamorgan to De Lemos, and probably the organization did not work well. It was, anyhow, abandoned. The fur trade, however, increased steadily in value, and Stoddard shows that in his day it was worth $200,000 a year, of which nearly $170,000 was in the pelts and skins of beaver, deer, and others. The Missouri Fur Company was organized in 1808, the chief spirits of it being Pierre Chouteau and Manuel Lisa, with Governor William Clark as one of the members. Manuel Lisa was the most active and energetic member, going out at the head of all the important expeditions, and insuring a good return for the "outfit." Lisa was president of the company as late as 1820. At that time, however, the old company had practically disbanded, and the name was simply a decorous disguise for Pierre Chouteau and company. In 1812, the amended articles of association of the Missouri Fur Company began as follows: "The undersigned do hereby form a company of limited partnership, and do associate and agree with each other, to the end of exploring in a commercial way, and hunting within that portion of country within the claim of the United States, and westwardly of a point which shall be five hundred miles from the United States present factories, and to conduct business within the said boundary, and at the town of St. Louis, under the name and title of the president and directors of the Missouri Fur Company." The capital stock is limited to $50,000, in 50 shares, of $1000 each, half paid on subscription, the remainder in installments, not exceeding $250 per share, after thirty days' notice by the board. The stock of the old Missouri Fur Company, with its "plant," is to be taken in lieu of $27,000, and the rest is to be cash. These directors were to be elected each year, and to receive an annual salary at the rate of $100 per annum.

After the demise of this company, the Chouteaus, Lisa, and Astor formed an alliance under the name and style of the American Fur Company, the successor of the Missouri and the Rocky Mountain Companies; and when Astor withdrew, Pierre Chouteau, Jr., became himself the American Fur Company. This company continued the work of the two companies which it had succeeded, opened up and explored the Rocky Mountains and Western waters, and for thirty years held a monopoly of the fur trade south of the vast regions ranged over by the Hudson's Bay Company. The firm did business on a very large scale, and at one time owned and maintained five forts, all built by themselves in the heart of the Indian country,—Forts Sarpy, Benton, Union, Pierre, and Berthold. It was not until 1858, after repeated efforts persisted in for a number of years, that the firm was able to get a steamboat up to Fort Benton, but finally the trip was made.

This trade was very valuable. The average returns on goods sent out was 100 per cent. in peltries, and this by no means represented the actual profits, for the goods were valued at their selling price in St. Louis, not their cost, and the peltries at their currency value in St. Louis. But red cloth that might retail at 5*s.* a yard in St. Louis probably did not cost the companies more than 3*s.*, including freight, interest, and insurance; and on the other hand, beaver worth $2.00 a pound in St. Louis might fetch twice as much in London, and five times as much in Canton. With capital enough, therefore, to buy wholesale for cash, and to carry the furs and deliver them in the best markets, those embarked in the St. Louis fur trade might easily make from 250 to 500 per cent. and turn their capital over once a year. Brackenridge, in his "Views of Louisiana," notes the fact that in 1810 the Indian trade of St. Louis with the Osages alone was worth $30,000, or nearly $6 per capita, the outlay in goods being $20,000,—a profit of 50 per cent. measured in furs. With the Cheyennes the trade was expected to yield a profit of 100 per cent., and so also with the Poncas and Arickarees. The trade with the Crows was counted on to return three for one, and that with the Pastanounas fifteen for four. The trade at Arkansas Post with the Chickasaws and Cherokees yielded five for two, and that with the various bands of Sioux four for one. The Spanish Governors of Louisiana, said Brackenridge, by a mercenary policy, had done great injury to the Indian fur trade, and threatened to throw it all into the hands of the British, their heavy charges for concessions forcing traders to charge high prices for their goods to the Indians; whereas it was the policy of the traders of the Hudson's Bay and Northwest Companies to supply goods and stores at low figures, charging exorbitant figures for their spirits. The Indians required to have stores and supplies to enable them to hunt at all; but to obtain the coveted whiskey, at no matter what price, they were sure to hunt assiduously. The same idea of cheap goods and

dear spirits is the key-note of the British fiscal policy to-day, and, while it will not do to say that Mr. Gladstone's plan is to cheapen clothing and food, so that the British workman may have the more to spend at the publican's, that is the outcome of it.[1]

St. Louis was founded in the pursuit of the fur trade, and it was the immense network of beaver-hunting streams made tributary to it which gave the fur trade of the town its immediate great value. The beaver recedes before civilization more rapidly than the honey-bee advances in its front. A timid, shy, and sagacious animal, hunted by many enemies, and procuring his subsistence by great labor, the beaver never attempts to restore his settlement when it has once been invaded by the white man. He abandons it at once, seeking refuge in the recesses of some deeper wilderness. The otter and the muskrat, with not a little of the beaver's intelligence, show a much greater tenacity in their resistance of the encroachments of man. The spoor of the former may still be seen along the edge of rocky forest streams; and the latter refuses to be expelled from the banks of mill-dams and the meeting-places of tide and fresh water, where his long and intricate covered ways may to-day be traced in every direction. But the beaver disappears as soon as the lonely trapper sets foot in the glen where he has hid his house, and the consequence is that his pelts need to be carried a long distance before they reach market. The cost of transportation of furs from the trapping regions of the Northwest, by lake, river, and portage, to Montreal, and thence to Europe was enormous. It consumed half the value of a pack of furs—deer-skins—to bear it from the Minnesota lakes, by Lake Superior and Mackinaw, Lake Nipissing and the Ottawa, to Montreal. But from St. Louis there was easy water transportation on the one hand to the vicinity of the trapping regions, and on the other to New Orleans and a market. This gave the traders and hunters of that place a great initial advantage over their rivals in the Northwest, and it was profited by to the utmost by the energetic men we have described and their associates and successors, such as Henry, Gen. Ashley, etc. Under their fostering care the fur trade of St. Louis rose to a value of six hundred thousand dollars a year.

One thing caused St. Louis to cling to the fur trade the more tenaciously, and that was that, until steamboats began to ascend the Mississippi on regular trips, the growing town was prevented by the difficulties of navigation from getting its share of the large and increasing commerce of the Ohio River. From the peace of 1783, and particularly from the opening of navigation on the Mississippi by Spain, a great influx of population was received by the counties of Virginia, Pennsylvania, Kentucky, Ohio, Indiana, and Illinois binding on the Ohio and its chief tributaries; and these new-comers vastly increased the merchantable surplus of products from these rich and teeming soils. The transportation of these products, of the host of incoming settlers and their supplies, made an immense business. But when the mouth of the Ohio River was reached the current turned down, not up, and goods from Redstone, Pittsburgh, Cincinnati, and Louisville either were carried direct to New Orleans, or, if they broke bulk at all on the Mississippi, did so at New Madrid. So much so was this the case that passengers from up the Ohio to St. Louis were expected to leave the boat at New Madrid and proceed by horse to St. Louis. In the rare cases when goods were taken up the river for a market, they seldom went higher than Cape Girardeau or Ste. Genevieve. The earliest hunters in the Missouri country, those of Cerré, started from Kaskaskia, crossed the Mississippi at Ste. Genevieve, and thence made a portage across to the Bonne Homme, Gasconade, and Osage Rivers. This was due entirely to the difficulty of navigating heavily-laden boats against a rapid stream, and the produce-laden craft of the Ohio was never meant to return against the current, either with or without cargo, for, as soon as their freight was disposed of, the boats were sold too, as lumber, and the boatmen returned overland.

St. Louis, in retaining control of the Missouri and Arkansas Rivers fur trade, not only acquired control of the large barter and exchange trade thus made local in that town, but it controlled also the chief *currency* of those sections, and had the advantage of possessing large supplies of a circulating medium of fixed and

[1] It has been usual to underestimate the value of this fur trade of St. Louis, through defective acquaintance with all its bearings. Thus, Martin, in his "History of Louisiana," vol. ii. 173, estimates the value of the fur trade of Upper Louisiana, in 1799, at only $70,000, upon the following returns: 1754 bundles (average 100 pounds each) of deer-skins, at $40=$70,160; 8 bundles bear-skins, at $32=$256; 18 bundles buffalo robes, at $30=$540. Total, $70,956. Martin does not seem to have known that at that time the most valuable part of the furs never went to New Orleans at all, but were sent to Canada *via* Vincennes and Detroit, or *via* Prairie du Chien, only the coarse and bulky pelts being sent down the river. Stoddard shows that 36,900 pounds of beaver, 8000 pounds of otter, 1300 pounds of marten, and 300 pounds of lynx were the average return for fifteen years, none of these going down the river. A bundle of castor (beaver) was worth $180 on the spot; a bundle of lynx was worth $500; of otter $450, and of marten $300; and the yearly value of these furs averaged $110,000. A buffalo robe was worth about $6, and a bear-skin $8.

certain value, receivable by Indians and whites equally and alike. Fur was the currency of St. Louis from the days of Laclede very nearly until Missouri became a State and the town an incorporated city. Other things were taken in exchange and barter,—beeswax, whiskey, potash, maple-sugar, salt, wood, feathers, bear's oil, venison, fish, lead, but fur was the currency and the standard of value, the representative of and equivalent to the *livres tournois* of hard metal. The only small coin consisted of Mexican dollars, cut with a chisel into four or five pieces,—"bits." A pound of shaved deerskin of good quality represented about twice the value of the livre, and a pound of beaver, otter, and ermine represented so many pounds of deer-skin. A "pack" of skins had a definite weight, and thus trade and computation were both easy. Checks and notes were drawn against them, deposits were made of furs and packs, and on the whole they constituted a much better and more uniform currency than the staple tobacco which was at one time the only circulating medium of Virginia and Maryland. "Bons" were a species of order or note for goods, redeemable in peltries, which, when signed with the name of any responsible merchant or trader, had full currency in local and general trade. Practically, they were certificates of deposit, but convertible or exchangeable into any other equivalents in the course of trade and barter. Next to the peltry, which had a regular currency and pretty near a uniform value from Mackinaw, Detroit, and Prairie du Chien among the French settlements all the way to New Orleans and the Belize, the best medium of certain value, but only of limited circulation, was the "carot" of tobacco. This article is still prepared in Louisiana by the plantation manufacturers of tobacco, and "carots" of "Perique" may still be seen in all the tobacconists' shops, —a solid roll of the shape and appearance of a bologna sausage. These rolls were called "carots," from their resemblance to the root of that name, and they were in common use and demand in the early days in Lower and Upper Louisiana from their convenience. All the grown population, male and female, took snuff; each carried his or her snuff-box habitually, and each prepared his snuff and filled his box in the morning. The snuff was not ground as now, but rasped or grated from the end of one of these rolls, and hence their form and solidity was a desideratum.[1] The carots had a definite weight, like the packs of furs, and their usual value was about two livres. They were sometimes prepared by boring a half-inch or inch hole in a log of tough wood; the tobacco, damp and cured, was wedged into this hole tightly with mallet and peg, and when the plug was as tight and hard as was desired the log was split and the tobacco taken out.[2]

The following copy of a St. Louis bill of lading, in 1809, will illustrate how completely the people were saturated with the conception of a peltry currency: "Shipped by Peter Provenchere, of the town of St. Louis, merchant, on board the boat 'J. Maddison,' whereof Charles Quirey is master, now lying at the landing before the town of St. Louis, and ready immediately to depart for Louisville, Ky., six packs of deer-skin, marked and numbered as per margin (F. T. 96, 99, 109, 111, 112, 113), and a barrel of bear's oil containing about thirty-two gallons, all in good order and well conditioned, which I promise to deliver in like good order and condition (unavoidable accidents excepted) unto Mr. Francis Tarascon, merchant, Louisville, or to his assigns. And, moreover, I acknowledge to have of the said Peter Provenchere a note of Peter

[1] This mode of preparing snuff was still not unusual at the beginning of this century. An anecdote is still going the rounds about Gilbert Stuart, the portrait painter,—he who alone succeeded in making a portrait of George Washington,—that a visitor called at his house one morning while the artist was taking a walk, and concluded to wait for him. Presently Stuart came in, nervous and agitated, and, without noticing his visitor, hurried to a cupboard, took his tobacco and grater and grated himself a handful of snuff. Not till his capacious nostrils were well supplied did he turn to speak. Then, in his courtly way, not without a reflection upon the slavery of habit, he explained that he had accidentally gone to walk without his snuff-box.

[2] We have before us the inventory of an auction sale—a *rendue*—had Dec. 23, 1780, "by Don Francisco Cruzat, lieutenant-colonel of the Louisiana regiment of infantry, and commandant of this western portion of the Illinois country," a sale made by order of Charles Sanguinet of certain effects of Louis Dubreuil, of New Orleans, the goods to be paid for in deer-skins or beaver at the current value or in money, as they may choose, five months credit, good security required. The sale is made by Constable Demers, who doubtless officiated as auctioneer, and the minutes of the sale are subscribed by Sanguinet, Diego Blanco, and notary Labuscière. At this sale *one hundred and six carots of tobacco* were sold for one hundred and ninety-one livres. A yoke of steers was sold for three hundred and ninety-nine livres ten sols, showing close bidding. A bottle of gravy-sauce and some vinegar sold for twenty livres, while "a lot of several historical books" only fetched twelve livres ten sols. A hundred empty bottles sold for thirty-nine livres. The fondness of the French *habitans* for the auction form of sale was very marked. In many of our rural districts throughout the country all auctions borrow the French name and are called "vendues,"—or, rather, in the current pronunciation, *vandus*, and the custom was probably borrowed also. In St. Louis the effects of all deceased persons under all circumstances were cried at auction, the commandant authorizing and ordering the sale, and the notary authenticating the account. The Archives of St. Louis contain as many records of such sales as they do of any other class of transaction. The sociable habits of the people made these sales go off well; they were made the occasion for little reunions, and the women always attended them and helped to give spirit to the bidding.

Menard on Louis Lorimier, inhabitant of Cape Girardeau, *for one thousand pounds of receiptable deer-skins*, the said note transferred to my order, and I bind and engage myself to ask of the said Louis Lorimier the payment of the said note, and if I reclaim it to deliver to the said Francis Tarascon or assigns the thousand pounds of deer-skins, together with the said six packs and the barrel now received, and in case of no payment to return the note to Mr. Tarascon, he or they paying freight. In witness whereof I have set my hand to these bills of lading, all of the same tenor and date, one being accomplished, the others null and void." The pack of deer-skins was thus about one hundred pounds in weight,—in this case the average was within a fraction of one hundred and seven pounds,—and notes were given, not for the value of so many deer-skins, but made payable in receiptable skins themselves, just as a warehouse bill to-day is payable in so many bales of cotton or hogsheads of tobacco, or an elevator receipt is "bon" for so many bushels of wheat or corn. The fixed price was forty cents per pound for finest deer-skins, thirty cents for medium, and twenty cents for inferior, and all contracts, unless there was an express stipulation to the contrary, were made in this medium. Spanish coin never affected the fur currency. The Spanish government paid off its officers and troops in hard dollars, but this was a mere drop in the bucket, —less than twelve thousand dollars a year for St. Louis. Even after the transfer to the United States, peltry continued the controlling currency for a number of years. Judge J. B. C. Lucas made his first purchase of a house for his residence in St. Louis in this currency, buying of Pierre Duchouquette and wife their domicile, for the price of six hundred dollars in peltries. This was Dec. 14, 1807.

One circumstance, however, materially influenced the value and the stability of the peltry currency, and this was the fact that it was only redeemable in money at New Orleans. Perrin du Lac, in his journal of travels in Louisiana, 1801–3, calls attention to this cause of depreciation in the circulating medium, and its tendency to enhance prices of commodities at St. Louis. To be sure, he was a chronic fault finder, and determined to see no possibility of good in the Spanish government. Yet it is true what he says, that "all commercial transactions, unless otherwise specially agreed to, are made conformably to this standard of value, and are taken in barter at the rate of forty cents per pound; but, as they have to be taken to New Orleans to realize that price, there is much risk and loss; so, consequently, the merchant sells his goods at a charge proportionate to the venture he assumes. Everything sells at an enormous price, the result of which is that the commonest workman receives pay for labor at the rate of ten to twelve francs per day."

In spite, however, of its control of the fur trade and of a currency, it was not until the city had completely mastered the transportation problem that St. Louis fairly began to grow. From the day when the arrival of the ten barges was thought to be worthy a *fête*, and to be chronicled among the memorabilia of the place, to the day when a Levee eight miles long is piled with freight, and cannot find room for the triple tiers of steamers ranged along its front; from the day of an occasional canoe-ferry and cow-paths across the commons for the only roads to the present, when a dozen trunk line railroads fetch in every day the products of every clime, is a long step apparently; but St. Louis took it when the first steamboat equalized to her the currents of the Mississippi and the Missouri, when imports from Europe came from the Atlantic coast instead of the Gulf for distribution, and the lead of the Missouri Potosi was piled upon the Levee alongside the pigs of Galena and Dubuque. But before that there was a long wrestle with the difficulties of transportation. The *charrette*, or cart, which has been described, could do little off the farms, and the heavy wagon of Pennsylvania was not in use anywhere to the west of Pittsburgh,—the "prairie schooner," as it came to be called, was, with reason, supposed to be unfit for a country which possessed no roads. Off the watercourses, all the transportation was done by means of pack-horses and pack-mules, and Capt. Bonneville has recorded the fact that he was the first fur-trader and adventurer at the head of a brigade of trappers who ever attempted to go west of the Kansas River with a wagon. Twenty years later than that, great wagons, drawn by long spans of oxen or by reduplicated teams of mules, found it easy to cross the South Pass to California, or go over the forks of the Canadian, *en route* to Santa Fé. But all the transportation of the Missouri Fur Company overland was done with pack-mules, and in the early days of the fur trade, where the canoe would not go, the goods must be loaded upon the shoulders of the *voyageurs* themselves.

The first goods received by the French settlements in the American Bottom, and the first peltries sent to market by them, were by the way of Montreal and the St. Lawrence River. Cahokia and Fort Chartres, before regular intercourse was established with New Orleans, traded through the lakes by way of the Illinois and Wisconsin Rivers, but Kaskaskia undoubtedly received and sent many goods by the Wabash. When the water was high, it was not a long nor diffi-

cult portage from the upper waters of the Kaskaskia, by the bed of the Embarras River, to the Wabash, and when the water was low, goods came down the Ohio to Fort Massac, and thence were carried by *charrette* and pack-mules to Kaskaskia. But very soon after St. Louis was founded all supplies came from New Orleans, and we find Laclede's trading-post and Cahokia actually sending goods to Prairie du Chien and probably to Michilimackinac also, while Vincennes was recognized to be a station on the water highway between New Orleans and Detroit. In this arduous service, a long and difficult route, the *voyageurs* had to lay aside the paddle for the oar, and the bateau and the barge superseded entirely the birch-bark canoe. The latter was still used to some extent in the upper waters and smaller streams, but it was abandoned so far as the Mississippi was concerned. It never was used on the Missouri, where, if any ferriage or short water transit was required, the rough boat made of buffalo hides stretched over a wooden frame was resorted to, and for regular navigation the barge and bateau.

The barge was but a bateau enlarged and made more commodious for passengers, and of a greater capacity for freight. On the Ohio, the ark and the flat-boat were contrived, to move down produce, families, and stock,—rude structures of great capacity, rafts, in fact, with two or three great oars worked by a dozen men, less to propel than to guide the unwieldy craft, which, indeed, was expected to move with the current of the river, and, to all practical purposes and intents, was a raft, broken up and sold for old lumber when its destination was reached. The Ohio and Mississippi River steamboats of the present day are simply engines set upon flat-boats, and with houses for freight and passengers built above them. These arks and flat-boats it was in the service of which the race of Ohio and Mississippi boatmen was trained,—a rough and boisterous class, but trustworthy and capable, and willing to endure periods of extreme fatigue and exposure. A great responsibility rested upon them, for often they carried to New Orleans cargoes worth thousands of dollars, the proceeds of which they had to fetch safely home with them and deliver to the owners. Often a boatman from Redstone or Pittsburgh or the Kanawha, after selling his goods in New Orleans, would seek passage round the Florida Capes in some vessel returning from the Gulf to Baltimore, and thence home over the mountains. But the usual route of the returning boatmen was up the Mississippi River to the second or third Chickasaw Bluff, and thence by the "Tennessee trace," a well-beaten path, to Cumberland Gap, and through that to the Ohio. It was a route through a wild country, and beset with perils beyond those proceeding from the Indians, through a part of whose territory it lay, for outlaws and desperadoes were to be encountered at almost every portion of this line of transportation and travel, tempted by the rapid succession of rich prizes, and the unsettled state of a country almost without the protection of law, and filled with adventurers of every stripe. There were caves in the river's banks, both on the Ohio and the Mississippi, where bands of highwaymen had their rendezvous, and whence they would sally forth to plunder the boatmen and capture their boats and cargoes, if they could not defend themselves. In many a bayou and lagoon along the course of the great river gangs of land-pirates lurked, ripe for rapine and murder too, and scarcely less dangerous were the gamblers who loitered in New Orleans or made their hideous homes in "Natchez-under-the-Hill." If the boatmen escaped these perils, others awaited them on the line of the "Tennessee trace," where there were regularly organized gangs of mounted highwaymen, attracted by the large quantities of specie the returning navigators brought home with them. So daring and numerous were these gangs that the boatmen, for safety, were forced to travel in well-armed parties and convoys, sometimes two or three hundred strong, and even then were frequently not able to get through without a battle. Such a training as this made the Ohio boatmen a class almost *sui generis*, hardy, self-reliant, bold, reckless, careless of their lives, and rude in their speech, yet faithful to their trusts in a remarkable degree, and always ready to defend the property of their employers with skill and courage. Had this not been the case the transportation business must have perished, because its profits would have been destroyed.

But between New Orleans and Louisville and St. Louis transportation up the river was demanded as well as down, and to supply this on a scale commensurate with the demands of commerce the *keel-boat* was contrived, a vessel capable of efficient service and heavy burdens in waters not too shallow. The keel-boat was capable of carrying from ten or twenty to sixty or seventy tons; it was built with a view to offering as little resisting surface to rapid currents as was compatible with good freighting capacity, and it was propelled by a composite enginery, including oars, poles, and the *cordelle*. With the latter, while one hand steered, the rest of the crew towed the boat, carrying the tow-rope over their shoulders as they walked along the river-bank. With the pole, the boatmen, in gangs, planted a heavy beam upon the bottom of the stream, and pushing against it, moved

rapidly towards the stern of the boat. That reached, they lifted their beams and ran to the bow, to continue the arduous and monotonous task. The oars were great sweeps, sometimes with a broad square end and a long leverage, which several men worked in huge clumsy oar-locks. This difficult and fatiguing boatman's service was almost altogether undertaken by the French Creoles, the descendants of the *voyageurs*, or by negroes and mulattoes. These boatmen worked with uncovered heads in the hottest weather, or at most a handkerchief about their foreheads and hanging down to cover their necks. They lived upon a poor and meagre fare, and were remarkable for their fidelity, honesty, and peaceful ways. But they were not capable of defending their charges with the fierce combativeness and bull-dog tenacity that characterized the American boatmen.

The best ideas of the difficulties of the transportation service in early St. Louis are to be gathered from the narratives of the primitive travelers and first immigrants to that point. In 1809, Charles Hempstead and his brother went to St. Louis from Connecticut. There were at this time, he used to relate, but two practicable routes from the Atlantic States to the Mississippi. One of these was *via* Philadelphia, across the mountains by wagon to Redstone, thence by flat-boat and keel-boat down the Ohio and up the Mississippi. The other route was by sea to Alexandria, Va., thence by Conestoga wagon or horseback to Wheeling, or *via* Winchester and Romney to Clarksburg, and thence to Marietta. From this place, if there were no boats, it was common for the traveler to buy a canoe and paddle himself down the Ohio to Shawneetown, at the mouth of the Wabash, whence there was a road, or "trace," across country to Kaskaskia. The latter, being the most populous settlement in that part of the West at the time, was naturally a centre of attraction to travelers. Mr. Hempstead and his brother, finding no vehicle or other mode of transportation at Shawneetown, shouldered their packs and walked to Kaskaskia, a matter of one hundred and fifty miles' distance. The country was settled thickly enough for the lads to find a bed and supper every night at some sort of a stopping-place. At Kaskaskia it was easy to find horses for transport to St. Louis. Philip Fine, who came from Tennessee, a lad, in 1801, recollected how he tumbled from a keel-boat into the Tennessee River. At Cape Girardeau the boat was sold, and pack-horses hired to transport their goods to the Maramec River, where Fine had an uncle living, an old settler. J. G. Easton remembered when all the transportation of St. Louis and vicinity was done in the French cart, or *charrette*, on land and keel-boats by river. The motive-power of the *charrette* was the French pony, or scrub oxen yoked by the horns. A cart with one horse carried about five hundred pounds; with two added in the lead its capacity was doubled. It took a full day, and often longer, to carry a load to St. Charles and back. These carts were made entirely of wood, without a pin or a band of iron about them. Sometimes the wheels were a solid block, but old Regis, a wheelwright distinguished in St. Louis in his day, and a sort of jack-at-all-trades, contrived to turn out respectable hu[illegible]d spokes by means of a lathe rigged by himsel[illegible]ply a spring-pole, a tug of rawhide, and a spindle,—and with this lathe the old workman used to manufacture capital peg-tops for the boys, charging from two to four tallow candles apiece for them, the highest-priced ones being made of seasoned hickory, with steel point.

Mrs. Anne L. Hunt, the daughter of Hon. Charles J. B. Lucas, came to St. Louis with her father in 1805, when he was sent out by Jefferson as one of the commissioners of land titles and judge of the district court. Judge Lucas purchased a flat-boat in Pittsburgh, and the government provided him with a corporal's guard,—one man to steer and four men to row. The boat had a little caboose aft for the protection and shelter of Mrs. Lucas and her children: all the rest was open [illegible]d exposed to the weather. The cargo was made [illegible] the judge's furniture and the stores and provisi[illegible] a voyage of two months. The party started June 9, 1805, without any company, but Mrs. Hunt notes that they occasionally passed boats and rafts on the way. At Shawneetown Judge Lucas took his mattress ashore to sleep on the bank, and the women were terribly alarmed in the night by the yells of Indians, but it was only a pow-wow of some kind, not a scalping-party. At Louisville the travelers went ashore and tarried with friends, while the soldiers rowed the boat over the falls. When the mouth of the Ohio was reached the travelers bought or hired horses, and proceeded on them towards St. Louis, Gen. Wilkinson having failed to send them a promised keel-boat. This boat they caught and went aboard at Cape Girardeau. "It was shaped somewhat like a barge, and was worked with oars, with a *cordelle* or rope, which the men pulled when the banks permitted, and with spiked poles, which were used to keep it off the bank." "I don't recollect exactly when we reached St. Louis," wrote Mrs. Hunt, "but it was somewhere in the forepart of September, which would make the entire trip about three months, and that was considered a fast trip in those days. Such a thing as a hotel or boarding-

house was of course unknown here, but my father, who had been up to St. Louis ahead of us to find out what delayed the keel-boat, had requested Mr. Soulard, who resided here, to rent a house for him." It is not to be presumed that there can be much traveling when the travelers must buy and provision their own flat-boat, buy their horses if they wish to ride, and rent a house if they wish to stop at their journey's end. To be sure a flat-boat at the mouth of the Ohio would sell for more than it cost at Pittsburgh, a Kaskaskia pony could be bought for one hundred livres, and a house that could be bought for five hundred dollars would scarcely rent for more than fifty or sixty dollars a year, still travel under such circumstances must necessarily have very narrow limitations.

Dr. Robert Simpson, an early postmaster of St. Louis, whose narrative has been partly quoted in a previous chapter, was a native of Port Tobacco, Charles Co., Md., and came from Washington, D. C., to St. Louis in 1809, having been appointed assistant surgeon in the United States army, and received orders to report at Fort Madison, on the Upper Mississippi. He left Pittsburgh in January with a detachment of troops, for whose transportation a number of flat-boats were prepared. They were intended for New Orleans. The ice was running badly when this army sallied forth in scows, and a boat was lost at Point Pleasant. Dr. Simpson left the flotilla at Fort Massac, and there waited several days for a passage up to St. Louis. At last a keel-boat came along with merchandise and a crew of three men and a steersman. "I procured a passage," says the doctor, "and we made our way up the Mississippi by means of poles, oars, *cordelle*, and sails. Our *cordelles* were made of bed-cords, our sails of four blankets sewed together, and our mast a sapling cut from the bank." Continuing his narrative, which abounds in happy and vivid reminiscences, the doctor says,—

"I did not reach Fort Madison until May, 1809. In June, 1810, I came to St. Louis in a canoe. I visited the town again in February, 1811, coming part way by land and part by water. . . . On 1st of February, 1812, I left on an overland trip for Washington, in company with John Rice Jones, Clement B. Penrose, Thomas F. Riddick, and Reuben Lewis. Mr. Riddick and I passed through Lexington, Ky., to East Tennessee, and at Bean's Station concluded to send our horses back to Louisville and take the stage. Between broken-down stages and being packed on stage-horses we had a hard time in getting to Washington, where we arrived in something less than forty days from St. Louis,—slow and rough traveling in those days."

Levi Pettibone accompanied Henry R. Schoolcraft, the Indian archæologist, on his first excursion to the West. They descended the Alleghany River from Olean to Pittsburgh, and thence down the Ohio in an ark,—the first one of the season. It was built of stout planks, with the lower seams calked, forming a perfectly flat bottom. It was about thirty feet wide and sixty feet long, with gunwales of about eighteen inches in height. Upon this were raised posts and boards eight feet high, forming an interior, divided into rooms for cooking and sleeping. The whole was covered with a flat roof, and near the front were two long sweeps, or gigantic oars, occasionally resorted to to keep the unwieldy vessel from running against islands or dangerous shores. Every night the ark was tied up to a tree, and a fire built on shore. The crew and passengers landed at everything like a town, and bought milk, butter, and eggs. The hands on these boats, and on flat- and keel-boats, we learn from a memorandum furnished the Missouri Historical Society by Capt. Joseph Barclay, were content to work for twenty-five dollars a trip and found, though a trip often consumed three months.

Timothy Flint's "Recollections" are dry and prosy, but they embody the actual observations and experiences of a conscientious traveler. He went West in 1815, and has described the transportation system the more minutely in that it often occasioned him great incommodity. He started from Philadelphia to Pittsburgh, and noted pretty much all that he saw *en route*. The people he met were styled "backwoodsmen," their baggage was called "plunder," and the common tavern signs in the mountains were the wolf, the bear, and the eagle. The travelers passed "hundreds of Pittsburgh wagons," the teamsters fit companions for the Ohio boatmen,—rude, profane, selfish, and drunken. At Pittsburgh, Flint was struck with the multitude and variety of river-craft, the stately barge, big as an Atlantic schooner, "with its raised and outlandish deck," requiring twenty-five hands to work it up stream; keel-boats, long, slender, elegant, carrying from twenty to thirty tons; Kentucky flats, or "broad-horns," resembling a New England pig-stye, and carrying often seventy tons; "family boats" of the flat-boat species, large, roomy, with comfortable apartments, stoves, and other comforts; "covered sleds," "ferry flats," "Alleghany skiffs," pirogues, common skiffs, and "dug-outs." The manners of the boatmen Flint found to be as strange as their language: "Their peculiar way of life has given origin not only to an appropriate dialect, but to new modes of enjoyment, riot, and fighting. Almost every boat, while it lies in harbor, has one or more fiddles scraping continually aboard, to which you often see boatmen dancing." Our author descended the Ohio in two or three different crafts. Here is his description of "poling:" "We found a new source of amusement

in contemplating a set of twelve or fourteen hands, walking slowly forward, and half bent, with the shoulder firmly fixed against the knob of a long pole, whose iron point was set in the bottom, and thus apparently with great labor propelling the boat against the stream. As soon as they have walked the length of the boat, they raise their poles, walk forward in Indian file, and renew their 'set,' as the phrase is, again."

From Cincinnati to St. Louis, Flint traveled in a keel-boat he had bought. For a twenty-ton boat nine hands was the complement to stem the current of the Mississippi, and French boatmen were the best, said our author. At one place they would *cordelle*, at another pole, at another "bush-whack" (pull the boat along by the bushes hanging down from the bank), at a fourth row. When the current was too strong on one side they would cross to the other, and all the way it was a laborious and exciting struggle.

"Let no deluded emigrant imagine," says Flint, "that he can work a boat up this river without great patience, expense, and labor, and, after all, without danger. The danger and fatigue in this kind of boating are undoubtedly greater than those of sea navigation. Let the emigrant, then, who ascends this river make the proper estimates of trouble, expense, and danger in advance, and arm himself with the requisite patience and resources. Above all, let him have a full complement of faithful and experienced hands. I do not remember to have traversed this river in any considerable trip without having heard of some fatal disaster to a boat, or having seen a dead body of some boatman, recognized by the red flannel shirt which they generally wear. The multitudes of carcasses of boats lying at the points, or thrown up high and dry in the wreck-heaps, demonstrate most palpably how many boats are lost in this wild and, as the boatmen always denominate it, 'wicked river.'"

Travel was high in proportion to its difficulties and dangers. In 1810 Mr. Billon paid $50 to have his trunks transported from Shawneetown to Kaskaskia. The actual expenses of keel-boating from New Orleans to St. Louis, on the basis of a boat of 40 tons, was about $23 a ton, so that freight could not be transported that distance for less than about $1.25 per 100 lbs. For passengers, the fares from New Orleans to Louisville and St. Louis, even after steamboats began to run, were from $125 to $150 each. This was in a few years reduced to $35 from Pittsburgh to New Orleans, and $10 or $12 only for deck passengers. From Boston to Central Illinois, in 1832, the fare was about $100. From Baltimore to Wheeling, by mail-stage, the charge used to be $12. From Louisville to St. Louis, by way of Vincennes, $25; by steamboat, $12. Freight from Baltimore to Wheeling was $1.50 per 100 lbs.; Wheeling to St. Louis $2 per 100; New Orleans to St. Louis, by steamboat, 65 cents per 100. The average reduction in cost of transportation from keel-boat rates to early steamboat rates was in the ratio of 5 to 1. Remembering this standard, we find that keel-boat rates, just prior to the introduction of steam navigation at St. Louis, would have ranged about as follows: St. Louis to New Orleans, going $100, returning $125; second class, $30 to $35. Freight, descending $1.50 per 100 lbs., ascending $3. St. Louis to Louisville, $50; second class $20; freight $1 per 100 lbs. St. Louis to Fever River, $50 up, $30 down; to Falls of St. Anthony, $75; to Franklin, in the Missouri, $2 per 100 lbs.; to Fort Leavenworth, $5; descending rates, one-third of the above. These figures might be extended further, but there is no need to use them except for illustration.[1]

The difficulties, dangers, and expenses of travel and transportation, however, could not arrest the tide of immigration when it had once fairly set in. It exerted such pressure, it rose in such a volume, that it overcame every obstacle. A St. Louis journal under date of Oct. 26, 1816, has the following significant paragraph: "Missouri and Illinois exhibit an interesting spectacle at this time. A stranger to witness this scene would imagine that Virginia, Kentucky, Tennessee, and the Carolinas had made an agreement to introduce us as soon as possible to the bosom of the American family. Every ferry on the river is daily occupied in passing families, carriages, wagons, negroes, carts, etc.,—respectable people, apparently able to purchase large tracts of land. Come on, we have millions of acres to occupy; provisions are cheap and in abundance." Flint saw and mixed much with this great body of new settlers, which pervaded every part of Illinois and Eastern and Northern Missouri, besides contributing a large quota to enhance the

[1] Soon after the general tide of immigration rolled into Missouri and Illinois, the following was the scale of prices for labor and articles of common use:

Wages.—Mechanics, $1 per day and board; master-mechanics, millwrights, scientific workmen, $2 and $3 per diem; common hands, $10 per month; hands using broad-axe, saw, or plane (unskilled mechanics), 75 cents per day.

Materials.— Bricks, $3.50 to $4 per thousand; seasoned pine boards, $20 to $30 per thousand; unseasoned (raft stuff), $12.50 to $15; flooring, at saw-mill, $1.25 per hundred; weather-boarding, 80 cents to $1 per hundred; walnut boards for ceiling, $1 to $1.50 per hundred, roofing, 75 cents per hundred; nails, 10 cents by the keg; glass, $6 per hundred square feet; oil, 75 cents per gallon by the barrel; white lead, $4 per keg of twenty-eight pounds.

Joining Work, etc.—Framing, $1 per hundred square feet; roofing, $1.50; laying floors, $4; doors, 50 cents per panel; window-sash, 6 cents per light; laying brick, $2 per thousand; plastering, three coats, 12½ cents per square yard, and board.

population of St. Louis. They did not escape the miseries of strangers in a new land, unused to its hardships and privations. The influenza and the ague smote them severely, and colds and pneumonias were rife among them.

"They were but too often wretchedly furnished with money and the comforts almost indispensable to a long journey. It seemed to have been their impression that if once they could arrive at the land flowing with milk and honey, supplies would come of course. The autumn had been unusually sickly. The emigrants had endured great exposure in arriving here. Families were crowded into a single, and often a small, uncomfortable apartment. Many suffered, died, and were buried by charity. Numerous instances of unrecorded suffering of the most exquisite degree, and with every agonizing circumstance, occurred. The parties often were friendless, moneyless, orphans, infants, widows, in a strange land, in a large town, as humane as might be expected, but to which, unfortunately, such scenes of suffering had become so frequent and familiar as to have lost their natural tendency to produce sympathy and commiseration. The first house which I entered in this town was one into one room of which was crowded a numerous family from Maine. The husband and father was dying, and expired while I was there. The wife was sick in the same bed, and, either from terror or exhaustion, uttered not a word during the whole scene. Three children were sick with fevers. If you add that they were in the house of a poor man, and had spent their last dollar, you can fill out the picture of their misery. It is gloomy to reflect that the cheery results of the settlement of our States and Territories are not obtained without numberless accompaniments of wretchedness like this."

But this picture is one of exceptional gloom, and Flint saw many brighter ones which redeemed it. St. Charles, where he lived, was a centre of the Kentucky and Virginia immigration pouring through to occupy the rich farm-lands of Northern Missouri. Sometimes as many as a hundred would pass through in a single day for days together. Sometimes a dozen wagons would be waiting at the Mamelles ferry, each with its team of four or six horses, each wagon attended by a dozen slaves, and followed by a hundred head of cattle, horses, sheep, and hogs. It was a busy, bustling sight,—the cheery, laughing negroes; the cattle, each jangling a different bell; the wagons, freighted heavily with household stuff, and women and children.—a pleasing and patriarchal spectacle. "I question," says Flint, "if the rich inhabitants of England, taking their summer excursion to Bath, are happier in their journey than these people. Just about nightfall they come to a spring or branch where there is water and wood. The pack of dogs sets up a cheerful barking, the cattle lie down and ruminate, the team is unharnessed, the huge wagons are covered so that the roof completely excludes the rain, the cooking utensils are brought out, the blacks prepare a supper which the toils of the day render delicious, and they talk over the adventures of the past day and the prospects of the next. Meantime, they are going where there is nothing but buffaloes and deer to limit their range even to the Western sea. Their imaginations are highly excited. Said some of them to me as they passed over the Mamelles prairie, the richest spot I have ever seen, 'If this is so rich, what must Boon's Lick be?'"

Flint found the rough backwoodsmen who made up the body of these immigrants to be a class full of homely virtues, and he was not sparing in their defense and praise. The backwoodsman had his vices and barbarisms, to be sure, but underneath there were truth, honesty, hospitality. His manners were rough, like his beard, his bear-skins, his buffalo robe, and the walls of his cabin. He said little, his courtesy was scant, but his latch-string hung out always, and he had meat and bread to lay before every stranger. "I reck'n you kin stay," or, "I s'pose we must let you stay," was the best welcome the casual visitor might expect; but the ungracious speech veiled many kind deeds. Everything the cabin afforded was at the new-comer's service; good fare, good cooking, a profusely-spread board, and a churlish resentment of every offer to pay for what was received. "A hardy, adventurous, hospitable, rough, but sincere and upright race of people," says the conscientious Flint, who still cannot quite forgive them for not liking Yankees, and for caring little about ministers, and thinking less about paying them. "They are averse to all, even the most necessary restraints. They are destitute of the forms and observances of society and religion; but they are sincere and kind without professions, and have a coarse but substantial morality, which is often rendered more striking by the immediate contrast of the graceful bows, civility, and professions of their French Catholic neighbors, who have the observances of society and the forms of worship, with often but a scanty modicum of the blunt truth and uprightness of their unpolished neighbors."

Governor Ford's "History of Illinois" does similar justice to the qualities of these American pioneers who came in such numbers into Missouri and Illinois, instantly taking the control of affairs out of the hands of the French settlers, and giving a new impulse to agriculture and every other industry. They were mostly illiterate, with few schools and no time to educate their children. It was cheaper to import their educated and professional people than to grow them at home. As for their preachers, they did not consider it necessary that a teacher of religion should be a scholar. They did good, and, so the matter was right, the manner was not worth much concern. These people were nearly all farmers. A few traders

supplied the goods which they did not produce or manufacture at home, and these were few. The farm yielded nearly all that the frugal life of toil which they spent demanded. They rarely used tea and coffee; the sheep-shearing produced wool sufficient for winter clothing; the cotton and linen that was worn was raised, and spun, and woven, and made up at home. Copperas, indigo, or butternut were all the dye-stuffs required. A coon's skin furnished hat or cap, a deer-skin, tanned in a domestic vat, or dressed, Indian fashion, at home, supplied shoes or moccasins. A hollowed log with a pestle was all the hominy-mill that was needed. The family dwelt in a log cabin, made out and out of wood, chinked with mud or mortar, without glass, nails, hinges, or locks. Each farmer was his own mechanic, built his own house, made his own harness, implements, and utensils, and furniture, doctored his own stock and his children, and was able to take care of himself in the heart of a prairie sea, without one of the resources which Robinson Crusoe found ready to his hand on Juan Fernandez. His carts and wagons were made without iron and run without tar, and their musical creakings were of a quality to have silenced an orchestra of steam-calliopes. The horse-collars were made of plaited straw or corn-husks, and Governor Ford tells of a farmer who, when his mischievous son had hid the collars, took off his own leather breeches, stuffed the legs with straw, and, using them for collars, turned over as many furrows as usual.

It was a virgin land, full of beauty, full also of riches, into which these pioneer Americans came. The grass on the prairie ranges grew higher than a man's head, and the cattle could not keep it down. There were wild fruits, berries, plums, pawpaws, herbs for sauce or physic, flowers exquisite as hot-house exotics. The vines hung heavy with grapes; the brooks, the rivulets, the spring-heads were umbrageous with lofty trees. Everywhere there was game in copse and vale and open prairie; the bison had gone West, but the deep paths cut by his feet and the wallows where he had rolled and plastered his huge flanks with mud were still visible. Few rifles cracked that did not bring down a deer or a wild turkey. Snakes were only too numerous until the droves of hogs exterminated them. The rural settlers who came in, with some New Englanders and Pennsylvanians, were chiefly of the yeoman class of the Carolinas, Virginia, Tennessee, Kentucky, and Maryland. They established themselves on the margins of the little prairies, on the banks of streams, and near large springs of water. Their cabins were built of round, unhewn logs, and the floor, where there was one, was at most of puncheons. The wolves serenaded them at night, but the cypress vine and the woodbine and morning glory festooned their fronts by day. The men hunted and tilled their fields by turns. They led a quiet and peaceful life, their homes too remote and deep embowered in seclusion for sociability, but not for friendship and neighborly deeds. If a man was sick, the neighbors plowed his field, planted his corn, cultivated and secured his crop for him. If a woman were sick or in travail, the neighbors' wives took turn about in caring for her family and discharging her various household functions. These women may have been border beauties in their youth, but they aged quickly, —there was so much hard work for them to do. They had few graces and adornments at the best of times, and the life they led was rather homely, like their dress. They split wood, carried water, went to milking; and unkempt hair, large, coarse hands, freckled faces, sunburnt necks were inevitable. They were often alone, and sometimes had occasion to profit by their knowledge of the use of the rifle in encounters with bears and wolves.

They spun and wove the stuff their garments were made of, and small blame to them if they did not encourage a fashion of flowing patterns. Six yards was thought to be almost an extravagant allowance for a dress. There were but two widths in the skirt, the front one cut gored; the waist approached the armpits, and the fastening behind was a draw-string across the shoulders and a buttoned belt at the waist; sleeves "sheep-shank" pattern; sun-bonnets of tow, with pasteboard splits; for Sunday luxury perhaps a Leghorn monstrosity, tied with a great broad bow of ribbon apeak, and another corresponding one under the counter. The tow linen dress gave way to calico or gingham in course of time, since the prairie manufacture could not compass prints; but the linsey petticoats, jackets, and bed-gowns held their own, and so did the check and "domestic" aprons. Madame and mademoiselle equally went barefoot in summer; in winter wore yarn stockings, knit of copperas-dyed wool, and moccasins or coarse brogans, or "shoe-packs," most commonly the latter. A woman's wardrobe hung on pegs around the cabin-wall, the man's clothes on pegs beside it when he did not have all that he possessed upon his back. If he were a hunter he always wore the hunting-shirt, of linsey or butternut, with the bosom bulging out with stores of all kinds,—it was his only pocket. This blouse hung to the knee, belted tight about the waist, and was often fringed, if a teamster's always. The hunter wore a vest of skin or woolen cloth, a pair of leggings or kersey trowsers, deer-skin moccasins, and a cap

coon- or deer-skin. The farmer, in place of the hunting-shirt, wore a frock-coat of kersey or linsey, with metal or horn buttons, buckskin trowsers, woven straw hat. His shirt was coarse, unbleached, unstarched stuff, and he generally had a bandana neckcloth in numerous folds about his neck, like a Belcher handkerchief, unless he preferred to have his throat and hairy breast bare to sun and wind.

These pioneers, coming in their jolting wagons over a mere pretense of roads, could not bring much furniture with them, and that in the cabins (there was not room for much) was homemade, rude, and plain. The bedstead was a bunk,—a fork driven in the ground, poles laid across to the wall, boards on them, and on these a bag of sacking filled with straw, or a pile of bear- and deer-skins. The table was made of boards pegged on to a frame, with four legs crossing each other in the centre like a saw-buck. On this a few pewter dishes, plates, and spoons, some wooden bowls, noggins, and gourds. A few had coarse china and delft ware, but it was not esteemed. It broke easily and could not be replaced, and it dulled the scalping- and clasp knives used for trencher-work. There were iron pots, a gridiron, a frying-pan, a Dutch oven, but no tinware, unless a coffee-pot. Every house had its loom, however, and its big or little spinning-wheel, or both. The dietary was abundant, but lacked refinement and variety. When the mill might be fifty miles off, it was cheaper to be content with hominy. That could be beaten at home, and it went well with pork, and still better with game. The elegant modern cuisine of cities has been able to discover no substitute for hominy as the accompaniment of venison and canvas-back duck. Some meal was pounded up at home, enough to make johnny-cake and pone, and mush for eating at supper with milk, or, in warm weather, a pan of clabber. The farmer's wife made few sweetmeats, but she did her best in the spring to boil down a supply of maple-sugar and maple-syrup, and, if there was an orchard, there was sure to be cider, provided tubs or barrels could be had. The garden sauce was not abundant; but wild greens were much sought after in the spring,—sorrel, lamb's quarter, dock, poke-sprouts, purslane. The fields supplied roasting-ears and pumpkins; the "patch" gave beans, squashes, potatoes, cabbage. If company came, a sheep or calf or half a dozen chickens were killed; if there was a log-rolling or a house-raising, pot-pie must be prepared, and such pasties as were got up for such occasions Friar Tuck never conceived of.

Hunting was business, not sport. When wolf-scalps were a dollar apiece and land two dollars an acre, some hunters could make enough to buy a farm in a few months. Bee-hunters were numerous, and wax was an article of export; so was bear's grease. But the hunters and farmers had their sports, their recreations, their hours of relaxation, though they did not take holiday like their French neighbors. Horse-races, especially scrub-matches and quarter races, were frequent. There were gander-pullings, too, and shooting-matches for turkeys, all of which amusements, as the women kept away from them, were boisterous and disorderly, much whiskey consumed, and free and rough-and-tumble fights very common. In these fights gouging was as frequent as it ever was in Georgia, and river boatmen ashore made the rioting and disorder worse than it would otherwise have been. Dancing was common at house-raisings, and every other entertainment in which women participated, such as weddings and huskings. The pioneer people married young, and with none of the Creole ceremonial and consultations *des parents*. The couple made their own bargains, announced their intention, got a license, a squire or preacher; then there was a dinner, which the wedding ceremony preceded, and an infaring, the neighbors coming together to build the young folks a cabin. There was much co-operation in the pioneer society,—it was "help me and I will help you" at log-rolling, house-raising, wood-choppings, corn-shuckings, and rail-splittings. All turned out if a child was lost, and every one went to a funeral, to a camp-meeting, to county court, to a political barbecue, and to a public sale or vendue.

The Spanish laws required every settler and tenant of the royal domain in Upper Louisiana to be a good Catholic. But when Cruzat and Trudeau and Delassus invited over the American colonists, and made liberal concessions of land to them, they winked at this ordinance with both eyes. "Of course you are a good Catholic, or else you would not come," said Trudeau to a Presbyterian minister. And when the latter asked permission to hold meetings, the Lieutenant-Governor said he had nothing to do with any public assemblies, so they were not disorderly. All this conveys a very good idea of the quality of the Spanish *régime*. It was the shell of despotism, but without the kernel. It was patriarchal, but not paternal. It was a potentiality, but not a power. The Lieutenant-Governor was absolute in authority, but he left every one to pursue his own counsels in nearly every case, and confined his drill and his discipline to the little handful of regular soldiers under his own immediate care who made up the garrison. In all ordinary matters home rule was the only rule in St. Louis. The syndic, the committees and trustees, and the notary and priest had control of the public

business and of local affairs. The Governor was useful for ornament, for defense against external enemies, and as arbitrator in cases of appeal. But the people transacted their own business. The law under which they governed themselves was the *coutume de Paris*, which all were familiar with, as children in a city are familiar with the main rescripts of the police code.

Spain governed Upper Louisiana under the general regulations of the Spanish colonial code, a very elaborate system of rules, conceived and matured in wisdom, and tried and proved by experience. But the unlettered inhabitants of Louisiana knew about as much of this code, and came about as much under its operations, as the rude sailor on the ocean knows or is affected by the consular code of his government. They saw the flag, they heard the drums beat, they met the Governor on the street and in the church, and when they or their neighbors quarreled they went before him to settle the dispute. He signed their marriage contracts, and gave them deeds for land when they bought it, and if they died he authorized and regulated the sale of their personal effects at auction. That was all. In other respects the government was outside and aloof from the people, only touching them in matters of real estate and of written contract. The code of the Indies and the laws of the Partidas, wise and beneficent institutions, were in nothing more wise and more beneficent than in leaving this simple people entirely alone. Meddlesome Governors or a restless, uneasy, mistrustful people could have easily made mischief. Put this code and these laws over colonial Boston, with Edmund Randolph to administer them, and there would have been a rebellion in six weeks. But the people of St. Louis were easily contented; they did not care under what tenure they held their lands so they remained in undisturbed possession. They did not object to have the law regulate the rates of interest, since they seldom borrowed at all, and never except at the established rates. They made all their contracts in compliance with the *coutume de Paris*,—second nature with them,—and so were not in danger of having them revoked. They gave themselves no concern about the formalities and intricate regulations concerning wills and testaments, nuncupatives, donations *intervivos*, dispositions *mortis causa*, revocations express and revocations implied, for the notary attended to all that, as it was his business to do. They seldom left property out of their family, and so never came in collision with the Governor's power to nullify their wills and set their death-bed bequests aside But a system like this would not have worked at all in New England; a system which required wills to be executed in the presence of a notary in order to sustain their validity, and for some classes of bequests exacted the signatures of seven witnesses, and which required to know all a testator's circumstances before conceding his competency to make a will, would have disturbed Massachusetts and Vermont more than the severest earthquake that was ever experienced there. So also the paternal and domiciliary intervention of the Spanish law in every other matter of succession; its recognition of illegitimates, its care of widows, dowries, and marriage contracts, and its guardianship of minors, would all have been looked upon as highly impertinent in any English-peopled State. This intrusive law further compelled children to maintain their parents, and directed kinsfolk to take care of minor orphans; it compelled witnesses to tell all they knew about things deemed material to the dispensation of justice,—in short, it was an offensively paternal system, the weight of which the people of St. Louis never felt, any more than they felt the weight of the atmosphere, for the simple reason that they were by nature, tradition, education, and disposition inclined to do exactly what the law prescribed, and to avoid all that the law forbade.

Louisiana only had one Governor, O'Reilly, who let the weight of his hand be felt, and scarcely the windage of that blow reached St. Louis. In fact, St. Louis—Upper Louisiana—was a distinct province from the lower one, though dependent on it. The Lieutenant-Governor was under the orders of the Governor at New Orleans, but he was appointed by the crown. The intendant at New Orleans was scarcely heard of in St. Louis, and the Lieutenant-Governor on the spot had almost unarrested jurisdiction as to finances, Indians, commerce, the collection of revenue, and the sale of lands. These grave and mighty functions were easily discharged in St. Louis; the financial department was limited to paying salaries; the Indians were kept quiet with presents, and now and then a hanging or an imprisonment; commerce mostly took care of itself; no taxes were collected, so the revenue caused no sleepless nights; and the land dispositions were chiefly the concession of parts of the royal domain to friends and favorites. The Lieutenant-Governor was himself intendant-general, commander-in-chief, *jefe político*, judge of admiralty, assessor, alcalde-general, auditor, *procureur du roi*, *regidor de Cabildos*, contractor, and treasurer. All the offices and powers of the State were assembled in his person, except those of syndic and priest, and the latter no longer had the functions of inquisitor, and hence his authority was simply advisory.

When power was so unlimited there would be a natural tendency to administer laws humanely and in accordance with public opinion. This was the case with legal process particularly; execution on judgment might be had in four days, yet the indulgence of the Governor always secured ample time for the debtor to pay without distress to himself or sacrifice of his property. Fees, costs, and legal charges were kept down to a very low minimum, and no extortion was ever permitted, yet the payment of debts in St. Louis under the Spanish *régime* is said to have been unusually prompt and punctual,—a necessary condition to a business which rested on credit, and whose only circulating medium was also the chief article of trade. Stoddard observes that "the change produced by the operation of the laws of the United States (after the cession), the dilatory proceedings of our courts, the introduction of the trial by jury, and the expenses of legal contracts gave a temporary check to trade and to the credit of merchants, particularly in Upper Louisiana. Experience led them to believe that the Spanish mode of decision, grounded on equitable laws, was much the most wise and salutary; and they murmured at a system calculated to produce delays, and in many instances to create expenses equal in amount to the sums demanded. They preferred the judgment of one man to that of twelve; and it is but justice to observe that their judicial officers were in most instances upright and impartial in their decisions."[1]

Stoddard calls attention to one gratifying fact, which is a practical testimony to the good effects of the Spanish system, and that was the almost total absence of aggravated crime, a circumstance scarcely to be hoped for in such a mixed population, leading lives of such excitement and adventure in settlements so new. Punishments were not too rigorous, but they were certain to be meted out to the offender, and the dread of the Mexican mines and the dungeons of the Moro Castle in Havana quelled the turbulent immigrants from the United States. As to the Creoles, they were naturally of a peaceful disposition, educated to obey, kept in hand by the church, and acutely sensitive to the disgrace of punishment.

In St. Louis, under the Spanish government, lawyers were not encouraged, forensic disputations were not allowed, and the laws themselves were not published to the people. It was thought enough that they were known by the government. Political inquiry was discountenanced. The government made the laws; it was enough for the people to do to obey them. The publication of ordinances and decrees was authorized where not incompatible with the public interest and common welfare, but this authorization amounted to nothing. Stoddard notes that only two decrees were ever promulgated,—one an ordinance relative to dowry and the inheritance of intestate estates, the other respecting grants and concessions of land, prescribing the quantities allowed to settlers and the forms to go through in order to perfect titles.

Practically, neither Upper nor Lower Louisiana had any revenue. There was no direct tax. Collateral inheritances paid two per cent., legacies to strangers four per cent., transferred shipping six per cent., and there was an income tax on salaries and "venal" offices. All vessels paid a pilotage at New Orleans of twenty dollars, and the license for selling ardent spirits in St. Louis and Upper Louisiana was thirty dollars. There was also a duty of six per cent. on all goods exported or imported, and that was all. The receipts of the Upper and Lower Louisiana treasury from all these sources was $126,000; the expenditures were $650,000; annual deficit $524,000. To liquidate this Mexico contributed $400,000 annually, the balance of $124,000 was met by the issue of treasury certificates or exchequer bills, which circulated as a sort of currency and were bought up by officials of the finance department on speculation at a discount of twenty-five to thirty per cent. At the time of the cession of Louisiana the debt accruing from these deficits was about $450,000, showing that unpaid certificates were outstanding to cover nearly four years.

The French in America were certainly wedded to their system of government, their *coutume de Paris*, and their commune home rule. Excepting St. Louis, all the towns in French Illinois retain to-day their ancient commons and common fields, just as they existed between a hundred and a hundred and fifty years ago. Louisiana is still governed under the old Roman civil law, not greatly modified. In Canada, after the British conquest, the laws of England were introduced in 1764, including trial by jury and legis-

[1] There is a quaint confirmation of this in an account of the old times in St. Louis, furnished to a newspaper some ten years ago by Mr. Godfrey Lesueur, an old citizen of Point Pleasant, New Madrid Co. "I have lived here under five governments," said Mr. Lesueur. "I was born under the Spanish government, then lived under the French government temporarily, then the United States government, then that of the Confederacy, now under the fifth. It may be asked which government was the best? I shall answer briefly,—that under the two first named, the governments of France and Spain. No taxes or contributions of any kind were exacted from the people. There was no litigation among the citizens, and no lawyers' fees to pay. All matters of controversy were acted upon promptly by the commandant at each post. The people were protected in all their rights, privileges, and immunities which were guaranteed to them by the treaty of cession. When the country was ceded to the United States the people were happy."

lative assemblies elected by the freeholders. The Canadians did not like the change. Innovation was disagreeable to them, and they longed to have their *coutume de Paris* restored to them. They petitioned to have their ancient laws and customs reinstated and the unfamiliar English statutes set aside. This was in 1765. They petitioned again in 1770 and 1773, and finally Parliament passed the "Quebec Act," abolishing all former laws and ordinances of the English, and re-establishing "the laws and customs of Canada." Why this tenacious clinging to old forms? Because the administration of the law under them was admirably simple, clear, inexpensive, and equitable. A few cases from the records and archives of St. Louis under the Spanish *régime* will illustrate this.

In 1780, Charles Gratiot, as has been detailed in the chapter on the "affair" of that year, brought suit against Charles Sanguinet, under a writ of replevin, to recover his goods, deposited with the latter for safe-keeping. The case was tried before De Leyba. Gratiot filed his "nar" May 8th; Sanguinet replied May 10th. The next day the deposition of Gratiot's clerk was taken, and the same day Sanguinet was ordered to restore his private papers to Gratiot. On the 12th, Gratiot offered to let Sanguinet keep the goods at his (Gratiot's) appraisement. Sanguinet provisionally accepted this (13th), but proposed valuation by arbitrators, which, May 16th, Gratiot declined, whereupon, May 20th, Sanguinet decided not to take the goods at Gratiot's valuation. May 26th the Governor rendered his decision:

"All the evidence in the case having been attentively examined and duly considered, we decide that Mr. Sanguinet is not sustained in his defense; that he unjustifiably retained the goods of Mr. Gratiot, which had been merely intrusted to his care for safe-keeping, as is proven by all the evidence in the case. In consequence we condemn the said Mr. Sanguinet in all the costs, expenses, and damages of this suit, and direct him to restore to Mr. Gratiot all the merchandise deposited with him by said Gratiot for safe-keeping, under penalty of imprisonment.

"Given at St. Louis, in the government room, by us, Don Fernando de Leyba, commander-in-chief and Lieutenant-Governor of the western part of Louisiana."

That was all,—case heard without expense or extraneous matter, judged upon its merits, decided without appeal, imprisonment if the decree be not obeyed. Say what we will, this is *justice*, in the original and effective sense of the word. To-day the case would have had two or three lawyers on a side, two or three jury trials, with one or two issues taken up "on appeal" to the higher courts; finally, after eighteen months' or two years' litigation, costing each party more than the goods were worth, a jury would bring in "a compromise verdict," stultifying to themselves, and satisfactory to nobody else. Another case: Domingo Bargas, Spanish merchant, dies suddenly in the night. Father Bernard, the parish curé, is uncertain about giving the body burial in consecrated ground,—Bargas may have died of "intoxication or some other unnatural cause." The Governor orders Dr. Gibkins to make a post-mortem examination, and himself questions a few witnesses. Verdict, apoplexy from heat, and the dead man receives proper burial.

In the case of the killing of Madame Chouteau's negro, before referred to, in which damages were claimed, Governor Cruzat, in doubt himself, referred the evidence to "the chief tribunal at New Orleans," and to Governor Mirò. Had it been still more complicated, it might have gone to Spain for the final decision. When Mirò's decision was received, the parties were called together and made to sign a paper assenting to it, appraisers and umpire were forthwith appointed, the value of the negro determined, the sums assessed, the money paid, and a receipt given.

A Governor has retired; his successor, taking office, calls the inhabitants together, and at once they take the following action:

"We, the undersigned, inhabitants, merchants, tradesmen, hunters, and traders of the post of St. Louis, assembled in the government chamber, by direction of Governor Don Francisco Cruzat, of the Illinois, certify to all whom it may concern that we have no subject of complaint to allege against the manner in which we were governed by His Excellency the late Governor Don Pedro Piernas; that he rendered us all the justice to which we were entitled; that neither himself nor the company of soldiers he commanded in the post ever committed any excesses or extortions, or were guilty of any wrong on any of the inhabitants; that said company occasioned no trouble, nor gave any scandal nor bad example; that no one received any violence or bad treatment without cause; that we are not aware that he had any pecuniary agreement or understanding with any one whomsoever on this or the other side regard to business. It was never experienced by any one that he had injured the public in restricting trade; that he never exacted anything, either from traders, hunters, or merchants, for licenses or passports necessary for their affairs, neither in setting out nor on their return; that he never excluded any one from the benefits of this trade, which he distributed alternately each year to the best of his judgment for the public interest and the number of traders: that no one received any ill treatment from the Indian tribes for having been badly received by him at this post; that they never heard from said Indians any complaints of him, his behavior, nor of the Spanish government, and that they are peaceable and contented, as well as we ourselves. In short, we can only speak well of him, and with respect and gratitude.

"In presence of

"FRANCISCO CRUZAT."

It was the policy and practice of the Governors, in every case where the thing could be done, to encourage disputants to submit their issues to arbitration and avoid litigation. This was very successfully re-

sorted to, and without being looked upon as any very extraordinary performance. Thus, Diart and Datchurut have a dispute about a cargo; the case has two sides to it; losses have been incurred, but Piernas persuades them, in order that they may "end and put a stop to a suit which might be ruinous to both, and avoid all prosecution," to refer the matter to three expert arbitrators, one of whom, the umpire, should be appointed by the Governor. Diart named merchant Perrault, and Datchurut named merchant Laclede Liguest, while Piernas named Lambert Lafleur, lieutenant of militia and merchant. Perrault and Laclede, not to be outdone, agree upon a basis of settlement without calling in the umpire, and so the whole matter is settled at once.

These Governors did not decide on the side of the capitalist and against the laborer. Picart (Pierre Massé was his right name) and J. B. Labastille, leadminers at Mine Lamothe, took out twenty thousand pounds of lead from land they thought to be part of the royal domain, free to squatting miners. Then Laroze came along,—it was his land, bought of Datchurut,—and he seized their lead and drove them off. Piernas, appealed to, investigated and confirmed Laroze's title, ordered him to survey his land, and compelled him to restore their lead to Picart and Labastille, who, however, were to work there no more without permission of Laroze. Massé had another lead dispute with François Vallé about a rate of wages. He lodged a complaint with Piernas, who investigated the matter, and the result was that his successor, Cruzat, exonerated Vallé, and ordered Picart to make him a public apology, and retract his injurious imputations. Picart asked leave to lay the case before the Governor-General below. It was granted, and the sentence confirmed. Cruzat appointed Laclede, Carpentier, and Duralde to receive the apology, and Diego Blanco, sergeant, and Juan Olivier, soldier, to act as witnesses. Hard-headed Massé declined to make the apology, but after holding out for a fortnight submitted. This, too, was justice, and of a very fine quality and pure strain. Parents deal so with their children; why cannot judges deal so likewise with unjust suitors who come before them? Are they not put upon the bench to do justice between man and man?

A cross-suit comes before De Leyba,—one of the sort that attorneys nowadays grow fat on. Joseph Marchetand Denoyer petitions De Leyba: Claude Tinon sold him a lot for a heifer; the heifer was delivered to Tinon, but Denoyer claims the lot was found not to belong to Tinon. He therefore wants his heifer (now a cow with a calf) restored to him. De Leyba orders Tinon to be furnished a copy, and to reply in three days. Tinon does so. He did sell the lot to Denoyer for a heifer and a pair of cart-wheels; he got the heifer, but never received the wheels. Denoyer received the lot, and Tinon several times offered to give him a deed for it, "but, being too stingy to pay the costs, has always deferred it and allowed the fence and ground to go to ruin," so that the Governor reclaimed the land and annexed it to the public domain. A copy of this reply is ordered to be sent to Denoyer, with directions to rejoin in three days, at the same time Tinon's counter-claim against Denoyer for work he promised to do, but neglected. The judgment is that Denoyer carry out his contract for work with Tinon; cow and calf awarded to Tinon, and Denoyer ordered to deliver the cart-wheels besides, and pay all the costs of the suits.

One must be careful how he talks at the church door in this loyal town, as witness this decree of Governor Piernas:

"We, Don Pedro Piernas, captain of infantry and Lieutenant-Governor of the Illinois settlements of His Catholic Majesty: In view of the complaint of Mr. Louis Lambert, of the 15th August, against Amable Letourneau, a Canadian, accused of using improper and seditious language in contempt and derision of the ordinances of the king, published by us at the door of the church on the day of the feast of the Assumption, and also that of Mr. Joseph Labuscière, of the same date to the same effect, we declare the said Amable Letourneau duly attainted and convicted of seditious language and a disturber of the public peace, and sentence him to ten years' banishment from His Majesty's settlements, with still heavier punishment should he disregard this sentence and reappear; as also to pay all the costs and expenses of this prosecution.

"Sentence executed this day. COTTIN, *Alguazil.*"

In the way of personal difficulties, there seem to have been more suits for slander than anything else in the little village,—natural enough in a small community given greatly to talk, and where everybody knew all about every one else, where, moreover, there was a strong dislike to everything calculated to disturb kindly and neighborly relations. To decide in such cases taxed both the patience and the judgment of the Governors; but they met the difficulties bravely. Robidou's match with Becquet's daughter had been broken off by tales about Robidou's undesirable relatives in Canada, some of whom had sold their souls to the devil,—one had killed his wife, one had committed sacrilege, etc., and as "there were no wicked ones in Becquet's family, he would not introduce any." Robidou petitioned the Governor for redress, and wished him to compel Becquet to disclose the name of his informant. The Governor said the evidence *pro* and *con* was pretty evenly balanced, so he threw the case out of court, enjoining on all parties to curb their tongues in future, and particularly rec-

ommending Robidou to "procure the requisite documents from Canada in support of the respectability of his branch of the Robidous." It *was* a reflection upon a man, a disgrace to him in the eyes of this simple-hearted community, to have "wicked ones in his family." Another suit was thrown out of court because the action proceeded "from a spirit of chicanery and obstinacy subversive of the harmony that should exist between neighbors." In another case, where an offender had impeached a lady's honor and confessed he lied, the judgment was that, "considering the petition of the said Menard, and the gravity of the offense, and that the written recantation is not adequate to the injury done the lady, we order that the said Menard be conducted on the next Sunday to the door of the parish church, at the close of the mass, where he will publicly make the necessary reparation as stated in his written recantation, and will suffer an imprisonment of fifteen days, as an example to others." In another slander case, between women, the matter is thrown out of court, there being no grounds for suit but "the idle scandal of babbling women, which took place long since, and is now revived by dissensions and broils among them." The Governor imposed absolute silence on the subject on all implicated in it, forbidding them to reflect on each other in any way, "under penalty of the utmost rigor of the law to be imposed upon the first transgressor."

Michael Calas was proved to have defamed the reputation of Madame Montardy. Governor Piernas decided that Calas was a calumniator, and should make reparation by publicly apologizing to the lady and asking her pardon; by paying a fine of twelve hundred maravedis, half to the lady, half to the Church, "and to be banished and chased away from this part of the Illinois for ten years, as a pernicious calumniator and disturber of the public repose, as much for the present offense as for other violences committed heretofore. To this effect he will be conducted by a detail of men beyond the lands of this province, where this sentence will be read to him by the constable of this post, enjoining on him to respect his banishment, and not to reappear under penalty of corporal chastisement if found on the possessions of his Catholic Majesty." Jeannot, convicted of being "a disturber of the public peace, prejudicial to good morals and public tranquillity, having been heretofore driven from the place," ten years' banishment, costs and expenses. In fact, St. Louis justice was as eager to get rid of all its "desartless rogues" as Dogberry could have been.

One of the most fatiguing duties of the Governor grew out of the fact that his notarial functions were very extensive. The law called for a great many written instruments, deeds, contracts, inventories, etc., and the Governor's association with a large proportion of these was essential to their authentication. Wills, marriage contracts, land sales, sales at auction of personal effects, inventories, manumissions, deeds of gift, deeds of donation *intervivos*,[1] and many other formal documents received the executive signature and required his approval. It seems that there were a good many slaves manumitted in old St. Louis, especially females. The consideration specified was usually valuable and faithful service. Thus, Joseph Dubé, before Labuscière, "acting as judge and substitute of the king's attorney-general in the Illinois," declared that he had "received valuable services from his Indian slave, Marie Marguerite, for which reason, as he had always found her a faithful and attached servant, he now gives her her freedom, as also to her female child, Victoire, aged about two years, declaring said slaves now free, to enjoy all the rights and franchises of free persons," etc.

There were a good many Indian slaves in Upper Louisiana under the Spanish *régime*, and it is not quite clear where they came from, but it seems probable that there was a system of buying and enslaving captives made by the Indians from tribes with which they were at war, and probably an exchange of such slaves from one part of the Territory to another. Indian slaves, it is obvious, were treated and regarded precisely as negro slaves were, with the difference, however, that more Indians than negroes appear to have been manumitted. Many of the enslaved In-

[1] This was an odd form of deed, of which several are on record. Thus, Zeñon Trudeau, ex-Lieutenant-Governor, wishes to do something for J. B. Truteau, schoolmaster; he accordingly makes him a present, for his children, of a debt of four hundred dollars in the following form: "Be it known by this indenture that I, Don Zeñon Trudeau, lieutenant-colonel and captain of grenadiers of the regiment of Louisiana, declare that I am under grateful acknowledgments to Don Juan Baptiste Truteau, schoolmaster of this town, he having for some years educated my numerous family with particular care, and having received many favors at his hands, and being my relative, and my eldest son, Don Renato, being godfather to his eldest son, René Louis, with my free consent, without any inducement or persuasion, in the best form of law, and well knowing my rights in such cases, I acknowledge and declare that I make a pure and perfect gift, which the laws call *intervivos*, and irrevocable, to the male children born and to be born, with the exclusion of the females, of the said Juan Baptiste Truteau of the four hundred dollars which he owes me, which I advanced for the purchase of his house, and now henceforth and forever I relinquish and abandon all right, title, actions, and resource to the said four hundred dollars," etc. Truteau accepts the gift and the trusteeship with similar formalities, while the Governor, for his part of the deed, bears witness that he knows the contracting parties, and that they had executed the paper before him.

dian women were probably the concubines of their masters, and set free because they had borne them children. Louis Metivier, for example, appears at "the registry of the royal jurisdiction of Illinois," before Labuscière, and declares that he has at the late N. Henrion's a little girl aged about five years, named Marie, the child of said Henrion and Agnes, a slave of said Metivier, on condition that said Henrion would take care of and raise her as a good father, and that she should be free, otherwise the said gift would not have been made. But Henrion said the child was now in the possession of Madame Beaugenou, and, as he had never conveyed the child to Henrion by deed of gift or otherwise, so now he set her free, to protect her from being enslaved by Henrion's heirs or any one else.[1]

[1] Among other deeds of manumission, we find Lieut. Louis Villars setting free his negress Julie, aged thirty; François Daire freeing Indian man Pierrot, aged forty; De Volsay and wife, their mulatto girl Françoise (who was De Volsay's child); Joseph Papin, his negress Flora and her child (Papin was sick, and had just made his will); Joseph Calvet and wife, their negro slave Louison Salbaxe; Nic. F. Guion, "a mongrel boy named Alexis, four years old, son of his Indian slave Madeleine and one Louis Lirette, of this place;" Charles Henrion, his mulatto girl Mariana. In the case of a mulatto infant, child of one Bargos, who had died suddenly, the Governor manumitted the child himself, upon the report of arbitrators that it had been the intention of Bargos to do so. (Under the slave code of our Southern States the courts often set aside manumissions, but never completed inchoate deeds of that kind.) Louis Perrault frees his mulatto woman Marie, long his faithful house servant, upon payment by her of five hundred dollars; Emilien Yosti, for four hundred dollars, emancipates his negro woman Genevieve and her two children, Magdalena and Augustina; the missionary priest, Father Torget, vicar-general of the Illinois, frees three slaves belonging to the mission, viz., Appollon, negro man, aged sixty, Jeannette, his wife, thirty-eight, and their youngest child, Anselmo, three and a half years old; Michel Bourgignon, his mulatto man, Batiste Indio Sambo; Louison, a mestizo slave of M. Lorain's, is freed by order of the Governor-general at New Orleans; Jacques Clamorgan frees his mulatto woman Ester, aged forty, for the five hundred dollars he paid for her; the same gentleman also sets free a mulatto boy, three years old, named Edward, son of his slave woman Silly, "for one hundred dollars paid him by *Lord* Edward F. Howard, reputed father of the boy;" Father Ledru, missionary curate, frees his negress Reichelle (Rachel), aged about twenty-six, for the price he paid for her to M. Reilhé; Mme. Marie Hebert, widow of John B. Martigny, frees her mongrel slave Marguerite, on condition that she serve her until her death; Gabriel Cerré manumits his "griffe" slave Victoire for eight hundred dollars, the price fixed by arbitrators ("griffe" was and is the Louisiana *patois* word for mulatto, half-and-half, in allusion to griffin, half lion, half eagle); Pierre Chouteau, for one hundred and fifty dollars, frees his slave Pelagie, aged three years, daughter of his mulatto slave Agatha and her free mulatto husband Antoine de May (almost the only instance found here of an official recognition of slaves as married people); Antoine Roy, negro slave Catharine, for four hundred dollars, to be free twelve years from date, but if Roy marries, to be free from time of marriage.

The first grant of lands recorded in St. Louis, the earliest mortgage, the first marriage, and the first baptism all bear date the same year, 1766. The first mortgage was given by a St. Louis trader to one in Canada, to cover advances, and was to be redeemed by the payment of a certain number of deer-skins within a specified time. It was duly paid at maturity. The first marriage took place—the contract was signed, that is to say—April 20, 1766, and the wedding ceremony, so far as the church rites went, was certainly performed at Easter, or "Paques." Marriage was very much of a business arrangement with the French *habitans* of St. Louis. All unions were not necessarily *mariages de convenance*, but without the *convenances* there was no marriage. The consent of the parents and the head of the family was necessary in order to get the sanction of the authorities, and no matter how much any one "sighed as a lover," he was sure to "obey as a son." Every marriage rested upon a written and recorded contract, which secured both parties, protected property and the rights of prospective heirs, and insured to the women especially a very desirable freedom and independence of action. Each party was protected, in his or her estate, from responsibility of the debts of the other contracted before marriage. The laws and customs relating to marriage were founded upon the *coutumes de Paris*, with some modifications derived from the laws of Castile. There was a community of interest; unless otherwise specified in the contract, whatever property either party possessed before marriage constituted a common fund to be enjoyed by both. When either party died intestate, the survivor was entitled to one-half the estate, and the children of the marriage, if any, to the other half; if no children, then the legal heirs of the deceased, such as parents, brothers, and sisters, etc. Hence it was customary on the death of a married person to proceed at once and take an inventory of his or her effects. If so specified in the contract, the survivor could elect to "renounce" the community of interest, and withdraw whatever amount he or she may have put in. This did not prevent either party from leaving by will to the survivor the whole of the property, where there were no children, and this was commonly done. All papers of this sort, marriage contracts, wills, inventories, etc., had to be executed in the presence of the Governor to give them validity.

Marriage contracts were very specific. They were drawn upon the principle that by avoiding mistakes now, differences in the future, quarrels and separations, may be escaped from. The pieces of property held by the parties are enumerated, and sometimes even

the wedding presents. The civil marriage was so much of a business arrangement that sometimes the parties executed their wills, drawn in one another's favor, immediately after signing the marriage contract. But when the religious sacrament was performed everything became a festival. The two fiddlers of the town were called in,—there were but two professionals, who sat beside each other like L'Allegro and Il Penseroso, for one was lean, lank, and melancholic, and the other was plump, jovial, and smiling,—and the fun did not cease until daylight came. In cases of odd matches, of marriages in which there was disparity of age or condition, or which the censorship of a small gossipy community did not approve, the wedding-night was sure to be the occasion of a "charivari," and an elderly groom who had married a young girl was generally forced to pay pretty heavily for peace and quiet on such occasions.[1]

A bigamist fared badly in St. Louis; the marriage tie, being practically indissoluble, was held to be very sacred. When it was discovered that Bonaventura Collell, who married Dr. Condé's daughter, had another wife in Spain, the marriage was forthwith annulled, Collell imprisoned, and all his property seized and confiscated. When Dr. Saugrain, Brackenridge's old friend and tutor, removed to St. Louis from Gallipolis, one of his first acts was to present to the Archives a certified copy of the evidence of his marriage in Virginia. The regular form of entry of a marriage was as follows: "Eugene Alvarez, son of Augustin Alvarez and Maria Brabo, born in Madrid, to Josepha Crepaud, daughter of Louis Crepaud and Marie Louise Pertuy, of Post Vincennes; married Dec. 29, 1782, by Governor Cruzat, Diego Blanco, Ferd. Lisora, and others ...ng present." Now and then there was a regular marriage between a white man and an Indian woman, with one or two instances of white women marrying leading Indian chiefs or warriors. Louis Blanchet, of Petits Côtes, was in 1790 married by Governor Perez to Angelique, "Indian of the Spotted Pawnee tribe;" John B. Prevot married another Angelique, half-breed daughter of Valdy, and the civil ceremony was performed by this same Louis Blanchet, then commandant at St. Charles; Pierre Berger, son of P. B. and Thérèse Hebert, deceased, married in 1797 by Governor Trudeau to Josette Mayer, natural daughter of J. B. Mayer and Josette, of the Indian tribe of the Omahas; Michel Vallé, son of Louis Vallé and Louisa Mayote, thirty-five years old, born in Montreal, to Françoise Sueyeuse, sixteen years old, daughter of François Sueyeuse, deceased, and an Indian woman of the Big Osages.

In the simple and pious community of old St. Louis, it was as much a religious duty as a civil precaution for a man to make his will as soon as he fancied that death was approaching him. A man who died without a final testament was like one who neglected to make the last confession and procure absolution of sins,—he was in danger of not being able to procure burial in consecrated ground with full ceremonial. It did not matter whether he had much to leave, or little, or nothing at all; there were his parents and friends to remember in some shape or form, and his soul to commend to his Maker. The wills were very precise and formal. Labuscière, the notary who drew them, was a precisian and formalist himself, and probably was responsible for a good deal of the technicality observable in early St. Louis documents. The forms were nearly always the same:

"Before the royal notary in the Illinois, province of Louisiana, in presence of the hereinafter-named witnesses, was personally present Mr. John B. Valleau, a senior surgeon of His Catholic Majesty in the Illinois, being now at the post of St. Louis, in the French part of the Illinois, lying sick in bed, in the house of Desnoyers, but sound of mind, memory, and understanding, as appears to the undersigned notary and witnesses, who, considering that there is nothing more certain than death, and nothing so uncertain as its hour, fearing to be overtaken by it without having disposed of the few goods which God has given him, the said John B. Valleau has made and dictated to the notary, in the presence of the undersigned witnesses, his last will and testament, in the following manner:

"First, as a Christian and a Catholic, he commends his soul to God the Father, Son and Holy Ghost, beseeching His divine bounty, by the merits of His passion, and by the intercession of the Holy Virgin, of holy St. John, his guardian, and of all the spirits of the celestial court, to receive it among the blessed.

"The said testator wishes and ordains that his debts should be paid, and the injuries occasioned by him, if there be any, shall be relieved by his executor hereinafter named.

"He declares, wishes, and ordains that Duralde, employed in the Spanish service, residing in this post of St. Louis, whom he appoints his executor, shall take possession of all his effects situated in this colony of the Illinois and at New Orleans, either personal or real property, goods, effects, money, or anything belonging to the said testator at the day of his death, in whatever part of this colony they may be situated, without any reservation, appointing the said Duralde as the executor of this will, and praying him to undertake the charge as a last proof of friendship.

"The said Duralde shall make a good and exact inventory of the property belonging to said testator, shall make the sale thereof, and the money arising therefrom shall be sent to Madame Valleau, or to her children, residing at La Rochelle, in the house of Madame Chotet, Main Street, revoking all other wills and codicils which I might have made before this present will, to which I adhere as being my last will.

"Thus made, dictated, and declared by the said testator, by the said notary and witnesses, and to him read, and re-read, he

[1] Col. O'Fallon, on his second marriage, was given one of these calithumpian serenades, and had to treat the whole town.

declaring to have well understood it, and wishing the said last will to be executed according to its tenor.

"Done in the room in which the said testator keeps his bed, the year one thousand seven hundred and sixty-eight, the 23d of November, about six o'clock P.M., in the presence of De Rive, civil and military Governor of the Missouri post, being at present in this post of St. Louis, and of Joseph Papin, trader, of this place, witnesses summoned for the purpose, and who have, with the notary and the testator, signed these presents, after the same was read conformable to the ordinance.

"VALLEAU.

"FRANCISCO RIVE.
"JOSEPH PAPIN. "LABUSCIÈRE, *Notary.*"

The above, one of the earliest wills ever executed in St. Louis, is the type of all that succeeded it until some time after the cession of Missouri to the United States. The introductory part has something of the slow, stately movement and solemn suggestion of a collect; it proves what was said above, that the draft and execution of a will was looked upon as essentially a religious act. In the body of the wills, however, the eccentricity of individuals often finds full play. A man's oddity of character is nearly always apt to crop out somehow in his last will and testament, and men thought to be sane to the core have sometimes made the craziest of wills,—wills which prove of themselves that the testator must have had a cranky thread somewhere in the texture of his being. Such, for instance, was Capt. De Volsay's legacy of five pairs of breeches to his faithless wife. In the will of Hebert, *dit* Lecompte, we have an illustration of the business like character of a marriage contract,—the domestic *ménage* becomes a partnership. Hebert has no children, so he leaves his property to his wife, specifying it. At the date of their marriage "she brought into the community nine hundred dollars,—four hundred her mother had given her, and five hundred she had earned by her own industry. His contribution to the community was four thousand dollars, making their joint wealth four thousand nine hundred dollars." Their property at the date of the will was five thousand five hundred dollars,—that is to say, during the ten years of their married life they had laid up sixty dollars a year, and all this was willed to the widow.

Property did not, as will be seen by this, accumulate very rapidly. Yet the people were thrifty, and it did accumulate. If there were no sudden starts forward, there were equally no collapses and fatal reactions. Every gain made was a permanent one. Every building put up was built to last. Real estate at first was not taken in great quantities. The titles cost some time to get them confirmed. A tract of a thousand arpens near St. Louis, which could be bought or sold for twenty-five barrels of whiskey (a gallon an acre), would probably not pay the expense and loss of time of a trader who had to go to New Orleans to get his concession confirmed and his title made complete. Thus it happened that the early inhabitants of St. Louis were, as a rule, content to cultivate and enjoy their forty-arpent lots, the title to which came to them through the commune, and their town lots, which they owned through concessions to Laclede Liguest and the Governor, without seeking to acquire estates outside. The exceptions to this were the large capitalists and wholesale traders and planters, like Chouteau and Vallé, men who regularly went to New Orleans on other business of their own, and the capitalists and speculative miners, who bought land with the hope of finding minerals upon it, deposits of lead, and salines which would pay to work. Still, from 1766 to 1788, no more than 6400 arpens of land all told had been surveyed in the district of St. Louis. In 1804, at the time of the cession, there were 868,771 arpens of recorded surveys, and 852,722 arpens of registered but unsurveyed concessions,—a total of 1,721,493 arpens of land claimed under French and Spanish titles, all granted in the last fourteen years of the Spanish *régime*, and nearly all of it in the last four years. The number of speculative and uncomplete grants among these created a reasonable and justifiable suspicion of fraud, while the determination of the United States courts to sift and investigate titles led to great uneasiness and mistrust, and for many years the tenure of land in and around St. Louis was a source of trouble, perplexity, and much discontent.

This, however, did not prevent people from improving their properties. The conditions under which both land and town lots were held required buildings to be erected within a limited time, and there are numerous instances of the Governor resuming possession of lots in St. Louis and giving them out to third parties because the original holder of the concession had failed to improve them within the period assigned by law. Still, in proportion to the slow growth of population, building was pretty active. The structures erected, however, were not of an imposing character. It was not until seven years after the American occupation that the first brick house was put up in St. Louis, and of those built of stone before that none were large or formidable in appearance. The famous old Chouteau mansion, the first and largest house in town, at various times Government House, bank, residence, trading-post, and practically fort also, was essentially only a double two-room house, with a basement and porticoes and a garret. It had but two chimneys; originally, therefore, but four fire-

places. Around these eventually a much larger building grew, but the ground-plan was not altered, and the Chouteau house was the pattern of every house built in St. Louis before the Spanish *régime* ceased to govern. This plan was the one room and chimney, the chimney between two rooms, and the hall between two chimneys, each flanked by two rooms. This last was the plan of the Chouteau house, a mere expansion of the one-room, one-story house of posts. The American log cabin, on the contrary, no matter how humble, always provided for the loft-room over the living-room, and the chimney being outside, the cabin could always be built to it, if needed.

As the population of the town under the Spanish *régime* grew in wealth from the increase of the fur trade and the trade in lead, both of which yielded large profits, and seldom less than cent. per cent. on the capital invested,[1] the inhabitants of St. Louis built themselves better and larger houses, often of stone, but always preserving the same plan,—the one-story cottage with veranda, built about a central chimney-stack, and inclosed in a square of ground, with a fence of durable pickets or a wall of stone. The Delaware and Shawanese Indians at Cape Girardeau had begun to erect their own log cabins, two stories high, before there was a house of that description in St. Louis. This was due to the influence of the indomitable conservatism of the French inhabitants of the towns, a population which still remained almost exclusively French for many years. Stoddard, who was a careful observer, and had taken a census of Missouri, notes the fact that there was a very large accession of population to the three districts of St. Louis, St. Charles, and Ste. Genevieve between 1788 and 1804, due to the profusely liberal policy of the Spanish government in granting free concessions of land, and exempting settlers from all taxes, and a still larger accession from 1804 onward. But these reinforcements were nearly all "English-Americans," and all took farm-lands. Three-fifths of the rural population in 1804, he says, was of these classes, while in the towns and the "compact villages," as he styles them, four-fifths were French and Canadians, and this proportion was maintained for several years after the cession.

The French population, however, of St. Louis, improved and refined itself very rapidly after 1788. There had always been a certain leaven of gentility and high breeding in the old French population of Illinois. The missionaries and priests, both Jesuit and Recollect, contained a proportion of men not only thoroughly and highly educated, but of gentle birth and ancient descent. Men like Marquette and Brébeuf were as well born as any of the proud nobles of the League and the Fronde, and among the wildest adventurers in the fur trade, hatless and barefoot *coureurs* and *voyageurs*, might often be found some cadet of French patrician stock, whom poverty and the love of sport and the keen desire to be free from all social restraints had combined to banish into the wilderness. Frontenac, Governor-General of Canada, was a ruined noble of the most ancient Basque blood; his wife, Anne de la Grange-Trianon, was the favorite companion of Mademoiselle de Montpensier, the granddaughter of Henry IV. and daughter of Gaston, Duke of Orleans. Fénelon's brother, Abbé Salignes, was a priest in St. Sulpice at Montreal. La Hontan, the traveler and explorer, was a baron; Denonville was a marquis; there were many chevaliers of the noble orders of France among the emigrants to Kaskaskia and Cahokia; in Louisiana, and many of them among the garrisons at Fort Chartres, were found such names as De la Chaise, the Baron de Chesnay, Chevalier de Loubois, Chevalier de Noyan, Chevaliers de St. Julien, D'Arensbourg, D'Herneuville, D'Artaguette, De Beauchamp, De Bessan, De St. Denis, De Gauvrit, De Pradel, De Courcelles, D'Hauterive, De Lusser, Patit de Lieulliers, Simare de Belleisle, Marin de la Tour, De Grandpré, De l'Angloserie, De St. Ange, De Labruissonière, De Salverte, De Léry, De Bombelles, De St. Pierre, De Vallés, Des Marets, De Bouillé, etc., of whom Gayarré says, "They were, all of them, aristocratic scions of noble houses, who had come to better their fortunes in Louisiana, and with the hope of more rapid advancement in their military career, on account of the dangers of the colonial service, in which, for that reason, years counted double for the ar[illegible] either for promotion or in support [illegible] an application for a retiring pension." More [illegible] these people of high birth and cultivated [illegible] gentle manners we[illegible] moving about in the Illinois [illegible]untry and passing from Canada to Louisiana and back again all the time. They were part of the garrison at Fort Chartres; they sojourned at Kaskaskia and Cahokia. After the settlement of St. Louis and the war of the American Revolution, a very intelligent and curious class of French travelers came to the

[1] Wages are a proof of the profits of a trade, and wages in St. Louis were high from the first. We find in the Archives that there was bitter grumbling against wages of two livres a day—eleven dollars and twenty-five cents per month—and found, when six dollars a month was high wages in the Eastern States; and in the fur trade nearly all the trappers were paid a share in the venture. In the lead-mines, according to Stoddard, men working for themselves often took out thirty dollars per day for weeks together. The boatmen were not paid so well, but their wages were never less than eight dollars a month in the earliest times of the French.

country, and all these were eager to visit the French settlements. Brissot de Warville, Volney, Lauzun, Lafayette, Talleyrand, Haussonville, St. John Crevecœur, Adet, De Beauvais, Seybert, Lancini, Duc de la Rochefoucauld-Liancourt, Marquis de Chastellux, Abbé Robin, etc., were among those visitors who have left memorials of their impressions, and all note the amenity of manners of the French *habitans* as compared with the rough and rude Americans around them.

When the French Revolution began to rage, great numbers of the *haute noblesse* of the French court and their followers and sympathizers emigrated to America, and St. Louis gained a large and most valuable accession of population from this source, men and women of the most distinguished manners and refined culture, who, in often the most extreme poverty and privations and compelled to earn their living by the meanest offices,—nurses, governesses, housekeepers, store-keepers, barbers, fiddlers, teachers,—yet preserved their dignity and self-respect and extorted the respect of all around them. Many of these noble personages either settled permanently in St. Louis or made a temporary sojourn there until the rudest blasts of the storm of proscription had blown itself out. The colony of French *émigrés* at Gallipolis, on the Ohio, when it was abandoned, also contributed to reinforce St. Louis society. Dr. Saugrain, one of the leading physicians of the old town, came from this settlement. The Duc d'Orleans, afterwards Louis Philippe, with his brothers, the Duc de Montpensier and the Comte de Beaujolais, were among the French *émigrés* who visited St. Louis; so also did Gen. Collot, while the Marquis de Maison-Rouge, the Baron de Bastrop, and Jacques Céran de Lassus de St. Vrain settled in Louisiana, the family of the latter furnishing to St. Louis its last and in many respects its best Spanish Governor.

Another reinforcement in population and manners was derived from the servile outbreak in San Domingo, which expelled the wealthy planters. Some of these went to Missouri and St. Louis and settled there. The ordinance of 1787 forbidding slavery in the Northwestern Territory of the United States drove from Illinois all the large and enterprising planters who were slaveholders, and many of these identified themselves with St. Louis. The effect of this ordinance must have been considerable, more so than writers have usually been willing to admit; for it is the wealthiest and leading people in any community always who own slaves and profit by slave labor. None others can afford it, and these, exempted from daily labor and given leisure to cultivate their minds at the same time that they improve and increase their estates, must necessarily become the dominant class in every slaveholding community. In Upper Louisiana before it had ceased to be called indiscriminately "the country of the Illinois," that is to say, about 1750–60, there were two slaves for every white person in a population all told of about one thousand. In 1799, by the census of Governor Delassus,[1] in a

[1] This census-table of Delassus is worth producing in full. It will be seen on examining it that there was one slave to a small fraction less than six white persons, or, including free negroes and mulattoes, one colored servant, on the average, to each family. There was one marriage per annum to 177 persons (which is about 30 per cent. under the normal rate for the United States); births, one to 31½ persons, also a low average; deaths, one in 116, a small death-rate. There was a horse to each 3.4 persons, or an average of two horses to a family, and 1.15 horned cattle to a person, or between seven and eight to a family. The production of wheat was 14.6 bushels per capita, which would leave a surplus of sixty thousand bushels for sale after the home consumption for food and seed was satisfied. The corn product was 17.7 bushels per capita, probably leaving no surplus; and the tobacco crop was 4.6 pounds per capita, not leaving much above the local demand and the supply of "carots" for the Indian trade. The table is as follows:

TABLE OF THE POPULATION OF THE POSTS OF UPPER LOUISIANA, COMPRISING THE BIRTHS, MARRIAGES, DEATHS, PRODUCTION, ETC., FOR THE YEAR 1799.

Names of Posts.	Whites.	Free Mulattoes.	Free Negroes.	Slaves.	Total.	Marriages.	Births.	Deaths.	Horses.	Horned Cattle.	Productions.				
											Wheat, bushels.	Corn, bushels.	Tobacco, pounds.	Salt, bush.	Lead, pounds.

total population of 6028 in Upper Louisiana (Louisiana west of the Mississippi and north of the boundary line of Arkansas) there were 4948 whites, equal to 82 per cent. of the whole, and 883 slaves, 14.6 per cent., the rest being free negroes and mulattoes. It was a serious injury to the Illinois country and a proportionate gain to St. Louis and its environs to have this body of slaveholders and capitalists transferred in this abrupt way from one side of the river to the other. The effect upon the Illinois country may be gathered from the observations of Gen. Victor Collot, made almost immediately after the exodus took place.[1]

"On the American side," he writes, "there are still to be found some Frenchmen, to wit, at Kaskaskia, at Rock's Prairie, at Piorias on Red River, at Dog's Prairie near Wisconsin, etc. Most of these people are a compound of traders, adventurers, wood-runners, rowers, and warriors, ignorant, superstitious, and obstinate, whom no fatigues, no privations, no dangers can stop in their enterprises, which they always carry through. Of the qualities which distinguish the Frenchmen they have retained nothing except courage. When at home, in the privacies of their ordinary life, their character is very much like that of the aborigines with whom they live. They are, therefore, indolent, lazy, and addicted to drunkenness, cultivating the earth but little or not at all; the French which they speak has become so corrupt that it has degenerated into a sort of jargon, and they have even forgotten the regular division of the months, and of time itself, according to the calculations of civilization. If you ask them when a particular event happened, they will answer that it was when the waters were high, when the strawberries were ripe, or in the corn and potato season. Should it be suggested to them to change anything for the better, even in matters which are acknowledged by them as being defective, or should any improvement be recommended to them in agriculture, or in some of the branches of commerce, their only answer is, 'It is the custom; so it was with our fathers. I get along with it, so, of course, will my children.' They love France, and speak of it with pride."

After the cession of Louisiana to the United States, for forty years St. Louis was the centre of United States regular officers and soldiers. So strong a force was maintained at the Bellefontaine cantonments and afterwards at Jefferson Barracks that the military became an important and formative element in the society of St. Louis. It will presently be shown how great and important an influence this was; it is sufficient just now to note the fact of such a contribution to the moulding and amelioration of the society of the growing town.

Under all these influences, and stimulated by the growth of wealth, which in the town far outran the growth of population, St. Louis acquired, in the course of the years between 1780 and 1820, a social reputation and a social character peculiarly its own. There was less dissipation, as there was also less wealth, in St. Louis than in New Orleans, where the planters, enriched by sugar and cotton and regiments of slaves, grew suddenly rich, and were prodigal in their expenditure. But there was more social grace, to compensate for this, in St. Louis. Society was toned and sobered there by the restraints put by the American element upon the natural *abandon* of the Creole. But this American element was a hearty and cordial Southern element itself, free from *gêne*, fond of social enjoyments, and bred in all the *petits soins* of cultivated social intercourse. It restrained from excesses, but left the way open to the utmost of wholesome pleasures. The St. Louis Creoles understood and liked it, and the two elements shook hands, made friends, and formed an indissoluble alliance forthwith. These people, Stoddard has remarked, had a native and inherited vivacity which made it impossible for you to guess that they were a century behind Europe in the arts and sciences and in education, that a major part of the men, and nearly all of the women, could neither read nor write. They could converse intelligently, for they had quick and ready minds, but their knowledge had no depth,—it was a superficial stock, gathered for conversational purposes only. If it helped them out there, it did all they demanded of it, for they had, in Stoddard's words, a passion for social intercourse, and neglected no opportunity to gratify it. They carried parties, and dancing at parties, to what the staid but liberal son of New England regarded as "an incredible excess. Neither the severity of the cold nor the oppression of the heat ever restrains them from this amusement, which usually commences early in the evening, and is seldom suspended till late the next morning. They even attend the balls not infrequently for two or three days in succession, and without the least apparent fatigue. At this exercise the females, in particular, are extremely active, and those of the United States must submit to be called their inferiors."

It is worth our while to glance at the picturesque old town of St. Louis as it was at this time, from the date of the cession until it began to grow and expand its proportions and seek to become a city. As yet no steamboat has profaned the landing where the boats moor, sometimes a dozen or two of them at a time, with the boatmen on their decks, guarding their cargoes, singing and fiddling. Sometimes a stranger, come for a cargo, will draw his boat upon the sandy beach of the island there and camp out by it while he is selling his cargo and getting his goods for the return, but, as a rule, the boatmen do not tarry at the landing longer than their necessary duties require of

[1] His book was published in 1796.

them. They climb up one of these steep roadways cut through the rock and make their way to a tavern. There are but two of them, opposite one another, upon the corners of Main and Locust Streets, and they are not so much inns for the accommodation of travelers as *cabarets* for the entertainment of boatmen, *voyageurs*, and *coureurs des bois*. Reputable strangers and visitors would have no need of a tavern. The house of some acquaintance would surely be open to them, or, if they came to stay, they would hire or buy a house for themselves.[1] The two taverns were kept, one by Yosti, and the other by Landreville, and they were generally crowded with reckless and daring men, just in from long voyages to Pittsburgh, Olean, or Redstone, to Prairie du Chien and Michilimackinac, to Natchez and New Orleans, or else from some long trapper's tramp to the headwaters of the Yellowstone, or the Seeds-ke-dee-agie, or the Popoagie, or the Salmon River, or the Wind River Mountains, and where they had encountered plenty of hair-breadth escapes and marvelous adventures, of which they liked to brag, particularly when they told of battles with the Blackfeet Indians and with the grizzly bears of the Missouri valleys. In these talks the liquor cans moved rapidly, thick clouds of tobacco-smoke were blown, not always out of peace-pipes, and cards were incessantly played, often for high stakes. There were quarrels and fights, too, but not with deadly weapons, and there was no end of good-natured chaff and banter. How it used to delight the boatmen, in the time of Governors Lewis and Clark, to get the latter's body-servant, York, into the taverns, ply him with liquor till the *miles gloriosus* rose within him to the Munchausen pitch, and then "draw him out," in order to make him out-brag the trappers and cap their marvelous stories with tales more marvelous still. They could not gainsay him neither, for he had been farther than they. He had followed his master across the great divide and down the Columbia River, until the camp was pitched within sight and sound of the long, murmurous rollers of the great Pacific Ocean.

St. Louis at the time of which we write had nearly two hundred houses, and fifty of these were built of stone. It had four or five mills, usually worked by horses, but one of them was a wind-mill; and its stone tower, demi-lunes, and bastions gave it a quaint mediæval look. The houses were not thick anywhere, but they were all white, very white,—lime was plenty and whitewash cheap,—and they gleamed out among the trees and orchards in which they were embowered in a very captivating way. They rose above one another up the side of the bluff, with the tower and the common-field picket-fence crowning the crest. Of the streets it will be wise to say as little as possible. That was before the days of city commissioners and also of heavy hauling. These thoroughfares were not of a very admirable grade; they were not very wide and not very straight. Still, you could find your way along them, and if you sought some particular place, all you had to do was to ask the first *habitant* lounging on his veranda,—you would be sure to find one if the weather permitted,—and he would courteously give you the information sought, and, furthermore, escort you to the spot in person, in spite of your protestations. Did you want to find the *Place d' Armes* and the "Government House," Main Street and Walnut? Or Madame Chouteau's, Main, Second, Market, and Chestnut; Auguste Chouteau's, where Laclede turned the first earth in the building of St Louis, Main and Second, Market and Walnut; or the Fort St. Charles, Fourth and Fifth, Walnut and

[1] There was but one inn at the time of Brackenridge's visit, in 1810–11. Mrs. Hunt, who went to St. Louis with her father, J. B. C. Lucas, in 1805, says, "Such a thing as a hotel or boarding house was of course unknown here;" and her father rented one from Cerré, the father-in-law of Auguste Chouteau. It was on Third Street, about two squares below Market. "It was a one-story house, built of logs, vertical, like posts, and had a large room in the centre, with two or three smaller ones around it. The roof was of shingles, and the shingles were not nailed, but were hung to the rafters with wooden pegs. The chimney was a monstrous affair, and the black-walnut mantel-piece was so high that none of the children could reach it." The old Missouri Hotel was the first hostelry worthy the name that was ever put up in St. Louis. It was begun in 1817, and completed two years later, the proprietors being John McKnight and Thomas Brady, and the carpenters and builders David Hill and Abraham Keese. Under the hotel were constructed very fine vaults, for the storage and preservation of furs and peltries. The hotel was sold by Brady's administrator to Maj. Thomas Biddle, in whose possession it remained until he fell in the duel with Spencer Pettis. Biddle's widow sold the property to John F. Darby. The hotel bore the sign of a life-sized buffalo. It was for a long time the centre of the political life of the just-created State of Missouri. The first Legislature convened here, and the first Governor and Lieutenant-Governor took the oath of office here, and here the first two United States senators were elected, David Barton and Thomas H. Benton, the latter only securing his nomination by the vote of a dying man and that of a bitter personal enemy. Benton's opponent was Judge Lucas, whose son, Charles Lucas, had died by Benton's hand in a ruthless, vindictive, and murderous duel, such as to-day would send a man to the penitentiary instead of to the Senate. It is, however, not exactly the fact to say that these were the only taverns and inns in St. Louis. There is casual mention of several more, such as Alexan Bellissème's, etc. Joseph Charless kept a tavern when he first came to St. Louis; Maj. Christy kept tavern, and there was one kept by a man named Webster, described by Dr Simpson as a long, low building. Besides this, as will be seen by consulting the notes of Mr. Billon in preceding chapters, and the lists of licenses given in a succeeding chapter there were several ordinaries in the town. But the two named in the text were those the boatmen resorted to.

Elm,—streets barely laid off as yet? If you wanted the doctor, M. Saugrain was to be found on Second Street, where the People's Garden used to be; baker Le Clerc had his shop on Main Street, between Elm and Walnut; and there were three blacksmiths, ready to shoe you a horse, make you a gun, or forge you a rudder-hook for your keel-boat in a trice. You could take your choice of Délosier, on Main Street near Morgan, Rencontre, on Main near Carr, or Valois, Main Street near Elm. There was but one schoolmaster (besides a dame who taught infant classes), however, and if you wanted any teaching done you must send your boy to J. B. Truteau, whose dwelling and school were in the same building. If you had goods to buy, there was Pierre Chouteau's, Chouteau & Berthold, Manuel Lisa's, Second Street, corner of Spruce, the king of fur-traders and trappers, whose delight it was to live and fight in the Indian country, and to come back to St. Louis with forty chiefs and their retainers for his guests; Labbadie & Sarpy's, Main Street, between Pine and Chestnut; Roubidou, Elm and Main; Jacques Clamorgan, Green and Main Streets, or the Debreuils, Second Street, between Pine and Chestnut. There were, as we have already said, two fiddlers, "Monsieur Tardif" and "Monsieur Chevreuil," for so the young men had nicknamed them, and there were five or six public billiard tables in town, but only one church, a wooden one, on Second Street, back of Auguste Chouteau's, and a very intermittent post-office and mail establishment; no printing-office and no newspaper. For that matter, not much news neither,—not more than a *quid nunc* could carry round from one ball to another and disseminate between the dances. There was no ferry yet across the Mississippi, and Mrs. Hunt says there were but two stores that had signs over their fronts,—"Falconer & Comegys" and "Hunt & Hankinson's New Cash Store,"—both on Main Street. In 1811, says this lady, her father moved into his new house, corner of Seventh and Market Streets, and people remonstrated with him on his want of prudence, taking a fourteen-year-old girl so far out of town, where the Indians might carry her off any day when he was down town attending to his business. In 1806, so simple were the habits of the people, so few their luxuries, that this girl, daughter of a judge and one of the most considerable men in town, a man, too, who was making money rapidly, records it as "one of the rarest treats I ever had in my young days" when a shop-keeper presented her with some almonds and raisins. There was but one butcher in the town in those days, and he never killed his ox until every cut of the beef was bespoke in advance. Game, however, was plenty, and there was no need to go far for it,—prairie hens could be shot anywhere between the town and Chouteau's mill-pond. James Lucas set his rabbit traps in what is now the Four Courts, and one day captured a skunk there. Skunks could probably still be caught around that vicinity—if the traps were big enough.

In 1808 there was a ferry established, a post-office was at work, with Rufus Easton postmaster,[1] the first newspaper was published, and the first murders, murder trials, and execution were had. Shortly after this an English school was founded, and the people began to build brick houses and advertise in the newspapers. When this happened old St. Louis knew itself to be doomed. The next thing was a fire company, a sweep-master, and a market-house, followed not many years afterwards by a bank. No old French settlement could survive such innovations as these.[2]

[1] He was Thomas Jefferson's appointee, and supposed to have for his errand not only the care of the mails, but also to watch Aaron Burr and Gen. Wilkinson. He was Territorial judge after serving as postmaster. His daughter, Mary E. Sibley, who was married in the year of the battle of Waterloo and survived until 1878, was the wife of Maj. George G. Sibley. Miss Easton was a leading belle and beauty, with scarce a rival in the town. She and her husband were both well educated, and having no children, though well off, determined to devote their lives to the promotion of female education. They founded Lindenwood Female Seminary, and Mrs. Sibley also established the first Sunday-school ever known in St. Charles. Judge Easton's successor in the post-office was Dr. Robert Simpson.

[2] To show the rapid progress of the community, we append some of the results of the census of 1810, beginning with population taken from a contemporary journal:

Districts.	No. of Souls.
St. Charles	3,505
St. Louis	5,667
Ste Genevieve	4,620
Cape Girardeau	3,888
New Madrid	2,105
Hopefield and St. Francis Settlement	183
Arkansas	874
Total	20,840

There are in the district of St. Louis 8 water-mills, 6 saw-mills, 15 horse-mills 12 distilleries, 2 breweries, 2 extensive shot-towers for manufacturing patent shot, 4 salt-works, 380 looms, and about 1200 spinning-wheels, etc.

The actual population of Louisiana exceeds the numbers of the above census by more than six per cent. That deficit may be accounted for in the following manner, viz.:

1st. The law of the United States directs that the enumeration should be made of those persons only that were resident in the Territory on the first Monday of August, 1810; since that period we have received a handsome increase by emigration, which may be set down at one hundred families of seven persons each.

2d. We have many of our citizens absent on hunts or down the river, etc.; for instance, there is with Mr. Henry, on the west side of the Rocky ridge, one hundred and forty men; for this item we may set down two hundred and fifty persons.

3d. The troops stationed in our Territory were not enumerated,

The establishment of the barracks at Bellefontaine by Gen. Wilkinson added sixty thousand dollars a year to the business of the town, and, as we have seen, contributed in a marked manner to its social enjoyment and improvement. The selection of this spot for a cantonment of troops was probably due to the fact that there were already buildings there suitable for barracks. There was an old factory there, used in the Indian trade, with many buildings, which had belonged to the Spanish fort, "Old Fort St. Charles the Prince."[1] These barracks were near enough to the town to allow constant intercourse between the troops and the townpeople, and there was much reciprocity in entertainments, the ladies often going out to the barracks. Wilkinson himself was very fond of society, in which he shone, for he had fascinating powers of conversation and liked to exercise them. His wife was an amiable, accomplished, and charming lady. There were usually from six hundred to a thousand troops in the cantonments, the officers of which made quite a respectable coterie in themselves,—enough to prevent any ball-room from seeming empty. Among the earliest commandants of the garrison was Capt. Howe, who was succeeded by Col. Bissell. The army had many intimate relations with the leaders in the fur trade, and some of the prominent men of the place, as, for instance, Charles Gratiot, had placed members of their own family in the regular service. Meriwether Lewis, William Clark, and Gen. Howard kept up and consolidated the intercourse established by George Rogers Clark, and afterwards renewed by Gens. Harrison and Wilkinson and Maj. Stoddard and their staffs. The protection of the frontier from the Indians on the one hand, and from invasions on the other hand by the Spaniards on the south and the British on the north, made St. Louis a very important military post, as well as the distributing centre for the arms and supplies of a very wide area of territory. For more than thirty years St. Louis was much more than what Fort Leavenworth afterwards became.

To an educated and accomplished, well-born, well-bred, and intensely pleasure-loving class such as the officers of the army, the society they found in St. Louis was a perpetual source of delight and cause for thanksgiving. None were better capable of appreciating and enjoying the company of people like the Gratiots, Soulards, Chouteaus, Christys, O'Fallons, Lucases, Labadies, Cabannés, Chenies, Sarpys, Roziers, Macklots, Bertholds, Tessons, Vallés, Prattes, and so many more like them, gentle, easy, bright men, lively, charming, beautiful, and accomplished women. There was good blood, good breeding, careful training in that charming French grace of pure courtesy, and a love of pleasure which went hand in hand with a determination to see that all were pleased and none offended. It was a society of great polish and true refinement, captivating every stranger at once and letting none escape the glamour of its fascinations. The foremost people in their circles, now that they had secured wealth and were able to live at ease, maintained quite intimate commercial and social relations with France and Paris, and that France and Paris, moreover, which had escaped being submerged by the tidal wave of revolution, the people of the old chateaux of the Faubourg St. Germain, who still refused and persisted in their refusal to recognize the usurper Bonaparte. They wore for their better clothes goods of French importation, and followed French fashion at a much shorter interval than that which separated the modes on the Atlantic seaboard from those across the ocean. Their *salons* were beautifully and tastefully decorated in the French style, and French works of art were to be found in the cathedral as well as in private houses.

There was not any great display of wealth in furniture, upholstery, silver- and china-ware, even after luxury had stalked boldly in; but these neat and tasteful French housekeepers made a little go a great way. There were no carpets (none says Mr. Darby

and they amount to more than three hundred men; and, 4th, from the scattered state of our population, extending from the Mississippi to three hundred miles west of that river, divided in small sections or collections of families, in some cases so remote and recent that the civil officers have found it impossible to change up each group of frontiersmen that are constantly passing off from the more settled to the extreme frontier of our country, such as have recently formed the new settlements of Spring and Black Rivers, which are on the west of Cape Girardeau District. The foregoing considerations induce the opinion that the actual population of Louisiana is, on this day, at least twenty-two thousand persons.

[1] This Bellefontaine tract, on the Missouri River, in St. Ferdinand township, was granted by Governor Zeñon Trudeau in 1797 to Hezekiah Lard (or Lord), the concession comprising one thousand arpens, traversed by Cold Water Creek. Lard made a farm of it, and built a grist- and saw-mill. When he died, in 1799, the land was appraised at seven hundred dollars, and the mill at five hundred dollars. The property sold in 1803 at auction, by order of arbitrators to close the estate, for two thousand one hundred and ninety dollars. (The total costs of arbitration and sale were only $75.75.) The purchaser of the main tract, William Massey, in 1806 sold the factory and buildings, with five acres of ground, to the United States for two hundred and fifty dollars, with use of the grounds for five years. At the same time Wilkinson bought the rest of the land found from Massey (five hundred arpens) for two thousand five hundred dollars. In 1809, Wilkinson resold to the United States the same tract for what he had paid for it. The name, St. Charles the Prince, seems to have been by some applied to the fort of Rioux and the fort also on the hill above St. Louis.

until 1816), but the walnut floors, nicely laid and smooth, were carefully and elaborately waxed every morning. There were no pianos, but papa was apt to play the violin with exquisite old-fashioned grace, and mamma very likely had a guitar, handed down to her from the grandmother who had lived in *La Belle France*. On this the demoiselle could play well enough to accompany her light and airy *chansons*. Amusements were not very numerous nor exciting in this simple and single-hearted community, but the great charm of them was that they were nearly all enjoyed in the bosom of the domestic circle. The careless gayety of the people was of that infectious sort which made a little enjoyment a complete equipment of delight. If Col. Eugene Leitendorfer did but come up from Carondelet and exhibit a few of his tricks of hand, embellished by florid oratory and the vaporing boastfulness of an Indian brave (Leitendorfer was a harmless, good-natured humbug, who had been with Eaton in Barbary, doubtless as dragoman and courier, though he spoke as if he were chief of staff), everybody attended and had something to talk about for a good week afterwards. Among outdoor sports there were shooting-matches and pony races, for the multitude chiefly, however, and the betting was confined to the boatmen and wood-rangers. The Indian pony was fleet, but he had not the sustained speed for more than a scrub or quarter race. These ponies were natural pacers and untiring at a "lope" on the march, but they could not run like the Virginia and Kentucky thoroughbreds. Mile heats were unknown, and indeed there was no race-course, except such as the prairie above the town afforded.

There were two billiard-rooms in St. Louis as early as 1767, three years after the planting of the town, and a third was opened a little later. This amusement suited a people used to lounge in the shade of verandas during the warm months and indifferent to any exercise violent enough to arrest the steady hum of animated talk. As for dancing, the weather never interfered with that or with card-playing, in which all ages and sexes indulged, as if it were a vocation in life. Sometimes, when there was a dance of more than usual state, a king's ball or the like, the fiddles of Messieurs Turdiff and Chevreuil were supplemented with a triangle and a tambourine, and a minstrel might perhaps be found to pipe a flageolet. But the music got better when the band at Bellefontaine spoiled the people. Gen. Wilkinson used this band very liberally for his own purposes and lent it often to his friends. The dances were commonly quadrilles, opened with the statelier minuet. The waltz was not known until M. Réné Paul imported it (with a consignment of dry-goods) from Philadelphia. Sunday afternoon was the stated ball-day. Then, too, the children always had their balls, superintended by the grown people,—a school of manners and grace, where lessons were taught not only in the art of bowing and scraping, but in that genuine courtesy of the heart which is founded upon self-repression and respect for the feelings of others.

It would be a charming and delightful thing if we could but restore one of these ancient mansions of St. Louis, bring back the old life and the old people and the old hospitality to its venerable floors and walls, and visit it, thus awakened and rejuvenated. But, alas! when such things and people crumble into dust and mould, the dust and mould gather likewise upon the sound of the stilled voice and the touch of the vanished hand; there is no subtile perfume floating off from the glove and slipper of our grand-dame's balls,—the association, the power of invoking such scenes perishes with their surroundings and accessories. We may not hope to live over again the dead past; we cannot reproduce it any more than we can recall Mozart's divine touch by jangling the crazy keys of Mozart's harpsichord. Were it otherwise, what a past we might revel in by simply hunting up a few of those old St. Louis mansions!—if the audacious and irreverent hand of innovation have spared any. In one single neighborhood and almost one single block there stood the Hammond mansion,—the first house in St. Louis built on the American plan,—the old French stone dwelling of Col. Rufus Easton, the French house of posts in which Dr. Robert Simpson (Easton's brother-in law) lived, and the tavern and wagon-yard of Alexander Bellissème,—"Old Alexander," as he was commonly called. Col. Hammond, Maj. Stoddard's successor as civil and military commander of St. Louis, was a Virginian by birth, appointed to the army of the Revolution from South Carolina, where he resided when the war broke out. He served in Congress, and on the expiration of his term Jefferson sent him to St. Louis. He was rich; he had the profusest Virginia notions of the duties of hospitality, and when he came West with his retinue of servants, he felt that he was representing the whole United States in a half-foreign country. He built a house,—a large Virginia frame,—with chimneys and stairways outside the building, and made his house headquarters for the town. Here the officers of the army met St. Louis and sealed that delightful acquaintance which ripened into a very extensive relationship by marriage, so that the number of officers in the old army who are in one way or another con-

nected with St. Louis people is almost phenomenal. Officers of the army have a proverbial aptitude for choosing well among the ornaments of society, of whom indeed they have the pick, and it is a compliment to the ladies of St. Louis that so many of them have wedded our officers.[1] To illustrate the intimate relations and social reciprocity between the officers of the army and the citizens of St. Louis it is only necessary to read the following:

"The 1st of January, 1827, the officers of the United States army at Jefferson Barracks gave a grand ball, to which many of the leading families were invited. It was a grand affair. It was determined at this time by the inhabitants of the city to give a complimentary ball in return. The residence of Governor Clark was procured for the occasion, and the ball came off on the 8th of January.[2] It answered a double purpose, to return the compliment and to celebrate the anniversary of the battle of New Orleans. The large room that contained the museum was emptied of its contents, was brilliantly illuminated by chandeliers hung to the ceiling, the walls were decorated with national flags, interspersed with life-size portraits of Washington, Lafayette, Jackson, and other distinguished men. The best wines and other liquors, cigars, and everything else to constitute good cheer were procured in the greatest abundance, and the very best musicians that the city afforded were obtained for this occasion. The time for commencing arrived, and with it came the gentlemen and ladies from Jefferson Barracks, bringing with them a full band of choice musicians. The invited guests of the city all arrived at the time and place appointed. The musicians were placed in the middle of this large hall, and the dancing commenced. The band from the barracks played alternately with the musicians from the city, and the enjoyment was genuine and general.

"The dancing ceased at one o'clock, and the company repaired

[1] The list is by no means complete of these marriages. In 1810, Lieut. John Campbell to Miss Nicholls; Lieut. Benito to Miss Vincent; Col. Bissell's daughter (1813) to William Morrison; another daughter of Col. Bissell (1815) to Capt. Price; a third (1817) to Maj. Douglass; 1816, Col. Thompson to Miss Lee; 1815, Christian Wilt to daughter of Maj. George Wilson; 1819, Indian Agent Ruland to daughter of Col. Wells; 1819, Capt. Bright to Miss Tesson; 1823, Maj. Thomas Biddle to daughter of John Mullanphy; 1823, Maj. Ben O'Fallon to daughter of Patrick Lee; 1824, Col. Farris to daughter of Samuel Perry; 1825, Capt. Bates to Mrs. Poteet; Capt. T. F. Smith to Miss Amelia Chouteau; Gen. William H. Ashley to daughter of Maj. Christy; 1824, Col. W. B. Alexander to daughter of Bernard Pratte; Capt. D. E. Hill to Miss Walter; 1827, Col. I. C. Brown to Miss Stephenson; 1829, Lieut Crosman to Miss Foster; Lieut. Clary to Miss Philipson; Capt. Z. C. Palmer to Mrs. Rector; Maj. Kearney to Miss Radford; Capt. T. J. Harrison to Miss Hamtramck; Capt. J. B. Clark to Miss Sanford; Lieut. Philip St. George to Miss Hertzog; Capt. James Dean to Miss Harriet Christy; Lieut. Rousseau to Miss Emily Lee; Gen. E. P. Gaines to Miss Myra Clark Whitney (1839); Anne Lucas, daughter of J. B. C. Lucas, in 1814, married Capt. Hunt, of the navy; Julia Cabanné married Lieut. Kingsbury; Capt. Grant (ex-President) married a Carondelet lady; Charles Gratiot's son and the son also of J. B. C. Lucas were graduates of West Point and distinguished in the army; Col. O'Fallon married a sister of Gen. George Rogers Clark; his son James married a granddaughter of Gen. Zachary Taylor; John T. Darby a daughter of Capt. Wilkinson; Col. Brant married a niece of Thomas H. Benton; Miss Easton married Maj. Sibley; Gen. Frost married a daughter of Maj. Graham; James G. Soulard married a daughter of Col. Thomas Hunt; Maj. Turner married a daughter of Capt. Theodore Hunt. Others of these intermarriages will be found recorded or spoken of in various other parts of this volume.

[2] Mr. Clark's residence in St. Louis was situated on the southeast corner of Vine and Main Streets. His ground extended east to the bank of the river, and down Main Street half the block. The house was of brick, and in 1820 was one of the best buildings in St. Louis, two stories high, and finished in the best style of the day. Attached to the south end of this building was a wing about one hundred feet long and thirty feet wide. In this department was kept what was then called the Indian Museum, where all manner of Indian curiosities were to be seen,—head-dresses composed of feathers, war-clubs, battle-axes, tomahawks, bows and arrows, smoke-pipes, breast-plates, and a large birch-bark canoe,—fossil remains, a large collection of minerals of different sorts, skins of large animals, among them the white buffalo robe, a great variety of birds, and the bones of rare animals, said to be the mammoth or the mastodon; a variety of the remains of serpents and reptiles, one a rattlesnake nine feet long, and the skin of a crocodile twelve feet in length, together with a collection of other articles which filled this large room in every part.

In further proof of the intimate relations of the citizens with officers of the army and their families, we append here from the unpublished papers of Col. John O'Fallon a unique list of the persons invited, and those who went, to a party given by Col. O'Fallon in 1828. The memorandum is in that gentleman's own handwriting, and these same guests were very likely at Governor Clark's ball in 1827:

into the main building and partook of a repast consisting of all that the country could afford, and served up in the best possible style. After supper the dancing was recommenced, and was kept up until six o'clock in the morning, when the company dispersed, pleased and satisfied, for not one adverse occurrence took place to mar the pleasure of the occasion.

"In those days it was customary to have two grand national balls during the winter, one on the 8th of January to celebrate the battle of New Orleans, the other the 22d of February, Washington's birthday. But none of the festivities of former times had equaled this one, and it is doubtful if any festival since then has surpassed it in pleasure and enjoyment."

Such assemblies, and those of an older day, held at the Hammond house, or Chouteau's, or Soulard's, or O'Fallon's, or Christy's, or Rector's, or Cabanné's, or Lucas's, or Sanguinet's, or the old Riddick mansion, Judge Luke Lawless' hospitable home, are easier to imagine than describe. The guests were people distinguished then, or afterwards to be distinguished. Jefferson Davis courted his first wife, Miss Knox Taylor, sister of Gen. Dick Taylor, in the old Christy mansion. Here you might have met, at one and the same king's ball, Gens. Scott and Gaines and Atkinson, Henry Clay and Tom Benton, the two Chouteaus, Manuel Lisa, Wilson P. Hunt, and Henry, the fur-traders, and H. M. Brackenridge, Lord Morpeth, the Earl of Dunmore, and Charles St. Vrain; John Scott, Rufus Easton, and Charles Delassus. John Scott, a great lawyer, would have been noticeable anywhere, with his long white cue of hair hanging gracefully down upon his shoulders, or else clubbed and tucked up with a comb. A man whose conversation would interest you even in a fit of the toothache,—a suave, courteous, peppery gentleman of the old school, who bowed and complimented and swore, as might be expected from the son of a planter of "the slashes of Hanover," who always carried dirk and pistol in his pockets, and was always ready to give and receive a challenge. As for the ladies, they were worthy to receive the attentions of such men as we have named,—many more of whom might be named. Charming, witty, gracious, no men wearied of them and flew to the card-table for rest and relief. On the contrary, their charm had an element of fascination in it, so that it never ceased to attract. Octogenarian dames, who were young then, and of whom to-day, or a few years back, but the feeble shadow, the piping treble of a voice and the snuff-box remained, could still draw young men to their side, to listen with pleased attention to their animated cackle about the good old times. What grace, animation, vivacity was theirs as they glided to and fro across the waxed floors, in the flaring light of candles, or paced up and down the piazzas, with a soldier or a statesman at their elbow, chattering English with the least delightful suspicion of an accent. How fresh and strong they seemed next day, after dancing all night long, and ready, if you called upon them, to take a breezy gallop to Florissant or Bellefontaine, or walk through gardens and pleached alley-ways of orchards, till they brought you to the romantic coverts and dells and pleasing shades along the margin of Chouteau's Pond.

That was a society of the best elements, built solid as the walls of those old mansions which they adorned, —walls of plaster and rubble, or squared blocks of limestone, three feet thick. We do not see such walls nowadays, nor such piazzas, doors, windows, cupboards, and wood-work as those houses contained, —tall mantels, deep cornices and wash-boards, and chair-boards and panels, all cut and grooved by hand. Those good old times have quite passed away; those charming home-circles are broken up, never to be restored in their primitive shape, in which all were neighbors and friends, and every domicile gave you open access and friendly welcome. Door-locks and safes for plates were not; even the thieving Indian and prowling negro never went beyond the pig-pen and the hen-roost to plunder. But there is a common consent that they were "good old times" indeed. As a writer has said,—writing, too, from his heart,—"We have never seen the man yet, come from what part of the world he may, who knew St. Louis sixty or seventy years ago, and was welcomed and received by the kind-hearted, generous, and noble people, honest, upright, and unsuspecting as they were, but what was touched by the friendly greetings of cordial welcome. Talk to one of these ancient visitors now, who knew St. Louis in those primitive days of purity and happiness, and his heart swells and his eyes fill with emotion at the recollection of the generous kindness and unselfish hospitality extended to him by its people."

CHAPTER XIII.

ST. LOUIS LAND TITLES.[1]

THE professional examiner of land titles is content to go back, in his researches, to the grants made by the three governments which have respectively, at different periods of the past, had dominion over and

[1] This clear, complete, and satisfactory chapter on St. Louis land titles was written expressly for this work by Henry W. Williams, Esq., attorney-at-law and examiner of titles in this city. No person in the city is more thoroughly acquainted with the history and the law of the subject here treated, or more

claimed the ownership of the soil upon which the city of St. Louis now stands.

From a utilitarian point of view, it is not necessary to go behind those grants, the law regarding them as the origin or source of the title, nevertheless it may be interesting—to the historian at least—to make some references to the period which antedates the dominion acquired by those governments, and briefly examine as to the methods of acquisition.

But little more than three centuries ago the soil of this continent—save perhaps those portions occupied by the Aztecs and the Zuñis—was wholly without individual ownership. There was not a claim to dominion or sovereignty, save that of the native tribes over so much of the territory as they chanced for the time being to occupy.

The use of land for cultivation and all other purposes was as free to the individual as the waters of the lakes and rivers, or the air which they breathed. Grants and patents, deeds and mortgages, inclosures and boundaries were unknown.

The natives roamed at will, locating their frail habitations "wheresoe'er their fancy led" throughout the land. They were wholly unfettered by the restraints that are attendant upon civilization. No "game laws" prohibited their slaughter of the animals with which the forests abounded; no edicts prohibited the capture by seine or net of the finny tribes which swarmed in the lakes and rivers; no prosecutions threatened them for killing, at any season of the year, the grouse and quail which abounded in all the wide prairies; no fears of warrants for trespass, resulting in damages and incarceration, restrained their wanderings at will; no prospective actions in ejectment marred their enjoyment of the land occupied by their wigwams.

All this, however, was destined to a mighty change. The existence of the New World having been discovered by adventurers from the Old, the three great powers of Europe—France, Spain, Great Britain—and others of lesser note, in their lust for power and greed for dominion over the entire surface of the globe, were each and all eager to appropriate to themselves as much of the new territory as they could possibly manage to acquire. Acting upon the theory that the savages were heathens and had no rights which Christian people were bound to respect,—or, at least, that it would confer upon them a great blessing to introduce Christianity and civilization among them,—they proceeded, in order to avoid conflicts among themselves, to establish a rule which should be recognized by all in their strife for the acquisition of the newly-discovered domain. It was, therefore, mutually agreed that "discovery" gave title or sovereignty and dominion to the government by whose subjects or by whose authority it was made, as against all other European governments, a doctrine which was happily satirized, or at least ridiculed, by a poet of the Revolutionary period who wrote,—

> "For the time once was here (to the world be it known)
> When all a man sailed by, or saw, was his own."
>
> —Freneau.

Under this rule the nation whose subjects made a "discovery" claimed not only the exclusion of all other Europeans, but the sole right of establishing settlements upon it, and of acquiring the soil from the natives. As they were all interested in asserting that right, each wanting a share of the immense spoil, they were of course unanimous in assenting to it; hence the spoliation of the heathen by means of discovery and conquest became legitimate, and was dignified as a principle embodied in the "Law of Nations."

This having been established, the nations whose subjects had made discoveries proceeded to assert their claims to sovereignty and dominion by making grants and charters to individuals and companies in lavish profusion. The result was the occupation and settlement of America by the rival powers, and a succession of wars and conquests which covered the continent with blood, and caused the expenditure of an enormous treasure. All these wars, the march of discovery, the movements of conquerors and adventurers, the making and breaking of treaties, the strange perils of the wilderness, have been sufficiently detailed in various portions of this work. We have traced the course of adventure and occupation down to the actual settlement of St. Louis and its final transfer to the United States. It remains to trace as distinctly the history of land titles in individuals, how they originated, what causes tended to make them doubtful and disputed, and how they have finally attained their present firm and satisfactory basis in St. Louis.

The cession of Louisiana gave to the United States its sovereignty and dominion over all that territory, and

competent to discuss them in an effective and comprehensive manner. We regret that the introductory portions of Mr. Williams' chapter, relating to matters more fully treated already in their proper order in other parts of this work, required to be omitted here; we should have been glad to show how well this pleasing and accurate writer can enliven an otherwise dull and dry subject from the store-house of history and poetry at his command. As it is, the reader will find that the entire complicated subject of our land titles is clearly unfolded before him in chronological and historical order, so that all the apparent difficulties which tend to repel the layman from studying such matters disappear at once under the skillful treatment.

we have been at some pains to show at length by what a clear and indisputable chain of titles we hold these possessions. But there was still outstanding the Indian title.

On page 144 of vol. i. of Monette's "History of the Valley of the Mississippi," the *procés verbal* by which Cavelier de la Salle formally took possession of the vast territory which he called Louisiana is set out at length, and it contains a statement that such possession was taken with the consent of sundry Indian tribes.

That the unsuspecting natives gave his party a friendly welcome, as visitors, there can be no doubt; but that they had the faintest idea that they were making a formal surrender of their forest homes and hunting-grounds to the strangers is beyond belief, even though recited with all the formality of a well-attested *procés verbal*. The colonists from the Old World met with but very little opposition in obtaining their footholds either in North or South America, and once established the work of acquisition was easy. By treaties, when a few trinkets would secure the surrender of the large bodies of land which they coveted, and by exterminating war when peaceful modes of accomplishing their purposes failed, they and their descendants have very nearly fulfilled to the letter the prophetic wail which one of the most distinguished of American poets attributes to the despairing native:

"They waste us; ay, like April snow
In the warm noon, we melt away;
And fast they follow as we go
Toward the setting day,
Till they shall fill the land, and we
Are driven into the Western sea!"

—Bryant.

For years they bravely struggled for the retention of the right which they held by patent from the God of nature to roam their hunting-grounds at will. They had no historian of their own to chronicle the incidents of their unavailing resistance; but the narratives of their enemies, the conquerors, are of a character to arouse strong sympathy with the natives, and too often to excite indignation against their foreign enemies. The pages of the Spanish historian De Solis, and of English and American histories, prove that the struggle for the retention of the land of their nativity was, in early days, heroic, long, and bloody. Nor has it yet ended; they are not yet "driven into the Western sea," but "civilization" and "manifest destiny" are both on their trail. There soon will be "no one left to mourn for Logan!"

To the honor of the French pioneers it must be repeated that their relations with the savage tribes were more peaceful, friendly, and just than those of other nations. They sought and gained the confidence and friendship of the natives, and, with comparatively few exceptions, their intercourse was of a peaceful and mutually beneficial character. The French padre, or "black gown," was usually welcomed and respected. The French trader was, as a rule, kindly received. This was especially the case with the honored pioneers who founded and carried on the "Indian trade" at St. Louis, and at the trading-posts which they established among all the tribes.

It is traditional to this day that the name of Chouteau was a passport to protection and favor among all the Western tribes.

When the United States government acquired dominion it wisely adopted the peaceful and proper methods of acquisition of the Indian title by treaty. In two of these treaties reference is made to previous cessions made to the English, French, and Spanish governments, but those former treaties, if made, are not now accessible. Nearly all the tribes have in due form ceded their rights to the United States,—in some instances, however, as a sequel to a fierce and bloody, but of course an unsuccessful war,—and usually for a ridiculously small compensation, in comparison with the extent of territory ceded. Treaties have been made with the Osages, the Sacs and Foxes, the Sioux, the Weas, the Piankeshaws, the Kickapoos, the Winnebagoes, the Menomonies, the Shawanese, the Kanzas, the Iowas, and the Illinois, which it is believed cover nearly all of the northern part of Louisiana, as it was acquired by the United States.

It follows therefore—although there are some delicate ethical questions involved, although the title-papers in some cases are fearfully stained with blood, in many cases are tainted with fraud and sadly lacking adequate consideration—that under the rulings of Vattel, and especially of that "higher law" known as "manifest destiny," the title acquired from France and confirmed by the Indian tribes must be pronounced good in "Uncle Sam."

We now return to the year 1764 to ascertain what grants of "legal" or "equitable" titles were made by the French or Spanish governments during the period of their dominion.

French Grants.—It has been said Laclede reached St. Louis on the 15th of February, 1764, with the men for his colony, and proceeded to lay out a town. In the following year quite a large addition to the colony was made by French people from Illinois, who, warned by the fate of the unfortunate exiles from Acadia, had no desire to become subjects of Great Britain, that power having commenced to take pos-

session of the country east of the Mississippi. Among the new-comers was M. Louis St. Ange de Bellerive, who was the first person to exercise civil and military command in St. Louis, and the first person who made grants of land in that city.

His life and his excellent character are fully set forth elsewhere in this volume.

Three months after taking command of Fort Chartres Capt. Sterling died, leaving the office of commandant of that post vacant. In this state of affairs —doubtless at the request of the garrison—St. Ange returned to Fort Chartres and resumed the command, holding the position until the arrival of Maj. Frazer from Fort Pitt, to whom he resigned his charge and returned to St. Louis. It is stated in Peck's "Annals of the West" that "prior to his departure (from Fort Chartres), with a fatherly care and benevolent intent, St. Ange instituted for those he left behind in Illinois some wise and salutary regulations regarding titles to their lands."

It has been generally supposed—and has been so stated in some of the more recent histories of that period—that St. Ange assumed command at St. Louis, implying that he did so without authority; but a comparison of dates and a reasonable degree of inference would seem to indicate that he was duly commissioned to act as commandant of the post, with all the powers incident thereto under French laws and ordinances.

The grant to Laclede, Maxent & Co. was made in 1762. Laclede selected the site of his principal trading-post in 1763, and began to build St. Louis on the 15th of February, 1764. It was probably known to the commandant at New Orleans that St. Louis had been selected as a trading-post, and that it would be a favorable location for a military establishment charged, as usual, with control of civil affairs. In the summer of 1764, as elsewhere stated, M. Neyon de Villiers left Fort Chartres, followed by many of the inhabitants, rather than dwell under the detested flag of that nation. It is stated that he had known some time previously the cession of the country to Great Britain. He left Fort Chartres in command of M. de St. Ange, to be delivered up to the English on demand.

As it is not probable that De Villiers deserted his post without orders, it is a reasonable inference that he was duly authorized to leave and to transfer his command to St. Ange. It is also reasonable to suppose that St. Ange was at the same time authorized, on being relieved by an English officer, to proceed to St. Louis, and establish and take command of a post at that place, it not being known even at New Orleans until October, 1764, that the west bank of the river had been ceded to Spain. If such orders were given,—and of this scarcely a doubt can exist,—St. Ange was fully authorized to take command at St. Louis, and he of course had the right to hold that position until the Spanish official came to relieve him, precisely as he held Fort Chartres long after the cession and until he was relieved.

This view of the case is confirmed by the fact that there are documents among the "archives" of the post which prove that the Governor-General at New Orleans recognized him as commandant of the post, by virtue of which office he was a "sub-delegate," and in that capacity had authority to make grants of land, subject to the approval of the Governor-General.

As St. Ange delivered up Fort Chartres on the 10th of October, 1765, to Capt. Sterling, and resumed the command after that officer's death, remaining until relieved by Maj. Frazer from Fort Pitt, it is manifest that he did not finally take command at St. Louis until the spring of 1766.

The records show that he proceeded without delay to discharge the duties devolving upon him, as on the 27th of April, 1766, he made the first land grant that ever was made affecting property at St. Louis. That grant was made to Joseph Labuxière (Labuscière) (Livre Terrien, No. 1, page 1), being for a lot in St. Louis, having a front of three hundred feet on Rue Royale (now Main Street), by one hundred and fifty feet deep to the river, said lot being now known as Block 13 of the city. (The time has been, if not now, when the proceeds of the sale of that block of its ground and twenty-nine similar blocks that might be selected in its vicinity would amount to more than the sum paid by the United States for the acquisition of the whole of the Louisiana Territory as it existed in 1803.)

St. Ange remained in command until May 20, 1770, when he was relieved by the Spanish Lieutenant-Governor, Don Pedro Piernas. His administration had given entire satisfaction. He was not only a brave soldier and a wise and skillful commander, but possessed sterling qualities as a civilian. During the four years of his service in St. Louis he won the confidence, esteem, and affection of the entire people, and laid the foundations of and steadfastly maintained an excellent system of civil government. He died at St. Louis, and was buried, according to the church register, on the 27th of December, 1774, in the cemetery of the church. The entry gives his name and title as "Louis St. Ange de Bellerive, captain of the Swiss Battalion of Louisiana," from

which it would appear that he retained under Spain the same military rank which he had acquired as a soldier of the French king.

The system of making and recording grants of land adopted by St. Ange was in no wise complicated. All concessions are short and simple in form, merely stating that on the day named, on the application of ———, "we have conceded, and we do concede to him (describing the land), under the conditions of settling it within one year and a day, and that the same shall remain liable to the public charges.

"Done the same day and year.

(Signed) "ST. ANGE.

"LABUXIÈRE, *Notary.*"

Spanish Titles.—The Spanish successors in office of St. Ange (with the dates when the "archives" of the post were turned over to them) were as follows:

Don Pedro Piernas, May 20, 1770.
Don Francisco Cruzat, May 19, 1775.
Don Fernando De Leyba, June 14, 1778.
Don Francisco Cruzat, Sept. 24, 1780 (second term).
Don Manuel Perez, Nov. 25, 1787.
Don Zeñon Trudeau, July 21, 1792.
Don Carlos Dehault Delassus, Aug. 29, 1799.

All of these officers, except Delassus, pursued the St. Ange method of making and recording grants or concessions of land, except that they were somewhat more formal in reciting the official titles of the granting officer. The records of all the grants made are contained in six small books of cap-paper with leather covers, and constitute what is commonly known as the "Livre Terrien," sometimes called the "Provincial Land Book." It does not appear that any surveys of the grants were made until 1770, when, at request of a number of the inhabitants, Lieutenant-Governor Piernas appointed Martin Duralde surveyor of the colony of Illinois.

He surveyed a large number of common-field lots, as they were called, being long narrow strips of land lying side by side, having a common front line, called the "traite quarré," on which they had a front of from one to four arpens (the arpent being equal to one hundred and ninety-two feet six inches, English measure) by a depth of forty arpens; each tract being described by the designation of the common field in which it was located, the number of arpens front and depth, and the names of the adjoining proprietors.

It is traditional that the reason for making the grants in that manner was that the owners of the fields might, when cultivating their respective tracts, be near to each other for mutual protection against attacks by the Indians.[1]

There were several common-field inclosures, designated as follows: The "St. Louis Prairie," which adjoined the city on the west; the "Grand Prairie," west of the "St. Louis Prairie;" the "Prairie Desnoyers," southwest of the town and from two to three miles distant, surveyed at a later date by Pierre Chouteau; the "Cul de Sac" or "Cul de Sac of the Grand Prairie," lying between the "Grand Prairie" and the "Prairie Desnoyers," the three at one time, according to the testimony of Mr. Pierre Chouteau, having one common inclosure; the "Little Prairie," south of the old town, and the "White Ox Prairie," some four miles north. Each of these common fields was inclosed and the fences kept up at the expense of the owners of the several field lots, each owner building and maintaining the fence at the front and rear ends of his lot, and each contributing his quota of the expense of building and maintaining the fences along the outer line of the two side boundaries.

No plats of said surveys were made, at least none appear of record. The certificates of survey (by Duralde) were recorded in Livre Terrien No. 2, and the surveys were made in the years 1770–72.

The town lots were not separately surveyed. They are represented upon a plat made in 1780, but the lines of that plat were not strictly followed in all cases by the United States government surveys; the variations, however, did not materially affect the rights of claimants.

There were also grants made known as "out-lots,"—that is to say, lots which were not in the town as laid out, nor in the common fields, but occupying intervening spaces between the same, or located adjoining them on the outer limits.

A large tract of land southwest of the town, containing 4510.48 arpens, equal to 3837.03 acres, according to the United States surveys, was held by the inhabitants as a common for pasturage, cutting wood etc.

Outside of all these there were grants of larger bodies of land for plantations or farms, one of them being for a league square, equal to 7056 arpens.

It does not appear that the government derived any revenue from sales of land. All the smaller grants were gratuitous. Larger grants were made, some of them in consideration of services rendered,

[1] But the custom is old French; the shape dictated by the saving in fencing. Each lot-holder got a lot forty arpens long, but had only to fence two arpens, one at each end, and contribute his proportion of two forty-arpens long fences.

J. T. S.

and some of them to aid in the establishment of enterprises which were alleged to be for the public good.

All the grants made by commandants or Lieutenant-Governors (as sub-delegates) were inchoate or incomplete titles, regarded as property, and as such were held and transferred; but by Spanish laws and regulations they required a survey, and the sanction or approval of the Governor-General of the province at New Orleans, to make them complete legal titles.

Of the large number of grants so made in Upper Louisiana only thirteen were completed in the manner prescribed by those laws so as to vest an absolute legal title in the grantee. A translation of a complete grant under the Spanish laws is given in 8 Howard, 314.

It was issued on the 29th of May, 1802, by Juan Ventura Morales, intendant *ad interim*, and not by the Governor-General.

In this connection, therefore, it should be noted that Don Antonio de Ulloa was commissioned on the 2d of May, 1765, to take possession of Louisiana, but was prevented by the rebellion of the inhabitants against submission to his authority. On the 29th of October, 1768, Don Alexander O'Reilly, lieutenant-general of the army, was commissioned "to proceed to New Orleans, take possession, and chastise the ringleaders of the rebellion."

On the 16th of April, 1769, he was commissioned as Governor and Captain-General of Louisiana, and specially vested "with power to establish, in respect of military force, police, administration of justice, and finances, such a form of government as would effectually secure its dependence and subordination, and promote the king's service and the happiness of his subjects." He arrived at New Orleans with a large military force, and took possession without opposition. On the 18th of February, 1770, he issued his "regulations," among which (No. 12) he directs that all grants of land shall be made or approved by the Governor-General.

On the 24th of August, 1770, the Marquis de Grimaldi informed Don Louis de Unzaga, who succeeded O'Reilly, that the king had approved and confirmed the regulations and instructions of Governor O'Reilly. On the 22d October, 1798, a communication was forwarded to De Lemos, then Governor of Louisiana, and to Morales, then intendant *ad interim*, informing them that "the king has resolved, for the sake of the better and more exact observance of the eighty-first article of the royal ordinance for intendants of New Spain, that the exclusive faculty of granting and distributing (*conceder y repartir*) lands of every class shall be restored to the intendancy of that province.

From this it will be perceived that the power to make or to approve grants of land was vested in the Governor-General from Feb. 18, 1770, to Oct. 22, 1798, and in the Intendant-General from and after the last-mentioned date. That power, as we have seen, was not exercised in Upper Louisiana save in thirteen cases; hence, as to all the other grants or concessions, the titles held by the inhabitants had not been perfected.

In the treaty of San Ildefonso, Oct. 1, 1800, by which Spain ceded the province of Louisiana to the French republic, there was no stipulation made as to the protection of the rights of the inhabitants to property, but the king in his royal proclamation given at Barcelona, Oct. 15, 1802, announcing the retrocession, expressed the hope that the government of the French republic "would protect the inhabitants in the peaceful possession of their property," and "that all grants of property of whatever denomination made by my Governors may be confirmed, though not confirmed by myself."

The treaty of April 30, 1803, by which France ceded the province to the United States, contained the following clause, written (M. Marbois states) by Napoleon himself:

"Article 3. The inhabitants of the ceded territory shall be incorporated in the Union of the United States, and admitted as soon as possible, according to the principles of the Federal Constitution, to the enjoyment of all the rights, advantages, and immunities of citizens of the United States, and in the mean time they shall be maintained and protected in the free enjoyment of their liberty, property, and the religion which they profess."

All the rights of individuals claiming lands in Upper Louisiana, excepting only the thirteen complete titles above referred to, were inchoate, requiring survey and patent from the former governments to make them perfect, and it was optional with those governments to make them complete or not.

The Congress of the United States, fully recognizing the principle that an inchoate title to land is property, and should be held sacred (even independently of treaty stipulations), proceeded to make provision for ascertaining and confirming all claims which could be properly substantiated as lawfully emanating from the former governments.

The first act of Congress after taking possession of the province of Louisiana, approved March 26, 1804, divided the same by the thirty-third degree of north latitude, all south of that line constituting the "Or-

leans Territory," and all north of it the "District of Louisiana." By an act approved Feb. 28, 1806, the "District of Louisiana" became the "Territory of Louisiana." In the act of June 4, 1812, it is called the "Territory of Missouri," and by proclamation of Aug. 10, 1821, it became the "State of Missouri."

The act of 1804 declared all grants of land and every act and proceeding towards obtaining any grant or title to lands subsequent to the treaty of San Ildefonso (Oct. 1, 1800) to be null and void; provided that nothing in this section shall be construed "to make null and void any *bona fide* grant made, agreeably to the laws, usages, and customs of the Spanish government, to an actual settler on the lands so granted for himself and for his wife and family; or to make null and void any *bona fide* act or proceeding done by an actual settler, agreeably to the laws, usages, and customs of the Spanish government, to obtain a grant for lands actually settled on by the person or persons claiming title thereto, if such settlement in either case was actually made prior to the 20th day of December, 1803." Further provides that such grant shall not secure to the grantee more than one mile square, and such further quantity as the Spanish laws and usages allowed for the wife and family."

The subsequent legislation greatly modified this; grants made prior to 10th of March, 1804, the day when St. Louis was delivered to the United States, being recognized as valid.

1805, March 2d.—"An Act for ascertaining and adjusting the titles and claims to lands in the Territory of Orleans and District of Louisiana" provides that persons who were residents on 1st of October, 1800, and had obtained from French and Spanish governments, during the time either of said governments were in possession, any duly registered warrant or order of survey for lands to which the Indian title had been extinguished, and which were on that day actually inhabited and cultivated by such persons, or for his or her use, shall be confirmed, etc.

Also that to every person being the head of a family, or twenty-one years of age, who had prior to 20th of December, 1803, with permission of Spanish officer, made actual settlement on a tract during the time the government making such grant had actual possession, and who, on 20th of December, 1803, did actually inhabit and cultivate said tract, the same shall be granted to him.

Provides also for the appointment by the President of a recorder of land titles, and that notice of all claims to land shall on or before the 6th of March, 1806, be filed with him, together with title papers, a plat of the land claimed, etc., which title papers shall be recorded. If claimant neglects to comply with these provisions, all his right to be forever barred.

Provides also for the appointment by the President of two persons, who, with said recorder of land titles, shall be constituted a board of commissioners, with power "to hear and decide in a summary manner all matters respecting claims, etc., and to decide in a summary way, according to justice and equity, on all claims filed with the recorder in conformity with the provisions of this act, which decisions shall be laid before Congress, and be subject to their determination thereon. "Provided, however, that nothing contained in this act shall be construed so as to recognize any grant or incomplete title bearing date subsequent to the 1st day of October, 1800, or to authorize the commissioners to make any decision thereon."

Requires the commissioners to make a full report to the Secretary of the Treasury, to be laid before Congress.

1806, April 21st.—An act supplementary to an act entitled "An Act for ascertaining and adjusting the titles and claims to land within the territory of Orleans and the District of Louisiana" provides that actual settlement shall be considered as having been made by permission of the proper Spanish officer.

That the persons claiming a tract not exceeding six hundred and forty acres, if otherwise embraced in the provisions of the amended act, shall be confirmed, although not twenty-one years old when claim originated.

Extends the time for filing notice of claim with recorder of land titles to the 1st of January, 1807, etc.

1807, March 3d.—"An Act respecting claims to land in the territories of Orleans and Louisiana" repeals that part of the act of March 2, 1805, which provides that no incomplete title shall be confirmed unless the person to whom the warrant or order of survey had been granted was, at the time of its date, either the head of a family or above the age of twenty-one years.

Provides that persons who, on the 20th of December, 1803, had for two consecutive years prior to that day been in possession of a tract of not more than two thousand acres, and who were on that day resident in the territory of Orleans or Louisiana, and had still possession of the tract, should be confirmed in their titles to said tract of land.

Section 4 provides that the commissioners "shall have full powers to decide, according to the laws and established usages and customs of the French and Spanish governments, upon all claims to lands within their respective districts, where the claim is made by

any person or persons, or the legal representative of any person or persons, who were on the 20th of December, 1803, inhabitants of Louisiana, and for a tract not exceeding the quantity of acres contained in a league square, and which does not include either a lead-mine or a salt spring, which decision of the commissioners when in favor of the claimant shall be final against the United States, any act of Congress to the contrary notwithstanding.

Section 5 extends the time for filing notices of claims and title papers with the recorder to the 1st of July, 1808.

Section 6 provides that the commissioners shall transmit to the Secretary of the Treasury and to the surveyor-general transcripts of their final decisions made in favor of claimants, "and they shall deliver to the party a certificate stating the circumstances of the case, and that he is entitled to a patent for a tract of land therein designated, which certificate shall be filed with the proper register or recorder within twelve months after date, and the register or recorder shall thereupon (a plat of the tract of land therein designated being previously filed with him or transmitted to him by the officer acting as surveyor-general, in the manner hereinafter provided) issue a certificate in favor of the party, which certificate being transmitted to the Secretary of the Treasury, shall entitle the party to a patent, to be issued in like manner as is provided by law for the issuing of patents for public lands lying in other Territories of the United States."

Section 7 makes provision for surveying the claims.

Section 8 directs that the commissioners shall report their opinions on all claims which they do not confirm, and how they are to be classified, etc.

Action of the Board of Commissioners.—Under the foregoing legislation, the President appointed John B. C. Lucas and Clement B. Penrose, and they, with Frederick Bates, recorder of land titles, constituted what is now known as the "old (or first) board of commissioners" for the adjustment of land claims. They commenced on the 8th of December, 1808, and terminated their labors on the 15th of January, 1812, having issued one thousand three hundred and forty-two confirmation certificates, each of which entitled the claimant or his legal representatives to a patent which would vest in him or them a complete legal title.

It is proper here to note that, although the board of commissioners were empowered to issue confirmation certificates which should be final against the United States, and although the act does not say that patent shall be issued, it has repeatedly been decided by the State and Federal courts that the "legal title" did not pass until the issue of a patent.[1]

The commissioners rejected a large number of claims, many of which would have been confirmed by them but for the stringent rules and restrictions prescribed by Congress.

There were also hundreds of claims for town lots, out-lots, common-field lots, etc., which were not acted upon by the board because they did not come within the scope of the legislation which defined and limited their powers.

Satisfied that those claims were meritorious and ought to be confirmed, Clement B. Penrose, one of the commissioners, and Thomas F. Riddick, clerk of the board, prepared communications, one to the Secretary of the Treasury, the other to the chairman of the Committee on Public Lands, stating the general facts in regard to such claims, recommending them for confirmation, and indicating the character of the further legislation that was requisite. Their suggestions were accepted, and the following act was passed to carry them into effect. Its importance demands that the first, second, and eighth sections be given *verbatim*:

1812, June 13.—"AN ACT *making further provision for settling the claims to land in the Territory of Missouri.*

"SEC. 1. *Be it enacted, etc.*, That the rights, titles, and claims to town or village lots, out-lots, common-field lots, and commons in, adjoining, and belonging to the several towns or villages of Portage des Sioux, St. Charles, St. Louis, St. Ferdinand, Ville à Robert, Carondelet, Ste. Genevieve, New Madrid, New Bourbon, Little Prairie, and Arkansas, in the Territory of Missouri, which lots have been inhabited, cultivated, or possessed prior to the 20th of December, 1803, shall be, and the same are hereby, confirmed to the inhabitants of the respective towns and villages aforesaid, according to their several rights or rights in common thereto; *Provided*, That nothing herein contained shall be construed to affect the rights of any person claiming the same lands, or any part thereof, whose claims have been confirmed by the board of commissioners for adjusting and settling claims to land in the said Territory. And it shall be the duty of the principal deputy surveyor for the said Territory, as soon as may be, to survey, or cause to be surveyed and marked (where the same has not already been done according to law), the out boundary lines of the said several towns or villages, so as to include the out-lots, common-field lots, and commons thereto respectively belonging. And he shall make out-plats of the surveys, which he shall transmit to the surveyor-general, who shall forward copies of the said plats to the commissioner of the general land office and to the recorder of land titles. . . .

"SEC. 2. *And be it further enacted*, That all town or village lots, out-lots, or common-field lots included in such surveys which are not rightfully owned or claimed by any private individual, or held as commons belonging to such towns or villages,

[1] Burgess *vs.* Gray, 15 Mo., 220; Aubuchon *vs.* Ames, 27 Mo., 93; Le Beau *vs.* Armitage, 47 Mo., 138; Smith *vs.* Madison, 67 Mo., 695; Landers *vs.* Brant, 10 How., 374; Burges *vs.* Gray, 16 How., 48; Maguire *vs.* Tylor, 8 Wall, 657. These decisions have had an important bearing upon questions of title.

or that the President of the United States may not think proper to reserve for military purposes, shall be and the same are hereby reserved for the support of schools in the respective towns or villages aforesaid; *Provided*, That the whole quantity of land contained in the lots reserved for the support of schools in any one town or village shall not exceed one-twentieth part of the whole lands included in the general survey of such town or village."

SEC. 3 provides that the claims to donations of lands in virtue of settlement and cultivation embraced in the report of the commissioners, which were not confirmed because possession to settle by Spanish officers had not been proven, or because the land claimed, though inhabited, was not cultivated on 20th December, 1803, shall be confirmed, in case it shall appear that it was cultivated prior to 20th December, 1803, and cultivated in eight months thereafter. Also, that when it shall appear by the report or records of the board that claims have not been confirmed merely on the ground that the claim was for more than eight hundred arpens, every such claim to the extent of eight hundred arpens shall be confirmed.

SEC. 4 directs recorder of land titles to make extracts from the books of the commissioners of all claims directed by the preceding section to be confirmed, and forward same to general land office. Also to furnish surveyor with description, etc., and when surveyed to issue certificate of confirmation, which shall be transmitted to the commissioner of the general land office, and if he shall be satisfied that it has been fairly obtained, patent shall be granted in like manner as is provided by law for other lands of the United States.

SEC. 5 directs certain public lands to be surveyed, and also such lands as have been confirmed by the board of commissioners, when the same have not already been surveyed under the authority of the United States, etc.

SEC. 6 provides that the recorder of land titles shall furnish to the surveyor descriptions of lands confirmed, etc.

SEC. 7 allows to persons who are actual settlers and have not filed notice of their claims with the recorder of land titles until the first of December, 1812; if not then filed, claims to be ever after barred.

SEC. 8. "And be it further enacted that the said recorder of land titles shall have the same powers and perform the same duties, in relation to the claims thus filed before the first day of December next, and the claims which have been heretofore filed but not decided on by the commissioners, as the board of commissioners had by former laws, respecting claims filed prior to the first day of July, 1808, except that his decisions shall be subject to the revision of Congress. And it shall be the duty of said recorder to make to the commissioner of the general land office a report of all the claims which shall be thus filed before the first day of December next, and of the claims which have been already filed but not decided on by the said commissioners, together with the substance of the evidence in support thereof with his opinion, and such remarks as he may think proper, which report, together with a list of the claims which, in the opinion of said recorder ought to be confirmed, shall be laid by the commissioner of the general land office before Congress at their next session for their determination thereon."

The passage of this more liberal act of Congress enabled the village claimants of town lots, out-lots, common-field lots, and commons to present their claims, which they proceeded to do, and as by far the larger portion of said claims were based upon the grants made by St. Ange and the Spanish Lieutenant-Governors who succeeded him, the inhabitants of St. Louis appointed a committee to represent them, who addressed to the recorder of land titles the following communication:

"Nov. 28, 1812.

"TO FREDERICK BATES, ESQ., *Recorder of Land Titles in and for the Territory of Missouri:* SIR,—For the benefit of all parties interested, please to record the registered concessions of Livres Terrien Nos. 1, 2, 3, 4, 5, and 6, on file in your office.

"Thomas F. Riddick.	Geo. Sarpy.
Pierre Chouteau.	Julius de Mun.
Alex. McNair.	Bernard Pratte.
Wm. C. Carr.	B. G. Farrar.
Chas. Gratiot.	John McKnight.
Augt. Chouteau.	Cabanné."
M. P. Leduc.	

The recorder of land titles entered at once upon the discharge of his arduous task. In the progress of his work it was discovered that further legislation by Congress was required, and the following act was passed:

1813, March 3.—SEC. 1 provides that persons who had filed a notice of their claims shall have until Jan. 1, 1814, to produce evidence in support thereof.

SEC. 2. Recorder to have same powers and perform the same duties in every respect, in relation to the claims whereof notice has been filed as aforesaid, as the board of commissioners would have had or should have performed, etc., except that his decision shall be subject to the revision of Congress.

SEC. 3 makes it the duty of the recorder to report to the commissioner of the general land office, which report shall be laid before Congress, etc.

SEC. 4 provides that certain claims that have been reduced in quantity by the board of commissioners shall be confirmed to the extent of the full quantity claimed, not to exceed six hundred and forty acres.

SEC. 5 requires survey to be made of such claims and the plats of survey returned to the recorder of land titles, whereupon the recorder shall issue a certificate, which shall be transmitted to the general land office, and if the commissioner is satisfied that it was fairly obtained, patent shall be granted, in like manner as is provided by law for other lands of the United States. . . .

Still further legislation was deemed necessary, and the following act was passed:

1814, April 12.—SEC. 1 provides that persons claiming by virtue of incomplete French or Spanish grants or concessions or any warrant or order of survey which was granted prior to 20th of December, 1803, for land in Orleans Territory, or before 10th of March, 1804, for lands in Missouri Territory, being then resident in the province of Louisiana, or at the time the same were made, and whose claims have been filed with the recorder of land titles, and are embraced in the report of the commissioners or register or recorder for the district in which the lands claimed are situated, in every case where it shall appear that the concession contains a special location or had been located prior to the dates mentioned "by a surveyor duly authorized by the government making such grant, such persons shall be and they are hereby confirmed in their claims."

SEC. 2 provides that every person or persons claiming land by right of donation under former laws, whose claims are con-

tained in the report of any board of commissioners or the report of the . . . recorder of land titles, made or hereafter to be made, which claims shall appear not to have been confirmed, merely because the tracts claimed were not inhabited on the 20th of December, 1803, such persons shall be and they are hereby confirmed in their respective claims; provided, etc. . . .

SEC. 3 provides for survey of the lands confirmed by this act, on the return of which recorder shall on application make out a certificate of confirmation, directed to the commissioner of the general land office, and if he is satisfied therewith then "patents shall be granted in like manner as is provided by law for the other lands of the United States."

SEC. 4 makes it the duty of the principal deputy surveyor to survey the lands confirmed by this act, on receiving order of survey from the recorder of land titles, etc.

SEC. 5 grants pre-emption right to certain parties who have actually inhabited and cultivated, etc.

Report of Recorder Bates.—On the 2d of February, 1816, having completed the work assigned to him, Recorder Bates, as required by the eighth section of the act of June 13, 1812, made his report to the commissioner of the general land office, by whom it was submitted to Congress. It is headed as follows:

"Report of opinions of the recorder of land titles for the Territory of Missouri on claims entered under the act of 13th June, 1812, and proven before Jan. 1, 1814, as provided by act of 2d March, 1813; comprehending also the claims in the late district of Arkansas, which by act of 2d August, 1813, were permitted to be entered until the 1st of January, 1814, and proven until the 1st of July, 1814, together with the extensions of quantity provided by the fourth section of act of 3d March, 1813, and confirmations under the act of 12th April, 1814."

It shows that two thousand five hundred and fifty-five claims were presented and acted upon, of which number eight hundred and one were rejected, seventeen hundred and forty-six confirmed, and eight confirmed conditionally. The confirmed claims were classified, and reported under the following heads:

1. "*Confirmation of village claims under act of Congress of the 13th June, 1812*"..... 586 claims.
2. "Grants of the late board, extended by virtue of the fourth section of the act of Congress of March 3, 1813"..... 236 claims.
3. "Confirmations of concessions, orders, or warrants of survey, principally under act of Congress of 12th April, 1814"..... 387 claims.
4. "Grants of claims founded on settlements under the several acts of Congress, commencing with that of 13th of June, 1812, and ending with that of 12th of April, 1814"..... 514 claims.
5. "Claims of William Russell"..... 23 claims.

This claimant filed 309 claims, all of which save 23 were rejected.

Confirmation of the report of Recorder Bates, 1816, April 29.—"An Act for the confirmation of certain claims to land in the Western District of the State of Louisiana and in the Territory of Missouri.

"SEC. 2. *And be it further enacted*, That all claims embraced in the reports of the recorder of land titles, acting as commissioner for ascertaining and adjusting the titles and claims to land in the Territory of Missouri, dated November 1, 1815, and February 2, 1816, where the decision of the said commissioner is in favor of the claimants, shall be and the same are hereby confirmed, to wit, confirmations of village claims under the act of Congress of the thirteenth of June, eighteen hundred and twelve; grants of the late board of commissioners, appointed for ascertaining and adjusting the titles and claims to land in the Territory of Missouri, extended by virtue of the fourth section of the act of the third of March, one thousand eight hundred and thirteen; grants and confirmations under the several acts of Congress, commencing with the act of the thirteenth day of June, eighteen hundred and twelve.

"SEC. 3. *And be it further enacted*, That in all cases not provided by law for patent certificates to issue, every person and the legal representative of every person whose claim to a tract of land *is confirmed by this or any former act*, and who has not already obtained a patent certificate for the same, shall, whenever his claim shall have been located and surveyed according to law, be entitled to receive from the . . . recorder of land titles in the Territory of Missouri . . . *a certificate stating that the claimant is entitled to a patent for said tract of land by virtue of this act*; for which certificate the officer issuing the same shall receive one dollar; *and the certificate shall entitle the party* TO A PATENT for the tract of land, WHICH SHALL ISSUE *in like manner as is provided by law for patents to issue for lands purchased of the United States.*"

On the same day when the foregoing act was approved, to wit, April 29, 1816, another act was also approved which provides that "a surveyor of the lands of the United States in the Territories of Illinois and Missouri shall be appointed, whose duty it shall be . . . to cause to be surveyed the lands in said Territories, the claims to which have been or may be confirmed by any act of Congress, which have not already been surveyed according to law, and generally to do and perform all and singular the duties required by law to be performed by the principal deputy surveyor for the Territory of Missouri."

Decisions of the Courts as to the effect of the Acts of 1812 and 1816.—From the earliest decisions of the Supreme Court of Missouri down to the latest, it has uniformly been held that the act of 1812 was a confirmation *proprio vigore*, in "words of present grant," "requiring no patent to vest the legal title" in the confirmee. The Supreme Court of the United States has concurred therein in several decisions.

In view of the decisions as to the effect of the confirmations by the old board of commissioners under the acts of 1805, 1806, and 1807, hereinbefore referred to, it is difficult to comprehend upon what theory the widely different decisions relating to the acts of 1812 and 1816 are based. The act of 1807 provides for the issuing of a patent, hence it is clear that Congress intended to pass the legal title in that manner. As the act of 1816, which is simply a supplement to the eighth section of the act of 1812, also requires that a patent shall issue, whence the distinction?

Reference to one of the most prominent of the decisions as to the effect of the acts of 1812 and 1816, for they must be considered together, may throw some light upon the subject.

In Guitard *vs.* Stoddard, 16 Howard, 510, it is said as follows.

"The laxity of the legislation in the act of 1812 is painfully evident when the fact is declared that the large and growing cities of the State of Missouri have their site upon the land comprehended in this confirmation. . . . Congress afforded no means of authenticating the rights, titles, and claims of the several confirmees. No board was appointed in the act to receive the evidence, nor to adjust contradictory pretensions. No officer was appointed to survey or to locate any individual right. All the facts requisite to sustain the confirmation—what were village or town lots, out-lots, common-field lots, or commons, what were the conditions of inhabitation, cultivation, or possession to bring the claimant within the act—were referred to the judicial tribunals."

Turning to the eighth section of the act thus severely criticised, it will be seen that the recorder of land titles was appointed with all the powers (except of confirmation) of the old board of commissioners for the express purpose of investigating the identical "village claims" described in the first section of that act. Under that appointment the recorder had full power to authenticate the rights, titles, and claims of the several confirmees, to "receive the evidence," and "to adjust contradictory pretensions, to determine what were village or town lots, out-lots, common-field lots, or commons," and "what were the conditions of inhabitation, cultivation, or possession to bring the claimant within the act.

The report of the recorder of land titles shows that he performed all those duties in respect to those identical village claims, his report thereon being headed "Confirmation of Village Claims under the Act of Congress of June 13, 1812," and embraces five hundred and eighty-six of those claims. Congress, by the act of 1816, confirmed the same claims by precisely the same description, and provided that when surveyed a patent certificate and patent should issue to the claimants. Another act was passed at the same time, or was approved on the same day, appointing an officer "to survey and to locate every individual right," thus supplying every requisite of proper legislation for the supposed lack of which Congress is censured. The conclusion, therefore, must necessarily be that only the first section of the act of 1812 was under consideration, and that if the provisions of the eighth section and the act of 1816 had also been considered the decision in Guitard *vs.* Stoddard would have been in harmony with the decisions as to the acts of 1805, 1806, and 1807.

Nearly all the claims, however, have been duly located and surveyed, and all such claims are now to all intents and purposes patented by the following act of Congress:

1874, June 6.—"An Act obviating the necessity of issuing patents for certain private land claims in the State of Missouri and for other purposes.

"*Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled*, That all of the right, title, and interest of the United States in and to all lands in the State of Missouri which have at any time heretofore been confirmed to any person or persons by any act of Congress, or by an officer or officers, or board or boards of commissioners acting under and by authority of any act of Congress, shall be and the same are hereby granted, released, and relinquished by the United States, in fee-simple, to the respective owners of the equitable titles thereto, and to their respective heirs and assigns forever, as fully and as completely, in every respect whatever, as could be done by patents issued therefor according to law."

Hunt's Confirmations.—It having been ascertained that parties were in possession of lands which, although possessed under the former government, had never been confirmed or surveyed, Congress passed the following:

1824, May 26.—"An Act supplementary to an act passed on the 13th of June, 1812, entitled 'An Act making further provisions for settling the claims to land in the Territory of Missouri.'

SEC. 1 provides that it shall be the duty of the individual owners of town or village lots, out-lots, and common-field lots in, adjoining, or belonging to the several towns of Portage des Sioux, St. Charles, St. Louis, etc., whose lots were confirmed by the act of 13th June, 1812, to proceed within eighteen months to designate said lots by proving before the recorder of land titles for said State of Missouri the fact of inhabitation, cultivation, or possession prior to 20th of December, 1803, and the boundaries and extent of each claim, so as to enable the surveyor to distinguish the private from the vacant lots appertaining to said towns and villages.

SEC. 2 provides for survey of the vacant land for schools at the expiration of the time allowed for proving claims.

SEC. 3 provides that the recorder shall issue a certificate of confirmation for each claim confirmed, and furnish a list of the same to the surveyor.

Theodore Hunt was then recorder of land titles. He proceeded to examine the claims, took testimony as to occupation, cultivation, etc., and made up the list required by the act, which embraced claims to the number of nine hundred and fourteen.

Confirmations of July 4, 1836.—It appearing that a large number of claims had not been confirmed under the previous legislation, Congress passed another act as follows:

1832, July 9.—"An Act for the final adjustment of private land claims in Missouri."

SEC. 1 provides "that it shall be the duty of the recorder of land titles in the State of Missouri, and two commissioners to be appointed by the President, by and with the advice and consent of the Senate, to examine all the unconfirmed claims to land in that State heretofore filed in the office of said recorder according to law, founded upon any incomplete grant, concession, war-

rant, or order of survey issued by the authority of France or Spain prior to the 10th of March, 1804, and to class the same so as to show, first, what claims in their opinion would in fact have been confirmed, according to the laws, usages, and customs of the Spanish government and the practice of the Spanish authorities under them at New Orleans, if the government under which such claims originated had continued in Missouri; and, secondly, what claims in their opinion are destitute of merit," etc.

SEC. 2 provides that the office of the recorder shall be open for the purposes of such examination for two years from the date of the organization of the board, and no longer: that the board shall make reports to the commissioner of the general land office, "to be laid before Congress for their final decision upon the claims contained in such first class."

1833, March 2.—"An Act supplemental to the act entitled 'An Act for the final adjustment of land claims in Missouri.'"

SEC. 1 extends the provisions of the act to which this is supplementary so as to "embrace in its operations every claim to a donation of land in the State of Missouri held by virtue of settlement and cultivation," etc.

SEC. 2 extends the time for taking the testimony to two years from the date of this act.

Messrs. Lewis F. Linn, Albert G. Harrison, and F. R. Conway (recorder of land titles) constituted the board. They made a report upon claims numbered from one to one hundred and forty-two, inclusive, as belonging to the first class, which was submitted to Congress Jan. 18, 1834, and referred to the Committee on Public Lands.

Messrs. James S. Mayfield and James H. Relfe were appointed commissioners in place of Messrs. Linn and Harrison. They made their report, which embraced claims numbered from one hundred and forty-three to three hundred and forty-five, inclusive, as of the first class, and claims numbered from one to one hundred and fifty-two as of the second class.

All the reports were submitted to Congress Dec. 10, 1835, and an act was passed confirming those of the first class, as follows:

1836, July 4.—"An Act confirming claims to land in the State of Missouri and for other purposes."

SEC. 1 provides "that the decisions in favor of land claimants made by the recorder of land titles in the State of Missouri, and the two commissioners associated with him by virtue of an act entitled 'An Act for the final adjustment of private land claims in Missouri,' approved July 9, 1832, and the act supplementary thereto, approved March 2, 1833, as entered in the transcript of decisions transmitted by the said recorder and commissioners to the commissioner of the general land office, and by him laid before Congress at the two last and present sessions, be and the same are hereby confirmed, saving and reserving, however, to all adverse claimants the right to assert the validity of their claims in a court or courts of justice." Provided, however, that nothing in this act contained shall apply or be in confirmation of the claim of Don Carlos D. Villemont for a tract of land at Point Chicot; and provided also that nothing in this act contained shall apply to or be in confirmation of the following claims: (Here follow the names of the seventy-eight claimants, with the quantity claimed by each.)

SEC. 2 provides that other lands may be located in lieu of any part of the land confirmed that may have been sold or otherwise disposed of by the United States.

SEC. 3 provides that such locations shall be entered with the register of the proper land office, who shall issue his certificate, and on transmission to the commissioner of the general land office patents shall be issued, etc.

New Madrid Locations.—For the relief of those who suffered by the earthquakes at New Madrid in 1812, Congress passed an act, approved Feb. 17, 1815, authorizing persons owning lands in the county of New Madrid, as it existed on the 10th of November, 1812, in cases where said lands had been materially injured by said earthquakes, to locate the like quantity of land on any of the public lands of the Territory of Missouri the sale of which was authorized by law.

Upon proof of such injury, the recorder of land titles was required to issue a certificate to the claimant, authorizing him to locate the quantity of land therein specified, and the surveyor for said Territory was required to survey the same and to return a plat of said location to the recorder, together with a notice in writing designating the tract claimed and located and the name of the claimant, which notice and plat was required to be recorded in said recorder's office.

It was made the duty of the recorder to transmit a report of the location so made to the commissioner of the land office, and to deliver to the claimant a certificate stating the circumstances of the case and that he was entitled to a patent for the tract therein designated. Upon that certificate patent was required to be issued, in like manner as provided by law for other public lands of the United States.

The act further provided that the title to the injured lands should revert to and become absolutely vested in the United States.

The sympathy and generosity of Congress manifested by this act was almost entirely lost or thrown away so far as the sufferers were concerned, and was perverted almost entirely to the profit of speculators.

There were 516 certificates issued, only 20 of which were located by the sufferers or original claimants. Three hundred and eighty-four of those certificates were purchased or obtained in some manner by land speculators residing in St. Louis. One of them claimed 16 of them, another 19, another 13, another 9, another 19, another 21, another 16, another 20, another 19, another 13, another 10, another 26, another 33, another 40, and others from 1 to 5 each.

The prices paid for those claims by the speculators, as disclosed by the records, does not exceed $10,000, though they cover nearly 200,000 acres of land, the minimum price of public land at that time being

$1.25 per acre. One of those claims for 160 acres was sold by the New Madrid sufferer for $25; another, same number of acres, for $30; one for 640 acres for $75; another, for same number of acres, for $100.

Very few of the claims were sold for better prices than these, and the greater part of them at much less rates. Thus the charity of Congress almost entirely failed to benefit the sufferers, but this was not the worst of the evils resulting from the passage of that act. It gave rise to fraud, perjury, and forgery to an alarming extent. There were no less than one hundred and forty-two claims set up by persons falsely and fraudulently representing themselves to be the assignees or legal representatives of the sufferers, having nothing whatever of record to support their claims, yet they were permitted to prove up the injury to the New Madrid land, relinquish the title to the same to the United States, and to receive their certificates of location.

A letter written by the clerk of the county court and *ex-officio* recorder of New Madrid County to the recorder of land titles, dated Aug. 16, 1825 ("American State Papers," title Public Lands, vol. iv. 609), presents a case which may be regarded as a "sample brick." It shows that a claim for a certificate of location was made before the recorder of land titles by one George Tenelle (who had eighteen other New Madrid claims) for two hundred and forty acres, which he claimed as assignee of Elisha Jackson, producing documents to that effect, and also proof, under oath, that the land had been materially injured by earthquakes. He obtained his certificate, and relinquished the injured land to the United States. It was then entered on the books of the land office as public land subject to entry. In 1825 it was entered by one Evans or Ogden, who proceeded to take possession. It then transpired that Jackson had sold the land in 1796, that the purchaser had constantly lived on it until he died in 1819, that one of his heirs had lived on it until it was claimed under the entry at the land office, and, further, that it was a valuable farm, which had never been injured by the earthquakes!

The St. Louis speculators proceeded to locate their certificates, almost without restraint, upon the lands in and adjacent to the city regardless of the claims of the holders of grants under the former government. Even the land now known as the "Stoddard addition," a choice residence portion of the city, embracing sixty-six of the present city blocks, which was originally granted to one Mordecai Bell, sold by him to Maj. Amos Stoddard (the first American commandant), and duly confirmed to him, was entirely covered by New Madrid locations. A long and tedious litigation ensued, resulting in the establishment of the Stoddard title.

It would require a huge volume instead of a chapter to detail the litigation caused by these New Madrid certificates. The courts, both Federal and State, have declared them void as against the early grants and confirmations, and the shadow of their cloud now hangs over only a few localities.

School Lands.—As heretofore stated, the act of 13th of June, 1812, provided that all lands not rightfully owned or claimed by private individuals or held as commons included within the out-boundary of a survey, which said act required to be run "so as to include the out-lots, common-field lots, and commons belonging to the town," should be reserved for the support of schools; *provided*, "that the whole quantity of land contained in the lots so reserved in any one town or village shall not exceed one-twentieth part of the whole lands included in the general survey of such town or village."

By the act of Jan. 27, 1831, the lands so reserved were relinquished by the United States, "to be sold or disposed of or regulated for the said purposes in such manner as may be directed by the Legislature of the State."

Here again is perceived the curse inflicted upon the city by the New Madrid speculators. They had sufficient influence to procure the approval of a survey made in 1840 of said out-boundary in such manner as to leave out the "Grand Prairie," "Cul de Sac" and "Prairie Des Noyer" common fields, notwithstanding the law required them to be included in such survey, and a survey had been made in 1838 by the same surveyor which correctly included said common fields.

The first-mentioned survey (of 1840) contained 7701.66 acres, which entitled the schools to 385.08 acres (one-twentieth of the whole), provided that quantity not rightfully claimed by individuals could be found. Only 290.05 acres of vacant land could be found within the out boundary as surveyed in 1840, and that quantity was surveyed and allotted to the public schools, being made up of scattered, detached parcels wherever a vacant lot or portion of a lot could be found. Had the survey of 1838 (which was in strict accordance with the law requiring such survey to be made) been approved, its area would have exceeded fifteen thousand acres, the schools would have been entitled to seven hundred and fifty acres, and vacant lands would have been found more than sufficient to have given the schools its full quota.

Efforts were made by the school board to have this great wrong remedied. The only persons adversely interested were New Madrid speculators, and unfortunately they had sufficient "influence" to defeat the application for a correct survey, thus thwarting the charitable designs of Congress in favor of our public schools, as well as those in favor of the New Madrid sufferers.

Township School Lands.—It was provided in the act of March 6, 1820, under which Missouri was admitted into the Union, that section sixteen in every township (or if sold, other lands) should be granted to the State for the use of schools.

This became operative upon the admission of the State into the Union. The section thus donated in Town 45 north, Range 7 east, is very near the centre of the city as now incorporated. The original six hundred and forty acres were reduced by conflicting grants and confirmations to about sixty acres, from the sale of which, and from compromises with the owners of conflicting claims, the commissioners appointed by the State to manage the property—Messrs. William Glasgow, Jr., and William C. Taylor (the latter now deceased)—realized the net amount of $343,701.44.

In 1853 and 1854 several suits were brought by said commissioners against persons holding under old grants and confirmations, all of which, save one, were decided in the higher courts against the school claim. The case excepted has recently, in the language of the court, been "launched upon its third voyage for the discovery of error."

Confirmations under Act of 1866.—Notwithstanding that Congress had afforded every opportunity for all persons to perfect their titles, there were quite a large number of lots in St. Louis which had not been duly confirmed and surveyed, hence another act was passed as follows:

1866, June 12.—"An Act authorizing documentary evidence of titles to be furnished to the owners of certain lands in the city of St. Louis"

provides "that the District Court of the United States may on proper decree declare released, granted, relinquished, and conveyed by the United States in fee-simple and in full property all the right, title, and interest of the United States in and to any lot, tract, piece, or parcel of land within the city of St. Louis, in the State of Missouri, to the person or persons having the best claim or claims to the same," etc.

Under this act one hundred and nine decrees have been issued.

Various other acts have from time to time been passed by Congress, ratifying or confirming claims made under former acts, and also the claims of individuals to particular tracts, but it is unnecessary to refer to them, all that is of general interest being embodied in the foregoing summary of the legislation.

As a matter of course, a very large amount of litigation has heretofore resulted from so much legislation and the conflicting claims brought into existence thereby.

Nevertheless, at the present time the legal principles involved have been so thoroughly settled by our courts, and the conflicting claims so far settled by compromise or court decisions, that only a very few localities are now in dispute.

The facilities for examining titles with accuracy and dispatch are equal to if not superior to those of any other city in the Union, and persons desiring to purchase property can readily satisfy themselves that their investments in that direction will be perfectly safe.

CHAPTER XIV.

TERRITORIAL GOVERNMENT.

SELDOM has government changed hands so easily and quietly as when Upper Louisiana ceased to be a Spanish or a French possession and became a part of the territory of the United States. The inhabitants of St. Louis made no demonstration. They were apathetic, indifferent, ignorant, possibly, of what was happening, or had the art to conceal their feelings. Charles Gratiot was almost the only man in St. Louis of French blood who took an interest in the proceedings, and he was a man of exceptional intelligence and information, a Republican and a Protestant. He had besides taken a large and liberal interest in American affairs from the period of the Revolution, and was, from his residence in Cahokia at the time of the war, a citizen of Virginia. Tradition relates that the news of the cession of Louisiana reached St. Louis on "a bright, sunshiny day in August." When the ceremony of transfer took place, March 10, 1804, Charles Gratiot's portico was the scene of the proceedings, and it is said that as one flag descended and the other was run up the flag-staff, the gentle Delassus wept, while Charles Gratiot called for three cheers in honor of the standard of his adopted country.

Capt. Stoddard, in taking possession of the government for the United States, obeyed the instructions sent him from Washington, and made few or no changes. He wished the people to feel that there was no dynastic revolution, but simply one Governor had succeeded another in due course; that, as the ancient French formula had it, "*le roi est mort, vive le roi.*"

He retained practically all the officers who were in service under Delassus, and one of these, Marie P. Le Duc, secretary to the province, was kept in office for several years, and in fact until Missouri became a State. He was finally appointed judge of the county court, and held that position for wellnigh twenty years.[1] One reason for the instructions of President Jefferson to Capt. Stoddard to make no changes in the conduct of affairs was that legislation by Congress was expected for the regulation of the Territory, and until that was had and peaceable and undisturbed possession was assured, it was thought best to have a merely military occupation. In Louisiana it had been a subject of serious complaint that Governor Claiborne, ignorant as he was of the laws, language, and manners and customs of the people over whom he had been placed, should be suddenly invested with all the powers at once of Governor-General and intendant, thus making an irresponsible and despotic proconsul out of a republican magistrate. He did not, in fact could not, exercise any such unlimited power with discretion, and the mistake made in the case of Claiborne was avoided in the case of Stoddard, who was charged practically with no duties at all, save those of preserving order.[2]

On the 26th of March, 1804, Congress passed an act to organize the newly-acquired Territory, dividing it into two parts, one to be called the "Territory of Orleans," the other "the District of Louisiana." This, a very unpopular measure at the time, completed the final severance of Missouri from Louisiana. The act forbade the continuance of the slave-trade, and submitted the character and quality of French and Spanish land grants to the United States courts, besides introducing the United States land office system of the day. "The District of Louisiana" was not otherwise interfered with, except that, as regards its civil needs, it was annexed temporarily to the Territory of Indiana (or the Indian Territory), of which Gen. William Henry Harrison was at the time Governor, with his headquarters alternately at Vincennes, Kaskaskia, and Cahokia, and he and the three judges of that Territory were authorized to act as a council, or legislative body, to enact such needful laws as might be required by the exigencies of the time, while these judges were further directed to hold two courts each year in St. Louis. The further legislation of Congress in regard to Missouri, previous to the passage of the enabling act providing for a Constitution and the admission of the State into the Union, had better be surveyed in this place and in one single group. It does not occupy much space upon the records. March 3, 1805, an act changing the name of the "District of Louisiana" to "Louisiana Territory," the Governor to be appointed for three years and the secretary for four years, the legislative power to be invested in the Governor and three judges. This act went into force on July 4, 1805. It grew out of the recommendations of President Jefferson in his message to Congress in December, 1804, and led to a very earnest debate in Congress, in the course of which it was vehemently urged that Louisiana, both the Territory and the District of New Orleans, were without the vestige of a republican form of government, and that the guarantees of the treaty of cession, as regarded the rights and liberties of the inhabitants, had not been complied with.[3]

[1] Marie P. Le Duc was born at the town of St. Denis, France, in 1770, and came to St. Louis during the administration of Carlos Delassus. His abilities were marked, and almost immediately brought him into prominence. He was a member of the First Constitutional Convention of Missouri, and during almost all his residence in the State was filling some official station.

[2] There was so much dissatisfaction in Louisiana that the Spanish ex-authorities secretly made it the basis of new intrigues, and Laussat, the French prefect, wrote home to his government that the people of Louisiana were only waiting for Bonaparte's triumph to return to their ancient allegiance. Claiborne was surrounded by bad advisers, he said, and Wilkinson, "who has long been known here in the most unfavorable manner, is a rattle-pated fellow, full of odd fantasies. He is frequently drunk, and has committed a thousand inconsistent and impertinent acts."

[3] In the course of this debate—the bill being in charge of John Randolph—it was urged that the French settlers did not understand the principles of a free government, and were not capable of administering their own affairs. Singularly enough, this position was maintained by the persons of French descent who happened to be in Congress, notably Mr. Huger, of South Carolina, who deeply offended the people of Louisiana by using language afterwards misconstrued to signify that they were no better than slaves and negroes, and by Mr. J. B. C. Lucas, who was in Congress for his first term as the representative of Western Pennsylvania. This gentleman supported the Territorial policy; his position was that of the ex-prefect Laussat,—that the people of the new Territories were without experience; the Spanish government had "made it its policy to keep them entirely disconnected with public affairs, which it has accustomed them to consider with indifference and even with a sort of abnegation." Mr. Lucas held that the treaty of cession only bound the United States to secure to Louisiana as large a portion of liberty and as full an enjoyment of their rights as they would have been permitted to possess under the government of France or Spain. More than this had been done, for the privilege of the *habeas corpus* had been extended to them. Mr. Lucas did not believe in theoretical legislation, and, without reflecting or wishing to reflect on the people of Louisiana, "he would say that they were not prepared for a government like that of the United States." They had not been consulted about the cession: it was a bargain made over their heads, and, "as a proof that this act had not been received with approbation by them, it must be borne in mind that when they saw the American flag hoisted

The next act was that of June 4, 1812, at which time "the District of Orleans" was erected into the State of Louisiana. It enacted that

"The Territory heretofore called 'Louisiana' shall hereafter be called 'Missouri.' The Governor shall be appointed by the President for three years, and must reside in the Territory; the secretary for four years, also to reside in the Territory. The General Assembly shall consist of the Governor, Legislative Council, and House of Representatives, the representatives to be elected by the voters for two years, every five hundred inhabitants to be entitled to one representative, until they number twenty-five, then the ratio to be regulated by the General Assembly. For the first election there shall be thirteen elected, for which purpose the Governor shall divide the Territory into thirteen precincts, previous to October 1st next. These first representatives will meet in St. Louis on the first Monday of December, 1812. They shall nominate eighteen persons to the President of the United States, who will appoint nine of them as members of the Legislative Council. And the Governor shall convene the first General Assembly at St. Louis, as soon as may be convenient after the appointment of the Legislative Council. Afterwards, the General Assembly shall meet once in each year at St. Louis, on the first Monday of December. A delegate to Congress shall be elected by the people at the election.

"This act to go into effect on the first Monday in October, 1812.

"HENRY CLAY, *Speaker House of Rep's.*
"WM. H. CRAWFORD, *Pres't Senate pro tem.*
"Approved) "JAMES MADISON, *President.*"

There is but one more act to record, that of April 29, 1816, which provides for one member of the "Legislative Council" from each county, to serve for two years, and the "General Assembly," to sit once in two years, on the first Monday in December.

The law of March 26, 1804, was enacted to go into effect October 1st of that year. Gen. Harrison and the three Indiana judges, Thomas Terry Davis, Henry Vandenburgh, and John Griffin, met in Vincennes and adopted the laws which they thought necessary to carry out the act of Congress and for the immediate government of the district; among others, one dividing it into five sub-districts, each of which was to have a commandant or Lieutenant-Governor. These districts were St. Louis, St. Charles, Ste. Genevieve, Cape Girardeau, and New Madrid. Courts of Quarter Sessions were established for each district, and each was to have its sheriff and recorder, appointed by the Governor. This action superseded Capt. Stoddard, whose term of office ended with Sept. 30, 1804. The next day, October 1st, Gen. Harrison and the Indiana judges came to St. Louis, opened court, and installed a new Governor or commandant for the sub-district. This was Col. Samuel Hammond, of Virginia, who built a house in the American style, and entertained royally until July 4, 1805, when the act of March 3d of that year superseded him by making Gen. James Wilkinson Governor of the whole Territory. Hammond was simply Deputy Governor, under Governor Harrison, of the District of St. Louis.

"The Court of Quarter Sessions" was to hold four terms every year in St. Louis, meeting on the third Tuesday in March, June, September, and December. The first session in St. Louis was an Oyer and Terminer, held Dec. 18, 1804, the place of meeting being the tavern of Emilien Yosti. The sheriff was James Rankin, and the justices present were Auguste Chouteau, Jacques Clamorgan, David Delaunay, and James Mackay. Charles Gratiot was presiding justice of this court, of which Edward Hempstead was acting deputy attorney-general *pro tem.*[1]

In the room of the French they shed tears. Was it not a proof that they were not so friendly to our government as some gentlemen imagined? There is no doubt but that after they have experienced the blessings of a free government they will wonder at their having shed tears on this occasion; but they must, in the first instance, feel these blessings." This conservative position of Mr. Lucas, and his knowledge of the French character and language, led Mr. Jefferson to appoint him to fill one of the judgeships created under the act, and henceforth his fortunes became allied with those of St. Louis.

[1] Edward Hempstead was the first delegate in Congress from Missouri Territory, and a man whose services to the community can never be forgotten while the power of grateful recollection survives. He and Thomas F. Riddick procured from Congress the legislation upon which the existing school system of St. Louis rests, and from which so much of its income has been derived. Hon. Elihu B. Washburne, once member of Congress from the Galena district of Illinois, and late Minister to France, who is closely connected with St. Louis people by marriage, and by sympath, also, has given such a complete and faultless sketch of Mr. Hempstead's life, in an elaborate address upon the subject before the Missouri Legislature, that he has left no more to be said. A few extracts from that address are all that will be needed here:

"Edward Hempstead, born at New London, Conn., June 3, 1780, was the son of Stephen Hempstead, who served most gallantly in the Revolution from the battle of Lexington onward. He was sergeant in Nathan Hale's company when the British executed that martyr as a spy. He came to St. Louis in 1811 and died there, esteemed by all.

"Mr Edward Hempstead received a classical education under the tuition of the Rev. Amos Bassett, in the town of Hebron, Conn. He early began the study of law in his native State, first under Sylvester Gilbert, Esq., and finished under Enoch Huntington, Esq. He was licensed in 1801, and commenced practice in Connecticut. From there he removed to Newport, R. I., where he became a partner of the Hon. Asher Robbins, afterward a distinguished member of the Senate of the United States from that State. After remaining two years at Newport, though he had gained a good reputation at the bar and the avenue to a complete success seemed open to him, he determined to seek a home west of the Mississippi. Louisiana had then been purchased from France, and with prophetic vision he saw that

"'Westward the star of empire takes its way.'

"For a young man with no resources but his own character and abilities to leave staid New England to settle in a country

William Sullivan was appointed constable for St. Louis, and a house was rented from Jacques Clamorgan for a jail; rent, fifteen dollars a month, and one hundred and thirty-three dollars and forty cents spent for repairing and fitting it up. The sheriff summoned a grand jury, the first one St. Louis ever had, and the following are the members of this body: Antoine Soulard, Bernard Pratte, Thomas F. Riddick, Wilson

half-way across the continent, and just acquired from a foreign nation, was the conception of a stout heart and inspired by a great ambition.
